VOL. 7. PETERBOROUGH, ONT., JUNE, 1887. NO. 6

THE SAW LOGS DRIVING ACT 1887.

THE Bill introduced in the Ontario Legislature during the last session, being an Act respecting the driving of saw logs and other timber on lakes, rivers, creeks and streams, was, after its first reading, published in full in THE LUMBERMAN of April last. As this Bill has since been considerably amended and become law, and as no doubt many of our readers have yet been unable to peruse it, we devote considerable space this month to the publication of the same in full.

The Bill reads as follows :—

2. Any person putting, or causing to be put, into any water in this Province, logs, for the purpose of floating the same in, upon or down such water, shall make adequate provisions and put on a sufficient force of men to break, and shall make all reasonable endeavors to break jams of such logs and clear the same from the banks and shores of such water with reasonable despatch, and run and drive the same so as not to unnecessarily delay or hinder the removal, floating, running or driving of other logs, or unnecessarily obstruct the floating or navigation of such water.

3. In case of the neglect of any person to comply with the provisions of the preceding section, it shall be lawful for any other person or persons desiring to float, run or drive logs in, upon or down such water, and whose logs would be thereby obstructed, to cause such jams to be broken and such logs to be cleared from the banks and shores of such water, and to be floated, run and driven in, upon and down such water.

4. The person or persons causing such jams to be broken or such logs to be cleared, floated, run or driven, pursuant to the last preceding section, shall do the same with reasonable economy and despatch, and shall take reasonable care not to leave logs on the banks or shores, and shall have a lien upon the logs in the jam or so cleared, floated, run or driven for the reasonable charges and expenses of breaking the jams and the clearing, floating, running, driving, booming and keeping possession of such logs, and may take and keep possession of such logs, or so much thereof as may be reasonably necessary to satisfy the amount of such charges and expenses pending the decision by arbitration as hereinafter provided for. The person taking possession of logs under this section shall use all reasonable care not to take such logs beyond the place of their original destination, if known, but may securely boom and keep possession of the same at or above such place. The owner or person controlling such logs, if known shall be forthwith notified of their whereabouts, and if satisfactory security be given for the amount of such charges and expenses, possession of the logs shall be given up.

5. When logs of any person upon or in any water in this Province, or the banks or shores of such water, are so intermixed with the logs of another person or persons, that the same cannot be conveniently separated for the purpose of being floated in, upon or down such water, then the several persons owning or controlling the intermixed logs, shall respectively make adequate provisions, and put on a fair proportion of the men required to break jams of such intermixed logs, and to clear the same from the banks and shores of such water with reasonable despatch, and to float, run and drive the same in, upon and down such water, and the costs and expenses thereof shall be borne by the parties in such proportions as they may agree upon, and in default of agreement as may be determined by arbitration as hereinafter provided for.

6. In case of neglect of any person to comply with the provisions of the last preceding section, it shall be lawful for any other person or persons whose logs are intermixed, to put on a sufficient number of men to supply the deficiency and break jams of such intermixed logs, and to clear the same from the banks and shores of such water, and to float, run and drive all such intermixed logs in, upon and down such water.

7. The person or persons supplying such deficiency and causing such jams to be broken, or such intermixed logs to be cleared, floated run or driven pursuant to the last preceding section, shall do the same with reasonable economy and despatch, and shall take reasonable care not to leave logs on the banks or shores, and shall have a lien upon the logs owned or controlled by the person guilty of such neglect, for a fair proportion of the charges and expenses of breaking the jams, and the clearing, floating, running, driving, booming and keeping possession of such intermixed logs; and may take and keep possession of such logs, or so much thereof, as may be reasonably necessary to satisfy the amount of such fair proportion of charges and expenses pending the decision by arbitration as hereinafter provided for. The person taking possession of logs under this section shall use all reasonable care not to take such logs beyond the place of their original destination, if known, but may securely boom and keep possession of the same at or above such place. The owner or person controlling such logs, if known, shall be forthwith notified of their whereabouts, and if satisfactory security be given for the amount of such proportion of charges and expenses, possession of the logs shall be given up.

8. When logs of any person, upon or in any water in this Province, or the banks or shores of such water, are intermixed with logs of another person or persons, then any of the persons whose logs are intermixed, may at any time during the drive, require his logs to be separated from the other logs at some suitable and convenient place, and after such separation he shall secure the same at his own cost and expense, in such manner as to allow free passage for such other logs; provided that when any logs so intermixed reach their place of original destination, if known, the same shall be separated from the other logs, and after such separation the owner shall secure the same at his own cost and expense.

9. The several persons owning or controlling the intermixed logs shall respectively make adequate provisions and put on a fair proportion of the men required to make the separation; the cost and expense of such separation shall be borne by the parties in such proportions as they may agree upon, and in default of agreement, as may be determined by arbitration as hereinafter provided.

10. In case of neglect of any person to comply with the provisions of the last preceding section, it shall be lawful for any other person or persons, whose logs are intermixed, to put on a sufficient number of men to supply the deficiency, and the logs owned by or controlled by the person guilty of such neglect shall be subject to a lien in favor of the person or persons supplying the deficiency, for a fair proportion of the charges and expenses of making the separation, and for the reasonable charges and expenses of booming and keeping possession, and such person or persous may take and keep possession of such logs or so much thereof as may be reasonably necessary to satisfy the amount of such fair proportion of charges and expenses pending the decision by arbitration as hereinafter provided for. The person taking possession of logs under this section shall use all reasonable care not to take such logs beyond the place of their original destination, if known, but may securely boom and keep possession of the same at or above such place. The owner or person controling such logs, if known, shall be forthwith notified of their whereabouts and if satisfactory security be given for the amount of such proportion of charges and expenses, possession of the logs shall be given up.

11. The security referred to in sections 4, 7 and 10 may be by bond in form A in the schedule hereto, or by deposit of money, or in such other way as the parties may agree upon.

12. If it be determined by arbitration, as hereinafter provided for, that any person acting under the assumed authority of this Act, has without just cause taken possession of or detained or caused to be taken possession of or detained, logs of another person, or has after offer of security which the arbitrators may think should have been accepted, detained such logs, or has through want of reasonable care left logs of another person on the banks or shores or has taken logs of another person beyond the place of their original destination contrary to the provisions of sections 4, 7 or 10, then such first mentioned person shall pay to such last mentioned person such damages as the arbitrators may determine.

13. The lien given by sections 4, 7 and 10 of this Act shall be subject to the lien (if any) of any person or corporation for tolls or dues for the use of any works or improvements made use of in running or driving such logs.

14. Nothing in this Act shall affect the liens or rights of the Crown upon or in respect of any logs.

15. All claims, disputes and differences arising under this Act shall be determined by arbitration as hereinafter provided and not by action or suit at law or in equity.

16. The person claiming that another person has not complied with the provisions of this Act, or claiming payment of any charges or expenses under this Act, or claiming a lein upon any logs, or claiming damages under section 12, shall give to such other person notice in writing stating the substance of the claims made, and appointing an arbitrator, and calling upon such other person to appoint an arbitrator within ten days after the service of such notice; if such other person does not within such ten days appoint an arbitrator the Judge of the County or District Court of the county or district, or the Stipendiary Magistrate of the provincial county or the district, as the case may be, in which the logs in connection with which the claim or part of the claim is made, or the major portion of such logs are situate at the time of the service of such notice, shall, on the application of the person giving such notice, appoint a second arbitrator; the two arbitrators so appointed shall within ten days after the appointment of the said second arbitrator appoint a third; if such two arbitrators do not within such ten days appoint a third, the said Stipendiary Magistrate shall on the application of either party appoint such third arbitrator.

17. If any arbitrator refuses to act or becomes incapable of acting, or dies, and the parties does not concur in appointing a new arbitrator, the said Judge or Stipendiary Magistrate shall, on the application of either party, appoint such new arbitrator.

18. The parties may agree that the arbitration shall be by one arbitrator instead of by three, and they may either agree upon the arbitrator or may apply to the said Judge or Stipendiary Magistrate to appoint one.

19. The person on whom a claim is made and notice of arbitration served may at any time before the arbitration is entered upon or with leave of the arbitrators during the arbitration, give the claimant notice in writing by way of counterclaim stating the substance of any claim arising under this Act which such person may have against the claimant, and such counterclaim, unless barred under section 26, shall be determined in the arbitration and an award made with respect thereto.

20. The three arbitrators or the sole arbitrator, as the case may be, shall proceed with the arbitration with due despatch, and shall make their or his award in writing, under their or his hand within thirty days from the date of the appointment of such arbitrator, or the last of such three arbitrators, as the case may be. The parties may, by consent in writing, from time to time enlarge the time for making said award, or the said Judge or Stipendiary Magistrate may from time to time, either before or after the expiration of said time, enlarge the time for making said award.

21. The arbitrators or arbitrator may require the personal attendance and examination upon oath of the parties and their witnesses and the production of all books and documents relating to the matters in question, and may determine by whom the expense of the arbitration, and the costs of the parties shall be paid, and the amount thereof; any costs or expenses payable to a person having a lien upon logs, by virtue of this Act shall be added to the amount of such lein.

22. Chapter 64 of the Revised Statutes of Ontario intitled *An Act respecting the costs of Arbitrations* applies to arbitrations under this Act.

23. The person or persons having a lien upon logs by virtue of this Act, may sell the same in order to realize the amount of such lien, and of the costs, charges and expenses connected with the sale. The arbitrators, or arbitrator, shall determine

either by their award or by separate document the time, place and manner of such sale, and may, from time to time, give directions, in writing, respecting such sale, and the realization of such lien, and of the costs, charges and expenses connected therewith.

24. The award and directions, in writing, of any two of the three arbitrators, or of the sole arbitrator, as the case may be, shall be final and binding upon and shall be obeyed by the parties, and shall be valid notwithstanding any want or defect of form or other technical objection.

25. The said Judge or Stipendiary Magistrate, as the case may be, may, on the application of either party, grant an order to compel any person or persons to attend and give evidence upon the arbitration and to produce all books and documents relating to the matters in dispute, and obedience to such order may be enforced in the same way as obedience to any order of such Judge or Stipendiary Magistrate made in a cause or matter pending before him in court may be enforced, and the person neglecting or refusing, without lawful excuse, to obey such order shall be liable to an action by any person aggrieved by such neglect or refusal for the damages sustained by him thereby.

26. All claims arising under this Act shall be made by notice in writing under section 16, within one year after the same have arisen, otherwise they shall be barred.

27. The Lieutenant-Governor in Council may from time to time by proclamation published in the *Ontario Gazette* declare that any portion or portions of this Province or any water therein shall, until further proclamation, be exempt from the operation of this Act, and thereupon the same shall be exempt accordingly.

28. Any portion or portions of the Province, or any water therein exempted by proclamation from the operation of this Act, may by proclamation published in the *Ontario Gazette*, be again brought within its operation until further proclamation, and so on from time to time.

UNITED STATES CHIPS.

—Chicago expects to receive a greater quantity of lumber from Lake Superior this season.

—Frank Close, at Moravia, N. Y., fell on a circular saw, and was split open from head to base.

—Lumber to the amount of 138,680,000 feet passed through the Sault Ste. Marie canal during 1886.

—Reports from the Tonawanda district state that the lumber trade is in a very healthy condition this spring.

—It is feared that the inter-state commerce law will shut out redwood from the eastern and middle state markets.

—The demand for lumber at Buffalo, especially box and assorted lots for the eastern trade, is improving daily.

—Twenty-eight vessels cleared from Alpena, Mich., during a recent week, carrying away 8,427,000 feet of lumber.

—Within a month $5,000,000 will be invested in new enterprises and manufacturing establishments in Louisville, Ky.

—Milwaukee, which a few years ago was a distributing point of some importance, is now almost wholly a retail market.

—Logs to the amount of 17,000,000 feet were put into Grasse river, St. Lawrence county, N.Y., during the past winter.

—It is estimated that the amount of old and new logs in the Menominee river and tributaries amounts to at least 650,000,000 feet.

—It is stated that the average Michigan pine shingle maker is touching cedar shingles very lightly, being afraid that they will not sell.

—A good authority states that in Michigan Norway logs are selling now for as much as could be obtained for bill stuff two years ago.

—The wood-working firms in Sheboygan, Wis., have contracted for 34,000,000 feet of lumber to be used up in their establishments.

—The Wolf river, Wis., log cut for the past winter is estimated at about 95,000,000 feet, of which 16,000,000 went into Post lake by rail.

—The largest drive ever run down Pine creek, Susquehanna district, Pa., was that of this spring, and consisted of about 50,000,000 feet of logs.

—Reports of forest fires are coming in unusually early this year from nearly every State. The cause is attributed to the peculiar dryness of the season.

—The hardwood dealers of Chicago are taking action upon the invitation of the New York trade to join in an effort to frame some national inspection rules.

—It is stated that 148,000,000 feet of logs were banked the past winter on streams tributary to Little and Big Bay de Noque and Ford rivers, upper Michigan.

—At Muskegon, Mich., the other day, there was a sale to a Chicago lumber company of 50,000,000 feet of lumber and 50,000,000 shingles. The sum paid was $800,000.

—An American paper mentions that Michigan lumbermen have offered the Pacific Lumber Company, of Eureka, Humbolt county, $1,500,000 for 10,000 acres of timber, mill, railroad, etc.

—The Oscoda Salt & Lumber Company last winter put in 6,000,000 feet of logs on Georgian bay, Canada, which will be rafted across Lake Huron to Oscoda for sawing, or sold to outside parties.

—It is stated that 60,000,000 or 70,000,000 feet of logs are hung up on the main streams in the Saginaw Valley, and will remain so until a freshet occurs. The owners are nervous over the situation.

—A statistical correspondent of the Saginaw *Courier* has figured out that 100,000,000 feet of Michigan pine will fetch in eold hard cash $1,700,000 ; and that it would take 7,000 cars to transport the boards.

—The large steam dry-kiln of E. B. Newton & Co., Grand Rapids, Mich., was totally destroyed by fire, May 12, with 770,000 shingles. It had a capacity of 100,000 shingles a day. It will probably be rebuilt.

—At Tonawanda there are 32 new boats ready to be launched, and more which were uncompleted. It was estimated that the canal fleet will be increased by 175 boats this year. Much of this tonnage will be employed in the lumber trade.

—The various lumber manufacturers on the Menominee river, Michigan, manufactured last season 217,132,678 feet of lumber and 62,689,150 shingles. On January 1st there were on hand 72,356,024 feet of lumber and 15,145,000 shingles.

—Mr. A. G. Van Schaick, a heavy lumberman of Chicago, in a recently published letter, estimates the entire amount of standing pine in Michigan, Wisconsin, and Minnesota at one hundred and seventy billion feet. Other well known authorities state that the estimate is altogether too high.

—The statement is made by the *Chicago Journal of Commerce* that fresh railway construction to the extent of 21,347 miles is projected in the United States, and that 15,000 miles will be laid down this year. New rails are required for existing lines to the extent of 9,000 miles, and altogether 3,250,000 tons of steel rails are needed this year.

—A very prominent lumberman in Bay City expresses the opinion that not over 75 per cent. of the expected log crop has been harvested in the upper peninsula. He says he knows one firm which will get one-third less than they expected, and another 25 per cent. less. The latter party contracted for 12,000,000 feet, and has only got about 9,000,000 feet. The timber does not hold out as represented, and the results will be, he predicts, a very heavy shortage.

—There were carried over on the Menominee 75,000,000 feet of logs. It is estimated that the past season's input amounted to 450,000,000 feet, making 525,000,000 as the total on that stream and its tributaries. The mill capacity at the mouth of the Menominee is said to be equal to cutting up 425,000,000 feet of logs during the sawing season. It is safe to say that the mills will be crowded to the top of their speed, and that there will be logs enough to keep them at it through the season.

—T. H. McGraw & Co., of Bay City, have just sold their lumbering property, located between the Millekokin and Black river, Upper Michigan, 55 miles west of St. Ignace, to J. T. Turst, of Wyandotte. The consideration was $450,000, of which $125,000 was cash in hand. This property is estimated by lumbermen to contain 100,000,000 feet of white pine, 25,000,000 feet of Norway, 10,000,000 feet of black birch, 10,000,000 feet of Hemlock and a large quantity of maple, ash and other hardwoods.

—What is doubtless the largest single transaction in manufactured lumber ever made in Chicago, and probably the largest made anywhere, was closed in that city a few days ago. Fifty million feet of lumber and seventy-five million shingles were purchased by the Chicago Lumber Company of H. C. Akeley, acting for the Roscommon Lumber Company, Muskegon, Mich., of which concern he is one of the officers, to be manufactured and delivered during the sawing season of 1887. The amount involved in the purchase is about $800,000, a sum which regarded as the measure of one purchase of stock by a single firm, in the ordinary course of business, affords some idea of the scale upon which the lumber business is carried on.

EUROPEAN NOTES.

The timber trade in Glasgow continues quiet.

Business has been somewhat more active in Glasgow during the past month.

Reports from Liverpool state that the only business doing there seems to be in pitch pine.

In the pitch pine trade buyers have no confidence in any rise in prices, notwithstanding the shortness of stocks.

Steamers are pushing themselves into every branch of the wood trade in England, and it is said that they will largely pervade the pitch pine trade this year, with a consequent reduction in freights.

Mr. John Simson, sr., member of the well-known firm of wood brokers, Simson & Son., of London, died on April 11th, aged 89 years.

Timber, of March 25th, publishes an excellent lithographic portrait of Mr. Edward H. Wade, of the Quebec timber shipping house of Smith, Wade & Co.

Late advices from Quebec merchants now in Europe report that very few sales have been effected during the past winter. Judging from present appearances, the spring fleet of sailing vessels will be a very small one.

London trade, according to *Timber* of May 14th, continues in a very quiet and undecided condition. No one has any inclination to purchase beyond absolute requirements and the whole tone is listless and inanimate. Although stocks are small no anxiety is shown to secure goods, the prevailing impression being that all requirements can be obtained as and when desired at the public auctions or other channels.

From Denny, Mott & Dickson's English trade circular for April we note the following remarks : The spring shipments of Canadian timber are badly wanted, as the market is bare of Oak and Yellow Pine of good quality. Shippers have placed the new season's timber coming forward at good prices, and consumers must be prepared for higher rates for both Oak and Yellow Pine, although Elm should be cheaper owing to the insignificent demand.

Farnworth and Jardine, in their last timber circular report there has been little enquiry for yellow pine timber from Canada and the deliveries, chiefly of Waney, have been very moderate. Waney maintains its value, but square pine is quite neglected, and prices are lower ; stocks are light. Red pine is very light in stock, but is very seldom inquired for. Oak has been in dull demand, and there is no change in value ; the stock is moderate. Oak planks continue in active demand, and prices are steady ; recent arrivals have gone direct into consumption, and the stock is now very light. Elm has been quite neglected, but the stock is moderate. Ash is seldom inquired for, and none has gone into consumption. Pine deals have moved off slowly and the stock remaining over is too heavy for this season of the year ; prices are easier, but sales are difficult to effect, buyers preferring to await the new import. Quebec staves are seldom inquired for. From New Brunswick there have been no arrivals, and the deliveries continuing fair, stocks are now reduced to a lower point than for many years past ; notwithstanding this, and a probable moderate import, it is difficult to maintain even present low prices. Pine deals are quite neglected, and the stock, though light, is sufficient. Birch has moved off slowly ; the stock is moderate, but prices are easier. Birch planks have not been imported.

DISAPPEARANCE OF TIMBER.

It is stated that oak timber especially is rapidly disappearing from Europe, although half of the area of Sweden, one-fourth of Norway, one-sixth that of Switzerland, and 780,000 square miles in Russia are said to be yet in forest. The consumption of oak in France has doubled during the last fifty years, she requires 15,000,000 cubic feet yearly for wine casks alone, 75,000 for building purposes, 600,000 cubic feet for her fleet, and 150,000 cubic feet for railway carriages ; £800,000 worth of staves were imported in 1852 ; £5,000,000 worth are now needed. Since losing Alsace and Loraine, France contains 150,000,000 acres ; about 20,000,000 acres of this surface is covered with forest. Holland and Belgium are nearly denuded of timber, and are large importers. North Germany is rich in forest, but within half a century has commenced to cut down young trees. Australia has sold her forests since railroads have been introduced. In Italy no forests remain. Spain and Greece are almost woodless. The southern coast of the Mediteranean is almost forestless.

—His worship Mayor Stewart and Messrs. W. G. Perley, Hector Cameron and Charles J. Pusey, of Ottawa, waited on the Minister of Railways and Canals recently, asking him to grant a subsidy for the unfinished portion of the Irondale, Bankroft & Ottawa Railway. The proposed road is an air line between Ottawa and Orillia, at which latter point it connects with the northern and Pacific railway and at Ottawa with the Canada Atlantic. The total length of the line is about one hundred and twenty-five miles, fifty of which has already been subsidized at the rate of $3,200 per mile, that is the portion between Bancroft and Irondale. It is for the balance that the deputation asked assistance in building. Ten miles of the line between Irondale and Kinsmouth have already been built. The country through which this line will run is an entirely new one and abounds in mineral and timber wealth. The line will traverse a portion of the County of Carleton, Lanark and Renfrew striking Georgian Bay at Orillia. Already iron mines are being worked at Kinsmouth and others will follow directly the road is opened. The Minister promises to give the matter his consideration.

OTTAWA LETTER.

MAY 23rd, 1887.

From Our Own Correspondent.

ALL fears of damage from the high water in the Ottawa river has now completely subsided. The water rose to a very high pitch but reached the highest about a week ago. Since then the water has fallen very fast. It was at one time feared that the mills at the Chaudiere would be shut down but nothing of that kind occurred. Since I last wrote you Messrs. Perley & Pattee's lath mill at the Chaudiere was completely destroyed by fire with a loss of probably $6000. As there was a heavy wind blowing at the time it was feared that the fire would extend to the other mills and the lumber piles but the prompt energy and discipline of the city fire brigade speedily dissipated all fears and the fire was confined to the lath mill. The firm are now getting everything in preparation for the erection of a new lath mill on the old site.

The movements in lumber from this point are fairly active although no material change has yet taken place in prices. All the deliveries so far are on last year's contracts. Nearly all the shipments are taking place to the United States and the barge traffic on the Redeau Canal is kept well employed in this particular. None of last winters cut of logs has yet reached the mills here from the Upper Ottawa but a good many are now out of the tributaries and are in the Ottawa, being in charge of the Upper Ottawa Towing Company. Speaking of the Towing Company, I may mention that they have placed a new iron boat on the Lower Allumette lake this season and have called her after one of the best known lumbermen of the Ottawa, G. B. Pattee. This addition to the company's fleet was much required as the boat used last season in the territory assigned to the "G. B. Pattee" was very old and not of sufficient capacity to handle all the logs assigned.

There is considerable discussion in lumber circles here with regard to the recent action of the Quebec government in raising the ground rent on limits, and of the Ontario Government in putting up the dues 25 per cent. This latter action makes the lumber dealers who operate in Ontario pay $1 per thousand feet instead of 75 cents formerly.

The Chaudiere lumbermen and others in the Province who work their limits year after year do not object to the increase of ground rents by the Quebec Government nearly so much as those lumbermen who merely hold the limits for speculation, and these latter class are not a few. There are men in the province of Quebec who never cut a log or a stick of timber, but who, when a limit is for sale are most eager and active buyers, and gain hold of the limit either to hold it themselves for an advance or simply act the part of middleman or agent for another, who for purposes but known to themselves do not care to enter into public competition. The amount of rise in the ground rents do not amount to much for men who work their limits, but it does amount to a good deal to men who are simply holding the limits for speculative purposes, for then the rise is just so much more to pay without any return. The result of this will be to make it much easier for those lumbermen working their limits to purchase those held on speculation, as it will no longer pay for speculators to hold limits for any considerable time. In the matter of the rise in the ground rent the Chaudiere men do not make any strong objections, but they are a unit on one point, the Ontario Crown dues are excessive, three quarters of a cent on square timber and 25 cents per thousand put on sawlog board measure. This increase looks trifling at first appearance but it is anything but trifling. With J. R. Booth, Perley & Pattee, Bronson & Weston it means $20,000 a year each. As a result of the increase of ground rent some of the lumbermen say that they will relinquish possession of some claims on the Gatineau and in case they do this land will be thrown open for settlement. On the whole, although the Crown dues are a little excessive, the rise in the ground rent will have one good effect. It will banish the dog in the manger, lumbermen who only hold what might otherwise be profitably worked that he might make a haul out of the exigencies of the trade.

One thing is now forcing its attention upon men engaged in the trade and that is there is not sufficient officials to prevent forest fires, and fires will be destructive until this adequate protection is extended. For the whole Upper Ottawa forests, which is thousands of miles in extent, there are only about half a dozen men employed, whose duty it is to look after the setting out of fires. How in the name of common sense is this handful of men going to prevent the putting out of forest fires? Now as I write, extensive fires are raging on the Dumoine river, on Black river and on the Schyan, and tens of thousands of dollars worth of valuable lumber is being destroyed. It is an old saying, but its truth is not spoiled by age, that the fire has destroyed more than the axe, and this truth is repeating itself every day. This spring has been remarkable for having no rain so far and the waste material in the bush is in a very inflammable state. Hunters, drivers and others who perambulate through the woods have to eat, and in order to eat they must cook, and in order to cook they must make a fire. When the repast is over they go about their business but leave behind them the neuclus of a devastation. The governments of both Ontario and Quebec make a big blunder when they do not increase their staff of bush rangers and see to it that they do their duty. Enough of valuable timber has been destroyed in the Upper Ottawa region this spring to pay the salaries of a thousand men. One man cannot cover hundreds of miles of territory. He cannot be ubiquitous. Therefore I say it is false economy having only a few men to do the work of a hundred. They cannot do it and the country suffers in one of its chief wealth producing resources. Wise administrations would look after a matter of such importance. Fortunately, the weather has been calm and that in itself confined the fires, but should a heavy wind set in now and no rain come, hundreds of miles of valuable timber will be laid waste. Last week a jobber on Black River for J. R. Booth had a shanty burned and all the rigging and stores that it contained for next winter's use burned with it.

The water in several of the lesser streams has gone down within the last week very rapidly and fears are some of the log drives on these lesser streams will be stuck unless rain comes to replenish the fast diminishing water. On the larger streams, however, their has been high water and it still maintains a good pitch, and no fears are entertained but that logs drawn on such will come out all right.

Messrs. Klock Bros., of Klock's Mills, are shipping by rail 65 cribs of square lumber to the Quebec market. It will be railed to Papineauville, there dumped into the Ottawa, rafted and floated to Quebec.

NEW BRUNSWICK.

From our own Correspondent.

THE Maritime Bank failure has ceased to cause so much excitement as in the first days of the disclosures of the means by which the shareholders and depositors were defrauded of their money, and as permanent liquidators have been appointed the winding up of this unfortunate institution will now be proceeded with in proper and legal form.

The Messrs. Stewart's have succeeded in earning for themselves an unenviable notoriety, and certainly the senior member of this prominent concern must be remarkably thin skinned, for I hear of his having entered suits for libel against this and that newspaper, that has dared to lift up its voice, and voice the popular idea as to the strange methods of business adopted by the gentleman mentioned. I sincerely hope the CANADA LUMBERMAN will not fall under the ban, or excite the ire of this timber king.

We have had a very strange season, so far, in our section. No rains in the upland district, and in the low-lying sections of the St. John river there has been a regular flood. The telegraph has doubtless informed your readers of the vast extent of this unprecedented freshet, and of the enormous amount of damage occasioned by the overflowing waters. Other sections of the country are very much in need of rain, although it is certainly a great mercy that we have had none lately, for, had we been visited by our usual spring rains, the damage caused by the waters of the St. John and its tributaries would have been almost incalculable.

Lumber remains very quiet, indeed as far as the English market is concerned, it is dull to the extreme. The latest reports from London and Liverpool are to the effect that while the consumption since the first of the year has been fair, the stock is lighter than for many years, and the import much less than for a long time, still there is no life in the market. Prices still remain at a very low figure, and dealers will not put in stock but simply buy from hand to mouth. All this is very discouraging to manufacturers and shippers on this side of the water, who were in hopes that this season would open with something near remunerative prices for our great staple.

The American market on the other hand seems to present a brighter and more buoyant appearance, and prices there opened well and still maintain a good position. Laths are selling well in New York at this writing, bringing $2.50 per thousand, and in the Boston market and at the Sound ports, clear boards and good random cargoes command paying prices. It is to be hoped for the sake of the coasting trade of these lower Provinces that no friction will occur between the Dominion Government and that of the United States, causing the enforcement of the Non-Intercourse Bill; for there is no denying the fact that were this bill to come into operation very serious fanancial trouble would follow in this and other maritime localities; perhaps I may be somewhat pessimistic in my views on this matter, but I know what a large industry our coasting trade with the United States is, and I would be sorry indeed to have any action on the part of our own government place this industry in any jeopardy. I trust that no trouble may arise, and I am inclined to think from recent action on the part of the Government that calmer counsels have prevailed and that peace and good will between neighbors will be maintained.

MADAWASKA, N.B., May 25th, 1887.

To the Editor of the Canada Lumberman.

DEAR SIR,—Your valuable journal deserves the greatest of credit for the interest taken to stir up and show the fraud practised by allowing Americans to slaughter our forests and use it as if it were their own.

At the eleventh hour Dame Rumor says that the export duty on raw lumber is about to be exacted on the head waters of the River St. John, whereas if it had been put in force years ago Brother Jonathan and New Brunswick capitalists never would have laid out a hundred thousand dollars on the American side to manufacture the lumber they have taken out of our forests for years back.

The American duty saved by floating our lumber on their side, and there manufactured, was equal to allowing Americans a premium of $3 per M. superficial feet on all the cedar they have robbed our forest out of, besides reaping the benefit of manufacturing the same.

Our politicians pay too little attention to protect the small channels of our resources, which swell up the large ones, and the sooner they learn to protect all the small feeders leading to our Treasury the sooner our revenue will be able to stand the heavy drain public demand makes on it daily.

Some say it s only a make believe, and others say its the intention to make American's pay all back export duty on lumber they have robbed and stole away. No doubt the latter would be harsh and not doing as we would wish be done by, as we failed in our duty to enforce the tariff in time, before New Brunswick and American capital built mills on the American side to manufacture our lumber, but, on the other hand, they had to run their own risk of getting clear of paying.

We can blame our local Parliament more than the Dominion for it's the former's duty to see that our Province resources are not tampered with by Americans. But capitalists and monopolist carry the N. B. House of Assembly in one pocket, and the Legislative Council in the other, and if I am called on to show it, I shall do so with pleasure, by referring to acts they endorsed, now disgracing our statutes.

It is already rumoured that by the enforcement of the export duty new shingle mills will be in operation this summer. All we want is a fair deal with foreigners to manufacture our lumber. Place us on an equal footing with them, to manufacture our own lumber, by exacting an export equal to their import, and we ask no favours, but to do as we have been doing, giving Americans $3 per M. feet of a premium over us to slaughter and manufacture our lumber, no wonder us New Brunswickers have to leave the country daily to seek a living abroad.

Next month we will know more about the new energy the export duty will create.

Respectfuly yours,

O. P. BYRAM.

THE QUEBEC TIMBER COMPANY, LIMITED.

The report of the Quebec Timber Company, Limited, to be submitted to the annual meeting on the 4th inst., is as under:—

The balance-sheet and revenue account for the year ending 31st December, 1886, with the auditor's report, are herewith submitted.

The Quebec accounts have been audited and certified as correct by Mr. William Walker, the Canadian auditor.

The revenue accounts for the year 1885 showed a profit of £2,232 18s 1d., and it was expected that the profit for 1886 would have largely exceeded that sum.

A large quantity of logs had been got out, and a sale had been arranged at remunerative prices. Owing, however, to an exceptionally dry season, and conscquent scarcity of water in the rivers, comparatively few of the logs reached the mills.

In the annexed revenue account credit has been taken for a sum of £11,700 8s. 2d., as the cost of the logs got out and in the rivers at 31st December, 1886, and the same sum appears in the balance-sheet as an asset. The logs are all so situated that it is confidently expected they will reach the mills shortly after the rivers open this spring. There is every reason to believe that a considerable profit will be realized by their sale.

The directors have arranged for remittances from Canada to meet the interest due to the company's creditors at Whitsunday, and they hope, at or prior to the term of Martinmas, to receive remittances from Canada which will enable them considerably to reduce the indebtedness of the company, and to meet the interest due at Martinmas.

The manager of the company has been in this country for a few weeks, but he has returned to Quebec, in order to have everything ready at the mills for the arrival of the logs in April.

One of the directors Mr. James Tait, retires by rotation. Mr. Moncrieff and Mr. Walker, the auditors, also retire, and their reappointment is recommended.

THE NEWS.

ONTARIO.

—A steam saw mill has lately been fitted up in Owen Sound.

—Mr. A. Oetzel is building a new planing mill at Waterloo, Ontario.

—Mr. R. B. Armstrong is talking about erecting a large shingle mill at Parry Sound.

—One of A. Caldwell & Co.'s men was drowned in the first drive of lumber on the Clyde.

—The fires in the pineries along the Central Ontario Railway are still burning furiously.

—The Cedar Mill at Deseronto is now in full blast and everything points to a busy season.

—The Longford Lumber Company's new shingle mill near Orillia, is now running at full capacity.

—Park's new planing mill at Stouffville, Ont., is in operation and employs a large gang of men.

—The L'Original saw mills have already closed down, having sawed up all the logs and timber on hand.

—The firm of Waft & Carr, planing mill proprietors, Wingham, has been succeeded by Watt & Little.

—James Bemrock has been admitted as a partner to the firm of Scrimgeour Bros., sash and door manufacturers, Stratford.

—Mr. John Knight's mill at Hobart has commenced operations, and will cut about 3½ million feet of logs this season.

—Mr. Joseph Maunder has placed a new twenty-five horse power boiler in his planing and shingle mill at Little Britton, Ontario.

—Some of the drives on the creeks and smaller streams of the Upper Ottawa have commenced and high water is anticipated.

—A meeting of creditors has been called to consider the affairs of Wm. Latch, wholesale lumber merchant of Toronto, who is in difficulties.

—The lumbermen at the Chaudiere have now begun running full blast night and day, and if the logs hold out will continue to do so from now out.

—Mr. A. Wing is running the Lynden, Ont., saw mill full blast on custom and bill lumber. He intends shipping principally to Brantford this summer.

—The Rathbun Company's mill at Campbellford has resumed work. New coal and lumber sheds will be built on their property in that town.

—The different saw mills on the Penetanguishene bay are being put in trim for an early start. A big cut will be made here during the ensuing season.

—Booth and Gordon's saw log drive on Indian river has been in progress for some time. The first of the drive reached Pembroke about the tenth of May.

—Mr. O. J. Phelps, lumberman, member for West Simcoe in the Local Legislature, is, it is said, likely to be made sheriff of Lincoln. He formerly lived in Merritton.

—The steam barge Kincardine has been bought by P. C. & J. J. Pearson, and will be used with the schooner Phœbe Catharine in the Georgian Bay lumber trade.

—No definite approximate idea can yet be obtained of the total log cut of the Ottawa river and its tributaries, but 600,000,000 feet is the figure generally put down.

—Mr. George Smith, contractor, with a large gang of men is busy at the foundation of the new building for the Terra Cotta Lumber Company's works at Deseronto.

—Amongst others who will use the railway to facilitate shipment will be Timmins and Gorman, who have this season made a large timber cut on the Whanapitee river.

—Shipments of square timber by the C.P.R. to Papineauville will shortly begin. The timber will be dumped off at Papineauville, and there rafted for he Quebec market.

—A new tug has been built by the Owen Sound Dry Dock Company for the Michael's Bay Lumber Co. She is strongly built, well fitted up, and will be known by the name of *Rover*.

—Bronson & Weston's saw log drive on the Schyan is in full blast. The number of logs made by the firm on this stream this year will about equal last season, but the quality will be superior.

—The Manotick mills are again running, after being closed for some time on account of the spring floods, during which time the mill hands were busily engaged in fitting up for a good summer work.

—Large quantities of saw logs are now being shipped over Mr. J. R. Booth's Nosbousing Railway between Nipissing and Norbousing lake. Thence they go by water to the mouth of the Mattawa River.

—Messrs. Bronson & Weston, of Ottawa, have engaged a gang of men employed at their lumber yards at the Deep Cut, completing the lines of tramway over the entire yard which were commenced last summer.

—The saw mill belonging to the estate of Henry Bros., Randwick, Ont., was recently sold for $1,800 to Mr. J. B. Smith, of Toronto, who will remove the machinery to North Bay where he has timber limits.

—A correspondent writing from Wickham says that the mills thereabouts are now nearly all running, but the usual cut will be reduced about one-quarter owing to the deep snow of last winter and the prevailing low prices.

—Messrs. McArthur & Thompson, of Fenelon Falls, who have been heavy buyers of timber of various descriptions in the back country during the past winter, have already got their drive of logs under way of their mills at Fenelon.

—Stratford *Beacon*: Mr. Peter Megan has taken the contract to cut logs for Mr. Corcoran at Beaver Creek, about 90 miles northeast of Selkirk, on Lake Winnipeg. He expects the contract—about five million feet—will occupy about two years.

—The new iron steam boat built at Pembroke last winter for the Upper Ottawa Towing Co. has been launched. The steamer has been christened the "G. B. Pattee," which does not look quite so handy as the boat herself, but we suppose will do.

—Fifteen doors, fine specimens of workmanship, were shipped from the Rathbun Company's door factory recently for Manchester, England, where they will be placed on view at the great Queen's Jubilee Exhibition to be held in that city during the coming summer.

—The Upper Ottawa Improvement Co. have submitted to the Government their tariff of rates for the ensuing year. It is understood that the rates this season for towing and passing timber through the company's works on the Upper Ottawa River will be considerably lower than last year.

—The great mill of Gilmour & Co., Trenton, Ont., is capable of cutting 350,000 feet of lumber in ten hours. The mill turns out 50,000 feet of ordered stuff for builders every day. The shingle mill attached cuts 125,000 daily. The planing mill has a daily capacity for 80,000 feet of lumber.

—The ice in going out of the lake broke the boom at Thistle & Co.'s mill, Pembroke, and some three or four thousand logs escaped. The logs were carried over the rapids but were caught by a boom lower down. They will be disposed of by Thistle & Co. to other lumbermen farther down the river.

—"The Longford Relief Association" is the name of a society lately organized by the employes of the Longford Lumber Co. Its object is to extend a helping hand and relieve all members, who from sickness or other misfortune may require pecuniary or medical aid. The idea is a good one and should be adopted elsewhere.

—The mill of the Conger Lumber Co., at Parry Sound, commenced the season's operations the same date as last year. The mill of the Parry Sound Lumber Co. has also commenced cutting. The Midland and North Shore Lumber Co's mill will commence about the first of June. Prospects for the season are reported as encouraging.

—The Fawkham correspondent of the Orillia *Packet* says: This place has at last settled down to the usual bustle of its milling activity, and by the appearance of the large stock which Trenouth Bros. have boomed in the river it promises to be a busy season for them at least. They have started their shingle mill and are doing good work for the outset.

—A serious accident occurred a few days since to the workmen employed building the Ontario Lumber Company's new mill at Midland. The scaffold fell, throwing Thos. Gowan, Baker, and a young man named Hawkins to the ground. The former two fell on their heads and Gowan is dangerously injured. Baker is also seriously hurt, but will recover. Gowan's recovery is doubtful.

—Bush fires have been raging in the timber limits along the Mississippi and Clyde rivers. The hands at A. Caldwell & Son's mill, Clyde Forks, had to remain up all night to prevent the building from being destroyed. The fire swept over the trees to the river's edge, and only the water intervening saved the property. This is a bad season for fires, as the leaves have not appeared, and every wood is dry and partially dead. It is said that Edwards & Co. will be severe losers.

—Mr. O. E. Comstock, of Arnprior, is reported as saying that the past season has been very unprofitable to the lumbermen. The snow has been so deep that it was impossible to get the logs out and many thousand feet of valuable timber will lie in the woods all the summer, simply because it could not be moved. Many of the lumbermen who had engaged their men by the week sent them home early in the season. The loss will amount to a good round figure, and many of the lumbermen will be almost stranded.

—Within the corporate limits of the town of Trenton a substantial dam has lately been built at a cost of $70,000, Gilmour & Co., lumbermen, and the town, each expending half that sum. The dam gives a head of 17 feet. The corporation intends to utilize a portion of the power for water works, and will offer the rest to manufacturers on advantageous terms to locate there and establish various industries.

—The estimate of square timber made in the Nipissing and Ottawa districts during the past season is, white pine 530,000 feet, waney white pine 355,000 feet, red pine 485,000 feet; total 1,370,000 feet. The export of Canadian timber to Michigan is expected to be heavy this year. From the Nipissing district it is computed that about 75,000 standards of logs will go into Michigan. The district lumbermen unite in protesting against the increase made by the Quebec Government in the ground rents of timber lands. They claim the new rents to be exorbitant. It is said to be their intention to strip the timber from the areas in Quebec in as brief a space as possible in order that they may thus cease to pay the increase.

—In the afternoon of May 11th, a serious fire broke out in the lath mill of Perley & Pattee, at Ottawa, which at one time threatened to be a very serious conflagration. By the timely arrival of the city fire brigade, however, and a favorable wind, the flames were confined to the building in which the fire originated, which was in a very short space of time reduced to ashes. The fire raged with great fury and the large mill belonging to Perley & Pattee as well as Mr. J. R. Booth's mill was at one time in great danger. The fire originated amongst some tar rope in the store room. The loss is estimated at about $15.000. The burned mill was nearly new, being only erected a few years ago. It was insured.

—The improvements going on at Messrs. Train & Son's saw mill at Burk's Falls, are advancing towards completion. The two Leffel Wheels have been set in the bulkhead which is compact and strongly built. The change of location of the Leffel's to the middle of the building and directly under the saw, gives an increased power and a saving of time in the work. The flume has been extended to accommodate the new order of things and also adds to the motive power of the mill. They are getting in the timbers and preparing for the machinery which is now here and on the way. A large number of logs are already at the mill awaiting the starting up, among them are a fine lot of hardwood logs for Messrs. Knight Bros.

—During the winter Mr. James Agret and Geo. Campbell have had a quantity of white pine timber take out in the vicinity of Ragged Chute, on the Quyon river. In the cut was one tree which is certainly deserving of note, says the *Equity*. It stood on the property of U. Keeler, near the bank of the stream, and was a well-known monarch of the forest. Mr. Wm. Somerville, of Shawville, having been sent off 20 years ago to purchase it. Unfortunately when cut down last winter, the tree broke off 37 feet from the stump, and again at 55 feet; this middle section (18 feet) of the tree was shattered to atoms, and rendered useless, but the remaining sections were manufactured into blocks of timber of the following dimensions: Butt—37x37 inches, feet long. Top—20x30 inches, 22 feet long. This tree is said to have been the largest on the Ottawa.

With the breaking up of the in Deschennes Lake, one of the large cakes struck the reserve boom at Thompson's Bay and broke it. The ice passed out again and went on towards the falls near the Chaudiere. It again took a swerve and struck the boom where some 40,000 reserve logs belonging to the Upper Ottawa Improvement Company were stored and broke it in two places. The boom immediately opened and some 5,000 logs at the outside calculation, escaped and passed over the falls. The logs which escaped will be collected by men all along the river and handed over to the Lower Ottawa Boom Co., and stored at their reserve boom near Carillon. Mr. Green of the Upper Ottawa Improvement Company states that the ice on the Deschennes lake this spring was the heaviest and firmest since the year 1876, when the whole of the Chaudiere was flooded.

—The steamer Kincardine, which arrived in the port of Owen Sound, recently, lumber laden from Dyer's Bay, brings the news of a terrible ride a young fellow had at Lymburne's mill. The mill is built on the shore of the Georgian Bay, at the base of a hill which rises perpendicularly at its back to a height of some 300 feet. Down this hill runs a chute connecting the waters of a spring lake on the top of the hill with those of the Georgian Bay. This shute is used for running logs from the mountain lake to the bay below, and down which they plunge with terrible swiftness, the angle of descension being fully 45 degrees. The young fellow at the time of the accident was stationed at the mouth of the chute starting logs on their mad race, when he slipped, and, falling into the swift-running water was carried with a mass of logs down the fearful course of the chute to the lake below, where he was picked up almost dead. His injuries are so severe that he cannot recover.

—McDonald's planing mill at Oakville, Ont., was burned on May 18th. Loss, $3000 ; partly insured.

—Mr. J. H. Bowman, of Dundas, is erecting an addition to his planing factory, in which to manufacture furniture.

—The Dominion Terra Cotta Lumber Co., Deseronto, have applied for incorporation. The capital of this company will be $200,000.

—The large planing mill belonging to W. H. Baldwin & Co., Ottawa, had a narrow escape from destruction by fire on May 13th. The bursting of a coal oil lamp was the cause. Damage very slight.

—Mr. Harvey Francis, of the firm of Francis, Carswell & Co., lumbermen of Calabogie, Ont., has severed his connection with that firm. His successor in business is Mr. E. McKay, of Renfrew.

—Extensive repairs have taken place on the upper reaches of the Madawaska and the dams repaired between the High Falls and Arnprior. The slide at Arnprior has also been attended to.

—The slides, piers and boom at Des Joachim have been carefully looked after, considerable improvements have been put on the South Chaudiere slides and also to the piers. The aprons of the slides have been replaced.

—The river improvements this year have been extensive. At the Roche Captaine the slides have been repaired as well as the slide piers and the same done to the mountain slide at Portage du Fort. The long slide on the Coulonge has also received attention as well as the booms at the mouth of Black River. The slides near the mouth of the Pettewawa have been repaired and the aprons replaced and the boom at the mouth strengthened.

—The men engaged at Chew Bros. mill at Midland having made up their minds that ten hours was sufficient to constitute a day's work, asked that they be allowed to go on at seven instead of six o'clock. Not getting a satisfactory answer immediately they went out on strike, resulting in the shutting down of the mill for a few hours only, as enough of the men went back to work to allow of the mill running as usual. The proprietors say that if the other mills are willing to adopt the ten hour system they will do the same.

—The lumbermen and the City of Belleville, through the Harbor Committee, have arrived at an amicable understanding as to the terms of the new agreement, re harbor tolls. The Harbor Committee have reported the following as the text of the agreement entered into for the next five years, and recommend that the Solicitor be authorized to draw an agreement as follows :—That $100 be allowed the lumbermen annually for swinging the booms. That a reduction of 1-16 of a cent be made on saw logs. That up to 12½ per cent. be allowed for repairs and renewals. That the city put in piers.

—The Upper Ottawa Towing Company are making active preparations for the season's work. Tugs Hirman Robinson and Bronson, and the Str. C. O'Keley will manage the "pull" between Pembroke and Des Joachim. The two former will ply between the Des Joachim boom and Fort William boom, while the latter will handle the logs between Fort William and the head of Allumette rapids. In the lower Allumette lake the company will place a new iron boat which is now being finished at Pembroke. The boats will ply night and day during the towing season. Operations in this line will, it is expected, be later this season than it has been since 1884.

—A large number of lumbermen were present at Coate & Co's auction rooms in the city of Toronto, on April 28th, when the executors of the estate of the late R. C. Smith, of Port Hope, offered for sale the timber limits and saw mills owned by the deceased. Parcel 1—On the White Fish River, Georgian Bay, area 36 square miles. Parcel 2—situate on the White Fish River, Georgian Bay, area 27 square miles, were disposed of by private sale to a gentleman representing a syndicate of Michigan lumbermen. Parcel 3—Dominion Government Indian Reserve, No. 8, situated at the mouth of White Fish river, Georgian Bay, area 14 square miles, was withdrawn at $3,900. Four lots in the township of Sherbourne, estimated to produce 7,000,000 of merchantable timber went to Joseph Adams for $19,000. Six lots in the township of Stanhope, watered by streams tributary to the Gull river waters, all of which are navigable for saw logs and timber, and within 30 to 35 miles of stations on the Victoria Railway, with an area of 25¼ sq. miles, were not sold, the highest bid, which was $57,100, falling short of the reserve. Bidding on this lot started at $5,000. Messrs. M. Boyd & Co., Bobcaygeon, by private sale secured 16 lots in the township of Glamorgan. The price paid was not made public. Three parcels in the township of Lutterworth were offered but withdrawn at $2,500. A bid of $2,100 secured the transfer of two lots in Monmouth township to Sadler, Dundas & Co., of Lindsay. Nine sections in Sherbourne and Digby townships were withdrawn at $26,500, re-offered and again withdrawn at $27,500.

QUEBEC.

—Large bush fires are in progress northeast of Quebec.

—W. J. Brown's large lumber yard, at Quebec, was destroyed by fire on the 14th May.

—The offices being erected at the Chaudiere by Messrs. Hurdman & Co. are fast approaching completion.

—The saw mill at Island Brook, belonging to G. W. French, was burned recently. Loss, $2,200 ; insurance, $1,000.

—Messrs. W. J. Hunt and John B. Paddon, have purchased the Wilson farm and saw mill at Milby, Que., for $4,000.

Messrs. McNevin & Co's saw mill was completely inundated during the recent Montreal floods, and $2,000 worth of timber floated away.

—The Quebec *Chronicle* notes that large quantities of square timber, round maple, firewood and other lumber are now coming into the city daily over the Lake St. John Railway.

—Messrs. Gilmour & Co. have given Father Paradis permission to cut on their limits 600 pine logs, to be used in the construction of a new church at Ste. Philomene de Montcerf.

—It is stated that pine deals in the province of Quebec and elsewhere are likely to be much under last years, heavy sales having been made for the United States markets at high prices, and there are prospects of still further considerable sales for the latter market, which is in exceptionally good condition.

—The principal timber on which crown dues were paid during the last fiscal year, in the Province of Quebec, was as follows :—Saw logs, 861,339 white pine 17 in. and over ; do. 1,325,759 under 17 inches. Spruce, 1,038,957 ; hardwood, 491 ; ash, hemlock and tamarac, 9,190—all logs ; boom timber, 9,037 pieces ; firewood, about 8,000 cords ; shingles, 6,833 M. ; railway ties and sleepers, 123,946 ; and some smaller items. The dues paid by timber men amounted to $411,220, ground rents $100,548. The timber manufactured in the province in 1884-5 was ; saw logs, pine, 2,187,098 ; Spruce, 1,038,957 ; square timber, white and red pine, 6,148, pcs., 222,552 ft., (a vast shrinkage from 111,529 pcs. and 5,453,890 ft. in 1875-6 ;) birch elm and maples, 5,784 pcs. or 148,526 ft., (a shrinkage from 36,595 pcs. or 913,713 ft. in 1874-5) ; small tamarac, pine, spruce, boom timber and flat timber, 14,650 pcs. or 603,012 lineal feet, (a shrinkage from 25,952 pcs, or 4,849,402 lineal feet in 1882-3); knees, buttocks, ties, pickets, etc., 155,587 pieces, or less than one third of 1881-2 ; firewood, lathwood, bark, etc., 12,699 cords, or less than half of 1883-4. The totals of dues, ground rents, bonus, interest and fines collected since Confederation are as follows :—

1866-67	$ 95,115	1876-77	$351,323
1867-68	331,751	1877-78	314,880
1868-69	362,868	1878-79	342,881
1869-70	406,480	1879-80	543,518
1870-71	444,752	1880-81	668,596
1871-72	518,682	1881-82	684,743
1872-73	527,976	1882-83	660,757
1873-74	532,734	1883-84	530,115

NEW BRUNSWICK.

—Business men in Sackville, N. B., are consulting as to the establishment of a wood-working factory at that point.

—Ritchie's mill and the Hickson mill at Newcastle have commenced operations. Both have undergone extensive improvements this spring.

—Messrs. B. Toombs & Co., Moncton, N. B., have six ship loads of pulp wood and 30,000 railroad cross-ties ready for shipment, the most of which will go to Philadelphia.

—Upwards of six million feet of lumber is reported to have floated through the Fredericton Bridge one day recently. Some of the logs came all the way from Madawaska.

—Last winter's crop of logs at Sackville, N. B., is numbered by the *Chignecto Post* at 437,500. At Joggin's store the quantity got out was 23,000,000 feet, 36,500 pieces piling and 500 cords of pulp wood. The latter will be shipped to Providence, R. I., for paper making. The *Post* says that a greater amount of logging was done last season than in any previous year.

MANITOBA AND THE NORTH-WEST.

—The Selkirk Lumber Company, of Manitoba, have the largest cut of any on the lake, about 60,000 logs.

—Wyatt & Co. are thinking of establishing a sash and door factory in connection with their lumber yard at Virden, Man.

—Major Walker, of Calgary, will open a branch lumber yard at Banff, which will be supplied from his mill at Kananaskis.

—Howell & Scarry have about finished a contract for cutting 50,000 ties, at Black Island, in Lake Winnipeg, for the Hudson Bay railway.

The Eau Clair Milling Co. are building an immense saw mill on the Bow River, and are anticipating a healthy business as soon as it gets in operation

R. & J. Watson have purchased the planing mill property at Portage la Prairie, which has been idle for some time, and will put it in shape for beginning operations.

The Keewatin Lumber Company intend opening up a yard at Winnipeg, under the management of Mr. R. E. Souter. That gentleman will be succeeded at Keewatin by Andrew McNeil, of Vermillion Bay.

—At Chatham, N.B., on May 12th, J. B. Snowball's locomotive shops, blacksmith shop and 50,000 feet of lumber was destroyed by fire. Loss, partly covered in Greenwich Insurance Co., of New York, and Sun, of London.

—A deputation of the Calgary Board of Trade waited on Supt. Whyte of the Canadian Pacific Railway the other day in regard to freight rates on lumber, and asked for a reduction of the now practically prohibitory rates from the west. An exchange says that he agreed with the deputation and said that he would endeavour to have the rates reduced.

—Application is made by the Moore & Macdowall Lumbering Company (limited) for an act of incorporation empowering them to purchase and hold timber limits and to transact a general lumber business. The capital stock is $200,000. The chief place of business is Prince Albert settlement, and the incorporators are Messrs. H. S. Moore, Prince Albert ; Day Hoyt McDonald, Prince Albert ; A. Lewden, Prince Albert ; R. Blanchard, Winnipeg ; A. Waldo and F. Newby, Ottawa, Ont.

—The Winnipeg *Free Press* says:—British Columbia lumber is taking quite a hold in the city and is becoming a prime favorite with carpenters and cabinet makers for certain classes of work. Large quantities of pine and cedar are being imported and the trade gives promise of developing into quite a business. Its advantage over our local timber is that much larger boards can be obtained. For instance a consignment to hand the other day contained a board three feet broad and sixteen long without a flaw or knot in it.

—The saw mill owners at Keewatin, believing that they were paying more taxes than they should, got up a petition to the Government, asking that Keewatin be declared a separate municipality. The Rat Portage people objected strongly to the withdrawal of the mill men from the municipality, and a deputation was sent to Toronto to look after the interests of the council. The matter has been compromised by the Rat Portage council agreeing to exempt logs and lumber from taxation ; remit one-half of taxes on mill building, plant, etc., except school rates ; and exempt all mill property from any debenture by-laws which may in future be passed by the majority of the people in the western part of the municipality. The arrangement will apply to all mill property in the township of Rat Portage.

—Application has been made to the Dominion Parliament for incorporation of a company under the name of "Moore & Macdowall, (Limited)." Incorporation is sought for the purposes of purchasing and holding and selling timber lands and other lands, in fee or otherwise, and also timber and timber limits by lease, license or otherwise, and for the manufacture and purchase and sale of saw logs, timber and lumber, and the carrying on of the business of lumbering in all its branches, including the building of dams, piers, docks and timber slides, and the making of improvements in the channels of rivers ; also the erecting or acquiring by purchase, lease or otherwise of sawmills, planing mills and other mills for the manufacture of doors sashes and any other articles of which wood shall form a component part ; also the building and opening of grist mills and flour mills and the carrying on of all business incident thereto or usually connected therewith, with power to purchase and sell and deal in grain and flour and breadstuffs generally. Also the building, acquiring, owning, chartering, navigating and using steam and other vessels and craft and other works and means of transport necessary or convenient for carrying on the operations of the company generally, all within the Dominion of Canada. The chief place of business of the company is to be situated in Prince Albert Settlement in the District of Saskatchewan. The capital stock of the company is to be $200,000, divided into 4,000 shares of fifty dollars each. The names in full of the applicants and their addresses and calling are as follows :—Henry Stewart Moore, of Prince Albert, Lumberman ; Day Hort Macdowall, of the same place, Lumberman ; Alexander Loudoun, of the same place, Lumberman ; Robert Blanchard, of the City of Winnipeg, in the Province of Manitoba, Doctor of Medicine ; Edward Waldo, of the City of Ottawa, in the Province of Ontario, Insurance Agent, and Frank Newby, of the said City of Ottawa, clerk in the Civil Service of Canada, who will be the first or provisional directors of said company, and all of whom are resident in Canada.

The Canada Lumberman

DEVOTED TO THE LUMBER AND WOOD WORKING INTERESTS OF THE DOMINION.

PUBLISHED MONTHLY BY

A. G. MORTIMER, PETERBOROUGH, ONT.

Terms of Subscription :

One copy, one year, in advance $1 00
One copy, six months, in advance 0 50

Advertising rates furnished on application.

All communications, orders and remittances should be addressed and made payable to A. G. MORTIMER, Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

Advertisements intended for insertion in any particular issue should reach the office of publication at least six clear days before the day of publication, to insure insertion.

The CANADA LUMBERMAN is filed at the Offices of MESSRS SAMUEL DEACON & Co., 154 Leadenhall Street, London, England, who also receive advertisements and subscriptions for this paper.

PETERBOROUGH, ONT., JUNE, 1887.

EDITORIAL COMMENT.

WE are indebted to the courtesy of the New York *Lumber Trade Journal* for a copy of the New York Inspection Rules for the inspection of hardwoods adopted by the Lumber Trade Association of that city on April 12th last. It is gotten up in pamphlet form, and will prove handy for reference.

* * *

THE CANADA LUMBERMAN published monthly by A. G. Mortimer, Peterborough, Ont., and the only paper devoted to the trade in the Dominion, has issued its first annual special edition in new type and on fine paper. The LUMBERMAN is full of interesting and valuable information and must be read with extreme satisfaction by Canadian dealers in the products of the forest. Moreover, it is well printed. We wish it continued prosperity.—*Kingston News.*

* * *

THE request of manufacturers of barrels and staves that an export duty should be imposed upon elm logs should receive the favorable consideration of the Finance Minister, as no doubt it will. It is but carrying out the principle of the increased duty upon saw logs last year and the duty placed upon shingle bolts in the present season. There is no reason why manufacturers in the United States should be privileged to obtain elm logs from Canada free of duty, while they have the benefit of a protective duty. Countervailing protection is due to our own manufacturers and mechanics in order to do them justice. Such is the policy we have adopted, and there is no good reason why an exception should be made in this case.

* * *

NOTWITHSTANDING the present export duty on logs entering the United States, it is computed that fully 75,000 standards will leave the Nipissing District this season to be manufactured across the border. Instead of the export decreasing under the lately imposed duty, a considerable increase is perceptible, which is being brought about principally by the depletion of the Michigan forests. THE LUMBERMAN agrees with the many Canadian lumbermen who are advocating a further increase in the duty, in order to prevent our native woods being slaughtered for the benefit of foreign manufacturers. If Americans refuse to build mills in this country and employ Canadian labor, they should be made to pay handsomely for the privilege of manufacturing our logs on the other side. It is hoped that the Dominion Government will take further action in this matter before the close of the present session.

* * *

THE newly announced tariff changes include the following : "Export duty on shingle bolts of pine or cedar and cedar logs capable of being made into shingle bolts, $1.50 per cord of 128 cubic feet," This is not as important a provision as those of last year increasing the export duties on pine and spruce saw logs, but it is a further step in the same right direction. It is also satisfactory as showing that the attention of the administration is still directed to this matter, and steps will be taken to enforce the law. It would manifestly be an absurdity to extend this principle unless it were determined to carry out its application more thoroughly than in the past, when the small amount received from these duties showed that payment must have been evaded in some cases. The protection of our own industries, instead of letting our forests be stript for the profit of foreign mill-owners, is certainly a salutary principle, and one that should be vigorously enforced.

NOW that the Parliament of Canada is sitting, we would again urge upon the Dominion authorities the propriety of making adequate provision for the enforcement of the export duty on saw logs, which was wisely augmented last session. Our friends in the United States are evidently preparing to supply their saw mills more largely with saw logs from the forests on the waters of Lakes Huron and Superior. If they meet with any success in their operations they are certain to increase them in the future. This we cannot prevent, but we may discourage it, in favour of our own lumbermen and if they are to compete with us in our own forests they should at all events be made to contribute to our revenue. They should not be allowed to escape payment of the dues on any saw logs they may convey across the line and the necessary provision should be made to ensure this. Otherwise the Act will remain a dead letter and it might just as well not have been passed.

* * *

APPENDED to Mr. J. T. Wylde's report on trade relations between Canada and the West Indies are some useful tables from which we take the following suggestive figures. Among the chief articles of import into Jamaica there appear under the head of wood, white pine $95,000, pitch pine $60,000, cypress shingles $26,400, cedar shingles $5,500. The United States exports for the year to the British West Indian Islands contained : Boards, deals, &c., $239,488, shingles $37,685, shooks $169,682, staves and headings $80,483, other lumber $11,883, timber $1,468, manufactures of wood $115,322 : To Cuba the United States sent lumber $229,850, hoops and hop poles $286, 929, shooks $897,307, staves and headings $83,000, empty hogsheads and barrels $263,265, furniture $38,985, other manufactures of wood, $37,000. To Porto Rico they sent : boards, deals &c., $44,661, hoops and hop poles, $27,727, shooks, $157,740, staves and headings $29,693, other lumber $9,893, timber $102, manufactures of wood $12,674. Why should not Canada do a large share of this trade ?

* * *

THE Chicago *Northwestern Lumberman* says :—"It looks as if the Dominion Government had taken an unfair advantage of American stumpage owners in selling them extensive limits, and afterwards putting an export duty on logs, that deprive them of realizing on their investment." We are not aware of the Dominion Government having sold *any* limits to "Americans," and certainly it has not sold *extensive* limits to them. The limits in the Georgian Bay region are the property of the Province of Ontario or of those holding from it, and any purchases must have been made from them. The Dominion Government alone has the right to demand export duties. We are glad to learn from our Chicago contemporary that the export duty has had the desired effect of checking the movement "that had begun to assume important proportions" of Canadian logs to mills in the United States. The wisdom of our policy may seem doubtful to our neighbors, who are not disinterested judges, but our own people are fully convinced of the wisdom of using our natural resources so that the profit of manufacturing them may accrue to Canadians rather than to foreigners.

* * *

PRESIDENT CLEVELAND seems so far to be anything but eager to avail himself of the power given to him by Congress of retaliating against our commerce, for our maintenance of our rights in regard to our fisheries. Neither do the people of the United States seem very anxious to press upon him to take immediate action in the matter. It looks indeed very much as though the Representatives and Senators had been influenced in their course by a spirit of brag combined with political wire-pulling, and that they were more eager to make the threat than to see it carried out. Our lumbermen however should not allow themselves to be lulled into a feeling of security that may prove fallacious. Should any collision occur through our protection of our fisheries, as may well happen, public feeling in the States may be aroused and such pressure may be put upon the President as to force him to act, even though it may be with reluctance. This possibility should therefore be faced, and our lumbermen should prepare themselves to open new channels for disposing of the produce of their mills. The necessity may not arise, but it is well to be ready for it. It may appear to be unlikely ; but we know that some shrewd business men in the United States have prepared for this eventuality, and we may therefore conclude that there is some risk.

* * *

ON another page will be found the report of a meeting held in Montreal during the past month, at which the question of increased timber dues and ground rents was discussed by the leading lumber operators of the country. It was resolved, that the timber trade as recently as the year 1880 assented to a large increase in dues, and for this reason the further increase was considered a gross injustice. It was also resolved by the bankers present that any considerable increase of charges on the trade would so deteriorate the security in timber licenses as to deter the banks from making the necessary advances for the carrying on of the trade. The deputation appointed at the meeting referred to waited on Mr. Mercier and Mr. Garveau, Minister of Crown Lands, urging that the Government re-consider their action. Mr. Mereier in reply stated that it was the fixed policy of the Government to increase the timber rents, as the financial condition of the province demanded it, and for this reasou he could not accede to their request. This decision on the part of the Quebec Legislature will, without doubt, be a crushing blow to the greatest industry of that province. In Quebec at present large areas are unmarketed because it costs too much already to get the timber out. It has been stated by one of the leading operators that lumbermen have not been making money for some years past ; that they have not cut more than a third of their ordinary stock, and this increase will prove disastrous and likely result in bankruptcy to many engaged in large operations. Mr. Mercier's argument that the necessities of the revenue are great is doubtless correct, but if by his present action the leading industry of the province is crippled, we fear he will realize when too late how unwise his present course has been.

* * *

OF very great importance to lumbermen is a measure passed in the last session of the Ontario Legislature to be known as the Saw Logs Driving Act, 1887, which we republish at length for the information of our readers. No doubt it was framed and enacted with a desire to benefit the trade, to prevent inconvenient delays, to obviate disputes and to afford a means of adjusting them fairly and equitably should they arise. Whether it will have the intended result is far less certain. It cannot be denied that there have been many disputes arising from the unintentional or wilful obstruction of drives by others ahead of them, or from the accidental or deliberate mingling of drives belonging to different owners. It was therefore obviously to be desired that there should be means readily available to remove such evils as far as possible, and to give redress in case of damage being inflicted, But we cannot help fearing that this measure may be found to conduce to disputes, ill-will and litigation. It seems to offer inducements to the reckless, the over-zealous or the litigious to exercise little care in avoiding causes of disagreement, or to show little concilliation in the case of any difficulty. The very fact that hitherto the settlement of such questions was difficult and costly, has had a restraining influence, causing a reluctance to give occasion for dispute and a willingness to adopt any reasonable compromise. The very increase of facilities for trying such questions and for taking action if incommoded, may have a tendency to aggravate the very evil the Act was intended to remedy. We hope however that it may not be so. At all events, now that this Act is the law of the land it should have a fair trial, so that if it is not found to work well in any respect it may be amended next year, or as any weak points may be discovered by practical experience. It would be useless now that the Act is passed to criticise any of the details, which may be left to the test of time and experience of its operation.

* * *

A NUMBER of important changes have taken place among the lumber journals in the United States during the month of May. The Chicago *Lumber Trade Journal* has been sold by Mr. S. D. Morgan, the late proprietor and founder, to a company which is now seeking incorporation. The names of those interested are : Messrs. Geo. W. Hotchkiss, Walter C. Wright, E. S. Hotchkiss, and W. W. Hogle, all of whom are already well known in lumber circles. Following this change comes the suspension of the oldest lumber journal in the United States, the *Lumberman's Gazette*, of Bay City, Mich., which closes its career after an existence of thirty-two years. The subscription list and good-will have been purchased by the proprietors of the progressive and ably conducted *Timberman*, Chicago, which undertakes to supply the news of the Saginaw Valley in a crispy and entertaining style. The *Timberman* has thrown off its baby clothes and become aged so quick that we hardly expect to know it hereafter. However, if it continues to prosper as it has during the past year, we will soon expect to see it standing on the top rail looking down upon its contemporaries, not in the same spirit as does its big city contemporary to-day, but in the happy knowledge of superior skill and enterprise. We wish it all the success possible in its extended field. The last, but not least, of the changes referred to is in the Mississippi Valley *Lumberman and Manufacturer*, the publication of which has been transferred from Mr. Platt B. Walker, to Messrs. J. Newton Nind, Platt B. Walker, jr. Wm. R. Gregory and W. C. Edgar, who are seeking incorporation under the name of the "Lumberman Publishing Company." This journal has been established for about eleven years and has won for itself the good will of the trade and a liberal support. The new proprietors are said to be first-class journalists and thoroughly conversant with the needs of the trade. THE LUMBERMAN extends to the new management its best wishes for the future success of this already valuable publication.

THE AUSTRALIAN TRADE.

THERE has appeared in the *Canada Gazette* since our last issue a despatch from Downing Street regarding the proposed Jubilee International Exhibition to be held this year in Adelaide, the capital of South Australia, which is celebrating its fiftieth year as a colony.

After the Royal Commission, the Colonial proclamation and the list of officers there comes a full detailed classification of the exhibits. Those that are of most special interest for our readers we give as follows :—

DEPARTMENT II.

Section D.—Furniture and Objects of General Use in Constructions and in Dwellings.

Class 217.—Heavy Furniture—Chairs, Tables &c., Suites for Drawing, Dining, aed other Rooms, Chamber Suites, Bedsteads, Office and Library Furniture, Vestibule Furniture, Church Furniture and Decoration.

Class 228.—Manufactured Parts of Buildings—Sash, Blinds, Mantels, Metalwork, &c.

DEPARTMENT V.

Section B.—Machines and Tools for Working Metal, Wood and Stone.

Class 510.—Machines and Tools for Working Wood :—Planing, Sawing, Turning, Veneering, Grooving, Mortising, Tongueing, Cutting, Moulding, Stamping, Carving, Cask-making and Cork-cutting, &c.

" 511.—Machines for direct-acting Steam-sawing, &c.

" 519.—Tools, Implemenss, &c., for working Metal, Wood and Stone, not before enumerated.

DEPARTMENT VI.

Section A.—Arboriculture and Forest Products.

Class 600.—Timber and Trunks of Trees, entire or in transverse Sections, with specimens of Barks, Leaves, Flowers, Seed Vessels, and Seeds, Masts, Spars, Knees, Longitudinal Sections of Trees, Railway Ties, Ship Timber, Lumber roughly sawed as Planks.
Shingles, Laths and Staves, split or sawn.

" 601.—Timber and Lumber prepared in various ways to resist Decay and Combustion, as by injectlon of salts of copper and zinc, &c.

" 602.—Ornamental Woods used in Decorating and for Furniture, as Veneers of Mahogany, Rosewood, Ebony, Walnut, Maple and Madrona, Cedar Huon Pine, Blackwood (*Acacia Melanoxylon*),&c.

" 603.—Dyewoods, Barks, Galls and other Vegetable Substances for Coloring and Tanning.

In the long list there are other classes which might be of some interest to our readers, but we have given the more important. Appended to the classification is the following :—

MEMO.—Should any proposed exhibit be unprovided for in the foregoing classification, entries may be made under the head of "Unenumerated."

As the dates for making applications for space and for receiving articles for exhibition are both now passed, the exhibition being opened on June 20th, to last for six months, this information comes too late for Canadians to avail themselves of it. We publish it, however, because it forcibly draws attention to the existence of a too much neglected market in Australia, and throws some light upon the articles that are there considered of importance.

The advantages of this market for the products of our forest are not sufficiently known, and most certainly are not utilized as they might be. The mainland of Australia possesses a great variety and quantity of hardwoods (very hard indeed most of them are) but of pine and woods of that nature in which Canadian forests are so rich, Australian forests may be said for all practical purposes to be destitute. Consequently for their supply of such material they have to rely upon New Zealand, "Oregon" and "Norway." New Zealand pine is excellent but the supply is not unlimited and there is a large home demand. "Oregon" may be looked upon as a general trade term applicable to importations from the Pacific Coast of North America, including British Columbia, which should be fully as well able to supply the demand as our neighbors in the States. The same remark may partially apply to "Norway," which includes other countries of Northern Europe, and even transhipments from Canada as being of much the same class. There seems no sufficient reason why Eastern Canada should not now do a portion of this trade direct. This is the more feasible as Australia does not require so much rough timber as more highly manufactured goods, and therefor of greater value in proportion to bulk or weight and better able to stand freight charges. As an instance of this the Australian Colonies besides largely consuming sashes, doors, &c., have imported wooden houses ready framed and fitted for erection without the employment of skilled labour upon them. As to their demand for smaller wooden wares, they must be obvious under their peculiar circumstances and we will not now particularize them though they are well worth the attention of the Canadian trade.

There is a great market for Canadian forests products in Australia, and steps should be taken to develop this trade which has hardly been touched hitherto.

HARD ON THE LUMBERMEN.

THE following letter received from the Department of Crown Lands for Ontario explains itself :—

TORONTO, 4th May, 1887.

Editor CANADA LUMBERMAN.

SIR,—An order in Council was passed 27th ulto., increasing the rate of ground rent on land under timber license in Ontario from $2 to $3 per square mile per annum, and also increasing the rate of dues on pine timber, square or waney, and on pine saw logs, from 1¼ cents to 2 cents per cubic foot on the timber, and from 75 cents to $1 per thousand feet board measure on logs. The increase on ground rent to take place on and after the first day of May, 1887, and the increased dues on pine timber and saw logs to be payable on all such timber cut under license on and after the date last mentioned.

As many of your readers take an interest in matters connected with the above, the information is sent to you for your use as an item for your paper.

Your obedient servant,
AUBREY WHITE.
Assistant Commissioner.

The feeling of the lumbermen, so far as we are able to learn, regarding the order in Council referred to above, is one of universal disappointment and alarm. It was not to be wondered at that the Ontario Government, after learning of the action taken by Mr. Mercier in the Quebec Legislature, in raising the ground rents on timber limits, should take a similar stand. With this, however, they were not satisfied, but have dealt a far more serious blow by increasing the Crown dues on all lumber cut in the Province of Ontario from 1¼ to 2 cents per cubic foot on timber, and 25 cents per M. feet board measure on logs. From a casual look at these figures one would imagine that the increase was so small that little harm would result from the change. But instead of this the matter is of momentous concern to all engaged in the trade, and we are safe in saying that no greater injustice has ever before been perpetrated on the lumber operators of this Province. The statement is authoritively made by our Ottawa correspondent that the larger operators, such as Mr. J. R. Booth, Messrs. Perley & Pattee and others, will, under this increased tax, lose annually in the neighborhood of $20,000. It is therefore not to be wondered at that the lumbermen are seriously alarmed and chagrined at this quite unexpected legislation on the part of the Ontario Government, and are combining together with the object of bettering their condition.

The Government, of course, defends its action in this matter by claiming the necessity of increased revenue. Evidently the manner in which additional revenue is secured, or whether the obtaining of the same is calculated to demoralize any branch of trade, are matters, the consideration of which has had but little weight. We doubt very much if the financial condition of the Province is in such an unsatisfactory condition as to make this step necessary. From the Provincial Treasurer's last annual report we learn that the finances of the Province are in an unusually satisfactory condition, and that it has a large balance to its credit. As to the exact amount of that balance there is considerable difference of opinion, but a fair estimate would place it at about four million dollars. This certainly does not look as if the exigencies of the case demanded this unjust treatment of the lumbermen. There is probably no other government which is in so comfortable a pecuniary condition. About one-sixth of the whole revenue of this Province is already derived from the sale of the Crown timber, and by present indications it would seem that a sufficient additional tax is to be levied to cause a stagnation, and make it almost impossible for any timber operator to do a successful business.

The lumbermen seem disinclined to make any serious protest against the slight increase in ground rents, but will oppose the increase of Crown dues to the utmost. It is their desire to make some kind of an arrangement, if possible, similar to the twenty years' agreement which has just elapsed, and it is to be hoped that sufficient influence can be brought to bear on the Mowat Government as to influence them in withdrawing, or at least amending, the order issued during the past month.

WEST INDIAN TRADE.

THERE appears to be every prospect that the Dominion Authorities will take steps to promote the increase of direct trade with the West Indies, both the British Islands and those under a foreign flag. The proposed lines of steamships if established, as seems likely, cannot fail to have a good effect in this direction. The valuable report of Mr. J. J. Wylde, the agent of the Dominion in the West Indies throws additional light upon this subject, which had already attracted considerable attention. He shows the magnitude of the trade that can thus be thrown open, the ease with which it may be augmented, and the adaptability of Canadian produce for the requirements of the West Indian Islands.

The timber trades of the Dominion have an interest second to none in this question. These Islands require a large quantity of just such material as our forests are calculated to supply. Indeed they already import largely through the ports of the United States of lumber and wooden goods of various kinds that come either from Canada or from the Northwestern States having similar forests. Why should we not establish a direct trade with them in these articles that would give us at least a share in the profit of supplying them? There is the advantage of their requiring not only such lumber as we can produce but much of it in a further manufactured conditions, so that our planing mills and kindred industries would feel the benefit as well as the saw mills.

The trade as a body should use any influence it can bring to bear upon the Dominion Authorities to induce them to grant a subsidy to the proposed lines of steamers. And when this is accomplished they should as individuals prepare to avail themselves as far as possible of this virtually new opening, which is capable of being so largely developed if the requirements of the market are duly considered and steps are taken to suit it.

THE INCREASE IN GROUND RENTS.

Since our last issue owners of Quebec timber limits have not been slow in condemning the action of the Mercier Government in increasing the ground rents from $2 to $5 per square mile. A meeting of lumbermen and those interested in the lumber trade, held in Montreal during the month, was very largely attended.

Mr. James McLaren occupied the chair, Mr. H. E. Bronson acting as secretary. Among those present were Messrs. Andrew Thomson, president of the Union Bank ; James King, J. R. Booth, H. Atkinson, R. R. Grindley, general manager Bank of British North America ; Jos. Kavanagh, Wm. Mackay, George Grinnell, F. Wolferstan Thomas, general manager Molson's bank ; Geo. Hague, general manager Merchants' bank ; W. J. Buchanan, of the Bank of Montreal ; A. Thomson, Jacques Grenier, president Banque du Peuple ; E. S. Clouston, local manager Bank of Montreal ; H. A. Price, T. Nash, manager Union bank ; C. A. Vallee, manager Banque Nationale ; W. Weir, president, Banque Ville Marie ; J. O. Lafreniere, W. W. L. Chipman, manager Ontario bank ; Montreal ; E. H. Grandbois, J. Charlton, M. P., James King, H. A. Coulston, J. S. Murphy, John Walker, G. B. Hall, W. C. Edwards, M.P., George Bryson, H. Robinson, O. Latour, James Gillies, E. D. Moore, the Hon. John Hamilton, A. Gilmour, R. R. Ross, J. G. Johnston, T. E. Kelley, R. White, William Little, John Roache, W. G. Perley, W. R. Thistle, W. E. Thompson, E. B. Eddy, Robt. Gill, manager Bank of Commerce, Ottawa ; Thos. Murray, M.P.P., John Bryson, M.P., Robert Hurdman, W. H. Hurdman, Robert Reford, J. Murray Smith, manager Bank of Toronto, Montreal ; Alex. Baptist, Jas. Dean, E. H. Bronson, G. A. Grier and Mr. Girouard, Quebec.

After considerable discussion the following resolutions were passed. Moved by Mr. John Charlton, M.P., seconded by Mr. J. R. Booth,

That this meeting desires to give expression to the following considerations in connection with the recent advance made by the Government of the Province of Quebec on the ground rent upon timber limits.

That the lumber industry is the leading industry in the Province, inasmuch as it is the principal source of Provincial revenue apart from the Dominion subsidy, and touches directly or indirectly every commercial interest in the community ; that the lumber trade as recently as in the year 1880, having in view the then financial position of the Quebec Government, assented to a large increase in dues ; that at the present price of timber lands, the profits arising from the prosecution of lumber manufacture are not commensurate with the risk involved, and the large amount of capital required.

That this meeting, representing the lumber industry of the Province, would deprecate any increase in charges, which will be so burdensome as to cripple the trade and thereby in the same degree injure the laboring, farming, banking and general commercial interests of the Province.

Moved by Mr. W. J. Buchanan, Bank of Montreal, seconded by Mr. George Hague, Merchants' Bank :

That the banking interests of the Province of Quebec, being largely interested directly and indirectly in the lumber industry, in common with all the other commercial interests in the Province, and being fully conversant with the fact that the profits derived from the lumber trade are small in comparison with the risks involved and the capital employed, believe that any considerable increase in charges upon the trade would so impair the security in timber licenses as to deter the banks from making the advances from time to time necessary for the efficient carrying on of the trade, and that any serious curtailment of such advances would reduce the output of lumber and thereby diminish the Provincial revenue.

As this might further result in impairing the credit of the province they venture to express the hope that the Government of Quebec will be induced to reconsider their recent action in increasing to so serious an extent the charges upon timber limits.

Moved by Mr. W. G. Perley, M.P., seconded by Mr. H. Atkinson :—

That Messrs. Ward, Thompson, McLaren, Roache, Latour, Charlton, Booth, King, Edwards, Powell, Robinson and Bronson be a deputation appointed to wait upon the Quebec Government to urge upon it the opinions of this meeting upon the question of Crown timber charges.

THE HAMILTON LUMBER TRADE.

THE Hamilton *Spectator* of a recent date contains the following information regarding the recent changes in the lumber trade at that port. The other day a *Spectator* reporter called on Mr. John Bradley, of the firm of Flatt & Bradley, to find out something about the lumber trade and the business prospects for the coming season. In former years the reporter noticed large quantities of square timber floating in the bay off the Grand Trunk railway docks, enclosed by large floating booms to keep the logs from drifting away, and generally about the end of April an old black steam barge with a high forecastle and poop something like the pictures you see of the ships of Sir Walter Raleigh, only not half so much style about her, used to puff importantly up the bay towing a line of chuckle-headed, stumpy-masted barges much larger than herself. Another fleet used to come from Kingston towed by a fine steam barge called the D. D. Calvin, and as they all anchored in a cluster off the old emigrant wharf near the Grand Trunk station they presented a very picturesque appearance. The fleets were manned by descendants of the old French Canadian voyageurs with bristly black moustaches and wearing red tuques, blue shirts, corduroy pants and big rubber boots coming up to their thighs. The barges were anchored with their sterns towards the booms, two large trap doors on either side of the rudder down near the surface of the water were pulled open by a pulley and ropes from above, and the logs were coaxed up to these apertures by some of the bristly whiskered brigands, who balanced themselves on the rolling logs with marvelous dexterity as a rule—and occasionally went souse into the iced water as an exception—until the heads of the logs were tilted up with a block and tackle, then a chain was brought from the interior of the vessel's hold and grappled on to them. A direct descendant of Jacques Cartier stood at the port hole and when he yelled something in Frenc and jabbed his long pike pole fiercely tbe big log was yanked bodily into the bowels of the barge, if the vessels happened to have a pony engine on board, or boosed slowly in by the power afforded by a couple of angular mules that promenaded sleepily around the big capstan away up forward on the forecastle, and waved their big ears with graceful langour as if to impress the beholder with the fact that they cou'd understand the voluminous and gaudy article of French talked by their sailor Jehu with one hand behind their backs. When all the fleet had filled their intestinal parts with squared timber, the little black steam barge marshalled them in line and the tow looked even a trifle majestic as it started off and the sinuous procession swept round in a graceful curve and headed for the canal.

This year, however, their does not appear to be any square timber in the docks at all, and the reporter dropped round to see Mr. Bradley and inquire the whyness thereof.

"Well," said Mr. Bradley in answer to the inquiry, "before he amalgamation of the Grand Trunk and Great Western large quantities of square timber and logs used to come down on the latter road and then be rafted or shipped on timber barges to Montreal and Quebec for shipment to the old country. After the building of the Canadian Pacific railway and the amalgamation of the other two roads this mode of shipment became ess popular or was to a great extent diverted to Toronto and Brockville. The shipment of square timber by water from this harbor has almost entirely ceased this year (though I understand there is a small lot at the N. & N. W. elevator) and the reason is that that the consignees on the other side of the Atantic prefer now to receive it in the shape of sawed lumber, as in that way they pay freight simply on what they can use while when importing the square timber they had to pay for the carriage of a lot of waste material. As a matter of fact they find it cheaper and better to get their lumber cut here instead of importing the timber or logs and cutting it over there. Before long English buyers will send their orders with instructions to have the material cut to the proper sizes for which they require to use it. Another reason is that the demand for rock elm lumber has fallen off in England owing to the depression in the ship building trade, and this used to be the chief variety exported from points on the line of the Wellington, Grey and Bruce via Hamilton. The timber is nearly all cut out up that way, anyhow.

"The source from which the lumber comes which is used here, or shipped from this city, is the Muskoka district, though there is also quite a quantity rafted down from the north shore to Collingwood and Meaford. That is about all the trade that is tributary to Hamilton to any extent, and a good deal of that goes to Toronto and Brockville. The Ottawa river and the district about Lake Nipissing is the great timber producing region of Canada.

"The prospects for trade this year are very good. We are shipping quite a lot to England and the eastern states. The eastern states are depending more upon us for the lumber they use every day, and in the course of a few years when the remainder of their timber is cut out they will be almost entirely dependent upon Canadian lumbermen because the lumbering regions of Michigan and Wisconsin are so much farther away that they cannot successfully compete with us owing to the difference in freight rates. It would be necessary for the Yankees to take such points as that into their serious consideration before putting any retaliation bill into force."

A GREAT FLOOD IN NEW BRUNSWICK.

THE floods along the valley of the St. John River in New Brunswick, which are stated as being the greatest since 1834, indicates that an immense section of the finest part of the province is threatened with a terrible disaster. The water reached a height all along the river from St. John to the Grand Falls, a distance of nearly 250 miles, unequaled in the history of the province. The damage done is incalculable, 10,000,000 of lumber having been swept out of the booms in the vicinity of Frederickton, and much of it has gone out to sea. The booms have been swept away like straws, and before they could be replaced nearly all the lumber cut on the St. John and its tributaries had been carried down or spread over the immense tracts of flooded country below Frederickton, or passing through the falls at St. John and driven to sea. This loss coming upon the lumbermen after the Maritime Bank crash, which fell particularly heavy upon them, will tax their resourcesto the utmost.

Bad as matters now are, worse is feared. The snow all over the upper country —the sources of the St. John is from two to five feet deep in the woods, while in nearly all the lake expansions of the river the ice is still firm. The weather is getting hot, and should a heavy rain come on a disaster unparalleled in the history of the country will overtake the valley of the St. John. In 1854 there was the greatest flood on record, but in height of water and extent of country submerged the present flood exceeds even that. That flood was followed by the cholera, and the connection of the two made 1854 a marked year in New Brunswick. The present great flood, coupled with the fact that cholera is abroad, has caused already the discussion of the effect on the health of the people in the flooded country. The water has backed up the Oromocto river, a distance of nearly 50 miles, covering the track of the N. B. railway for miles, and blocking traffic. At Westfield, 15 miles from St. John, the Nerepis bridge, erected in 1874 at a cost of $200,000, was carried away on Wednesday. The railway track here is under water, and at Rothesay the Intercolonial has been undermined, and transfer of passengers and mails is necessary.

Owing to the narrow outlet at St. John, it will be weeks yet before the water drains off to its usual level. In the meantime the loss and suffering will be incalculable.

RAT PORTAGE MILLS.

THE mills around the head of the lake have completed their preparations for the summer's work and some of them have commenced cutting. At this time a look at the mills, their capacity for work, and the expected cut of the season might be interesting.

The Rainy Lake Lumber Co.'s mill is situated immediately in the town, and when fully equipped has the greatest cutting capacity of all. It is in liquidation at the present time, and last season was not working until the fall. This season the liquidator has instructed the manager, Mr. Hall, to run the mill and cut up the logs on hand. To do this the mills, which contain two rotary saws, will be run to its utmost capacity until September. The output will be about 100,000 feet long timber, 30,000 lath, and about the same of shingles per day, making for the season about 12,000,000 feet of lumber besides lath and shingles.

About a mile west from the village is the settlement around Norman Mills. Here are three large mills. The first owned by Henry Bulwer was not run last season, but will this season, we understand, be run to its full capacity and with its one circular will turn out about 50,000 feet per day.

Next to this is the mill and plant owned by the Minnesota and Ontario Lumber Co. This is a one rotary and one gang saw mill, and will turn out about 125,000 feet per day, and will run the full season, making for the summer about 16,000,000 feet of lumber.

Occupying almost the same yard is the mill owned by Cameron & Kennedy. It is a one circular mill and runs night and day, turning out about 80,000 feet per day.

These are all steam mills, but at Keewatin about one and a half miles farther west along the C. P. R. are two water mills, one owned by Dick & Banning, and the other by the Keewatin Lumber Company. The former is a small mill with only one circular. They having a drying kiln attached for seasoning lumber and do a good business. The prospects for this season are good and the mill will be taxed to its utmost, but what will be the amount we cannot say.

The Mather mill is one of the most prosperous mills on the lake, and is managed by the Mathers, who have a controlling interest in the company. There are two circulars and one gang saw in the mill, and when running to its full extent, cuts about 150,000 per day. Owing to the lowness of the water in the lake they will not be able to keep all the saws going. The government has commenced the construction of a dam at the second outlet of the late, with the intention of raising it to give sufficient water for this mill. In that case their cut for this season will be large. All these mills have planing mills attached which are kept running most of the time. There are in the yards at the present time about 25,000,000 feet of lumber.

The anticipated cut for the sawing season from all the mills from 65 to 75 million feet, making a total amount of lumber in the yards this season of nearly 100 million feet. To do this work an array of men is employed, and a great amount of money put in circulation. The town is now full of men, some from the camps and some from the outside, and all to be employed in making the lumber to supply the prairie section of our Dominion, for it is from here that the principal supply comes. The logs to supply these mills are cut during the winter season in the Rainy Lake and Rainy River district, floated down these waters and their tributaries to the Lake of the Woods, and thence towed by a fleet of tugs to their destination.—*Winnipeg Free Press.*

THE YUKAN TERRITORY.

An exploring expedition is on foot under the Dominion Government auspices, from which there seems every reason to believe many important discoveries will result regarding the mineral resources of the Dominion. The object of this enterprise organized by the Hon. Thos. White, Minister of the Interior, is for the exploration of the Yukan River, undoubtedly one of the finest streams on the continent. The river is computed to be over 2,000 miles in length and for 783 miles passes through the northwestern part of British Columbia. There is every indication that the region abounds in gold, silver, coal, lead, cinnabar and other precious metals and surface gold mines have already been worked with great success nearly 2,000 men having been employed in this work during the past season. The Government have deemed the discoveries thus far of sufficient importance to warrant an official investigation, and a joint topographical and geological expedition has been organized, which will be under the direction of Dr. Dawson. The expedition starts early in May, and the result of its operations will be awaited with general interest in mining circles in British Columbia, Alaska and the Pacific States having already become much agitated over the prospective disclosures.

RAFTING LOGS.

The attempt to float logs from Nova Scotia to New York, which so signally failed in the case of the famous "cigar" raft of Amherst, even before the structure had been launched, was considered a remarkable enterprise. That method of transporting raw forest product may yet become a success, though it is considered doubtful. The rafting of logs on the great lakes, though from the earlier periods of lumbering in Michigan practiced to some extent, has been a hazardous undertaking. Of late years raftsmen have learned by experience, so that they are now able to guard against the danger of breaking up in turbulent seas, by the use of heavy boom sticks, etc., and losses from such cause are less frequent than formerly. A large amount of logs have, within the past two years, been floated from Lake Superior to Lake Huron and Saginaw river mills. Other large quantities have been floated to Alpena and Bay City from the Canadian shores of Georgian bay. But probably few Michigan, or even Canadian lumbermen are aware that an attempt was ever made to float a raft across the Atlantic ocean; yet such was the fact. In its issue of February 19, the *Timber Trades' Journal*, of London, England, contained a letter from a gentleman, who stated that a so-called raft of timber made a voyage from British North America to Great Britain about the year 1812. The structure was in the form of a ship, and was named the Baron of Renfrew, was jury rigged and crossed the ocean under sale. She contained 5,000 English loads of timber. Unfortunately, just as the voyage was being completed the mast was caught by a gale in the Irish channel became unmanageable, and went ashore somewhere between Liverpool and Glasgow, and broke up. It is thought that the experiment has never been repeated. At the time, the timbermen of Great Britain were somewhat uneasy for fear that the attempt would be a success, which naturally would have had the effect to change the order of existing business, and reduce values and profits. Now the scheme of rafting pine from the southern states to ports in Great Britain is being discussed. It is thought by some that the powerful steam tugs of later times should be sufficient to handle such a float as the Baron of Renfrew in a gale, and that thus the hazard that attended the voyage in that instance would not pertain to a similar experiment now. But the doubters as yet are in the vast majority.

ADVERTISEMENTS.

THOSE wishing to **BUY** or **SELL TIMBER LANDS, LUMBER** or **SECOND HAND MACHINERY** will find THE CANADA LUMBERMAN an excellent medium in which to make known their wants. Advertisements of this character will be inserted at the low rate of **ONE CENT A WORD**, cash to accompany the order in every case.

Peterborough, Ont.

TRADE REVIEW.

TORONTO.

From Our Own Correspondent.

During the former part of the month of May trade was good. A steadily increasing demand for lumber of all grades gave evidence that we might expect a more than ordinary summer's work. Toward the latter part of the month a falling off, true a slight one, was noticed, owing doubtless to the nearness of June.

Long joists are beginning to arrive in quantity, but still the supply is not equal to the demand. Hemlock, much abused hemlock, is coming more and more into use. Quantities of scantling and joists are finding ready sale and enquiries are numerous. Mill run boards, as well as dressing and better, dry, are disposed of quickly, and at very good figues. Pine bill stuff is very scarce and a shade firmer at the yards, prices being from $13 in some yards to $14 in others.

A quantity of elm and ash square timber for export is now being rafted. Some of the sticks are remarkably fine.

Since the G.T.R. is charging storage the quantity of lumber piled in R.R. yards has greatly diminished, very little fresh taking the place of the old piles.

Excepting the changes rated above, the quotations remain about the same.

From conversation with builders, planing mill men, &c., we learn that all expect a strike, after which the usual miserable consequences will follow. Judging from what we hear the strike will be fought out by both sides, to the bitter end, each party employing the customary tactics to enlist public sympathy, &c.

The stone masons being on strike for some time, has to a certain extent retarded buliding operations, as no work of any consequence could be begun previous to the laying of the foundation. At present writing there are no indications that a speedy settlement will be had. If boycotting is to be the order, we need not look for a peaceable solution of the annual difficulty.

It is not necessary to add to grievances, real or supposed. The least said and done the better, and the more easy to unite parties apparently discordant. Neither masters nor men are in a position to prolong any dispute. The former have their bills for material purchase maturing, as well as in some cases, notes for new machinery falling due, to say nothing about the hundred and one other expenses to be met. Nor can the latter stand idle for any time. The past winter was long, and many good mechanics were out of work, glad to take any job, even that very unpleasant one of cutting ice.

In view of a busy season, beneficial to all, masters and men should try and prevent a strike. Some concessions must be made by both sides, and the sooner this is done the better. It is worse than childish for either or both sides to stand out for some fancied grievance, and after weeks, perhaps months, of strife and mutual recrimination, and enforced idleness, agree on some scale of wages and hours which could have been assented to at the beginning.

The following are the ruling quotations in this city at present:—

Mill cull boards & scantling	$10 00
Shipping cull boards, promiscuous widths	12 00

Black ash 1 & 2	20 00@25 00

HAMILTON.

According to the Dundas *Banner*, Hamilton will not be the scene of very extensive lumbering operations this year. The cut of timber in the Muskoka district has fallen off about 25 per cent. The chief reason for the light cut is the great depth of snow all winter. In some places roads three miles ong have been made through the snow to get out the timber. English orders, Mr. Flatt says, are running more largely to boards and deals, and the result will be that more timber will be sawed in Canada and less exported in the log. Flatt & Bradley are filling an order the like of which has not been given in Canada for many years. It is a shipment of pine masts for the English Navy, which has been in other years supplied from the forests of Norway. The masts are cut in Beverly township in this County, and in the neighborhood of Weston, Woodbridge and Saginaw, Mich. They are magnificent sticks, some of them 110 feet long. Those cut in Canada will be rafted at Toronto and go to England from Halifax.

The following are the ruling prices in the retail yards:

Mill cull boards and scantlings	$8 9 00 to $10 00
Shipping cull boards, promiscuous widths	10 00 to 12 00
Shipping cull stocks	13 00
Scantling and joist up to 6ft	13 00
Scantling and joist up to 18ft	13 50
Scantling and joist up to 20ft	14 00
Scantling and joist up to 22ft	15 00
Scantling and joist up to 24ft	16 00
Scantling and joist up to 26ft	17 00
Scantling and joist up to 28ft	18 00
Scantling and joist up to 30ft	10 00
Cutting up plank 1¼ and thicker, dry	20 00 to 25 00
Cutting up boards	20 00
Dressing stocks	16 00 to 18 00
1½ flooring, rough	16 00 to 18 60
1½ flooring, rough	16 00 to 18 00
1½ flooring, dressed face measure	32 00
1½ flooring dressed face measure	25 00
1 flooring dressed face measnre	23 00
Beed sheeting 1	28 00 to 30 00
Picks A M. Inspection	30 00
Three Uppers A. M. Inspection	40 00
XXX sawn shingles per M	2 60 to 2 70
Sawn Lath	2 25
Red oak	20 00 to 25 00
White oak	25 00 to 30 00
Basswood No. 1 and 2	18 00 to 20 00
Cherry No. 1 and 2	50 00 to 60 00
White Ash No. 1 and 2	25 00 to 30 00
Black Ash No. 1 and 2	20 00 to 25 00

MONTREAL LUMBER MARKET.

MONTREAL, May 25th.

Activity has characterized the lumber trade in Montreal during the past month, and a brisk business both in city and country orders has been transacted at the yards; and in car loads a large business has also been done. Although there is a large amount of building under way here, and the prospects for the future still bright, dealers do not anticipate any radical change in prices.

There have been large arrivals per barges via. the Lachine Canal, and a good number are reported to be also on the way.

Shipments to Europe have now begun, and the first cargoes for South America will be despatched about the beginning of June.

The Grand Trunk Railway have issued a circular to those concerned in the shipment of timber, telegraph poles, masts &c., in regard to the manner of loading on flat cars, of which the following is a synopsis:—

"When the material is so long, that two cars are required, one good sound bearing piece or saddle of sufficient thickness to keep the timber clear of the car floor must be placed on each car near the trucks next the end of the load; but if the timbers are too short for the saddles to be so placed, they may be brought to any point between the trucks sufficiently near to each other to prevent the shortest from working out between stakes; two good stakes being fixed on both sides of each car in pockets near to saddle or bearing piece, and tied across with telegraph wire to keep the load from spreading; one wire being over the top of the load and another about one-third down so as to prevent the stakes working out.

When a few long poles have to be loaded on the top of two cars of short ones, a bearing piece must be securely fixed across each car on the top of the short poles to keep the long ones clear. Only two of the stakes on each side of such cars must run up so as to allow them to curve freely.

When the timbers are too long to be safely carried on two cars, a third must in all cases be used, the load to be kept entirely clear of the centre car by one bearing piece being placed on end cars and the whole tied and staked as before described.

Should there be sufficient timber for two loads, either of which would require a third car, but the total length of which will not be equal to more than five cars, each load may be placed upon two cars with bearing pieces or saddles of sufficient thickness to keep the timber clear of the car floor throughout, at a point between the trucks of each car, and near to those next to the end of the load, the fifth car being placed between the two loads so as to cover the projecting ends. The timber in this as in all other cases must be tied with wire in the manner before described.

The cars must be so loaded as to leave the breaks easily accessible and operative.

When the load occupies more than one car, the weight carried should not be allowed to exceed two-thirds of the capacity of the cars on which the load rests, and particular care must be taken to prevent overloading.

No cars must be used for such traffic unless they are in good repair, have good iron trucks, not less than six inch journals and are of equal height, and when for points in the United States the wheels must stand the limit gauge.

The following are the quotations of the yards here:

Pine, 1st quality, ₱ M	800 00@40 00

ALBANY.

The lumber business here is reported good, while a scarcity of stock exists in several yards. Prices are inclined slightly downwards, although the opinion seems to be that there really no necessity for any break. The season in all probability will be a short one. Manufacturers were three weeks late in starting their mills, logs being scarce owing to scarcity of water and forest fires. The following are the ruling prices:

Pine, clear, ₱ M	$55 00@60 00

SAGINAW VALLEY.

The market here is fairly active. Prices are somewhat firmer and lumbermen are cheerful. The call is for the coarser grades chiefly. The correspondent of the *N. W. Lumberman* furnishes the following information: Buyers have been here from Rochester, Brocklyn, Albany, Cleveland, Buffalo, Akron, and Cincinnati, and they have taken large blocks of lumber. I note sales of 2,000,000 feet at $10, $20, and $38; 600,000 at $11, $22, and $40; 700,000 feet at $10, $20, and $38; 400,000 feet at $9.50, $19 and $38; 2,300,000 feet at $10, $20 and $38; 600,000 straight, and it is said this lot sold better than $10, $20 and $38 under inspection. E. Hall, of Bay City, has closed out all of his dry white pine and reports Norway in good demand. Rust Bros. & Co. have sold all on their South Saginaw dock but 500,000 feet. Sibley & Bearinger sold 4,000,000 Norway piece stuff and stripes, cut at Cheboygan, to Chicago parties. The price was not reported. A number of sales have been made, the details regarding which are not obtainable being purposely suppressed. Fully 25,000,000 feet have changed hands during the week. Nearly all that has been sold straight during the week has gone at $14.50 to $16. Box lumber meets a ready sale at $10 to $10.50.

There is very active demand for shingles, and stocks are scarce. River brands are quoted strong at $2.25 to $3.25, and interior mills at $2.10, $3 and $3.10.

The yard trade is active and healthy, although occassional complaints are made of discriminating rates to some points.

NEW YORK CITY.

The wholesale market is only fairly active. The water transport facilities being now fully available considerable lumber is arriving to fill up and complete stocks. The new Inter-State Law is being felt here to a considerable extent, and the opinion seems to prevail that it is calculated to do the lumber trade much injury. The handlers of certain classes of wood, pitch pine for instance, are, however, it is said, in a fair way to benefit by the new law. Dealers in white pine are doing a good business. Spruce is in active demand and firm in tone, but receivers are positive that there will be a shortage in the receipts and are rather anxious to work off everything that comes forward. Hemlock is in good demand, with the supply principally Pennsylvannia. Laths are coming in sparingly. Shingles are moving slowly except cedars which are active. Hardwood dealers are reporting trade dull, but a fair distribution takes place. Poplar is still in active demand and prices weak. Ash is in active demand, and all thickness are wanted. Plain oak, when well seasoned, is easily disposed of. Quartered oak is in active demand. Cherry is in demand, as are hazlewood and mahogany.

CHICAGO.

From Our Own Correspondent.

Business in the lumber trade here still continues to be good but of course shipments are not so large as they were in March for the reason that western buyers took advantage of the Railway rates, prior to April 1st, which was considerably lower than now, and laid in a good stock. Still yard men here have had no reason to complain of this months trade, and in fact there would have been a good deal more lumber sold if the stocks on hand had not been broken up so badly, as a good many orders have been declined on that account. Common and cull lumber is very scarce, and although navigation is well opened, there has been very little if any low grade lumber received as yet, and as there is not much on hand at the mills we may expect to be short of that kind of stock until this year's cut becomes seasoned. There are six firms going out of the yard business here, and one new firm going in; several yards will change locations, my firm among the number. Speaking of yards changing locations brings to mind the fact that there is to-day a good many thousand feet of vacant dock property suitable for lumber business, "to let" in this city and at reduced rates from former years. This is quite a change from 10 years ago when it was almost impossible to get dock property at any price. The cause, is quite apparent to men in the business, which is the very small margin on which lumber is handled here. The carpenters have been on a strike here for some time, which has hurt city trade somewhat, but they have settled down again and the world still moves. This is a "striking" city and some one of the numerous unions here are on a strike all the time. The newest and latest strike talked of now is the brick layers, laborers and hod carriers union strike. Of course all these strikes have a bad effect on trade generally, and I venture to predict that if this state of things continues a few more years Chicago will have to "step down and out" in one of her greatest industries, viz., the Cattle and Hog Packing business. She will still have the Board of Trade though, which is without a doubt the most extensive "gambling house" in the world, as they rake in the sheckles from every nation and every clime, and strikes have no direct effect and the good work still goes on.

The following are the ruling quotations at present :—

NEWS NOTES.

—Francis and Cassels' limits on the lower Madawaska have been considerably damaged during the past fortnight by forest fires.

—The Canadian Transportation Company has already sold tickets to 5,000 persons who are going to Sault Ste. Marie with the view of locating there.

—Emery Brothers, of Saginaw, will saw this year ten million feet board measure at Midland. They have leased the mills of the British American Lumber Company.

—An effect of the export duty on saw logs has been to put a stop, or very nearly so, to the rafting of logs from the Georgian Bay to Saginaw and Chicago, or the carrying of them in enormous barges to those points.

—A serious fire has occured at Mr. Sewill's mill, Jacques Cartier, near Quebec, during which about 40,000 Quebec standards of spruce deals were entirely destroyed. The amount of insurance has not been made known.

—Very heavy bush fires have been raging for some time past in the northern portion of Tiny, near Penetanguishene. They started at Methodist Point, and have swept nearly across Tiny Point, burning both sides of the road for several miles.

—United States Consul Hotchkiss reports $1,633,820 as the value of lumber exported from the Ottawa district to the United States during the three-quarters ending March 31.

—The first crib of square lumber for the season passed over the Chaudiere Slides May 25th. The timber was made near the Rocky farm and is the property of Klock Bros. Aylmer.

—The piles in the boom works of the Port Arthur Lumber Company, Port Arthur, Ont., 300 in number, were raised from six to 12 feet, last winter, by the action of the frost; in fact, the boom was nearly frozen out, and will have to be hammered back in place.

—A gentleman who has lately arrived from the Desert is reported as saying that in some places all the snow has not yet left the ground. The water in the creeks and the Desert and Gatineau rivers are very high and is somewhat impeding the lumber drives.

—Reports from Quebec state that the drives are progressing favorably. The American Markets are consuming large quantities of spruce, and the demand for spruce boards this spring is in excess of the supply. One of the Chaudiere Mills has sold largely to the United States—both good and common stuffs. This mill lately made a contract to cut 40,000 to 50,000 logs into boards for this market.

—Terrible bush fires have been raging on Allumette Island during the past fortnight, in many instances doing great damage. In some sections on the Quebec side whole districts have been devasted, barns burned and much valuable timber destroyed. Ashes and cinders fell in showers about Pembroke, and it was reported that limits on the Pettewawa were being consumed, but the report was found to be untrue.

—There is every present prospect of a large shipping trade being carried on at Whitby harbour this year. At present the wharves are filled high with lumber and cedar poles, and several carloads have had to stand this week until the barges would come and load their cargoes. The harbour people cannot at present form any definite estimate of how much stuff will be handled there. Of course a good deal of the lumber will be this season's cut, and may not come down until September.

—Many of the Chaudiere lumbermen are introducing a new and improved article of machinery called the slapper. It is a large iron wheel which is placed directly over the jack ladder and when the log is drawn up out of the water on the jack ladder, this wheel, which is covered with sharp spikes and attached to a heavy moving frame-work attached to beams above, catches the log on the upper side and runs along it after the fashion of a cog wheel until it is sawn, thus holding the log solid upon the saw carriage and preventing it from jumping while being sawn.

—Bryson *Equity*: Messrs. William Richards, Hiram Richards, Jesse Smith and Wm. Lothian stopped at the Forest House on Thursday night. They were on their way down the river, having completed the work of building improvements for this season. The last job disposed of was a rudder boom, built at Pembroke but intended to be floated down to Lapasse, when navigation opens. This boom is the second of the kind which has been built by the company, the first having been constructed at the Chats rapids a few years ago. These booms take the place of what was formerly known as glancing booms. They are made about four feet wide, of timber solidly bolted together. One end of the boom is held stationary by means of a pier or stout anchor; to this end so held is attached a heavy rudder upon which the current strikes with such great pressure, that the projecting end of the boom is held in an oblique position across the channel. The boom recently constructed is about 500 feet long.

THE NASSAU MILLS.

THE new mill just completed at Nassau, near Peterborough, was visited by a LUMBERMAN reporter a few days ago, in company with the proprietor, Mr. J. M. Irwin. This mill, the erection of which was commenced in December last, is designed and laid out quite different to the ordinary saw mill, being a combination of planing, saw and shingle mill. It is situated directly on the edge of the Otonabee river, while in the rear is a fairly large pond, in which the timber is floated and from thence conveyed to the saw. Running along both sides of the new building are railway switches connecting with the Grand Trunk. In this connection it is worthy of mention that Mr. Irwin has already constructed over two miles of switch, which connect the two mills and lumber yards. The latest edition to the "Red Mills" property is a heavy frame structure, 40 x 100 feet, three stories in height, the roof of which is covered with corrugated iron. To one side is erected the engine and boiler house, 35 feet square, in which is contained a 75-horse power "Beckett" engine and three boilers. The ground floor of the mill proper is used as a planing mill, in which is also located the main driving shafts for operating the machinery on the different floors. Here, among a number of other woodworking machines, is to be found what is known as the "Lightning" planer, which is indeed a magnificient machine. The board is conveyed into this machine in its rough state, carried through, planed and grooved, and by a simple device carried into a box car at the opposite side of the mill, where it is piled and ready for shipment.

The second floor is used exclusively for bill timber, which is manufactured up to 60 feet lengths. The third floor is utilized for the manufacture of shingles. The various departments have a capacity as follows:—Planing mill, 40,000 feet per day; bill timber mill, 25 to 30 thousand feet per day; shingle mill, 30,000 per day. The whole arrangement is unique, and a credit to the practical common sense of the owner, under whose personal supervision the work was carried out.

While referring to the improvements which are going on, it is not out of place to mention that the large water mill has also been undergoing considerable changes and cutting operations will soon be commenced. This mill, which has operated for the last thirty years, has a capacity of 100,000 feet per day. It is operated by two Leffel and eight central discharge water wheels, the estimated power being 500-horse power.

Mr. Irwin's limits are situated at the head waters of the Otonabee, and the logs are floated down that stream to the mills. Employment is given to about 250 men on an average, although that number is largely increased at certain seasons of the year. The cut of logs last winter is given as 14,000,000 feet.

Should any LUMBERMAN readers ever think of visiting these mills with the object of "painting the town red," they are strongly advised to stop away as every building in the village already bears that color, and it would be difficult for even a lumberman to make it brighter.

Mr. Adam, of Gatineau Point, and formerly of Cookstown, who has got out a new patent for a saw to manufacture bevel-edged shingles, has completed the construction of a large factory at Gatineau Point. Instead of manufacturing shingles out of blocks, Mr. Adam has purchased some 900 logs seized by Father Paradis on the Gilmour limits some time ago. The new style of shingles is represented to be far ahead of the ordinary shingle, and Mr. Adam has made several large sales already.

Don't worry if you are out of employment, write to Mr. Kowdy, 41 Wellington Street East, Toronto. Send stamps for reply.

YOU can live at home, and make more money at work for us, than at anything else in this world. Capital not needed; you are started free. Both sexes; all ages. Any one can do the work. Large earnings sure from first start. Costly outfit and terms free. Better not delay. Costs you nothing to send us your address and find out; if you are wise you will do so at once. H. HALLETT & Co., Portland, Maine.

SMITH'S

Mercantile & Land Reporting Agency

BANKERS—DOMINION BANK.

General Solicitor, JNO. LEYS, ESQ., Barrister, Toronto. Secretary, JOHN SMILEY, M.A.

MANAGER—WILLIAM SMITH.

General Offices—Court St., Toronto, Ont.

Telegraph Address—Agency, Toronto.

Having for its special objects the furnishing to subscribers of reliable information on the financial standing or otherwise of tradesmen and others, the collection of outstanding accounts and the procuring of the most reliable information from independent sources of the value and condition of landed and other properties in any part of Canada and the United States, with correspondents in Great Britain and other parts of Europe.

Our method of procuring for our subscribers the most reliable information is through solicitors of the highest standing, and from other equally reliable sources in the several localities indicated, who are under contract with us to supply the necessary information promptly.

The Landed Enquiry Department of this Agency, the only institution of this kind known, is invaluable to Solicitors, Loan, Investment, and Insurance Companies, Estate Agents, and others, preventing fraudulent land transactions resulting from misrepresentations.

The Department for the collection of outstanding accounts is conducted on an entire change of the system usually followed by Collecting Agencies, viz.:—Subscribers may have their collections paid either direct to themselves, or to the offices of the Agency, in which latter case remittances will be deposited to an account provided for that purpose, and immediately remitted to the parties to whom it is due, and will not be applied to any other purpose.

Another important feature in connection with this department is, that subscribers depositing accounts for collection will, if requested, be furnished with a Form of Script, on which will be entered the name of each debtor, the amount owing, and a full report of the prospects of collection, and providing that the receipts thereof be paid to bearer only, thus enabling subscribers to realize on their outstanding accounts.

The Agency will forward at least once in three months, or oftener if desired, a report and statement of all accounts in hand.

NOTE.—The offices of the Agency are open to the Solicitors and subscribers for reference to our numerous maps, atlasses, directories and correspondence, and for the transaction of business with their clients and customers when in Toronto.

VOL. 7. PETERBOROUGH, ONT., JULY, 1887. NO. 7.

THE LUMBER INTEREST IN CANADA.

A RECENT printed report of U. S. Consul Hotchkiss at Ottawa, Ont., gives some interesting details as to the lumber interests of the Provinces of Ontario and Quebec. When Americans began to cut the pine and take it out in the log to saw it in Michigan, the export duty of $2 per thousand board measure was put on, with the expectation that it would be prohibitory of log exports. Had it been sawed in Canada, there would have been only the $2 per M United States tariff. The old rate was $1 per M; $2 is now the nominal rate, but the Provincial Governments have the right to increase to $3, and that soon will be the rate if the log export continues in any considerable volume.

The title to standing crown timber is in the Provincial (not he Dominion) Governments, and the right to cut it is sold by auction, a minimun price being fixed, and the highest bidder securing the privilege of cutting for a year all the timber in a "berth," or "limit," which usually is 640 acres, or a square mile. For the product he must pay according to a fixed tariff. Parties securing berths for one year have a prior right to annual renewals, subject to regulations. The license is in a form fixed by the Department of Crown Lands, and gives the holder the right to cut timber and saw logs within specified bounds, together with power to seize and recover anywhere in the Dominion whatever any trespasser may cut during the time off the berth. But any other party may cut trees under 10 inches in diameter for "floats, traverses, oars or wythes," for use in rafting timber cut in the province and being rafted near by. Also, timber may be cut for making roads and bridges. Any lands within the berth previously sold to settlers are excepting, and lands sold after date of lease are to be excluded from its operation and from that of renewal lease. But when sales to settlers are canceled, the land returns to area covered by the lease. All timber cut must be paid for according to a provincial tariff fixed by the province. The Dominion also levies an export duty on white and Norway pine saw logs, per 1,000 feet board measure of $2. On similar spruce and hemlock logs, $1 per 1,000 feet. On shingle bolts, $1.50 per cord, 128 feet. The Governor in council may increase the duty on $3 per 1,000 feet. The ground rent, per square mile, payable annually, is $2. Logs are cut 13½ feet long, six inches being allowed for brooming in rafting.

Renewals of license are conditioned upon full payment of all dues and rents for the previous year, according to sworn statement of number and description of timber and logs cut. Public officials have the right to test and verify these statements; if found incorrect there may be forfeitures of material and other penalties. Defaulted other dues constitute a first lien on any timber, cut under license, belonging to defaulter.

The tariff on saw logs will in all probability be raised till the prohibitory point is reached.

Much of the pine now being lumbered has been once condemned, or the choice timber has been taken from it, for the English market.

Mills in the Ottawa district are all "gangs," running from four to eight gangs of from 36 to 42 saws each. They are run night and day during the short season of seven months, using electric lights. Those at Ottawa use power from the Chaudiere Falls, which also operate the electric light system of Ottawa. The machinery used in the saw mills is much of it made in the United States, and is of the best quality. Eleven hours is the rule for a day's work, wages in the woods being about the following, including board:

Foremen, per month	$40 to $60
Choppers and skidders	15 to 20
Road cutters	12 to 15
Teamsters and loaders	16 to 18
Cooks	30 to 40
Log measurers	50
Horse or mule team, with teamster	35 to 40
Wages, in and around mills, always without board, are:	
Foreman	$100
Head sawyer for gangs	$40 to 45
Head sawyer for circular	50
Tail sawyer	30 to 40
Edger and trimmer	35 to 40
Filers	50 to 60
General help, teamsters and pilers	30 to 35

The mills being run by water, their location is arbitrary and prevents the use of natural or artificial means of avoiding handling the product so common in Michigan. All must be teamed to the drying ground, and afterwards to the rail or water delivery. This adds to the expense 50 to 75 cents per 1,000 feet.

Lath and pickets are of excellent quality, but the lath is 1 3 8 inch wide instead of the 1½ United States standard. The shingle business is not prosecuted to any great extent and the few produced being made "bastard" are classed as the lowest grade in United States markets. Much stuff that would make soap, hat, shoe, starch and packing boxes is sold for fuel at 10 per load. Here seems to be an opportunity for some one to build up a fine paying business.

HOW DO YOU KNOW YOUR ADVERTISEMENTS PAY?

The devices employed to ascertain what mediums are giving the best results are almost innumerable; some may be considered wise, but most of them otherwise. A number of years ago the Valley Machine Co. placed some of their business with me. The "V" commencing the name got crushed in the press, which made the address "Alley" Machine Co. The manager receiving a large number of letters addressed in this manner, "Alley Machine Co.," told me that he was convinced that I represented one of the best advertising mediums in the country; also that he should profit by the hint given, and, of course, promptly renewed his order. Taking the hint from this accident I have suggested from time to time to my patrons that a slight change may be made in addresses. My friend John Smith operated it in this way, giving his name to the first paper, John A. Smith; to the second, John B. etc., by which he has become to be known as Alphabet Smith. Others I have known in any one paper to ask their patrons to call for catalogue "A"; in the next one catalogue "B," etc. The result of this has been to show that live concerns take more than one paper, as several of my patrons have received from the same source a request for catalogues A and B. Others I have known to give different numbers to the streets, in cases where that can be done without confusion. I have had access to the correspondence of a considerable number of my friends who are large advertisers, and have found that the average is about one in ten of letters received that will mention the medium in which the advertisement was seen. Out of upwards of 300 letters sent to one business concern, all of which mentioned the paper, only five had a rating in the commercial registers, convincing me at least that it is not the best class who "mention this paper." The conclusion of all my investigations and comparisons is just this: advertisers should place their cards in papers having a circulation sufficient to insure that they are not paying too much for reaching that particular constituency. In placing the card make sure that the quality and character of the paper is such that it will be read for the information it contains. Take a card sufficiently large to be readily seen, and advertise your goods in season. Hold out no false inducements. Change the matter frequently, that it may look fresh, and if satisfied that the papers you patronize reach the people to whom you wish to sell, keep your name constantly before them.—*From XX., New York.*

RESTRICTING LUMBER EXPORTATION.

TO those who have considered the forest resources of Canada as of vast extent, it will be no news to learn that there is danger of the production not being more than equal to the home demand in a very few years, should exportation continue to increase. But how many are there among us who, without due consideration, are accustomed to rejoice in the fact that our lumber export is so great and is apparently in such a flourishing condition? They forget that every thousand feet of lumber taken away from the country leaves so much less behind it. Our forest trees cannot last forever, particularly since no organized steps are being taken to ensure a new growth, after the original trees have been felled. The growth of a forest tree is not that of one or two years. Many of them take a lifetime and even more to reach their growth. Nevertheless we are cutting and cutting, wasting and wasting, and conveying from the country as fast as we can what, had it been properly husbanded, would have been an important source of national wealth for generations. The question under all the circumstances of "what are we going to do about it?" is a most important one and ought to have more attention from the authorities, the trade and the public generally than it has as yet received. There are those who have been instant in season and out of season in pointing out the results to which we are drifting. Now or never is the time to consider them and put on the brakes. Already we have lost not a few of our national products in animated nature: and our forests are fast following them into the land of the "have been."

Is there no means of arresting the wilful waste that goes on in the woods and what we may term the proflicacy and extravagance connected with lumber exportation? Would not the imposition of a tolerably export duty have some effect, and could not the Provincial governments increase the restrictions which they have placed upon the lumbering interests? It has been stated than in view of the increased annual dues placed upon timber limits by the Governments of Ontario and Quebec it was seriously contemplated by limit holders to exhaust their holdings as fast as possible so that they should have but few more payments to make. Under the circumstances is it not their interest to hold on and make their properties last as long as possible, since with a judiciously restricted cut the lumber that is left would annually enhance in value.—*Canadian Trade Review.*

TRADE WITH GREAT BRITAIN.

IN a previous issue of this journal was published the report of Prof. Macoun's address on Canadian woods, delivered before the Carriage Builders' Association in London, Eng., which treated principally on a certain class of Canadian woods suitable for carriage building. Through the courtesy of Ira Cornwall, Esq., late Agent-General for New Brunswick in Great Britain, THE LUMBERMAN is enabled to give a synopsis of that gentleman's report, relating to Canadian woods and their utilization for various manufactured articles for export, furnished to the New Brunswick Government. The hints contained in the extracts which follow are practical and quite worthy the attention of Canadian lumbermen and manufacturers. The suggestions thrown out advocating the formation in this country of a company such as is referred to in this report have been made after careful and practical research of the wants of the British trade, and can be relied upon as authentic :

"The most important item of trade with Great Britain is in our woods and from the large number of inquiries which I had during the Colonial exhibition I am convinced that a great extension of that export can be made if properly handled. This more especially applies to our hardwoods. It is quite evident that our hardwoods will not find profitable sale there until they are carefully seasoned and properly manufactured. All of this must be done upon this side of the Atlantic and from all experiences up to the present, it is equally evident that the business has not been properly understood by our manufacturers, and that there is not sufficient capital accessible in the business to make it a success. A company or syndicate should be formed with a large capital capable of holding a large stock of wood for careful seasoning, to erect and operate large mills capable of turning out all classes of wood goods, and who could establish large warehouses in Liverpool and London, where an extensive stock could always be kept on hand for immediate delivery. That such a company in the hands of proper and experienced management, devoting their whole attention to this branch, would be a success, it is an easy matter to demonstrate from the figures I was enabled to glean at the exhibition. I also have the assurance that if the company were launched under proper auspices upon this side, the amount of stock necessary would be readily taken up in England. It would most unquestionably be of great advantage to the province to have the company operate there and it was admitted by all with whom I talked over the matter that New Brunswick is the most favorable place for its location.

Among the articles which I would suggest to the company as advantageous to manufacture are, cloth boards, slats for slate frames, broom handles, brush backs, mouldings, blind slats, blind pulleys, hardwood squares and dimension stuff for curtain rods, rings and ends, for mangle rollers, portions of furniture, &c.; in this last named line alone there is an almost limitless field. I was enabled through the excellent idea of Messrs. Howe, in showing the stains on the woods in the wood trophy, and also from some tests that I had made to convince English manufacturers of the adaptability of our birch for staining. It is being more largely used in that way now, and the following item taken from an American lumber journal of a recent date may be of service in arousing the interest of our people in this subject :

"The price of Black Birch of best quality has recently gone up from $7 to $95 per 1,000. The extraordinary advance is due to the discovery that boards cut out of the first logs are susceptible of a very high polish, and can be used for almost any purpose hitherto exclusively reserved for mahogany, which is worth $250 a thousand. The advance has been expedited by the discovery that the best black walnut is giving out. Black walnut from Arkansas and the south is so porous that it is of very little use in furniture making. The best black birch is found almost exclusively on the barren copper ore regions between Milwaukee and Ashland, where all other timber is stunted in growth and very poor. Here boards out of the butt cut quickly assume a beautiful red tint on being exposed to the atmosphere, and can be polished up to a great degree of fineness. The price will soon fall to $50 to $60 a thousand. A railroad is being laid right through the very inaccessible region where it grows, and the high prices have tempted several men to open out saw mills. Red beech has also advanced in price very rapidly. It could be bought up recently in Indiana and Ohio for the bare cost of sawing, but now it is worth $30 a thousand."

The industry of manufacturing spools and spool-wood for the thread-makers of the United Kingdom has been carried on for many years in the Province of New Brunswick, Nova Scotia, and Quebec ; and those versed in the subject say that when properly conducted there is big money in it for the manufacturer. Messrs. J. & P. Coats, of Paisley, Scotland, use very largely of spool stock, as do also Clark & Co., of the Anchor Mills of the same place ; and they are always anxious to secure first-class stock, even greatly in advance of their consumption, which is enormous. Delivered in Scotland, the prices paid are from £6 to £6 10s. per 1,000 superficial feet. Of course, many other firms use largely of this kind of wood ; in fact, since the introduction of the machine called the quadruple borer, the demand has been universal. This within the last five years or thereabouts. Previous to that time, the spool blocks were made from transverse sections of the birch log, the thickness of the desired length of the block, and were cut out of these sections by hollow cylindrical saws attached to vertical spindles running at a high rate of speed—some 3,500 revolutions per minute. In the centre of the saw was a boring bit that bored the holes in the spool blocks so manufactured. Owing to the growing scarcity of birchwood in Great Britain and Ireland, the Scotch blocker has been gradually abandoned, and the quadruple borer has taken its place on account of its ability to utilize spool stock, as described, which could be imported from Norway and America at a cost commensurate with the scheduled cost of production, whereas birch in the log would make the cost of the material very high.

The spools themselves, finished and ready for use, should be manufactured in this country, and I am assured that it only requires the careful selection of wood, proper seasoning, and above all great caution as to turning, to insure all of the orders being placed with our manufacturers. There is a large trade to be done in blocks, for shoe lasts, and in this care in the selection of blocks, cutting them into proper shapes for double and single last blocks, and dipping the ends in a composition to prevent them cracking while seasoning.

A large quantity of poplar of from four to eight inches in diameter, with the bark on, and in lengths of from six to twelve feet, is now imported into England from Brittany. These saplings are split down the centre, and they are then cut into proper lengths and used for brush backs for the coarse brooms or brushes used by the street sweepers. All that is required in these is that the mould should be free from knots, straight, and without twist. As the freight from Brittany is very high, and as this class of wood is so plentiful and easily got at in New Brunswick, there should not be any difficulty in competing for the trade. In addition to these large orders are now open and were constantly offered to me for fancy turning such as door knobs, chemists' boxes in great variety, menthol core boxes, fancy boxes for confectionery, door stops, deck plugs, wedges, &c. In these lines there were not any manufacturers in Canada, so far as I could find out, capable of entering into the large contracts that were offered. The same might be said of tool handles in endless variety. Hay rake handles, pitchfork handles, spade and shovel handles are in constant demand. Bobbins and ships' blocks can only be sold where stocks are kept on hand ready for delivery. Many of the hardwoods are used by musical instrument makers, but they find the woods taken over in bulk (square timber) practically useless. Birch and maple are now being introduced for flooring purposes by some of the best firms, and the day is not far distant when it will be admitted that they are far preferable to pitch pine, at double the cost. Medical men are now recommending their use for hospitals, &c., on sanitary considerations. Another branch which is capable of development is carriage and waggon stock, and the oak, elm and ash of New Brunswick, if cut under the same conditions as in England or provinces, is equally well adapted for this purpose. That is, it must be the second growth, or more properly, such as is grown on partly cleared land, and where it has been subject to full action of the sun and wind for some years.

Offers were made by a number of carriage builders to give a guarantee to place all their orders for stock with Canadian manufacturers in preference to purchasing in the United States, and also that they would pay the same prices now paid in that market. Offers were also made by carriage builders and dealers to place the requisite amount of capital in a manufacturing concern in this country to enable them to carry on the trade successfully.

This branch would require exceeding caution to make it a success. It must in all cases be remembered that as far as oak and elm are concerned we have to compete against the wood from trees grown on the large estates in Great Britain, where they are fully exposed to the action of the sun and atmosphere, and that our ordinary forest growth will not answer. Ash is in some demand, and our ground on pasture ash was carefully tested by some of the woodworkers in London and very highly recommended. The best quality of hickory can be obtained readily from Ontario, and could be manufactured here with the other woods. Basswood is now being more and more largely used for carriage bodies.

In other branches several of our woods are coming into prominence, largely through the specimens shown at the exhibition. Among these the most important will be the use of cedar for coopers' work, particularly for water tanks, also for use in breweries, &c. There were a very large number of inquiries regarding this wood, and I understand that some very considerable orders have been placed in New Brunswick already. Birch staves for barrels also drew considerable attention.

Excelsior (wood fibre) for packing and upholstering is gradually coming into use in England, could be readily sold were it possible to deliver it there at a reasonable freight. This item prevents any successful shipments at present. Although there were not any specimens of chemically prepared or other wood pulp, shown from New Brunswick, still a number of inquiries regarding this article found their way to me through my identification with the other wood trade.

There is a very large and growing market for this material, and provided it can be manufactured on a sufficiently cheap scale to meet that now produced on the European continent, a quick market could be found. The necessarily limited space allowed for this report prevents my going so fully as I wish into the details of the wood trade, which is quite capable of great extension.

THE ABUSE OF MACHINERY.

THERE is hardly any line of business in which machinery, and machinery of a high class, cuts a more prominent figure than in the manufacture and manipulation of lumber. No important part of the work that is put upon a piece of timber, from the time it leaves the water until it is delivered to the consumer ready for use, is accomplished without the use of machinery. There is little to a saw mill, or a planing mill, or a door, sash and blind factory, or, indeed, any wood working establishment, beyond an aggregation of machinery for performing the multitude of operations to which the raw material of the trade must be submitted to fit it for consumption. The purely manual labor expended on lumber in any stage of its progress is chiefly employed in its handling, and this is often accomplished through the aid of devices which make it unnecessary for the workman to lay his hand upon the wood.

It is possibly this very fact—that so much can be done by machinery—that has led to the employment of cheap and clumsy hands to partly do what it requires brains and skill to do thoroughly and well. Be this as it may, there is no one who has had much experience in saw mills and planing mills but knows that a large proportion of the machinery therein is every day subjected to more or less abuse. It is the abuse, not of intention, but of ignorance and incompetency, and for that very reason the hardest to deal with. It is difficult to convince an ignorant man that his knowledge is not as wide as the universe, and to demonstrate to an ignorant but conceited man that he has anything to learn is well nigh impossible. Such men are very often employed to run machinery, and to any one who will calmly and intelligently consider what the probable result must be, it cannot be a matter of wonder that they make a mess of the job. So much is this felt by machinery men, that they are frequently doubtful about introducing new devices, fearing that the careless and incompetent handling they will receive from the users will condemn them, and damage the reputation of the makers. The inventor and manufacturer of a very novel and useful device, which accomplishes rapidly and cheaply a part of the work of lumber making that now depends chiefly on the main strength and awkwardness of muscle, while in conversation recently, spoke of the slow progress he had made in getting his improvement into use. "Yes," he said, 'it's a good thing—there are plenty to admit that—but they are shy about using it ; it's machinery, you know, and it's pretty hard to get the best machine well used. It will do the work, and do it well and cheaply, and the machine is simple and not easily injured, but still it is a machine, and the cheap, ignorant laborers who are trusted with it, know more about getting such a thing out of order than all the mechanics in the United States can learn about getting it back again. I am not pushing my apparatus into the market, because my experience in this way has been so discouraging and unprofitable."

For this condition of affairs it is unquestionable that those who buy machinery, and who employ the men who run it, are most to blame. It is too frequently the case that they look more to the price a man asks for his labor, than to his ability as an operative. The saving of a dollar a day in the cost of labor is palpable and fully appreciated ; the loss in time and in damage to an expensive piece of machinery is obscure and less easily apprehended. More often than otherwise, if a machine runs badly, and is much of the time out of repair, the blame is put entirely upon the maker, when if the mill owner would get at the naked truth he would find that the machine is all right, but is so improperly handled that good work is out of the question. Said the manager of one of the largest planing machine establishments in the country, the other day, "there are few mills in which our machinery is running, that I can go into without fear and trembling. I know, in most cases, I shall find something wrong ; and the chances are, of course, that the blame will be put on the machines. I could name scores of mills that do not get within a large percentage of the work out of their equipments that they are capable of doing, just because the men in charge do not know their business."

It avails little for a machinery manufacturer to use the best materials, and have them put together with great care and skill, if some incompetent, twelve shilling a day laborer is

handle it. The best machine made will not show its worth, or do one-half the work it might under such conditions ; nor can it be expected to last nearly as long as it would if skillfully operated and properly cared for. The loss falls upon the user, of course, though the maker suffers, too, in the reputation of his work, which is damaged through no fault of his or of his machine. But it should be apparent to any mill owner that to employ unskilled labor to handle a mill equipment which represents an investment of thousands of dollars, is a piece of folly that is wholly without reasonable excuse. There is not only the liability that the machinery will be damaged, but the certainty that it will not do nearly the work of which it is capable. What does the difference of, say, a dollar a day, or three hundred dollars a year, amount to in the attendance for a machine representing an investment of ten to twenty times as much? One breakage saved would pay it all, and the gain in work performed would, in most cases, be more than the entire amount of a capable man's wages. The importance of the skillful operation of machinery is so manifest that it seems strange that it should be necessary to call attention to it ; but the experience of machinery men, and the admissions of machinery users, evidence the fact that the need of reform in his respect is widespread and urgent.—*Chicago Timberman.*

WEIGHTS OF BRITISH COLUMBIAN WOODS.

The following table shows the weights, specific gravities, deflections and breaking loads of nine different woods of the Province of British Columbia. The results have been obtained from experiments made by Mr. Edward Mohun, of Victoria. The pieces tested were 1 in. square, and had a span of 1 ft., being supported at both ends and loaded in the centre. The specimens selected were fair average specimens of building timber, partly seasoned, but free from knots and flaws. The results given by exceptionally good specimens were eliminated in preparing the Table. For instance, one piece of Douglas fir only broke under a load of 660 lb. :—

DESCRIPTION OF TIMBER.	MEAN DEFLECTION IN INCHES. 200 lb.	280 lb.	300 lb.	350 lb.	400 lb.	450 lb.	500 lb.	550 lb.	600 lb.	650 lb.	Highest Breaking Load.	Lowest Breaking Load.	Mean Breaking Load.	Specific Gravity.	Weight of on Cubic Feet in Pounds.

THE OPENING OF NAVIGATION.

THE coming season promises to be a very successful one for the boat forwarders on both the Rideau and Ottawa River routes. Owing to the passing of the Inter-State Commerce Bill by the American Congress the rates by rail to Burlington and other American ports to which our Canadian lumber is shipped are considerably higher than they were last season, and even last season rates by rail were one-third higher than the rates by water, the only difference being that the shipments could be made in less time by rail than by boat.

The further increase of these rates by rail this season will and in fact has taken all or nearly all of the carrying out of the hands of the Railroad Companies and in consequence of this it is impossible for shippers to secure enough barges to supply the demand notwithstanding that a dozen new ones were built during the winter.

It is difficult to get at the amount of lumber shipped during a season from Ottawa by boat, but the following is a calculation made by a prominent forwarder and is as nearly correct as possible :

All the mills last year at the Chaudiere, including J. R. Booth, Bronson & Weston, Grier & Co., E. B. Eddy, Perley & Pattee, and Hurdman & Co., turned out on an average 600,000 feet of lumber per day each, making a total output for all the mills for a day of 3,600,000 feet. The total output for all the mills for the season, which was about 210 days, was about 756,000,000 feet. Of this amount about 252,000,000 feet was carried in American bottoms. The remainder, about 404,000,000 feet, was carried in Canadian bottoms and by rail. Of this last amount it is estimated that at the very least 200,000,000 feet was carried by rail. As this cannot be carried by rail on account of the rise in the freight rates it will have to be carried by boat and the forwarders state that every foot of it will be carried in Canadian bottoms. If this be the case it will easily account for the great demand which there is at present for Canadian barges.

The forwarders have completed the repairs to their boats and are now engaged in placing their barges and loading tows. Messrs. Blanchard & Co. are now engaged in loading a tow of 30 barges with lumber for Burlington. Messrs. Murphy & Co., are loading tows of 60 barges with lumber for Burlington. Messrs. Kirby & Bangs' tow of 6 barges will load with lumber for Buckingham on Monday. Messrs. Blanchard & Co., have leased all the barges and steamers of the Sincennes, McNaughton Line, and will run them in connection with their own line. Geo. Harris' line, of six barges, loads lumber for Buckingham on Monday. S. T. Easton's line of five barges will also load lumber on Monday next, besides these are many other smaller tows and crafts loading for intermediate points. The forwarders on the Rideau route are confident of a splendid season, and state that fully a third more freight will be carried this season than last owing to the high railroad rates between Montreal and Ottawa and Ottawa and Kingston, and also that forwarders this year refuse to make yearly contracts.

Mr. Wise, the engineer of the Rideau Canal, has notified all the forwarders having crafts on the Rideau route that the water will be let in to-day, and that navigation will be open on Monday. The Steamer Olive, of the Merchants' Despatch Line, will arrive down from Smith's Falls on Monday, going to Montreal.

On Wednesday next the steamer Ida, of the Merchants' Despatch Line, will arrive down with a load of freight on her way to Montreal. The wharf of the Olive and Ida, S. T. Eastman's is now open to receive freight.

The steamer Ella Ross will not begin running until the first of June, as she will only carry passengers.

All the other lines will begin running on their old route as soon as navigation is fully opened.—*Ottawa Journal.*

STILL IN THE TREE.

A. G. Van Schaick, who is pretty generally considered able to make as reasonable a guess as any one, has summed up the standing pine in Michigan and Wisconsin. Mr. Van Schaick does more than jump at conclusions ; he has maps and charts and charts of each section, and has for years kept a tab on experts, reports, and noted what the output has been. He gives his figures in the Northwestern *Lumberman* as follows :

	Feet.
In the Saginaw district	6,000,000,000
Other Lake Huron districts	12,000,000,000
Mackinac to Manistee, west shore	5,000,000,000
Manistee	5,000,000,000
Manistee to Muskegon	10,000,000,000
Muskegon and south	7,000,000,000
Menominee, in Michigan	4,000,000,000
South shore of peninsula	3,000,000,000
Lake Superior, in Michigan	5,000,000,000
Railway lands	12,000,000,000
Total	70,000,000,000

He estimates the amount in Wisconsin as about the same as in Michigan and locates it as follows :

Green Bay Shore	8,000,000,000
Wolf and Wisconsin rivers	8,000,000,000
Black and its branches	4,000,000,000
Chippewa and its branches	10,000,000,000
St. Croix and its branches	4,000,000,000
Lake Superior	6,000,000,000
Railway land	30,000,000,000
Total for Wisconsin	70,000,000,000

Mr. Van Schaick estimates the amount in Minnesota at about 30,000,000,000 feet, and believes the whole amount will be required for home use.

If consumers of lumber can see anything in the outlook that promises any permanent decline in lumber I cannot, and when the consumption of the past 20 years has advanced the price of pine in the West from $1.25 per acre to $4 per thousand, and from $1.50 per thousand, in 1880, to $5 for the same timber in Michigan, in 1886, with a demand for lumber that doubles every 15 years, nothing can, in my opinion, prevent the value of pine stumpage from advancing 10 per cent. per annum on its present value until the whole supply is exhausted. The time has already come when it is difficult to buy pine timber and manufacture and sell it at a profit ; and such being the fact timber owners must look with more favor [illegible] shape their business to cut it with a view to securing the profit it should pay under such circumstances.

THE SAGINAW OUTPUT.

The output of the streams in the Saginaw district is as follows :

Tittabawassee and tributaries	410,000,000
Cass, Flint and Bad river	10,000,000
Kowkawlin	20,000,000
Rifle river	80,000,000
Au Gres river	40,000,000
Saginaw and Shore pine	10,000,000
Total	570,000,000

The railroads hauled directly to the Saginaw river last year 149,555,557 feet, and as near as can be ascertained they will handle direct to the river 170,000,000 feet, and about 30,000,000 feet will be towed here from the Upper Michigan and Georgian Bay points. There is now in the mill booms 33,190,000 feet. This gives a total stock for the mills :

Streams in Saginaw District	570,000,000
Railroad logs	170,000,000
Rafted from upper lake, etc	30,000,000
In mill booms	33,190,000
Total	803,190,000

To the foregoing may be added about 40,000,000 feet that will be put in during the summer.

At Escanaba the log output of that river is estimated at 25,000,000 feet.

DECAY OF LUMBER.

Beech, says the *Industrial World*, rots very easily if exposed to the elements, but under shelter remains sound. If covered by water it will remain sound for a long time. Oak, if exposed to the weather, loses its sapwood, but the old wood remains sound for many years. All young timber should either be put in water immediately after it is cut or put under shelter, as the young wood begins to rot very quickly if it is alternately wetted and dried. It follows, then, that deterioration takes place to a far greater extent than we imagine by letting young trees lie out in all weathers with their bark on, as they can not resist wet without having been first dried. All wood should be either put in water immediately after being cut, or at least when spring comes, as it is absolutely necessary that all timber should be water-soaked before any attempt is made to dry it. It is a well established fact that boards dry much quicker if the logs have previously lain in water. Another fact worthy of record is that water-soaked lumber is never attacked by insects and hence plank treated in this way can stand for many years without injury.

LUMBERING IN NEW BRUNSWICK.

The general estimate of the lumber that would be cut on the St. John river during the past winter, outside of Mr. Gibson's cut, was in the vicinity of 150,000,000 feet B.M. It is now supposed that there will be a falling off one-third or more in this quantity. The depth of snow, which above Fredericton would average 5 feet on the level, was a great drawback to the woodsmen. The winter was a succession of cold snow storms. The snow not packing, made the hauling very hard. Shoveling to the standing trees, which in ordinary years begins late in February or early in March, had to be begun about the middle of January, and the work of getting to yarded logs was as great as the chopping, hauling and yarding of them would have been in any ordinary year. Thus the last winter has been one of the most expensive to the log handler in New Brunswick that has been known for many years. Then the cost of portaging, always a heavy item, was increased by the frequent snows, so that it may with confidence be affirmed that few of our log handlers will make much out of their winter's work, while many will be losers. The prospect for a successful drive is good.

—The Messrs. Emery Bros., of Saginaw, Mich., have concluded this year that all the logs they got out, about 40,000, will be sawed in Canada, and they have rented a mill on the Georgian Bay for that purpose. This is a result of the high export duty on logs. The probabilities are that as they own extensive limits in the Nipissing and Georgian Bay territory, they will build mills of their own to saw their Canadian log cut.

THE NEWS.

ONTARIO.

—The Toronto wholesale lumber trade is reported good.

—On an average one hundred million feet of lumber is consumed in building operations in Toronto yearly.

—About 60,000 logs will be stuck in the Gatineau this winter, some of which belong to Mr. Jas. McLaren.

—A lad engaged in McClymont's saw mill at New Edinburgh, had his hand cut off recently while running a saw.

—News from the Gatineau lumber district states that the lumber drive has arrived at the mouth of the Gatineau river.

—Messrs. Jull & Stearns, not having succeeded in making money by their planing mill at Port Rowan, have assigned.

—William Latch, wholesale lumber merchant, Toronto, has assigned. The cause is principally attributed to business neglect.

—Considerable activity prevails around the docks at Parry Sound these days. Lumber is the staple article, and is being shipped freely.

—Mr. J. R. Booth has placed some new shingle machines in his Ottawa mill, which enables him to turn out pine as well as cedar shingles.

—Mr. Brennan of the Ontario Lumber Co., caught two young moose on the French River. He will keep them for a driving team.

—A large number of men are leaving Ottawa and vicinity for Michigan to work in the bush and mills for the lumbermen throughout that State.

—Mr. Hall, an Ottawa lumberman, thinks that no better class of logs can be got out anywhere than on the Whanapitae and around that district.

—Mr. John T, Brown the well known farmer and lumberman, formerly of the township of Ramsay, died at Burlington, Ont., during the past month.

—The shingle mill owned and run by Mr. George Cummins, on the 7th con. of Beverly township, was recently destroyed by fire, nothing being saved.

—The Minden *Echo* says that the last of Strickland's logs have already passed through that place, and that Mr. Irwin's drive will pass sometime in July.

—McArthur Brothers, of Cheboygan, Mich. and Toronto, will ship about 6,000,000 feet of lumber and board pine from the Georgian Bay district this season.

—George Taylor aged 22, while fixing machinery in a mill near Port Elgin, was struck by a saw which cut off the top of his head and threw him into the river.

—McArthur Bros. have about 6,000,000 feet of lumber and board pine in the Georgian Bay district, which will be shipped on their own boats to lower lake points.

—A washout occurred on the mill-race at Whitevale lately, destroying the pipes leading to the water-wheel in the saw mill, and taking the embankment around it.

—Mr. W. F. Whitney, of Bay City, Mich., intends rafting about 10,000,000 feet of logs from the Georgian Bay district this season to be manufactured into lumber across the border.

—This year's drive of sawlogs on the Ottawa is now down and the lumbermen are sawing on last winters cut. The quality of the new logs is pretty much the same as other years.

—A young man named John Hunt, of Mt. St. Patrick, had his hand crushed between a block of wood and a rapidly revolving saw in Carswell, Thistle & Mackay's mill at Calabogie.

—Messrs. Bronson & Weston, Ottawa, have put a new steamer, the Transfer, on duty to facilitate the passage of lumber from the mills to the piling ground on the canal banks.

—Messrs. Taylor & Lount, of Whitevale, propose to remove their saw mill to the site of the old grist mill, and to use the second storey as a brush factory, running both by water power.

—Mr. Thos. Jennings has purchased from Messrs. Falconer & Hamilton the new planing mill and furniture factory lately belonging to the estate of Messrs. Irwin Bros., at Shelburne.

—Mr. A. C. Dallas has leased the premises owned by the Pike & Richardson Cooperage Co., near Chatham, and will continue there the manufacture of patent coiled hoops, staves, heading and liner hoops.

—Messrs. Perley & Pattee, of Ottawa, have a large number of men engaged in putting down a trestle foundation for the new lathe mill which is being erected in the place of the one recently destroyed by fire.

—The boiler of a portable saw mill engine which was at work near the old Crawford mill, about three miles north-west of Culloden, burst recently, killing the two men (father and son) who were operating it.

—The Canada Lumber Company, lately incorporated, will operate principally at Buckingham, Ontario. It is understood that the capital stock will be $500,000, which will cover the lumber business, stock-raising and merchandizing.

—The tug "Gladiator" recently brought in a tow of logs for Mr. Miscampbell's mill at Midland, sufficient to make two and a half millions of lumber. Owing to this mill making a late start it will run day and night during the balance of the season.

—The lumbering firm of Francis Bros. & Co., Pembroke, have purchased from Messrs. Reopelle & McGuire a timber limit on White Fish Lake in the Indian Reserve, Algoma District. The price paid was somewhere in the neighborhood of $55,000.

—Reports from the Parry Sound district go to show that the drives of the different lumber companies are going down the rivers in fairly good shape; most of them are now safe and but few logs will be "hung up" this year, notwithstanding low water.

—Ald. Bingham, who has charge of the log drive on the Gatineau river, states that he has 60,000 logs high and dry on the banks of the river at different points, as a result of the river subsiding. He will use horses to have them rolled into the stream.

—McLean Bros., of French River, propose manufacturing about 4,000,000 feet of lumber this year. Next fall they intend erecting a large gang and band mill at the same point. They are also doing a large amount of rafting and towing for the Oscoda Lumber Co., this year.

—A company with a capital of $25,000 is being founded at Brantford for the manufacture of patent asphalt paving blocks, tyling, roofing, and materials of a like nature. The promoters are S. J. Aiken, D. J. Conger, R. Holmes, and Wm. Smith Burton, of Boston, Mass.

—The Rat Portage council has decided to sell the property of the insolvent Rainy Lake Lumber Co., located at that place, for taxes. The property consists of a saw mill, logs, etc. It is understood the liquidators have refused to pay the taxes, which now amount to a total of $2,526.47, accrued during the past three years.

—Messrs. McKinnon & Walsh have purchased the limits and mill of Charles Anderson, at Little Current. The price paid was in the neighborhood of $112,000. Mr. McKinnon is from Philadelphia, and Mr. Walsh is an old resident of Toronto. Both gentlemen are well up in the business and are well and favorably known throughout Canada.

—The quantity of material in the shape of lumber, iron, etc., consumed at the Canadian Pacific railway Perth carshops during the past six months has been very large, owing to the erection of box cars, of which three and four per day are being built. At present there are about fifty cars loaded with shop material, principally lumber, at the station.

—The Bobcaygeon *Independent* says:—The water in the lakes has kept up well, and the navigation is excellent. It has been an exceptionally good year for the drives of logs coming down. The dams put up by the Provincial Government in the back country work admirably, and the high level of the water will probably be maintained during the season.

—Lumbering operations have not had all their hindrances during the late severe winter. Rafts passing through minor streams find the supply of water extremely short. McLaren on Black Creek, has been compelled to abandon 8,000 of his logs, one-fourth of his entire raft. He brought the whole to within four miles of Lake Dore, but could only get 24,000 through.

—McLaren's drive of Black Creek, inlet of Lake Dore, has, in part entered Snake River. It was found necessary to leave a quarter of the drive, 8,000 logs, up the creek, four miles from its mouth. Low water is seriously interfering with the forwarding of timber on all the smaller streams. A small drive belonging to Johnston Bros., of Ottawa, is now passing through the slide at Calumet.

—In Montreal an active business is being done in lumber, owing to the extensive building operations which are now being conducted. There are no changes to note in prices although the mills have made an advance in some descriptions. The present briskness has every appearance of continuing. Shipments in bulk have so far been in very limited compass; but the trade of the season is not expected to manifest any diminution, if, indeed, it does not show an advance.

—A Detroit dealer gave his views on the future lumber business of his model city recently as follows: "Michigan pine is growing very scarce and in five years we will have to draw from Canada. Detroit is accessible to Georgian Bay and other large timber tracts. All the waste of a saw mill can be utilized in a city like this and the good lumber easily distributed. We will have big mills on the river in a few years." The same might be said of the Lake cities.

—The C. P. R. have got all Messrs. Timmins & Gorman's Whanapitae square timber conveyed to Pipineauville where it is now being rafted up to be taken to the Quebec market. Mr. Thomas Hall, who has charge of taking the timber from Papineauville to Quebec, in speaking of the lumber business of the Nipissing district, said that nearly all the logs got out in that district will be got safely to the mills. Out of the whole season's cut only about 20,000 will be stuck in South River.

As five of Gilmour & Co.'s men were proceeding down the river below Ranney's Falls, near Trenton, a few days ago, their boat struck a swell and upset, and they were thrown into the water. Three of their number were carried down the river about half a mile, and reached the shore. The remaining two grabbed the boat when it went over and clung to it, and landed safely on Meyer' Island, about one mile and a half distant.

—Whilst a youth named Edward Henry was removing some saw-dust from a place near the belt which drove the shingle machine of Messrs. Berney's saw mill at Thompsonville, a short time ago, he was caught by the belt and his leg broken and torn from his body. His brother found him shortly after in a state of sensibility and able to speak to him. Doctors Armstrong and Cheffey removed the broken part of the thigh-bone from the socket, and shortly after death put an end to his sufferings.

—Thos. W. Hotchkiss, U.S. Consul, at Ottawa, Ont., reports that the supply of oak timber in Canada is practically exhausted and that for some time past special lots of oak lumber have been obtained from the United States for Canadian uses. Oak is scheduled in the Canadian tariff among "free goods" but a recent customs decision is to the effect that all oak sawn to a special size, or for any special use is—dutiable. Practically, there is a duty of 25 per cent. on oak lumber going into Canada.

—The old Toronto wholesale lumber firm of McCool, Boyle & Wilson has been dissolved, and in its stead a new firm under the name of McCraney & McCool will conduct the business in the future. Mr. McCraney hails from Oakville, and is a thoroughly experienced and well known lumberman. Mr. McCool has been engaged in the business since his boyhood, and evidently what he does not know about lumber is hardly worth finding out. THE LUMBERMAN bespeaks for the new firm a liberal support.

—The Canadian Pacific Railroad Company carried out of Ottawa last year 75,000,000 feet of lumber and the Canadian Atlantic Railroad Company about a similar amount, making the amount carried out of the Ottawa by rail last year about 150,000,000 feet out of a total cut of somewhat over 350,000,000 feet. Two-thirds of this amount shipped by rail went to the United States. The C.P.R. have secured several large contracts for carrying lumber from Ottawa to points in the United States this season.

—Various tales come back from the Georgian Bay country to the effect that Lawton Bros. are cutting some pretty slick pine from their Blind river holdings. The old concern of Lawton Bros., of Toledo, the senior member of which died last fall, has been reorganized under the same name and will be continued by J. R. and S. H. Lawton. The former is now over at the Canadian mill, arranging for forwarding the output to the Toledo yards. J. R. says: "You just wait, and I'll show you some cord pine that didn't grow on the Cass river." —*Chicago Timberman.*

—The following members called upon Sir John Macdonald recently to impress upon the Government the desirability of placing a duty upon Elm logs:—Messrs. Moncreiff, Brown, McKay, Roome, Sproule, Ferguson (Welland), Porter, Cockburn, Wright, Perley, Ward, White (Renfrew), Gordon, Bergin, Coughlin, Stevenson and Guillett. The case was presented by Mr. Adam Brown, and several members of the deputation spoke in support of the duty. The Premier promised to consider the matter.

—The late rains has proved of wonderful service in getting out the square timber and logs on the different streams. It was feared that Charette's drive of Perley & Pattee's on the Black River would be stuck, and the recent heavy rains have so raised the water that all fears have been dissipated. This drive is an extensive one of fully 10,000 logs. Alexander Fraser's 40,000 saw logs drive on the Schyan is coming down nicely, the recent rains swelling the stream to considerable dimentions. Fears were at one time entertained that these logs would be stuck owing to the water falling so fast. R. & J. White's two rafts of timber got out on Moose Creek near the head of Big Lake is coming down in good style in charge of Mr. Lalonde. This timber is of the make of 1885-6. Reports heard from all points say very little, if any, of the cut of this year will be left behind, which fact is attributed to the recent copious rains, which have boomed the creeks and swelled the rivers.

—The Canadian Pacific Railway Company carried out of Ottawa, last year, 75,000,000 feet of lumber, and the Canada Atlantic Railway about a similar amount, making the amount carried out of the Ottawa by rail last year about 150,000,000 feet of out of a total cut, of somewhat over 350,000,000 feet. Two-thirds of this amount shipped by rail went to the United States. The C. P. R. have secured several large contracts for carrying lumber from Ottawa to points in the United States this season.

—While McLaren & Edwards' gang of rivermen were working at a big dam at an exceedingly dangerous point on the Falls at No. 1 Mill, the jam suddenly broke away, precipitating half-a-dozen men into the water—right in the middle of the jam. One strapping fellow, and among the best of the gang, named David Saiyen, was killed almost instantly, his head being cut open. He came from Ripon, Que., and was about 30 years of age. His body got entangled beneath the logs, and was not got out for half an hour afterwards. Another man named John Ferguson, of Carleton Place, was very badly crushed between two logs, and would undoubtedly have shared the same fate as poor Saigen but for the timely assistance of Mr. John Anable, who kept the logs apart with his pole. Ferguson was taken to the tents and medical aid summoned. Saiyen's body was taken to Mr. Donaldson's, coffined, and sent to his friends. His comrades felt their loss keenly. It was a miracle more of them were not killed.—*Gazette.*

—The two mills of the Langford Lumber Company located at Langford, 100 miles north of Toronto, are both in full blast with a cutting capacity of 120,000 a day. The stock of 16,000,000 feet is now all down out of Black river into Lake St. John, at the mills. The Black river and Head river drives have all got out earlier than former years by about 10 days. Water for driving and sorting purposes is ample. The stock wintered here and also this year's cut has all been sold to the Skillings, Whitneys & Barnes Lumber Company, of Ogdensburg, N. Y. The stock held over is being shipped very rapidly, a full train of 22 cars having left the yards every day during the last ten. William Thompson, President of the Langdon Lumber Company, has been making extensive improvements and purchases during the spring on his own account. He has built a fine shingle mill in Orillia, and a handsome steamer to ply on Lake Couchiching, between Orillia, Langford and Washago. He also purchased a mill and limit of the estate of the late R. C. Smith, which he purposes stocking next season.

—The lumbermen of the Chaudiere have, through Mr. Perley, M.P., represented to the Government the necessity of replacing the present suspension bridge across the Ottawa river, at the Chaudiere Falls, with a more substantial structure better able to accommodate the greatly increased amount of traffic which passes over it daily. The lumbermen represent that the roadways leading to the bridge, and in fact, all the roadways on the Chaudiere have been repaired and reconstructed to accommodate the greatly increased traffic, while the bridge across the river is totally inadequate for the heavy traffic over it. They represent that the bridge has now been in use about thirty years and is not in good repair, and although plenty wide enough for the traffic which passed over it at the time of its construction, it is now far too narrow and should be replaced by a more substantial and wider bridge. It is understood that the demands of the lumbermen are being favorably considered by the Government, and that ere long a new iron bridge will span the Ottawa in the place of the old Suspension Bridge.—*Journal.*

—Robt. Campbell, M.P., died at his residence, Eganville, on June 14th, of disease of the liver, complicated with kidney affections. Mr. Campbell was the eldest son of Dugald Campbell, an Argyleshire man, and was born at Glenurquhart, Argyleshire, Scotland, March 20th, 1818. He was therefore over sixty-nine years of age. Practically he was a Canadian as he came with his parents to Canada when but two years old. His parents settled in Lochiel, Glengarry, in 1820. Mr. Campbell began business life as a clerk in the employ of the late John Egan, the lumber king of the Bonnechere, and was one of his most valued employees. He married at Hawkesbury in 1845, Miss Elizabeth Lothian. After Mr. Egan's death, Mr. Campbell became manager of his estate, and finally started in the lumber business himself, establishing what has been up to now the firm of Robert Campbell & Sons. He ran for South Renfrew in 1878, but was defeated by Mr. William Bannerman, by something over 200 majority. In 1882 he was successful, being elected over Mr. Bannerman by 154 votes, and in February last was again returned, defeating Mr. Ferguson by 125 majority. Mr. Campbell was not an active parliamentarian, but was much respected personally by his fellow-members.

Please mention this paper when writing to advertisers.

QUEBEC.

—G. W. L. French, is re-erecting his saw mill at Island Brook.

—Dunbar Beaudry, sash and door factory, Montreal, has assigned in trust.

—An international congress of Canadian and American Boards of Trade will be held in Montreal in June.

Quebec market is showing a little more life, but shippers do not seem to be in want of much tonnage; one or two ships have been placed to load timber at $4.60 and $4.70.

—The Cookshire Mill Co., at Cookshire, are running their mill day and night. The river for a mile above the mill is completely covered from bank to bank with floating logs.

—The Eddy Manufacturing Company's new paper pail factory back of their match factory, Hull, is being rushed up. The contractor expects to complete the stone works by the end of June. The roof, it is understood, will be similar to the roofs on the company's saw mills.

—G. W. L. French, of Island Brook, who had the ill luck to lose his saw mill by fire a short time ago, is just now commencing to rebuild. His loss is a very severe one, as his insurance was not more than two-fifths of its value, and then loss of this year's work will add still more to his loss.

—The Supervisor of Timber Cullers at Quebec gives the following statement of timber, staves, masts and spars culled at that port this season and last up to 1st June. Basswood, butternut and tamarac are items which are left blank in both years:—

	1886.	1887.
Waney White Pine	45,358	127,965
White Pine	11,049	15,840
Red Pine	179	269
Oak	165,012	174,295
Elm	59,907	.....
Ash	4,707	18,274
Basswood	.....	.....
Butternut	.....	.....
Tamarac	.....	.....
Birch and Maple	147,742	43,462
Masts and Bowsprits	—pcs.	—pcs.
Spars	—pcs.	—pcs.
Std. Staves	3.8.3.20	.....
W. I. Staves	8.1.2.16	.....

NOVA SCOTIA.

—D. Wright & Co. manufactured a large number of spars this winter at their camp in Ogemaw county. Several car loads will be shipped to Halifax, N.S. They are the full length of two cars, and the largest of them are fully 18 inches in diameter at the top.

—The projectors of the big timber raft in Nova Scotia, which it is proposed to tow to Boston or New York, and thereby avoid both the duty on manufactured lumber and the freights by vessels, have not lost courage, it appears, on account of their failure to launch the huge craft from the ways on which it was built last season. In fact, they are building it some 200 feet longer, with something like 500,000 feet more logs than before. The only hitch in the launching last year was the weakness of ways, which could not support the immense weight resting on them. As this will be amply guarded against next time, there is but little doubt but that the leviathian will be successfully floated. The matter of towing it 400 or 500 miles in the open sea is, however, an unsolved problem. If it should happen to strike one of the storms that sweep this coast at frequent intervals, even in the summer season, the sticks would likely soon be piled up on the beaches from the Bay of Fundy to Cape Cod.

NEW BRUNSWICK.

—About 80,000,000 feet of logs will be hung up in the upper St. John in New Brunswick.

—St. John, N. B., exported for May, deals, lumber and timber to the value of $382,598.

—Edgar Taylor, aged 33 years, was killed in a saw mill at Botsford Parish, June 1st. His head came in contact with a saw and was cut in two.

—Mr. Thos. W. Flett has made an arrangement to start the Flett saw mill at Nelson this season, and is now busily engaged with a large gang of men fitting her up.

—Very few logs are in the boom on the Restigouche near Campbellton. The freshet is yet very high and lumbermen are afraid to drive. The boom is being run by Mr. Wm. Bryenton, of Derby.

—Of an anticipated cut of 150,000,000 on the St. John River it is improbable that over 110,000,000 feet will be realized, although this quantity will no doubt be increased by the 17,000,000 old logs held over.

Nearly all the lumber expected has come into the north-west boom, at Newcastle, only one drive having stuck. There will be about twelve million rafted this year. The logs are said to be of better quality than last year.

Advices from the Aroostook state that there is a big jam of logs at Aroostook Falls, and between twenty and twenty-five million feet of logs will be hung up for the season in consequence, as the water is falling very fast. This will seriously inconvenience some of the St. John millmen and will materially reduce the season's cut. On the upper waters of the St. John about eight million logs will be hung up.

MANITOBA AND NORTH-WEST

Mr. McArthur reports seeing a quantity of white on the North Fork of the Saskatchewan during his recent exploring [illegible]

It is stated that the Normoi Mills' (Rat Portage) average cut for a week recently was 75,000 feet of lumber, 1[illegible] of lath and 34,000 shingles daily.

The new C.P.R. hotel at Banff. is being pushed ahead rapidly. About 750,000 feet of lumber and 300,000 [illegible] will be used in the construction.

—Messrs. Hoyt and Sage, of the Alberta Lumber Co., report disastrous results to settlers from fire which have been raging north and west of the Crossing. Two settlers were burnt out and barely escaped with their lives.

—Dennis Shea, foreman of a pile driver, while releasing some logs in a jam at Banff, N. W. T., fell into the river, and was drowned in sight of his men, who were unable to reach him. He was 28 years of age and unmarried.

—The Winnipeg *Free Press* states that British Columbia lumber is becoming a prime favorite with carpenters and cabinet makers in that city for certain classes of work. Quantities of pine and cedar are being imported. Its advantage over the Manitoba timber is that much larger boards can be obtained. For instance a board three feet broad and sixteen long without a flaw or knot in it, was found in a consignment from British Columbia.

—The Calgary N.W.T., *Herald* gives the following particulars regarding the new saw mills just erected by the Eau Claire & Bow River Lumber Co., at that place: It is a splendid structure. The boiler house and engine room is of solid stone 32x 46, walls two feet thick. The engine is 75 horse power. The most conspicuous thing about the place is a very substantial structure, 23x122, and its capacity is 40,000 feet per day, though with large timber it would run 100,000. The machinery consists of a rotary saw, gang saw, lath mill, clapboard machine and shingle machine. The intention is to manufacture every kind of building lumber and woodwork, so that it will not be necessary to import any manufactured lumber. Mr. Prince thinks prices will remain pretty firm, though they may be able to make a slight reduction on present prices and there will be no danger of the supply giving out. The Company intend manufacturing 2,000,000 feet this summer. Rough lumber will be sold at about $20; shingles $3; lath $3. The Company have invested about $40,000 and they want to get some of it back this year. The mill will give employment to about 50 men. The company have ten timber limits, equalling 500 square miles. They have had gangs of men at work in the woods for a year and two million feet of logs have been taken out. The gangs have been working at Canmore and Silver City, about 60 men being employed. The company's booms and arrangements for utilizing the Bow are on a large and most complete scale, and it is more than likely that they will utilize the fine water power at no distant day, not only for the lumber business but for flouring and woollen mills. The members of the company are as follows: President, J. G. Thorp; Vice-President, O. H. Ingram; Secretary-Treas., V. W. Bayless; ass.-sec.-treas., E. B. Putnam; P. A. Prince, Manager. The headquarters of the Company is San Claire, Wis., where the officers reside.

UNITED STATES.

—Eastern spruce is reported very scarce in New York.

—There is a mill at Tacoma W. T. which cuts 400,000 feet a day.

—The loss by the recent fires in Michigan is estimated 7,000,000 dollars.

—A good deal of summer logging is going on this year in the Saginaw Valley.

—Eastern demand for lumber is good and commercial men have little difficulty in securing favorable orders.

—Something of a famine of shingles is reported. There has been a shortage in this line in the Eastern markets all the spring.

—The lumber receipts at Toledo, Ohio, for the season of 1886-87 were 30,000,000 feet more than the previous season.

The Canada Lumberman

DEVOTED TO THE LUMBER AND WOOD WORKING INTERESTS OF THE DOMINION.

PUBLISHED MONTHLY BY

A. G. MORTIMER, PETERBOROUGH, ONT.

Terms of Subscription:

One copy, one year, in advance $1 00
One copy, six months, in advance 0 50

Advertising rates furnished on application.

All communications, orders and remittances should be addressed and made payable to A. G. MORTIMER, Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

Advertisements intended for insertion in any particular issue should reach the office of publication at least six clear days before the day of publication, to insure insertion.

The CANADA LUMBERMAN is filed at the Offices of MESSRS SAMUEL DEACON & Co., 154 Leadenhall Street, London, England, who also receive advertisements and subscriptions for this paper.

PETERBOROUGH, ONT., JULY, 1887.

EDITORIAL COMMENT.

THE *Timber Trades Journal* of London, Eng., says :—"The CANADA LUMBERMEN has vastly improved in every way since Mr. A. G. Mortimer has taken it in hand."

* * *

FROM out the list of goods brought into Canada last year free of duty we find the following :—Woods manufactured, including walnut, pitch pine, cedar, oak, mahogany, $226,000 ; logs, $493,200.

* * *

THE *Timber Trades Journal*, of Chicago, has presented itself in new and enlarged shape, and from present appearances the new proprietors are going to make it second to no class journal in that country, where trade publications are becoming as numerous as flies in July. Chicago is one of the leading lumber centres of the world, and can claim credit for having three of the ablest representative papers to be found anywhere.

* * *

THE Mississippi Valley *Lumberman* comes to hand in an entirely new dress and now presents a very handsome appearance. The new management evidently not only understand how to turn out a sound and practical trade paper, but also demonstrate their knowledge of the "Art Preservative" in a way that does them credit. The American papers *do* put on a great deal of style typographically, but the CANADA LUMBERMAN is not going to fall behind as will soon be demonstrated. Success to the *M. V. L.*

* * *

THE increased export duty on pine logs does not seem to prevent exportation to the mills in the United States, though it has undoubtedly put a strong check upon such operations. The export, we learn, is still taking place, especially from the Nipissing District. This trade should be carefully watched, both to make sure that the payment of duty is not evaded and also to obtain accurate statistics of its extent. If it is found that the present duties do not suffice to confine this practice within narrow limits a further advance should be made when Parliament next meets.

* * *

THE value of the lumber exported by Canada from 1873 to 1886 inclusive, exceeded 310,000,000. Of this amount the United States bought about $110,000,000 worth, while the exports to Great Britain were valued at $177,000,000. But the Eastern States in spite of a prohibitory revenue tax of $2 per 1,000 feet, is gradually becoming Canada's chief market, particularly for lumber upon which labor is expended, and which, therefore, is the more valuable to Canada. In years prior to 1880 Great Britain's purchase of lumber exceeded that of the United States from Canada by over $12,000,000, while in 1885 Great Britain's purchases amounted to $8,577,581, against $9,355,591 by the United States.

* * *

BILL NYE takes occasion to express himself in a soul-stirring manner in a recent letter on the subject of forest denuding. In one of his erudite paragraphs he says : "Driven from my quarters by the heat, and the torturing remorse which sometimes comes to a man who has fished not wisely but too well, I strolled forth for some time beneath the gathering wings of the great quiet night, and finally backed up against a softly-sighing pine, to scratch my blotched and corrugated back between the shoulder blades, where no human hand could reach. I look forward with horror to the day when our forest trees shall be utterly swept from the face of the earth, and when, with all the agony shed over our race by the mosquito, we will not have a forest tree to our backs."

* * *

ANOTHER dispute seems to have arisen between the Dominion and Ontario Governments which will in all probability be fought out in the courts. It appears that some years ago the Crown Lands Department of Ontario sold a number of timber limits on the Georgian Bay, which the purchasers have failed to develop, preferring to hold them on speculation. Of late, however, a move has been made to sell off these limits, but it has recently transpired that the Dominion government had laid out eighty square miles of this country as an Indian reserve, and sold the pine on the same to certain lumbermen. The treaty under which the limits were converted into Indian reserves was made in 1850, so that in all probability those who have bought these limits will find that they have no legal right to hold them.

* * *

WE cannot congratulate the Dominion Government on having yielded to the opposition against the proposed export duty on elm logs. It is not perhaps a matter of great importance to many of our friends, but it is a bad precedent, and a reversal of the salutary principle that has apparently been adopted, so that it has an importance reaching far beyond the interests of those immediately concerned. Even in its more restricted aspect it is an unfortunate step backward. There are Canadian manufacturers buying elm to convert into staves, &c., and it is not a wise policy to allow this raw material to be taken freely abroad to be there manufactured, while the article manufactured by our own people is subject to an import duty. Nor will the farmers and others having elm logs to sell find themselves gainers in the long run by this policy, for if their home factories were free from one-sided competition they would be able to give the best price for the raw material. This mistake should be rectified next session.

* * *

SPEAKING of the steady advance in pine lumber a Toronto operator made a true remark when he said that while all other material could be reproduced pine when once exhausted could never be replaced. At the present rapid encroaches on this class of timber it will only be a matter of a few years before the supply will become exhausted, and then the question which has already arisen regarding a substitute will become a live question indeed. What this substitute will be is hard to determine, but we venture the opinion that iron will be brought into requisition in building operations just as rapidly as the supply of pine becomes exhausted. Of course this will make the cost of building increase, but in the adoption of iron in many places where pine is now used, we may safely look forward to more durable and substantial structures, and the value of property built in that way will be proportionately increased. The progress of this change, no matter what shape it way assume, will be slow, and as it gradually comes about, it will be observed to have many peculiar and interesting features.

* * *

WE have heard numerous complaints of late from Toronto and elsewhere regarding the scarcity of cars for the shipment of lumber, and it is a matter which demands the immediate attention of the different railway companies interested. One firm in particular informed us about the middle of June that they were then nearly five weeks behind with their orders, and through not being able to ship their stock customers were compelled to cancel their orders. It is said that this state of affairs has existed, to a greater or less extent, since January, and as there is still a busier season near at hand, it is feared that the difficulty now experienced may increase instead of diminish. From what we can learn the greatest difficulty is found in Grand Trunk shipments, and the feeling is freely expressed that too little attention is paid to this matter by the authorities of that line. In proof of this statement it is claimed that it is no uncommon occurrence to see a half dozen or more loaded cars of lumber standing for days on sidings awaiting the convenience of the company before unloading, while at the same time other shippers are urging their claim for cars, and are told that there are none to be had. We trust that this mild hint may have its desired effect, and that this serious inconvenience may hereafter be averted.

* * *

IN conversation with about a score of Toronto wholesale lumbermen a fortnight ago THE LUMBERMAN found that trade in the Queen City was just about all that could be desired, and that the then proposed strike of the carpenters and bricklayers was the only thing calculated to cause a feeling of uneasiness among the trade. "Let the dispute between master and workman be amicably settled and we can take care of ourselves in good shape," was the opinion expressed by a leading dealer, and endorsed by many others. But from later accounts it has become apparent that the hope then expressed has not been realized. The strike which is now going on is calculated to impede, in fact almost cease, building operations in Toronto for some time to come, and as a consequence the lumbermen will be heavy losers. It is indeed unfortunate that hardly a season can pass by without disputes arising between capital and labor, and through nearsightedness, often on the part of both employer and workman, a city's trade is seriously injured, and those who are in no way to blame are forced to suffer, and in more cases than one driven to the wall in consequence. The sooner some improved method is adopted to remove disaffections in the labor market, and compromise disputes, the sooner will stagnant money and enterprise be brought out and utilized to build up our naturally prosperous country.

* * *

THE establishment of a new department in the Government of the Dominion, that of Trade and Commerce, will be regarded by the lumber trade as having great possibilities for good, of course till it is put in operation and its scope and duties are deened by practical experience, the effect of its action can only be conjectured. It can hardly fail to do some good to the lumbering and kindred industries, and if energetically but judiciously conducted it may be made of very great benefit. By facilitating the opening of new channels of commerce, by collecting and disseminating information as to the special requirements of foreign markets, by establishing commercial relations with other countries and in a variety of similar ways, the Department of Trade and Commerce may give a great impetus to the trade of the Dominion, and there is no Canadian industry that is more susceptible of expansion by such means than lumbering and the timber trades of various kind. Except at London and Paris the Dominion has no officials from whom such reports can be obtained as are supplied by the Imperial consular service. These valuable reports are however open to the public. It is true they are seldom seen in Canada, and the new department could ensure them greater publicity, could no doubt obtain them in advance and probably would find no difficulty in having the attention of consuls and agents called to such branches of trade as are of especial importance to us. They could also collect within Canada itself information and statistics bearing on trade matters, compile them in a useful form and give them publicity. In many ways which might be suggested and which practical experience will point out, the new Department of Trade and Commerce can be made of material service in the extension of our industries and not least of those which we represent.

* * *

IN the May issue of this journal we pointed out the advantages to be derived from opening out new markets in the West Indies and Australia for the products of the Canadian forests. We then realized that our remarks only covered a limited field, and that equally as much could be said regarding the inducements held out by other countries for the utilization of our lumber and manufactured products. From the official report of the Canadian representatives to the late Colonial Exhibition we have been particularly impressed with the suggestions thrown out referring to the advantages of commercial trade with South Africa. Doubtless at first thought this may appear to many to be looking altogether too far away for a desirable market, but on reflection we think that the scheme will prove to be a feasable one. The South African Colonies, including the Cape of Good Hope, cover an area of over 500,000 square miles, and have a population of white and colored races amounting to about 2,860,000, but about 800,000 square miles are directly tributary to British trade and influence, and the total population of this would be considerably over 3,000,000. It the modern history of the African continent is studied it will be seen that civilization has extended more rapidly and steadily from the Southern, or temperate regions, than from any other quarter, so that the trade of Africa can be best cultivated for the future by making the Cape or Natal the chief base of operations. There can be little doubt but that in the future the American continent will supply a large quantity of goods to Africa, and as manufactured and unmanufactured woods is one of the greatest necessities of that country we cannot help but think that a large and profitable trade might be worked up by Canadians in this market. From the Baltic ports lumber is already being largely shipped, and from the United States we also find large shipments of various manufactured goods. A return cargo of wool can readily be obtained for the return trip, which makes such an enterprise doubly remunerative. Africa is not now, and will not be for a long time to come, if ever, a great manufacturing country, and there are certain manufactures wanted there, notably building materials, which this country can produce to better advantage than any other. The Americans, stimulated by the reports of their consuls, have for some years recognized this and have been pushing trade to good effect. It is to be hoped that Canada will not lose the advantages of an early start in this direction. If such a direct trade were opened the Dominion Government would, we have no doubt, support the line of steamers or vessels with a sudsidy.

It is a pity that there should not appear in the estimates an appropriation for subsidizing a line of steamers to the West Indies, for the encouragement of such commerce would have the undoubted effect of increasing the export of lumber and wooden goods to the Islands. The reason given by Sir Chas. Tupper for delay was that it would be premature and possibly injurious to take any action in the matter until the pending negotiations with Spain are completed, as he hoped would shortly be the case. We trust that by next year such satisfactory commercial treaties will have been concluded with Spain and possibly with France, as to open up new channels of trade for the Canadian lumber interest, and at the same time that the obstacle to establishing a line of steamers to the West Indies may be removed.

* * *

The decision of the Supreme Court of Canada in the case of the St. Catharines Milling and Lumber Company is one of considerable interest- It will be remembered that the company obtained from the Dominion Government timber land in the disputed territory of Canada, the Canada authorities claiming to deal with the property because they had acquired the Indian title. The Ontario courts, have upheld the right of the Province and now by a majority of four to two judges, the Supreme Court, the highest tribunal in the Dominion, has confirmed their judgment, maintaining that the Indian title is only extinguished not acquired and that the Province, not the Dominion, represents the Crown and enjoys its rights. It is said, and is probably true, that the case will be taken to the Judicial Committee of the Imperial Privy Council. This is the last resort and must settle the question definitely and finally. Thus an end must soon be put to a state of uncertainty from disputed title that has been very inconvenient to the lumbermen of Northwestern Ontario.

PROTECTION, COMMERCIAL UNION, OR LIMITED RECIPROCITY, WHICH ?

There has arisen lately considerable discussion as regards commercial relations between Canada and the United States. Some are advocating absolute commercial union between the two countries with no custom houses on the international boundary, and the same tariff as against the rest of the world. Some on the other hand would maintain, and even push still further, the policy adopted both at Ottawa and Washington of protecting home productions against foreign competition even between the two countries. The advocates of both plans are doing their utmost to advance their views and gain converts to their opinions. And between the two extremes there are many who without going the length of unrestricted commercial interchange between the two countries, would be glad to see some of the restrictions removed and mutual trade fostered and encouraged. With the object of ascertaining the views of the lumber trade on this important issue, a representative of this journal has during the past month, interviewed a number of representative lumbermen in Ontario. The original intention was to publish the substance of each interview separately, but after inspecting our note book it was found that the opinion of one was in reality the opinion of all, therefore it only becomes necessary to set forth the views as expressed in a general way. From among the wholesale lumbermen of Toronto an expression of opinion was given by the following well-known gentlemen : Messrs. J. M. Dollar, manager Ontario Lumber Co. ; Tennant & Co. ; F. N. Tennant ; A. H. Campbell, of A. H. Campbell & Co. ; William Kerr, of Christie, Kerr & Co. ; Mr. Willmott, of Willmott & McIntosh ; Mr. Scott, of Scott, Scott & Co. ; Mr. Donagh, of Donagh & Oliver ; Mr. Hargreaves, of Hargreaves & Co. ; Frank Thorpe ; Mr. McCraney, of McCraney & McCool, and Wm. Leak. In Hamilton we called upon Messrs. Flatt & Bradley ; R. Cruickshank ; Robt. Thomson and Patterson Bros. When we say that every member of the trade visited expressed himself in favor of commercial union, we mean that they were unanimous in the opinion that from a lumberman's standpoint such a treaty would be of incalculable advantage to the trade in general. The views as expressed on this question can be summed up in a few words. The rapid destruction of United States forests has made it nesessary for Americans to look to Canada for a large percentage of their lumber. The production in this country is even now much larger than the home market requires, and naturally enough we turn our attention to the most contiguous outside market. This market is found in the Eastern States. Under the present protective tariff there is an import duty of $2 per thousand on manufactured lumber going into the United States, and an export duty of $2 per thousand feet on pine logs. This import duty, it is claimed, comes out of the pockets of the Canadian manufacturers, for the reason that Canadian shippers are compelled to lay down their lumber on the other side as cheap as the same article can be obtained at Tonawanda or any other point. If both the import and export duties were removed it is but natural to conclude that a much larger and more profitable market would be opened out, an advantage alike to the American as well as the Canadian. Such an arrangement would at once enhance the value of timber lands, and would induce capitalists from both sides of the line to make heavy investments. It would, to a great extent at least, do away with the export of saw logs, as it would be found far more profitable to bring the saw mill to the timber than the timber to the saw mill. New mills would spring up rapidly, and additional employment would be found for thousands of men who are compelled to seek work elsewhere, and in a word it would give an incentive to the lumber business of Canada such as has yet never been realized. Under a commercial treaty such as is here referred to the probability is that Manitoba and the Northwest would be largely supplied from Minneapolis and other contiguous points ; the Western peninsula of Ontario from Michigan ; and the eastern markets from Ontario, Quebec and the other eastern Provinces. Then also would be found a ready market for our course lumber and mill culls, which at the present time are a drug on the market, as owing to the import duty it is impossible to profitably ship them abroad. The opinion seems to be general that such a step would not materially, if at all, affect the present price of lumber. It might have a tendency towards slightly higher rates, but not enough to influence the market to any extent.

Till the year 1867 there had been in force since 1854 a treaty establishing limited reciprocity between Canada and the United States. But this arrangement was then terminated by our neighbors for reasons which they deemed sufficient. Under this reciprocity as it then existed there were no duties but freedom of interchange between the two countries as regards the products of the forests, the farm, the fisheries and the mine—the raw materials as they may be called for the food, the clothing and the habitations of the people. While we do not assume to voice the whole lumber trade of Canada, from what we can learn from those with whom we have conversed, the conclusion arrived at is that a treaty similar in every respect to the one just referred to, is all that is really required by the lumbermen of this country, as we have been repeatedly informed that the trade was never so prosperous as during the existence of the old treaty. The advocates of the protection of native industries and the advocates of a zollverein, however much they differ, may unite in accepting a return to reciprocity as it existed from 1854 to 1867. Many in both countries are in favor of such interchange of produce and would gladly see it revived whether it went further or not. To the lumbermen it would be of as much advantage as unrestricted commercial union ; removing the duties on what they export to the other side of the line and the duties they have to pay on any food, such as pork for instance, that they import. Such limited reciprocity might be adopted without difficulty or much delay. Indeed the Canadian statute book already contains a measure authorizing the executive to adopt it. One objection made to "commercial union" does not apply to this more limited arrangement, for both countries import little of such goods except from each other and may easily make them free of duty, so that the question of Canada discriminating against the mother country is not involved. Neither would the other difficulty arise as to the equitable division of the custom receipts between the two countries. In fact there is no serious obstacle in the way of a speedy return to a limited reciprocity, while on the other hand there are strong barriers to surmount before the people of either country will care to express themselves favorably on the question of commercial union.

BUSINESS NOTICES.

One of the neatest machine catalogues issued this year is that of the Tanite Company, Stroudsburg, Pa., describing its specialties in Emery wheels, grinding machinery, gummers, &c.

We have received from Messrs. Butterworth & Lowe, Grand Rapids, Mich., their new catalogue of cars for logging roads. It is a neat production and not only contains descriptions and illustrations of all the latest productions in logging cars, but also some valuable tables, rules, data, etc., which we have no doubt will be of value to lumbermen and others. This catalogue will be cheerfully mailed to any of our readers who are contemplating a purchase in this line.

Through the courtesy of Mr. J. H. Walker. manager of the Toronto branch of the Canadian Rubber Company, we were recently shown through the various departments of the Toronto house, and was much interested not only in the large and varied stock of goods there shown but also in the valuable information given us concerning the extensive proportions of this business. We were informed that the business done last year by this company aggregated $2,000,000, whi'e employment was given to nearly 1000 operatives. The Toronto branch alone, through the indefatigable efforts of the Company's popular manager, done a business of one half million dollars. We have pleasure in again directing attention to the Company's advt. on another page.

We have much pleasure in dire[illegible] nouncements made in this issue of [illegible] representative whol[illegible] nouncement will increase f[illegible] to have a classified list of all or nearly all the leading lumber firms in Canada. The [illegible] ment of special interest. W[illegible] in every part of Canada cards similar [illegible] this issue, and shall be pleased to furnish quotations promptly

On another page will be found an advertisement from Mr James T. Milne. of Peterborough, which appears for the first time in this issue. This gentleman has con[illegible] facture of Milne's Oscillating Steam Gang [illegible] Band Mill. We have examined models and [illegible] new device in saw milling and consider it a valuable improvement on anything of the kind yet introduced. This machine has a substantial straight column frame, containing the foundation, engine-power, sawing resistance and os[illegible] ment. The sawing movement does away entirely with side rods and slides, which not only [illegible] reomes a great trouble and expense, but also increases the power and speed. Placing the engine under the saw frame is also a great advantage, in giving steam and steam-cushion to th[illegible] the self-acting press rolls, taking their power from main column under saw floor, and the device for cutting cro[illegible] logs, are each of themselves an improvement on anything yet introduced. Mr. Milne is a practical millwright [illegible] man, and the merits of his machine are worthy of his long and practical experience.

EUROPEAN NOTES.

The subject of an exchange for the timber trade is again receiving considerable attention in London.

Glasgow trade is reported as being in a very unsatisfactory condition. "Nothing doing" is the report that meets one at almost every turn.

At at auction sale held in Glasgow, on the 18th May, Quebec deals realized the following figures according to Brown's *Export List :* Quebec 1st yellow deals—

12 ft.	7/10 × 3	3s 11 d
12 ft.	7/10 × 3	2s 1½d
11 ft.	7/10 × 3	2s 0½d
10 ft.	7/10 × 3	1s 11½d
9 ft.	7/10 × 3	1s 9 d
9 ft.	11 × 3	2s 0½d
10/14 ft.	6 × 2	2s 1½d

On the same occasion, Quebec second yellow pine deals ten by fourteen feet, six by two inches, brought one and four pence half penny.

The English import of hewn timber for May was 174,477 loads, as compared with 145,041 loads for the corresponding month of 1886. For the five months ending May 31st, the statistics give 572,066 loads for '87 as compared with 489,819 loads for '86. Taking sawn timber for May the increase is still larger, the figures being 315,723 loads, as compared with 221,983. For the five months ending the 31st ult., the returns give 655,855 loads, as compared with 499,825, [illegible] 156,030 loads for 1887. The increase in sawn timber mainly goes from Russia, Norway, and Sweden, the former getting the larger portion of the increase. For the month of May, staves show a larger importation by 5,700 pieces than in May of the previous year, and for the five months the large increase of 9,642 pieces must be credited to them. Mahogany, on the other hand, is the only item showing a lessened quantity, the importation being 3,815 tons for May, 1887, as against 4,431 for the previous year. For the five months ending the 31st ult., 19,835 tons have been received, as compared with 21,589 tons for 1886.

The *Timber Trades Journal* speaking of London trade prospects and other things, says :—While prices of the limited quantity of sale goods offered at the "Baltic" each succeeding week appear to be hardening, complaints of dull trade, or rather no trade at all, are certainly not diminishing ; but rather on the increase, if that were possibler. Now, how to fit these two things together is the puzzle. Nobody can point to a scarcity of any one commodity, and give an illustration of the stagnation on one hand, and the seeming advance on the other, for all, or nearly all, the goods sold last week exhibited an improvement. Can it be the continental drain on the Baltic stocks, or a colonial demand that has been under cover of the low freights restoring the level? Fortunately, according to Canadian reports, there is a strong demand arising in the Southern States for whitewood, and spruce of the higher grades is already beginning to feel the effects of this increased demand, so that as it goes out of consumption [illegible] market may possibly be found for it. If [illegible] will sell here, it should be the better class, which is also [illegible] the "States" are apparently enquiring for.

TRADE REVIEW.

TORONTO.

From Our Own Correspondent.

The retail trade is fairly active with room for improvement. Car lots are somewhat slow in moving as builders are chary of purchasing more than will supply their immediate wants. The strike of the carpenters along with that of the plasterers, lathers and plasterers' laborers, have somewhat unsettled trade. Prices remain firm and are on the whole well maintained—very little cutting being done. Dry lumber is fast disappearing. Our market is almost omnivorous, nearly every description of lumber finding a buyer.

What is badly required in this city are extensive piling ground affording every facility to the lumberman in the handling of his lumber, and to which mill men can ship stocks to be sold on commission. The growth of Toronto in the past and its present rapid strides warrant such an undertaking. In a few years the very limited piling ground now afforded by the R. R. Co.'s, will be required for other purposes than piling lumber, and, unless a district be set apart for lumber, our lumber dealers will find themselves hampered in their endeavors to transact business. The present very slow handling of lumber along the Esplanade prevents the R. R. Co.'s from getting greater use of their rolling stock, as well as causing a hindrance to traffic generally. At the present time there are in Toronto over 600 cars of merchandize of all kinds under load, some of which have been standing since May. Officials from Montreal are making enquiries as to the cause of detention. They are not difficult to find. Limited space at the disposal of the R. R. and an ever increasing traffic. In the interests of the lumbermen, the railroads and the city at large, lumber must leave the Esplanade and go elsewhere.

The following are present prices:—

MONTREAL LUMBER MARKET.

MONTREAL, 25th June, 1887.

Trade in Montreal since last report has generally been active, and some large lines, principally for export account have changed hands. Contractors have also been extensive buyers as a large amount of building is likely to continue all summer. Dealers here have enough to do to fill all their orders ; in fact they have some difficulty in doing so on account of short stocks. Prices in this market are still steady, but advices from Ottawa are strong, and the advance that has taken place at the mills on some kinds of lumber will likely be felt here before long.

Last season of navigation opened very favorably, the arrivals from sea exceeding those of 1885, as did the exports generally. Pessimists predicted that the figures of 1886 would hardly be reached this year, but already the shewing is an excellent one, as will be seen from the following statement :—

Statement of ocean tonnage from the opening of navigation, up to and including June 11th, arriving at the port of Montreal :—

	1887. No.	1887. Tons.	1886. No.	1886. Tons.
Steamships	82	139,708	61	111,105
Barks	10	6,593	7	5,759
Brigs	...	...	4	1,299
Totals	92	146,301	72	118,163

The shipments from the port of Montreal up to date include 11,000 deals, and 750,000 feet of sawn lumber, as against about 5,000 deals and 1,500,000 feet of lumber for the corresponding portion of last year, the freights on which are quoted at $11 to $11.50 per M. to South America, and 40s. to 47s., 6d. per standard to the United Kingdom.

The following are the quotations at the yards here :—

ALBANY.

ALBANY, N. Y., June 24th, 1887.

The lumber market here is very quiet at present, shipments being light and lumber coming in slowly. It is stated that there is less lumber in the yards by 25 per cent. than for the past 20 years. Notwithstanding this prices are weak. The principal change in prices is an advance in spruce. Pine is quiet, as are also hardwoods.

Pine, clear, M	$55 00@60 00
Pine, fourths	58 00@60 00

NEW YORK CITY.

NEW YORK, June 22nd, 1887.

The wholesale people are doing a good business with prices fairly firm, although not as strong as they were some time ago. The receipts of spruce from the East are looking up in amount and the canal and river are sending down northern and western lumber. The coastwise receipts of hard pine and Virginia are good. Eastern hemlock is in short supply and in active demand from all quarters for building. There is still a lack of some assortments in the yards and everything offered is readily placed at fair prices. The only weakness is in hard pine, and that is more the result of overstocking in a few lines as the distributive demand was never better.

At the retail yards the distribution is quite general and the outlook good. Hardwoods are in especial demand, the call being for walnut, cherry and quartered oak. Good old quartered oak is wanted for the high priced houses going up on the west side, while ash is the trim used in the lower priced buildings.

In Brooklyn the demand in the out-lying districts is very good and the teams are kept busy all the time. North of Broadway and Bushwick avenue building is general on almost every block. The class of houses going up range in prices from $2,500 to $12,500 to build. The sale of improved property continues good, and this keeps up speculative building. Those who built last year and the year before find no trouble in disposing of the buildings at an advance above cost and usual profits of not less than 10 per cent. This in many cases runs up to 25 per cent.

SAGINAW VALLEY.

BAY CITY, Mich. June 25th.

Shipments for the past week or two have been a little more lively than heretofore, although the cargo market is by no means up to the average of past years, caused principally, it is said, through the scarcity of vessels. A dealer, says the *Northwestern Lumberman*, who usually handles large quantities of lumber for Ohio says that Ohio men have bought sparingly in the Saginaw Valley this season. Ed. McCarty reiterated that he had not bought a board, and Rose and Mason, who handle millions of feet, tell the same story. It is nevertheless true, however, that lumber is being sold quietly in considerable quantities. George V. Selden, who spent two elegant weeks in the Valley and left for home on Saturday, bought 1,500,000 feet to be cut, chiefly stock boards and strips ; and 200,000 feet of Norway bill stuff, but he would not divulge the price ; neither would the settler. Moshet & Fisher report having sold 5,300,000 feet during the week. The lot contained 1,300,000 feet of box at $10, and the figures for the remainder could not be obtained. The sale is also reported of 500,000 feet at $19 straight, 400,000 feet of box lumber at $10.50 ; 100,000 feet of good stock at $10, $20 and $38 ; 700,000 feet of coarse boards at $11.50 ; 150,000 feet, at $12 ; 600,000 feet of bill stuff, 12, 14 and 16 feet, at $8.50 ; 120,000 feet of sap boards at $20 ; 80,000 feet of Norway bill stuff at $10 ; and 280,000 feet of hemlock at $7. I also hear of the sale of 300,000 lath at $1.15. A dealer from Grand Rapids was in the city yesterday looking for stocks. He said Chicago had cleaned up the west shore closely, and he was of the opinion he could buy on this river and ship to advantage, the rail rate being only 6 cents. The call is chiefly for common lumber, stocks, strips and box. Uppers drag a little and prices for really good stock have been shaded. Norway strips are held at $11.

CHICAGO.

We extract the following from *The Timberman's* review of June 25th :—There has been so little abatement in the activity of the general lumber market, that it may practically be recorded as without notable change. Reports of a slightly diminished volume of sales at some points are met by advice of a contrary nature from others, so that it would be hazardous to affirm that there has been less lumber distributed this week than last. The situation of the trade is very satisfactory, except, perhaps, in respect to some of the conditions of the distributing business which are the natural forerunners of the impending rise in values. Lumber is moving very easily and freely. In all quarters sales are making without difficulty, and in a good many cases without effort on the part of jobbers.

Lumber sells itself, almost, and sometimes fades away more rapidly than suits the fancy of the dealer who feels sure that he can get more for it in the near future. It is a notable and most significant fact, that nowhere are jobbers making any special effort to push sales, and it is frequently mentioned that they are at some pains to sell no more than they are obliged to to keep up their trade. This is doubtless, however, a transient condition, growing mainly out of the relative cheapness of lumber in car lots. To keep their stocks in motion to the degree that is essential to the proper manipulation of a lumber yard, it will shortly be desirable for dealers to offer them freely, though there is nothing in the outlook now to warrant the expectation that the forcing process will be necessary at any time this season. The market for lumber by cargo here has maintained its strength, and possibly gained a little on dimensions, but so far as can be learned, stock at the mills is merely steady. Indeed, there are rumours that concessions are not wholly unknown. The extreme reticence of sellers in respect to the prices they are getting, in some measure confirms this. Considering that lumber is netting the mill people from a dollar to two dollars more than they averaged last year, it can hardly be said that this branch of the trade has had very much to complain of.

Lumber is quotably higher in a few markets, and the steadily increasing firmness comes to a point where an advance is the next thing to do, every day. There are signs that Chicago dealers will come out with a practical new list shortly, and this will doubtless be quickly followed by advances at other points, corresponding to such as may be made here. If there is any escape from a condition of higher prices all over the district wherein pine is sold and consumed, the way of it does not now appear.

Indirectly, the lumber trade, in common with other lines, has suffered a little from the financial disturbances arising out of the crash in the grain market here last week, but on the whole the bursting of that bubble has inflicted less injury than might have been feared. It makes money a trifle harder to obtain for those who are using their discount lines freely, but the result to legitimate business of the failure of a gambling deal can hardly be permanent or severely injurious. It is good evidence, indeed, of the financial health of the country, that such a collapse could occur with so little damage. In a certain way it is likely that the attempt to corner the market has been of benefit, in that it enabled holders of old wheat in the country to unload at a price that will give them more money than they could have got otherwise.

Shingles continue to attract a good deal of attention. They are very active to the extent of the supply, which falls considerably below the demand. Producers are very firm in their views, though they are apparently making no great effort at present to advance prices. They usually refuse offers to contract on the basis of present figures for future delivery, which indicates a hope and belief that they will be able to do a trifle better by and by.

In respect to prices, the change this week has been very slight. One hears nothing of any lower price for short green piece stuff than $10.25. A few lots may have sold a notch below this but the commission men profess to be getting it for anything reasonably good, and $10.50 for loads showing any considerable sprinkling of 18 and 20 feet stuff in the tallies. Most of the cargoes, however, which run a fair percentage of 18 feet and over are sold on a separate basis for long and short, the figures being usually $10.25 and $11@12.50. Cull dimensions sells at $7@8 according to what it happens to be.

There has been no special change in inch lumber, which maintains all its former strength and may have even gained a trifle in this respect, though this fact is not to be shown in quotations. The demand is largely for common stuff, which is extraordinary firm and high. As high as $13, and even $13.25 is paid for cargoes in which the pickings hardly balance the culls, so that they average no more than flat common. Lath comes forward in rather small quantities and are quickly taken up at $1.50@1.60 for green.

The following are the ruling quotations at present :—

MADAWASKA LETTER.

MADAWASKA, N. B., June 15th, 1887.

From Our Own Correspondent.

I don't think I can add anything you have not already heard about the unusual high water this spring. Most everywhere the damage has been more or less severe but no worse than was generally expected. The drives are about all out in the main river, and the water rapidly falling leaves lumber high up on the banks.

No doubt you have seen that the export duty on shingles, bolts, and cedar and pine logs capable of being made into shingle bolts, has been placed at $1.50 per cord of 128 cubic feet. I cannot see how those parties having hauled logs of pine and cedar for shingles can very well cut them up into shingle bolts and cord them so as to come at the duty ; nor can I see how they can figure logs into cords unless they do, to be correct. Suppose we take 128 cubic feet, which makes one cord, and see how many superficial feet there is in it. We will find it contains 1536 superficial feet of lumber. So far so good. Now we will saw one cord of shingle bolts into shingles, and we will get 3,000 shingles out of it. Then we will measure 1536 superficial feet of cedar logs, which makes one cord of 128 cubic feet, and we will get 15,000 shingles. So by measuring the logs into superficial feet instead of sawing them into bolts and cording them, we lose the export duty on 12,000 shingles on every cord of 1536 superficial feet, which makes one cord of 128 cubic feet. The great difference is in measurement. When we scale logs we take the top end, square it up and take the contents, allowing nothing for the wood thrown off to make the log square from top to butt, and the taper on cedar logs is by no means a small consideration in measurement. It is perfectly absurd to take 1536 superficial feet of logs to make one cord of 128 cubic feet.

The press should post the department regarding this matter. If they adopt a scale charging $1.50 per cord of 128 cubic feet, and count the same into superficial feet, take 1536 feet for one cord of 128 cubic feet, and collect the export duty of $1.50 per cord, the shingles which can be taken out of 1536 superficial feet of cedar logs will be 15,000, and fifty cents per thousand will amount to $7.50 for 1536 superficial feet. On the other hand if we saw one cord of 128 cubic feet of cedar into shingles we only get 3,000, which makes the export duty fifty cents per thousand. Now mark the difference. In one cord measured superficial feet we have 15,000 shingles, and one cord cubic feet we have 3,000, losing 12,000 export on every cord, superficial measure instead of bolts. One operator on the American side manufactures each season about 30,000,000 of shingles besides other lumber, the raw material being taken out of our forests. This man has never paid one dollar export duty, whereas if our government had exacted the same there would have been $15,000 yearly coming in to replenish the provincial treasury. I hope that the views as here expressed may have their desired effect, and that our representatives may see this important matter in a new light.

I see that Messrs. Brown, Masson, Guellet, Hesson, Perley and Dawson, are urging that a high export duty be imposed upon logs and timber of all kinds, but Mr. McMildon protested against it, saying it was a scheme to reduce the price of logs to mill owners. The mill owners of St. John who supported him must feel thankful to him for advocating no export duty, and encouraging Americans to continue our forest destruction, to the detriment of our own people. He is a lawyer, however, and, doubtless, has an axe to grind, which doubtless accounts for his discrimination against his own country in the interests of Americans.

NEWS NOTES.

—The building trades in Chicago are gradually recovering from the annual spring strike and lock-out, and the men are going back to work.

—A cargo of 300,000 feet of black and white ash lumber is being loaded at Bay City, destined for Africa. It goes by water the entire distance.

—The firm of J. J. Howe & Co., is credited with the intention of putting in a lumber yard at every town on the Duluth and Manitoba road.

—The lumbermen of south-western Pennsylvania are getting up an organization to be known as the Lumbermen's Protective Association of South-western Pennsylvania.

—Twenty vessels which cleared from Alpena, Mich., for a week ending on a late date, carried 6,355,000 feet of lumber, 5,600 cedar posts, 114,000 shingles and 600 ties.

—Since the opening of navigation Alpena has shipped by lake 27,707,000 feet of lumber, 614,000 shingles, 49,600 railway ties, 26,400 cedar posts, and 40 cords of match timber.

—The Inter-State Commerce law has had the effect of changing a large volume of the carrying trade from the railroads to the water routes. This is seen in a number of sections.

—J. S. Chase, a well-known commission lumber dealer of Chicago, after a six-months' sojourn in the forests of British Columbia, has returned to Chicago and resumed charge of his business interests.

—The mills at Cheboygan, Mich., are making a good record this year. The probable cut during the season will be about 100,000,000. The estimated product of shingles for the present year is 21,900,000.

—Scores of camps have begun work in Clare county, Mich., to save the burned-over timber, which must be cut at once. Logs are already moving in considerable volume. Thousands of trees have been killed.

—An American paper says that the new Canadian tariff, now under consideration, adds to the free list Redwood, planks and boards, sawn, but not further manufactured. This is intended to encourage the manufacture of cigar boxes.

A log jam on the Menominee river, in Michigan, reaching from Little Quinnesec falls to Big Quinnesec falls, and containing 100,000,000 feet, is called the biggest ever known on that stream. It fills the river full, and at some points is filled 30 feet high.

THE NEW LINE FOR MANITOBA.

THE St. Paul, Minneapolis & Manitobarailroad which is extending its system with marvelous rapidity is destined to play an important part in the lumber business in the very near future. Since the boom days of 1882 the trade along the Manitoba lines has been neither lager or important. Dealers have found that the consumptive demand, of farmers struggling to get out from under a load of debt could not be large, and the growth has not been conspicuous in any of the towns along the lines. But besides the extension the Manitoba is pushing west-ward from the Minot to the Great falls of the Missouri and Halena at the rate of five miles a day, the road promises soon to be a competitor for some of the southwestern carrying trade. At least the direction of some of its lines so indicate. One of these branches has already reached Watertown, D.T., and it is understood is to be pushed to Huron and how far beyond only President Hill probably knows. Another branch has reached Aberdeen, and is the confessed plan of President Hill to push one of these lines sooner or later to the Black Hills country and on to Denver. These lines already tap points heretofore reached only by the Chicago roads, and open markets for the Northwestern manufacturers which have belonged to Chicago and the manufacturers at Winona, Lacrosse and middle Mississippi points. These various extensions mean a large increase in the consumptive demand but it has been no part of the policy of the Manitoba thus far to foster the St. Paul and Minneapolis market. The greater part of all the lumber consumed along the Manitoba lines has been drawn from Duluth, from railroad on the St. Paul & Duluth line, the Hinckley branch and mills at St. Cloud, and in that vicinity. Presumptively Mr. T. B. Walker with his mills at Grand Forks and Crookston, and his virtual monopoly upon the lumber supply of the Red Lake region, holds the gateway to the line stretching westward towards the Pacific Slope. But the Manitoba has already begun to extend its lines into the pine region lying north of the northern Pacific, and it is part of the present rapidly developing plan to build the St. Paul, Brainard & Northwestern along the Rum river and Mille Lac to Brainard and thence to a point of Juncture with the line building east from Crookston somewhere near Leech Lake. All this means a multiplication of railroad mills, as well as an increase of consumption and under the most favorable conditions the manufacturer of Minneapolis and of North Wisconsin can reasonably expect sharp competition from these newer fields of supply. They may cast an eye of covetous expectancy upon these new fields, but may as well make up their mind first as last that they will have to fight for a share of the trade.—*Mississippi Valley Lumberman.*

LUMBER IN THE UNITED STATES.

THE New York *Lumber Trade Journal* of the 1st June reports the West India market fairly active, with prices firm. For Rio a 1,000 ton barque, now loading general cargo, will take half a million feet. Another cargo is also being loaded. This will about clean out the Rio shippers and for future shipments lumber to arrive will have to be depended on. There is very little being done for Para, Australia, or Africa. For the west coast of South America, a few shipments are being made. For the River Plate, two cargoes have been ordered to go forward. The general tendency of the White Pine export trade is toward an advance and a better outlook for business. The demand for North Carolina pine is heavy in consequence of the scarcity of Spruce. One firm have six mills running steadily to fill orders now on their books. Quotations are not changed, but higher figures are more easily obtained than heretofore. Dressed stocks is growing steadily in demand. The market for Yellow Pine is steady at present quotations, with a fair demand for export. The stock of heart face boards is large and accumulating. There has been a falling off in the car trade. The local demand is good, and is freely supplied. The local demand for White Pine continues light with no immediate prospect of any large increase, while a fair market is found in the coal mining regions and far bridges on northern railroads. Very few mills are running on hemlock for want of water to bring the logs down. They will be fully thirty days late in starting, consequently there is little or no Hemlock coming from the north. It is in full supply, however, from Pennsylvania. The market is very active and firm, and agood business is being done. The heavy freshets in the east has caused serious delay to the mills, and they are only now starting up, nearly a month later than they expected. As a result, orders for Spruce have accumulated. They are very firm in prices. Almost any kind of a cargo will bring $16, and from that up to $18 can be called the range of the market. There are but two mills running in St. John, and very few on the Kennebec, consequently there cannot be much Spruce lumber before the middle of June. The market is very active and prices have an upward tendency. The market for lath is steady and strong. All sales have been made at $2.05, except one lot was sold as high as $2.75. Some few winter sawn are coming to hand, but are hard to place, as the slab sawn stock has the call every time. These are selling at $2.25 to $2.30. Canadian lath, from the Ottawa, are offered at $2.50, but no amounts have been placed, as they come 50 in a bundle, which does not suit our dealers, as it entails too much handling. The hardwood goods are in accord that business never was so dull. All good lumber, however, arriving finds ready purchasers at the yards. Prices have not advanced, but are firm at our outside quotations, necessarily with some few exceptions. The local dealers are beginning to realize that the sources of supply are being rapidly reduced. Choice lumber cannot be replaced except at a marked advance. Those that have any such are aware of this, and are naturally firmer in theirs. While the demand increases the supply does not. The time is drawing very close when the cost of all kinds of hardwoods will be greatly enhanced. Business has been fairly active and steady in the log market, a good regular trade having been done. Good logs are still scarce, particularly Walnut. Inferior logs are very dull of sale. Good Walnut logs, running on an average, say 25 inches, straight grained and smooth, without defects, would find a ready sale. Poplar logs are in fair demand. A car or two of logs running 20 to 30 inches could be sold without difficulty. The arrivals of Mahogany and Cedar have been considerable. A number of the cargoes have been promptly sold, leaving the stocks in first hands about the same; the demand continues fairly active and prices firmer. The market for Spanish Cedar is quiet. The demand is fair, and prospects for a good business are rather more favorable than they have been. Prices remain the same, but are much firmer, with an upward tendency.

LATEST NEWS NOTES.

—Forests cover twenty-four per cent. of the entire area of Norway.

—The losses by the Michigan forest fires including the destruction of Lake Linden, are estimated at about $7,000,000.

—The drives on the Androscoggin in Maine, have been only partially successful, and the outlook is reported bad. No logs were cut this season on the Swift river. On the Sandy, however, there was a big cut, and all the logs came out easily and early.

—The operations of the Inter-State Law have played sad havoc with the lumber trade of Oswego, N. Y., compelling several of the leading firms to go out of business, as on the same freights as those from Buffalo and Tonawanda competition cannot be had on equal terms

—William F. Whitney, Bay City, Mich., has just sold his Canadian timber holdings. with all his outfit for operating, to Hon. Joseph Jackson, of Simcoe, Ont., for $130,000. The purchaser will get out long timber for the Tonawanda, N.Y., market. It is said Edward Lynn, who made the sale, received $25,000 as his commission.

—The announcement is made that Torrent & Co. have put into the Muskegon Mill a machine for converting slabs into lumber. The slabs are cut four feet long, and such as are worth re-sawing fed to the machine, and five-eights inch lumber of good average width secured. Twenty-five per cent. of clear lumber is secured, suitable for making panel stock for cheap doors, while more goes into good box stuff.

—A Canadian named Boulette was drowned Kennebec river, Me., while working on a drive for Thales Spaulding, 14 miles below the forks. He was riding a log in the drive, fell off and drowned. He had hid $175 before starting out with the drive, so the money would not get wet, but his friends were unable to find it after his death.

—A considerable conflagration broke out in the island lumber district of Buffalo, N.Y., June 8, which would have been much more disastrous except for the efficient work of the fire department. About 1,000,000 feet of lumber owned by Hurd & Hauenstein, Hurd Bros., Noyes & Sawyer, W. S. Crostwaite, W. W. Tyler, Albus & Co., and others, together with Playter's planing mill, Austin's sash factory, shops of the Union Dry Dock Company and buildings belonging to R. Wills & Co., shipbuilders. Playter's loss was about $20,000 on mill and considerable on lumber; G. W. Austin, $16,000, one-half insured; R. Mills & Co., $7,000 on shops, which were insured, also considerable on lumber; also upward of $4,000 by local firms who had car loads of lumber burned on track. The total loss was about $100,000.

ADVERTISEMENTS.

THOSE wishing to **BUY** or **SELL TIMBER LANDS, LUMBER** or **SECOND HAND MACHINERY** will find THE CANADA LUMBERMAN an excellent medium in which to make known their wants. Advertisements of this character will be inserted at the low rate of 1½c. **A WORD**, cash to accompany the order in every case.

SMITH'S

Mercantile & Land Reporting Agency

BANKERS—DOMINION BANK.

General Solicitor, JNO. LEYS, ESQ., Barrister, Toronto. Secretary, JOHN SMILEY, M.A.

MANAGER—WILLIAM SMITH.

General Offices—Court St., Toronto, Ont.

Telegraph Address—Agency, Toronto.

Having for its special objects the furnishing to subscribers of reliable information on the financial standing or otherwise of tradesmen and others, the collection of outstanding accounts and the procuring of the most reliable information from independent sources of the value and condition of landed and other properties in any part of Canada and the United States, with correspondents in Great Britain and other parts of Europe.

Our method of procuring for our subscribers the most reliable information is through solicitors of the highest standing, and from other equally reliable sources in the several localities indicated, who are under contract with us to supply the necessary information promptly.

The Landed Enquiry Department of this Agency, the only institution of this kind known, is invaluable to Solicitors, Loan, Investment, and Insurance Companies, Estate Agents, and others, preventing fraudulent land transactions resulting from mi-representations.

The Department for the collection of outstanding accounts is conducted on an entire change of the system usually followed by Collecting Agencies, viz.:—Subscribers may have their collections paid either direct to themselves, or to the offices of the Agency, in which latter case remittances will be deposited to an account provided for that purpose, and immediately remitted to the parties to whom it is due, and will not be applied to any other purpose.

Another important feature in connection with this department is, that subscribers depositing accounts for collection will, if requested, be furnished with a Form of Script, on which will be entered the name of each debtor, the amount owing, and a full report of the prospects of collection, and providing that the receipts thereof be paid to bearer only, thus enabling subscribers to realize on their outstanding accounts.

The Agency will forward at least once in three months, or oftener if desired, a report and statement of all accounts in hand.

NOTE.—The offices of the Agency are open to the Solicitors and subscribers for reference to our numerous maps, atlasses, directories and correspondence, and for the transaction of business with their clients and customers when in Toronto.

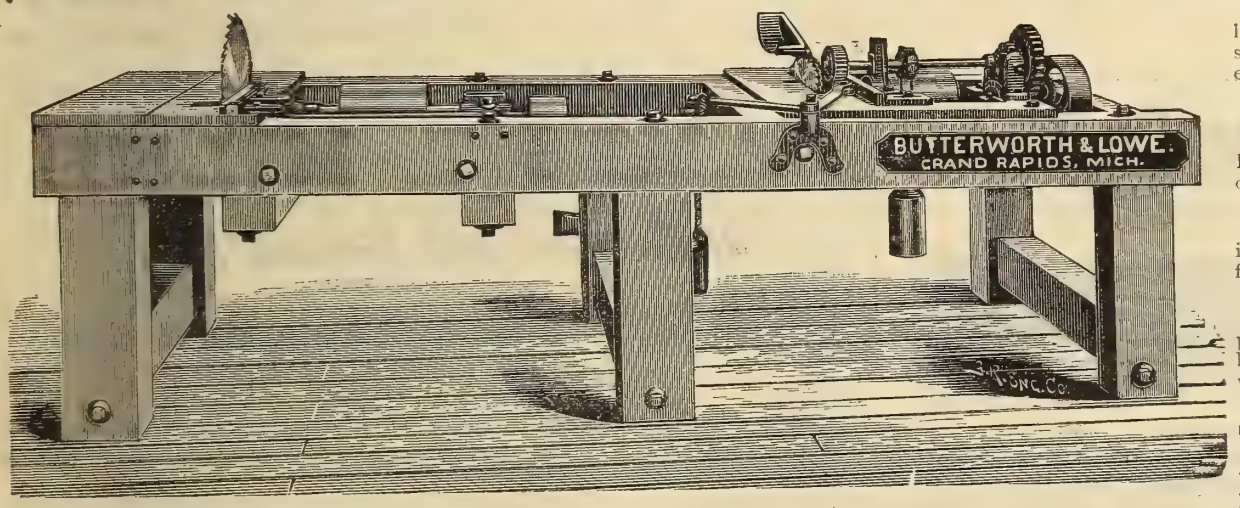
IMPROVED GANG LATH MILL AND BOLTER MADE BY BUTTERWORTH & LOWE, Grand Rapids, Mich, U. S.



LATH SAWS, 12 IN. DIAMETER. BOLTER SAW, 22 IN. DIAMETER.

"The lath mill you sent me cuts daily 26,000 to 28,000 lath of yellow pine. We have not used more than two saws, as they make away with all the stock. All hands engaged are colored, and they say it is just fun to run it."
JAS. PATTINSON,
for the Reliance Lumber Co., Beaumont, Tex.

"We average 35,000 pieces per day of eleven hours. Have made as high as 42,000. The mill never gets out of order. It is an every day worker—always reliable."
A. B. LONG & SONS, Grand Rapids, Mich.

"Has proved a first-class mill. Gives entire satisfaction in every respect. It makes up all the stock my mill will furnish. THOS. D. STIMSON,
Muskegon, Mich.

"I have had several lath mills, but never one to compete with yours. As for capacity there is no end to it. I have never furnished it with enough slabs for a full days' work. JAMES G. McELWEE, Big Rapids, Mich.

"We are more than satisfied with the gang sash mill and roller. McEWAN BROS., Bay City, Mich.

"We have never been able to furnish all the stock it would take care of so as to test its capacity. It gives perfect satisfaction in every way, being strong and simple and light running.
CURLER, GILBERT & PIERSON, Duluth, Minn.

PUBLISHED MONTHLY By A. G. MORTIMER. | *The only Newspaper devoted to the Lumber and Woodworking Industries of the Dominion.* | SUBSCRIPTION $1.00 PER ANNUM

VOL. 7. PETERBOROUGH, ONT., AUGUST, 1887. NO. 8.

The Canada Lumberman

DEVOTED TO THE LUMBER AND WOOD WORKING INTERESTS OF THE DOMINION.

PUBLISHED MONTHLY BY

A. G. MORTIMER, PETERBOROUGH, ONT.

Terms of Subscription:

One copy, one year, in advance $1 00
One copy, six months, in advance 0 50

Advertising rates furnished on application.

All communications, orders and remittances should be addressed and made payable to A. G. MORTIMER, Peterborough, Ont.

Communications intended for insertion in the CANADA LUMBERMAN, must be accompanied by the name of the writer, not necessarily for publication, but as a guarantee of good faith. Communications to insure insertion (if accepted) in the following number, should be in the hands of the publishers a week before the date of the next issue.

Advertisements intended for insertion in any particular issue should reach the office of publication at least six clear days before the day of publication, to insure insertion.

The CANADA LUMBERMAN is filed at the Offices of MESSRS SAMUEL DEACON & Co., 154 Leadenhall Street, London, England, who also receive advertisements and subscriptions for this paper.

PETERBOROUGH, ONT., AUGUST, 1887.

EDITORIAL COMMENT.

IF we are to accept the statement of the *Northwestern Lumberman* the price of lumber must have increased to a fabulous price in Canada lately, as that journal furnishes the startling intelligence that a loss of $10,000 was incurred by the destruction by fire of 60,000 feet of lumber in Ottawa. Surely $166 per thousand should leave the manufacturer at least a living margin of profit.

* * *

SHIPMENTS to Europe from Montreal, Quebec, St. John and Chatham, N.B., and other ports, are, according to latest reports, increasing daily. The English trade journals are chronicling almost daily arrivals from this side of the water, and although trade in that country is generally considered at low ebb, the consumption to all appearances is nevertheless large. Our news columns this month contain considerable information regarding the arrivals and sale of Canadian woods in Europe.

* * *

A NEW lumber cutter, a description of which is given on another page, has recently been tested in Toronto, and promises great results. This cutter substitutes a knife for a saw and does its work at one stroke. It cuts anything from a slab to a veneer and that without the slightest waste. Steps are already being taken for the organization of a strong company to go into the manufacture of this machine for the Canadian trade, and it is therefore quite probable that our readers will soon become familiar with the new process.

* * *

THE dispute between the Dominion and Ontario Governments *in re* the title to the timber land and minerals in north-western Ontario has been going on for some time, and although the Supreme Court has sustained Mr. Mowat in his views, the probability is that it will yet go before the Privy Council for final decision. Sir John Macdonald contends that the title resides in the Dominion Government as acquirers of the Indian title, while Mr. Mowat on the other hand holds that the Indian title was extinguished, not acquired. Time will tell who is right.

* * *

"WE should not loose sight of the fact," said G. W. Warren, the pine land dealer, "that the greater part of the pine to be manufactured at Rat Portage and Winnipeg, for use in the British possessions, must come from this side of the line. The bulk of the stumpage is owned by Minnesota men, and so the condition of the market up there, and what is being done, is of a great deal of importance and interest. I look for a very important development up that way. More men are interested in the Northern slope development than is generally supposed."

* * *

ONE hundred in the shade is a temperature seldom experienced in this part of the world, but for the past month it has been no uncommon occurrence to see the thermometer sizzling around that number. By donning our airy linen coat and trousers, with a nicely starched unmentionable, we *can* stand ninety-nine, but when the thing gets up to a hundred and over a line has to be drawn somewhere. We drew the line and went over to see some of our American cousins, but the scheme didn t seem to work. The further we went the hotter it got, and after bunking on the floor for several nights with our head in close proximity to a refrigerator, we made up our mind that Canada was not such a mean place after all and accordingly packed our valise and took the first train for home. To get the lumbermen to talk business these days is just about out of the question. Even a newspaper man can't draw them out. Their main ambition now-a-days seems to be directed to some sylvan resort where sweet breezes can lull them into a feeling of security against the heat of the office, and where by the aid of the lemon—and something else—they can keep in a somewhat natural physical and mental condition.

* * *

NEWS has recently come from Washington that the Treasury Department has decided that sawed elm boards 6½ feet in length, 1½ inches in thickness, the edges of which follow the natural shape of the tree, used in the manufacture of hoops, are dutiable at the rate of $2 per thousand feet, board measure, under the tariff provisions for sawed elm lumber. And this decision, aimed at our Canadian mills, comes just after the resolution of our own Parliament, at the instigation of the friends of foreign industries, not to impose an export duty on elm logs. The manufacturers in the United States want our elm, but they are so greedy as to grudge Canadians the profit even of this primary stave manufacture, wishing to obtain at small cost our raw material that they may reap all the advantage of turning out the manufactured article. Well may the Toronto *World* remark that our Parliament has committed "a grave blunder" in allowing hardwood logs to be exported free of duty, and add that we are offering encouragement to carry off out of the country valuable raw material, which we ought to hold at home with a firm grip, in order that the wealth it is converted into may remain with the country to which it belongs. This decision of the Washington Treasury Board supplies another strong reason why the export duty should be exacted and our Parliament should reconsider the matter as soon as it again meets.

AN important meeting of the representative lumbermen of Ontario was held in Toronto the end of June, at which several important matters of peculiar interest to the trade in general came up for discussion. The meeting was of such a character that for the present no public statement can be made of the work done. Suffice it to say that live questions affecting legislation were freely talked over and steps taken to protect the trade in every case where an undue advantage was being taken by the government, calculated to prove injurious to the lumber industry. The question of the immediate organization of a Provincial Lumberman's Association was again debated, resulting in positive steps being taken to further the scheme. THE LUMBERMAN is pleased to accept this as an indication of unity among the trade, and the overthrow of the barriers which in the past have tended to destroy the unanimity of action which should characterize so important a body of manufacturers. In union is strength, and at no time in the history of the lumber trade of Canada is organization more required than at the present time. The vital interests of the trade are threatened by the late action of both the Ontario and Quebec governments, and the strongest influence must be brought to bear if the lumbermen are to be protected from serious loss. We hope at an early date to be in a position to give our readers tangible proof of the work now under way, and to announce as a matter of fact the successful organization of a Lumberman's Exchange for Ontario, to be followed no doubt, by similar action on the part of the trade in the other provinces of the Dominion.

* * *

A GOOD deal has been said for and against the timber on the Canadian side that grows in the Georgian Bay region, but those who have put their money in there appear to be fairly well satisfied that they will have a chance to turn it over again, notwithstanding the restrictions which the Dominion Government has seen fit to put upon the exportation of logs. A gentleman who has lately been in the Spanish river district, says that the quality of the timber there is very satisfactory. It is not cork pine, nor the soft, black knot timber, but it is a sort of medium size, red-knot variety that makes a good average. It does not run remarkably high to uppers, but it is said that it does yield a satisfactory low percentage of culls, which perhaps makes it worth quite as much. It is not apparently a class of stock that is either very choice or else good for nothing, but a sort that may nearly all be marketed at a fair price. The Detroit gentlemen who favors *The Timberman* with some facts about that country this week, figures out a very good profit on it at present rates of cost and market value. He makes its net cost in pile at the mill $9 for stock that will average, say, $17 in the market. It can be freighted for about $3, and with $2 duty will cost $14 in market, leaving $3 as the net profit. There is, of course, not the bonanza in it there would be if there were no $2 to pay the Government, but there is still a chance on this showing for those who have invested there to make a profit on what they have put in. They are likely also to profit later by the removal of the duty, which is pretty sure to come off within a few years on both sides. The fact of the matter is, the natural market for the pine standing in western Ontario is through the distributing points on the lakes, and the inevitable tendency of trade will carry it where there is a demand for it, and in time break down any barriers that stand in the way of its free movement. —*Chicago Timberman.*

It is reported that an effort is being made in Michigan to enforce the prohibition of the importation of foreign contract labor against the French-Canadians who go over there to work in the woods in the winter. If this movement should be successful it would have a tendency to increase the expenses of the Michigan operators, and at the same time to increase the supply of labour and make wages easier for Canadian lumbermen.

* * *

Dr. Robt. Bell, of the Geological Survey, in a paper recently read before the British Association, states that the amount of timber which has been lost through forest fires in Canada is almost incredible, and can only be appreciated by those who have travelled much in the northern districts. The proportion of red and white pine which has thus been swept away in the Ottawa Valley and in the St. Maurice and Georgian bay districts is estimated by the lumbermen as many times greater than all that has been cut by the axe. Yet all this is insignificant in quantity compared with the pine, spruce, cedar, balsam, etc., which have been destroyed by this means in the more northern latitudes all the way from the Gulf of St. Lawrence to Nelson River and thence northwards. The total quantities which have disappeared are almost incalculable, but even a rough estimate of the amount for each hundred or thousand square miles shows it to have been enormous and of serious national importance. This is all the more to be deplored that these forest fires are usually the result of carelessness, and any laws existing on the subject seem to be a dead letter.

* * *

Preparations are already being made for an International Exhibition at Glasgow in the summer of 1888. The fact that the corporation has given a site of 60 acres whereon will be erected buildings covering 10 acres, shows the scale of this enterprise, promises to support which have even now been received from all quarters, the guarantee fund already exceeding $1,250,000. One of its stated objects is "to stimulate commercial enterprise by inviting all nations to exhibit their products, both in the raw and finished state." Our timber trades should be adequately represented on this occasion. It is true that the woods from Canadian forests are already well known and appreciated in the Glasgow market, but there should be such a display as will ensure our not suffering by comparison. And those Canadian mills that carry the manufacture of our lumber to a more advanced stage, might find their interest in trying to extend their market in this direction. We are ahead of Great Britain in wood working machinery, and ought to be able to obtain custom for doors, sashes, &c. Our manufacturers of machinery should also be represented.

* * *

The city of Melbourne, the most populous and most enterprising community of Australasia, has announced that it will hold a Centennial International Exhibition next year to celebrate the hundredth anniversary of the first settlement of the great Island-continent. With the impetus that the C. P. R. and its associated line of steamers has given to the trade of the Dominion, and the facilities for transport thus afforded, the Australian market has acquired increased importance, and this is especially the case with the products of our forests. The documents we have received in relation to it show that the management of the exhibition is in good hands and that every arrangement is being made for the convenience of exhibitors and spectators. We will quote one useful suggestion :—"Exhibitors are particularly requested to mark the trade price of the articles exhibited, so as to facilitate the judgment of the jury as well as the information of visitors." It is intended to keep the exhibition open from the 1st of August, 1888, to the end of January, 1889. We will give further information as we receive it, to our readers, but those of them proposing to exhibit would do well to communicate with the Minister of Agriculture, Ottawa, as applications for space should be made by the end of August, 1887.

* * *

Bradstreet's, usually well informed in trade matters, speaks of the increased export duty on saw logs as having succeeded in its objects of retaliating for the duty on our lumber and frustrating those Michigan lumbermen who while enjoying this protection bought pine lands in Canada, in order to get a cheap supply of logs. This importation of logs has, it says, been abandoned, and it mentions a concern, which owning 1,000,000,000 of Canadian pine, put in 12,000,000 feet of logs last winter in order to tow them to Tarvos and Saginaw, a project which has been abandoned. This is satisfactory and it is still more satisfactory to learn that these logs, sold to a Boston concern, are being sawn at Midland. According to the same authority other lumbermen from the States are withdrawing from these attempts to carry off Canadian logs. *Bradstreet's*, as might be expected, is better informed as to the real position of affairs than many who are laying down the law with more confidence than knowledge. It places the responsibility on the right shoulders by remarking that "meanwhile the Canadian Government is ready to permit free exportation of logs whenever the United States allows free importation of lumber." And until the United States sees fit to accept our standing offer, the export duty, which seems to work as was intended, will be retained.

EFFECTS OF RECIPROCITY.

Is it so certain that reciprocity would be all gain to the Canadian lumberman? There are two sides to every question and it is always as well to see what there is to be said on the other side. It is claimed by those in the United States who favor reciprocity that Canadian lumbermen would not obtain the amount of the duty for their own profit, but that the purchaser would secure the benefit of cheaper lumber. Though there is some difference of opinion of this point the majority of the lumbermen of the States more immediate affected, do not seem to fear that reciprocity would seriously reduce prices, and as they ought to be well qualified to form a reasonable conjecture, our lumbermen may fairly hope to pocket at least a considerable portion of the amount of the remitted duty. Again the advocates of reciprocity in the United States claim that their pine is being fast exhausted in the Northern States, and that free access to the forests of Canada would spare their own from such rapid destruction. In this some of the lumbermen of Michigan, Wisconsin and other States seem to concur, for it is notorious that some of those who have extensive limits in their own country have obtained others in Canada with hardly any concealment of their intention to work these and spare their home timber for the present. If there is any profit for United States lumbermen in reserving their limits till timber becomes scarcer and therefore more valuable, it seems as if such a policy must be equally advantageous for Canadians.

Another point to be taken into consideration is that with reciprocity the export duty on Canadian saw logs must go with the import duty imposed by the United States on our lumber. Would the increased competition of citizens of the United States for Canadian limits materially increase the price our lumbermen would have to pay for them? And would the drain of logs out of the country to be sawn in mills across the international boundary prejudice the Canadian trade?

Another question is whether reciprocity would materially cheapen the lumbermen's supplies. Perhaps in some localities corn could then be obtained at a price that would make it an economical substitute for oats purchased near at hand. Possibly, too, pork might be obtained more cheaply from the States than from the home market, though the abolition of the duty might not always have this effect, as there is little doubt that the great pork men of the Western States have in times of a glutted market sold in large quantities to our lumbermen at a reduction to cover the duty, thus reducing their surplus stock and maintaining prices at home.

A further question is what the effect of reciprocity would be upon our home markets for lumber. If, as is asserted by protectionists, Canadian industries would suffer from the competition thus facilitated, it is evident that the home market which some of our lumbermen have assiduously cultivated and which they find most remunerative, would be prejudicially affected, but on the other hand the friends of reciprocity maintain that it would give an impetus to our Canadian towns and increase business.

Weighing the different considerations, it seems that reciprocity would in some respects benefit the Canadian lumberman, but that this advantage would not be without some drawbacks. The relative importance of these drawbacks it would be difficult to estimate. They would vary considerably with distances from markets, facilities for conveyance and other local influences. It is at least certain that the trade should not be too sanguine as to the effect of reciprocity or exaggerate its benefits so as to be led into disappointment and perhaps inconvenient miscalculations.

There will, however, be time for further consideration before reciprocity is adopted. The United States does not seem to be eager to accept the Canadian offer of a renewal of the old restricted reciprocity, nor does Canada seem more eager to snatch at the suggestion of unrestricted reciprocity. If either bargain is made it cannot be concluded in a day.

THE N. & N. W. R. AND ITS MANAGEMENT.

Our attention has been frequently drawn to the manner in which the Northern and Northwestern Railway Company is treating the lumber merchants in Toronto and vicinity, and during a recent visit to that city we made enquiries of every lumber dealer we called upon, and found the dissatisfaction universal. To rightly understand the grounds of complaint it may be briefly mentioned that for many years Toronto, by its position as the terminus of a number of roads running through lumbering districts, has been practically made a slaughter market for the lower grades of lumber. For instance: Sales are frequently made by Toronto merchants of, say, 75 per cent. of a certain stock of lumber at the mills to go to the United States, and during the shipping of which the balance, or 25 per cent. is forwarded to Toronto to be sold for whatever it will bring. In this way an immense quantity of lumber is thrown on that market, and the builders and their consumers of lumber reap a great benefit in low prices. Much of this lumber has, however, either to be unloaded on the railway docks and yards, or has to be held on the cars for a few days until a market can be made for it. Certain rules in regard to demurrage on these cars have been laid down by all the roads coming into Toronto. The Grand Trunk and the Canadian Pacific railways have always treated their lumber shippers in a liberal spirit in this regard, and have shown themselves reluctant to add to the difficulties of the dealer by making charges for demurrage if unloaded in anything like a reasonable time. The management of the N. & N. W., however, has construed these rules in the harshest manner. and most unyielding manner. The agents are allowed no discretionary power and the only satisfaction consignees can get is to be told to place their case before Mr. Barker, and perhaps he may do something for them, which remark is generally accompanied by a smile of doubtful portent. These charges for demurrage by the Northern have become so onerous that customers in fear of such charges are reluctant to purchase lumber coming over this road, and so make matters worse for the wholesaler. Several of the leading merchants of the city stated in the most positive manner that they would not buy any lumber to come over the Northern railway if they could get it by any other route. Practically the severe rules put into effect by Mr. Barker are provoking a "boycot" most injurious to the road. The Grand Trunk and C. P. R. are often spoken of as huge monopolies, but their treatment of their Toronto customers is in marked contrast to the road which of all others should act in the fairest spirit towards its Toronto patrons. This question of demurrage is by no means the only ground of complaint against the Northern, and we certainly found in our interview with the Toronto lumber dealers an irritation and prejudice against Mr. Barker's management that must in the end act most detrimentally to the road.

WHERE IT GOES.

The annual draft on the United States forests for purposes outside of the ordinary lumber supply, is as follows: Shoe pegs require 100,000 cords of timber annually in their manufacture; matches 300,000; lasts and boot trees, 500,000. All this is of the most superior quality. straight grained and clear of knots and gnarls. To raise the telegraph poles of the country require 800,000 trees, and 300,000 more are required for annual repair. The railway ties of the country annually consume 75,000 acres of timber at least thirty years old, and the fencing of railways represents $45,000,000 and the annual repair $15,000,000. These are but a moiety of what is required of the United States forest supply. The burning of brick alone requires 2,000,000 cords of wood annually.

THE VENEER CUTTING MACHINE.

A Brooklyn, N. Y., man has invented an improved veneer cutting machine, and has applied it to the cutting of logs into lumber, claiming that it will effect a complete revolution in lumber manufacture. The invention is a large steel plate with knife-like edge, a compressing roller and ingenius appliances to serve the log and remove the lumber when cut—all operated by steam power. The log is held stationary in a horizontal position. The knife-like plate, capable of from 20 to 30 strokes per minute, strike the log at an angle of 45 degrees at each stroke, passing through its entire length and cutting off a board of perfectly smooth surface and uniform thickness. It is claimed that any degree of thickness can be cut, even to the hundredth part of an inch. A machine adapted for cutting logs four feet long and averaging two feet in diameter will cut in one day 37,500 feet of inch, 60,000 feet of half-inch, or 80,000 feet of quarter-inch lumber. Besides the present process of sawing, planing is also done away with, as the operation of cutting renders smooth the surface of the board. In material alone a saving is effected of from 37 per cent. in the manufacture of half-inch to 233 per cent in the manufacture of one-sixteenth inch lumber. It is the expectation of the inventor that in the case of thin lumber, at all events, which composes 66 per cent. of United States consumption, his machine will superspede saws and planing mills. He shows barrel staves made from lumber manufactured by his machine. He says that from 1,000 feet of lumber 1,800 of such staves is the highest number now obtainable, whereas by the use of his machine 4,500 can be got.

THE NEW CHICAGO LIST.

THE lumber dealers of Chicago, says *The Timberman*, have yielded to the inevitable and advanced their prices. At least they have made a new list. Perhaps strict exactness requires it should be said that they have not so much raised the figures they were getting, as they have made a basis for future advances; for it is certainly a fact that on many grades the meeting attempted to do nothing more than to put into shape prices that have been asked and received for some time back. The item of No. 1 fencing, for example, was not really advanced, though admitted to be the strongest thing on the list. The figure established—$15.50—has been current in this market for a couple of weeks, and in its last issue *The Timberman* noted the fact that this stock was held by some yards at $16. So far as fencing goes, the new list merely brings the prices up to the plane that had been reached some days ago by houses that lead the market. And certainly, any conservative man must admit that $14 for common boards, though it is a distinct rise from previously ruling figures, is not a price for them that can long obtain. They are selling for $13 by the cargo, including a liberal percentage of culls, which leaves a handling bill for the yards of an even dollar. Lumber cannot be handled on such a margin. The piece stuff list is put in rather better shape. The advance of short lengths to $12.50 gives the yards about $2 margin, which will let them out, though it will give them no great profit. But they have not been in the habit of making much money on their dimension stock, and it is probable that most of them will feel very well pleased for the present, to be assured that when they fill a bill of two-inch lumber they are getting back the money they invested in it.

It is well known that the "official" Chicago price lists, so called, have had a bad reputation. They have been known to be unreliable and to be disregarded entirely in the business of selling. But there is reason to believe now that the old order of things has, for the time at any rate, passed away, and that all things relating to these prices have become new. *The Timberman* is inclined to put faith in the new list which has been issued, because it conceives that the prices rest upon a basis of necessity and good business sense. The theory that prices can really be advanced by a price list meeting is exploded. A price list meeting has no such function, as a matter of fact. It cannot make values. It can by inquiry ascertain what values are, and through consultation and by agreement can secure concert of action to the end that the price of lumber and its actual value may be made to correspond. When it undertakes to go beyond this, and strain its power to force prices above a natural and healthy level, its deliberations become farcial and its resolutions come to nought.

It is fortunate that in their action this week the Chicago dealers kept carefully within the limits set by prudence and good judgment. They have made a list of prices that may fairly be obtained. They may be obtained, not because they are declared by a meeting, but because they represent what lumber is worth.

There is another good reason why the new list should prove one that will be observed by the trade—it is simply the basis of further advances that are certain to follow within a few weeks. There is the strongest "bull" feeling in lumber that was ever known at this season of the year. It is a feeling developed out of the conditions of the trade, and that is bound to increase. As it transpires from day to day—and it certainly will do so—that competing markets follow promptly in the lead of Chicago, and put up their figures to correspond, the practicability of securing still better prices will become apparent, and the necessary result will be a steady upward movement. A lingering fear of the dull weeks about the Fourth of July, led to the making of a slightly lower list than the strength of the situation warranted, but in this respect if the dealers made any error it was on the right side. The mistake of making their list too low, can be easily rectified; the mistake of making it too high, has always proved demoralizing and disastrous.

Beginning with the better grades, there was little attempt made to advance them; in fact, none of the items were really put up except B select, which was made $31 for 1¼ and 1½ inch, and $32 for 2-inch, and 2-inch third clear, which was put at $44. In 12-inch stocks, B was advanced $1, to $37, and D to $22 for 12 to 16 feet, and $24 for 18 and 20 ft. Twelve inch common, was put at $16 for 12 feet, $14.50 for 14 and 16 feet, and $18 for 16, 18 and 20 feet, being an advance of about fifty cents. No. 2 boards 12 feet, were raised a half dollar to $14. Box boards were not changed particularly, except on D, which was lifted to $24. There was considerable discussion over strips, which were finally left about as they have been quoted, with a provision that sixteen feet strips be held one dollar higher than other lengths. In flooring, the practical changes were on C, 6-inch, put at $24.50; No. 1 Norway raised to $16.50; A and B, 4-inch, $33 and $31 respectively; Norway, clear, $23, B $21 and C $18; shiplap was advanced to $15.50 and $16 for 8 and 10-inch; the balance of the flooring list was left without much further change. It was developed that there is a good deal of variation in the prices made on siding, and after some talk it was decided to quote it $21.50 for clear, $20.50 for A, $18 for B, $13.50 for C and $10 for D. The price of ceiling was made in proportion. Common and cull boards were advanced decidedly over the prices that have been secured heretofore. They were made $14 for No. 1, $12.50 for No. 2 and $10 for No. 3. Thick common went up to $14 also. The list on fencing was fixed at $15.50 for No. 1, $13 for No. 2, $10 for No. 3; No. 1 Norway, $15; and 4-inch common, 12 and 14 feet $13, and 16 feet $14. It was recommended by the committee that the D flooring should be left in the No. 1 quality of this sort of lumber. Piece stuff was advanced to $12.50 for 2x4 to 2x10—12, 14 and 16 feet. For 2x12 and small timber the price was put at $3.50. Up to 2x10 the price of 18 and 20 feet was settled at $15. The quotations on the larger sizes and longer lengths may be found in our market columns. Cull dimension was also advanced a trifle, 2 inch plank of promiscuous widths being made $10, and 2x4 $11. The shingle quotations were established at $2.40 for extra A, $2.25 for choice, $2.15 for standard, and $2.20 and $2 for extra and standard cedar. Lath was put up to $2.10.

HOW TO SELECT GOOD TIMBER.

There are certain appearances which are characteristic of strong and durable timber, to what class soever it belongs. In the same species of timber, that specimen will in general be the strongest and most durable which has grown the slowest, as shown by the narrowness of the annual rings. The cellular tissue, as seen in the medullory rays (when visible), should be hard and compact. The vascular or fibrous tissue should adhere firmly together and should show no woolliness at a freshly cut surface, nor should it clog the teeth of the saw with loose fibres. If the wood is colored, darkness of color is in general a sign of strength and durability. The freshly cut surface of the wood should be firm and shining, should have somewhat of a translucent appearance. A dull, chalky appearance is a sign of bad timber. In wood of a given species, the heaviest specimens are in general the strongest and the most lasting. Among resinous woods, those which have least resin in their pores, and among non-resinous woods those which have least sap or gum in them, are in general the strongest and most lasting. It is stated by some authors that in fir wood which has most sap wood, and in hard wood that which has the least, is the most durable; but the universality of this law is doubtful. Timber should be free from such blemishes as clefts or cracks radiating from the center; "cup-shakes" or cracks which partially separate one annular layer from another; V upsets, where the fibres have been crippled by compressions; V "rindgalls," or wounds in the layer of the wood, which have been covered and concealed by the growth of subsequent layers over them and hollow or spungy places in the centre or elsewhere, indicating the commencement of decay.—*Chicago Lumber Trade Journal.*

TREES ON THE PACIFIC SLOPE.

GEORGE H. Hamm, the well-known correspondent, who is "doing" British Columbia in the interests of the Winnipeg *Manitoban*, writes as follows: "The timber supply of the province is apparently inexhaustible, and will doubtless prove a mine of wealth before many years. Already shipments are made to the Australian, South American and Chinese markets, but the volume of trade has not as yet reached the proportion that it is capable of. The principal tree is the Douglass fir, which ranges from four to twelve feet in diameter, and from two hundred to three hundred feet high. It is straight and tough, and capable of bearing a great strain, and is almost unequaled for bridging, framework and for shipbuilding, while its great length and straightness make it especially adapted for masts and spars. Besides the Douglass, the following trees are to be found in the province—the lists being obtained from a work issued by the local government. Western hemlock, large, found on coast and Columbian river; Englemann's spruce, eastern part of province and interior plateau; Menzie's spruce, very large, mostly on coast; great silver fire, coast tree of great size; balsam spruce, abounds in Gold and Selkirk ranges, and east of McLeod's lake; Williamson's Alpine hemlock, too scarce and too high up to be of much use; red pine (yellow pine or pitch pine,) a variety of the heavy yellow pine of California and Oregon, very handsome, four feet in diameter, common in dryer parts of the interior; white pine, (mountain pine,) Columbia region—Shuswap and Adarms' lakes—also interior of Vancouver's Island; white-barked pine, small; western cedar (giant cedar or red cedar,) wood pale, yellow or reddish color, very durable, often found 100 to 150 feet high, and 15 feet thick; yellow cypress (yellow cedar,) mainland coast, Vancouver and Queen Charlotte islands: western larch (tamarac,) Rocky Mountains, Selkirk and Gold ranges, west to Shuswap lake, large tree, yields strong, coarse, durable wood: maple, valuable hard wood, on Voncouver and adjacent islands, Queen Charlotte [illegible] the mainland coast, up to 55 deg., attaining a diameter of four feet; vine maple, very strong, tough white wood, confined to coast; yew, Voncouver and opposite mainland shores, very tough and hard, and of a beautiful rose color; cr[illegible] along all the coasts, wood very hard, takes good polish, and withstands great wear; alder, two feet thick, on the Lower Fraser and along coast, good furniture wood; western birch (paper or canoe birch,) Columbia region. Upper Fraser, Peace river, range and value not much known; [illegible] couver island, 70 feet in height, and three feet in diameter; dogwood, Vancouver and coast opposite; arbutus, close grained, heavy, resembling box, reaches 50 f[illegible] 20 inches in diameter, found on Vancouver and neighboring islands; aspen poplar, abounds over the whole interior, reaching a thickness of two feet. Three other va[illegible] are found, commonly included under the name cottonwood. One does not extend above Yale, and is the [illegible] used in Puget Sound to make staves for sugar barrels for San Francisco. The other two kinds occur in valleys [illegible] Mountain ash, in the interior; Juniper (red cedar or [illegible] cedar,) east coast of Vancouver, and along the shores of Kamloops and other lakes in the interior.

There are already some very extensive saw mills in operation—and have been cutting for a quarter of a century—and yet this branch of industry is only in its infancy. Not only is there the trans-Pacific trade, gigantic as it should soon be, but with cheap freight rates the treeless plains of the [illegible] could be readily supplied, and profitable interchange of commodities spring up.

THE SPEED OF CIRCULAR SAWS.

Competent authority has decided after long experiments that the rim of a circular saw should travel about nine thousand feet or nearly two miles a minute. Following is a table compiled to show the number of revolutions a minute saws of different sizes should make to reach an average speed of 9,000 feet a minute:

Size of Saw.	Revs. a minute.	Size of Saw.	Revs. a minute.	Size of Saw.	Revs. a minute.
8 in	4,500	30 in	1,200	52 in	700
10 in	3,600	32 in	1,125	54 in	675
12 in	3,000	34 in	1,058	56 in	650
14 in	2,585	36 in	1,000	58 in	625
16 in	1,222	38 in	950	60 in	[illegible]
18 in	2,000	40 in	900	62 in	575
20 in	1,800	42 in	870	64 in	550
22 in	1,636	44 in	840	66 in	545
24 in	1,500	46 in	800	68 in	529
26 in	1,384	48 in	750	70 in	514
28 in	1,285	50 in	725	72 in	500

These calculations are based on the assumption that the circumference is just three times the diameter. This assumption is for ease in computation, and the reader of course understands that, as the circumference is more than three times the diameter, by a small fraction, the saw will in each case run a little faster than this computation demands. The speeds are near enough for all practical purposes.

—Says a traveller who has recently visited the Pacific coast: Among the myriads of natural curiosities and wonder that confront the visitor to the coast of the North Pacific ocean, nothing impressed me so deeply as the gigantic forests of Puget Sound. That arm of the Pacific is 200 miles in length, with a shore so irregular and indented so plentifully with bays and deep harbors that its measurement is over 1,800 miles in extent. Along this whole shore line and extending thence on both sides miles and miles farther than the eye can see, is one vast unbroken area of forest trees, the like of which I never saw. A few saw mills have been erected along the sound, and although for several years they have ripped 500,000,000 feet of lumber from these forests annually, these spaces made by what seem like tremendous inroads on the timber, appear like little garden patches. The markets for this product of these mills in the depths of the Washington territory wilderness is South America, Australia, Central America, and the Pacific ocean islands. The great belt of virgin timber covers 30,000,000 acres, an area equal to that of the States of Massachusetts, Connecticut, Vermont, and New Hampshire. The forests are of fir, cedar, maple and other valuable wood. The firs comprise two-thirds of the timber. An official estimate places the amount of timber on this belt at 500,000,000 feet, enough to last the mills now there for more than 1,000 years. The fir trees grow to the enormous height of 250 feet, and I have seen piles of boards cut from them, not one board in which was less than 10 feet long and six feet wide, without a knot from one end to the other.

EUROPEAN NOTES.

Baltic timber is at present selling well in England.

Wholesale business is not active and the complaint is that things are quiet.

The arrivals of timber from Canada are increasing in importance, the principal commodity being pine.

The trade in Grimsby is firm in its character, but there is no great amount of business doing from quay or yard.

The first arrivals in Liverpool of the spring fleet from Quebec will make the quays appear more lively than for some time past.

An important reduction is being made in the London dock rates of timber. This will be good news to shippers, importers and the trade generally.

The importation of wood goods into the port of London still continues to be restricted within much narrower limits than are usual for this period of the season.

Steamers are pushing themselves into every branch of the wood trade in England, and it is said that they will largely pervade the pitch pine trade this year, with consequent reduction in freights.

Things are very quiet at the London timber docks, and the absence of the bustle usually expected at this period of the year is very noticeable. It is evident the undercurrent of activity which brought to the surface the advance in flooring, and some other descriptions, was not sufficient to keep the volume of trade at its ordinary level, and stagnation has again become a marked feature.

Messrs. A. F. & D. Mackay say :—"The importation from Quebec has not yet commenced, the amount of consumption falling wholly on the stock on hand, which has now got to a very low ebb. Of Quebec square pine the stock is 28,000 cubic feet, of waney pine 62,000, and of St. John and other ports pine 12,000 feet, making a total of 102,000 cubic feet, against a like total of 346,000 cubic feet twelve months ago. The bulk of the present stock is Quebec waney board pine."

The stock of wood in the public docks in London on the 30th June, 1887, was: Foreign deals and battens, 3,211,000 pieces; pine and spruce battens, 1,705,000 pieces; boards, 5,894,000 pieces; total, 10,810,000 pieces. The deliveries for the first six months have been: Foreign deals and battens, 4,319,000 pieces; pine and spruce battens, 1,058,000 pieces; boards, rough, 854,000 pieces; boards, prepared, 4,903,000 pieces; total, 11,134,000. These figures will do much to account for the very depressed state of the market.

There have been considerable arrivals of deals at Glasgow lately, comprising Quebec deals and Pictou, N.S., spruce deals and a small cargo of Namsos deals and battens. There have also been a number of sundry imports of wood goods per steam liners, and American walnut logs and oak planks, &c. The first sailing vessel with timber from Quebec had arrived at Greenock last year on 23rd June. There is a quiet demand, and imports of Quebec log timber this season are expected to be small.

Messrs. Churchill & Sim, of London, in their last wood circular, report the following arrivals from Canada during the past half year :—Pine deals, &c., 265,000 pieces, against 86,000 pieces in 1886; spruce, 32,000 pieces, against 86,000 pieces in 1886. And from New Brunswick, &c.: Spruce deals, 15,000 pieces, against 83,000 pieces in 1886. There is little market business to report in pine deals, such sales as have been made are at last month's quotations. Spruce have been more freely taken by the trade, but at no improvement on recent rates. For timber the demand has been very feeble and prices lower.

From the accounts relating to the trade and navigation of the United Kingdom for the month of May, we learn that the difference between the value of the imports and exports to that country for the first five months of the year amounts in round numbers to about £62,000,000, or, in other words we receive value for our goods to the extent of £90,000,000, and pay to foreign countries and our colonies something like £152,000,000. The question of how this enormous difference is made up is left to the political economist. There can be no question but that there has not been anything like a balance between the exports and imports for a considerable time past, the former being uniformly downward.

Messrs. Dobell & Co., report as follows :—"We have no change to note in our trade, which has throughout the month shown a lack of animation. The import from Quebec has been confined to pine deals, and though it has not been excessive it has been considerably beyond the requirements of our trade, and an unduly large proportion of the arrivals have had to be yarded. Spruce deals are down to a very low point, in fact the stock now held is not equal to the consumption of last month. Pitch pine has been arriving freely but the consumption has also been on a liberal scale, and in view of the season being about over, the stocks cannot be considered excessive. All other goods are lower in stock than we have known them for some time, but, unfortunately, this has so far not had the beneficial effects on values which might have been expected."

Particulars of Glasgow stocks at 30th June are appended :—Teak timber shows about 2,600 loads less on hand than at corresponding date last year; about 3,000 loads of teak have gone into consumers' hands during the past quarter. Pitch pine is less by about 8,000 loads than the stock of a year ago, but at that time it was far in excess of requirements; the quantity now on hand is about the same as at 30th June, 1885, and is ample. The consumption of pitch pine during the past three months (say about 8,000 logs hewn and sawn) shows a falling off compared with corresponding quarter last year. Of Quebec log timber there is, on the whole, a smaller stock than at this time last year, to the extent over all of about 3,000 loads. There has been a moderate consumption during the past quarter. In the Clyde import list for this week the first of this season's import of timber from Quebec to Greenock is included, viz.: the cargo per Arizona from Quebec.

Farnworth & Jardine, of London, report as follows regarding the imports from Canada;—Yellow pine timber: The stock of both waney and square pine is now reduced to a very low compass, the consumption has been small, and very little will now be done until the arrival of the new season's wood now shortly due. Red pine is seldom inquired for; there has been no consumption and the stock is only nominal. Oak: The consumption of Canadian has been moderate and the stock is small. From the States the import of both logs and planks has been large; it has gone freely into consumption at rather lower prices, and the market is now very lightly stocked. In elm nothing has been doing, and the stock is very limited. Ash is in moderate request, but prices rule low, and the market is almost bare. Pine deals are heavy in stock, and, although the consumption has fairly kept pace with the import, sales are most difficult to effect; prices have had a downward tendency, and prospects are not encouraging for future imports. In Quebec staves nothing has been doing. Regarding New Brunswick and Nova Scotia spruce and pine deals, they say: The import has been unusually light, and almost entirely by steamer; the consumption has been satisfactory, leaving the market with the lightest stock held for many years past at this period. Prices have been fairly steady throughout the month, but it has not been possible to obtain any advance on the low prices now ruling. Birch is arriving freely, and, although the consumption has been large, the market has had a downward tendency; the stock, however, is moderate. Pine deals are seldom inquired for, and prices are low.

The half-yearly general court of the proprietors of the Canada company was held in London, on the 30th June, at the offices, No. 1, East India Avenue, Leadenhall Street, E.C. Mr. Robert Gillespie presided, and in moving the adoption of the report—which recommended a dividend at the rate of £2 per share—said that after the distribution a sum of £4,076 8s. remained to be carried forward. The results for the half year ending the 30th June had been, he thought, on the the whole satisfactory. The land sold and leased compared favorably with what had been done in the previous year, and though the rule receipts had been less than in the corresponding period of 1886, they would observe that the falling off had been in rents and interest, and also in the receipts from timber and sundries. He had analysed the transactions of the year considered up to the end of March, and he thought the proprietors would concur with him in thinking that the expectation he had at the last meeting expressed had been fairly realized. The transactions had resulted in a satisfactory advance upon the valuation of December, 1886. The total lands disposed of represented 1,936 acres, of which 883 acres, which were valued in December last at £1 4s. 11d., had realized £1 9s. 6d. per acre; 673 acres which had been valued at £5 6s. 7d. had realized £7 12s. 10. per acre, and 380 acres, which had reverted to the company at £3, had realized £3 3s. 2d. per acre. The general result was that there had been an increase at the rate of 20 per cent. over the valuation of December, 1886. This verified the contention that though the company might be slow in effecting its sales, it realized very advantageously on its property. The chairman concluded by reading extracts from the report of the Commissioners in Canada, which extracts testified emphatically to the satisfactory condition of the company.—The report was adopted.

Canada has at least one representative lumber journal. THE CANADA LUMBERMAN,, published monthly at Peterborough, Ontario, is one of the most readable of our exchanges :—*New York Lumber Trade Journal.*

GENERAL NEWS NOTES.

—Quebec freight market is dull.

—Edmund C. Spencer, Parrsboro', lumber merchant, has assigned.

—The Export Lumber Co., of Montreal, is doing a large shipping trade this season.

—A large number of mills commenced sawing operations in the province of Quebec during the month of July.

—Reports from Three Rivers (Que.) district state business in the shipping line from there has been very brisk this season.

—Montreal freight market remains weak, 37/6 for deals being about the rate, and even at this rate it is now easy to get shippers.

—A man named Arthur Prenovost was accidentally drowned July 15th at Hall, Neilson & Co's saw mill, Three Rivers, Que., where he was employed.

—A. L. Wright & Co. are building a steam saw mill at Cloverdale river, near Salisbury, N.B., which will have a circular and gang, with accessories.

—The drives on the St. Maurice have not yet got in, and it is rumoured quite a number of logs have stuck owing to the rapid fall of the water in the creeks.

—John Paterson's mill at Hollin, Ont., was struck by lightning and totally destroyed by fire, together with a large quantity of lumber. Loss, about $3,000; no insurance.

—Messrs. Hall, Neilson and Co., who operate in the province of Quebec, are reported to have a number of logs hung up on the Wattawin, which will now probably remain there until next spring.

—Disastrous forest fires have been ravaging Cape Breton. A tract of one hundred square miles of country, between Sydney and Cow Bay, has been completely devastated. It is said to be the worst fire known in the island.

—Mr. William Little, of Three Rivers, has been a heavy purchaser of laths and No. 1 cull pine deals, and it is rumoured he has badly burned his fingers, the market having broken and he has been left with large stocks on hand.

—At a recent meeting of the Quebec Board of Trade a successor was elected to fill the post of President of the Board in lieu of Mr. T. Beckett (Dobell, Beckett and Co.), whose other duties would not admit of his retaining the office.

—The Canadian Pacific road is likely to have a suit on its hands for not having built bridges over Bow river, west of Canmore, Ont., such as will not interfere with log navigation. The company owning the Eau Claire mills at Calgary will seek damages because of a jam above the railroad bridges, having given the railroad company due notice of the requirement for a log passage.

—The employees in the Burrard Inlet saw mills, British Columbia, went out on strike recently in order to enforce a demand for a reduction in the hours of labor to ten hours per day. The men have been working eleven and a half hours per day. The mills were very busy at the time of the strike, no less than six vessels being in waiting for lumber for foreign ports. The strike has since ended by the proprietors according to the demands of the men.

—Mr. T. Butler has succeeded in getting all his drive of 100,000 pieces down the Salmon river and all has been rafted and towed to Deseronto. On the Moira, the tail of the drive is at Cannifton with very little water. On that river over 150,000 pieces have been left behind owing to low water, in the dead water between Plainfield and the railway bridge. Of this stuff about 35,000 pieces belong to the Rathbun Company, the rest belonging to the Messrs. Gilmour, Flint & Holton, Wm. Sutherland, and Job Lingham. They may be got down should heavy rains occur in the fall.

—From the best information obtainable, says the Minneapolis *Lumberman*, it appears that the season's log cut has about come up to the expectations. B. E. Nelson, secretary of the Minneapolis exchange, who has given considerable attention to the subject, although not in possession of full statistics, is of the opinion that the cut will aggregate about 275,000,000 feet, and this figure is generally accepted by the lumbermen. In addition there are 25,000,000 to 30,000,000 of old logs in the river, making a total log supply of about 300,000,000 feet. The prospects are that all of this will be sawed this season. The present condition of the lumber piles throughout the Northwest warrants the full cut. Stocks have not been so low since 1882 as they are to-day, and they are lower in Minneapolis, in proportion, than they are at other principal manufacturing and shipping points. According to figures compiled for the lumber exchange the stock in Minneapolis was about 130,000,000 on April 1, against 200,000,000 in the spring of 1886, and a similar supply in the spring of 1885. In Chicago there is about 100,000,000 feet less this spring than last.

IMPERIAL TARIFF POLICY.

To the Editor of the Canada Lumberman.

DEAR SIR,—At present the movement in favor of Imperial Federation seems to be in the stage of a general policy, the cultivation of a sentiment for unity, and opposition to the adoption of anything leading to disintegration, rather than of a definite proposal of any immediate practical measure. As to the exact shape any modification of the present status of the difierent portions of the Empire shall take, it seems to be at present undetermined and left an open question even for members of the Imperial Federation League. A suggestion, not yet officially adopted, has however been made by the Canadian branch that all portions of the empire should agree to discriminate in favour af importations from each other and against foreign imports, an idea which has also found some acceptance among the members in Great Britain. The proposal is not to form an Imperial Zollverein with free trade, or a similar tariff for all parts; neither the principal Colonies nor the mother country are at all inclined to such a step, which indeed would be contrary to the constitution of the League reserving as it does to the self-governing colonies their right to frame their local tariffs. The idea briefly sketched is that the different portions of the Empire whether their tariff calls for high duties, low duties or no duties at all, should maintain them unchanged as against each other, but that they should all add a discriminating duty of a certain amount against foreign importations, thus whether protectionists or freetrade, favoring their fellow subjects against foreigners.

Though this idea is still undeveloped, and has not become a practical question, it may be of interest to your readers in these times of lively discussion of our fiscal policy and proposed amendments of it, to consider how such a policy of Imperial discrimination against the rest of the world would effect the Canadian timber trades. Our two great markets apart from home consumption are the United States and the United Kingdom. It would be impossible to estimate the effect of the change as regards the trade with the States, because it would depend greatly upon the action taken at Washington in consequence of it, and thus is an unknown factor in the problem. As to the trade with the United Kingdom it would undoubtedly give it an impetus for it would give our timber a preference as compared with that from Northern Europe and the Southern States of the Union, both strong competitors with Canada for the custom of Great Britain. In the British West Indies it would secure us almost a monopoly of the market, for a very moderate discriminating duty would transfer from the United States to Canada this valuable business of which the former has so far had the lion's share. The same would be true of Australia, which has hitherto drawn largely from Norway and Sweden and from the Pacific Coast States of the Union, neither of which in the face of any adverse discrimination should be able to hold their own against the splendid timber of British Columbia. It would be useless to extend this view to the markets of smaller or more distant portions of the Empire, though their aggregate trade might be worthy of consideration.

Though as I have said this is not at present a practical question of the day, it is not without interest for our lumbermen and others connected with the trade, who may watch, as I shall, to see what progress is made with this movement. It is a matter of curiosity now, but some day, perhaps in a modified shape, it may become a live issue. Events march rapidly in these times, and there is change in the air.

Yours truly,

I. F. L.

LOGGING ON THE OTTAWA.

OTTAWA, CAN., July 7.—This, the beautiful seat of the Dominion Government, is also the great entrepot of the Ottawa River. Draining a heavily wooded district containing 100,000 square miles, the Ottawa is the greatest logging river of Canada, and its timber industry is the most important in the Dominion. Each year the lumbermen work their way further back into the interior, logs now travelling as far as 200 miles before reaching the mills. The number of saw mills in the Province of Quebec is stated at 1,729, employing 12,461 hands. The estimated value of the rough products of the forest annually exported from the province is about $10,000,000. The number of logs that will be brought down this year will be about 2,500,000.

In former years great confusion and loss resulted from the mixing up of the logs, as well as their being left along the banks after the subsidence of high water. These annoyances are now reduced to a minimum, under the marvellous system adopted and carried on by the Upper Ottawa Improvement Co., popularly known as the "boom company." Extensive booms have been constructed, distributing stations established, and with the powerful steam tugs, and large body of experienced men at work, the losses amount to comparatively nothing.

The most important distributing station is near the town of Quyon, about forty miles above Ottawa. Here the logs are sorted with reference to the side of the river on which they are to be delivered, as well as by certain groups of mills, a further sorting taking place below. The logs are brought down into a narrow passage called the gap, and are distributed according to their axe marks. The principal sawmill men on the north side of the river are known. Eddy, Conroy and Hamilton; and those on the south side as Booth, Perley, Mason, Young and Bronson. The logs take the names of owners as they are pushed through the "gap" by the stalwart loggers, who sing out the particular pocket into which they are to be floated, by very singular, and to the uninitiated, incomprehensible terms. Here are a few of the calls:

CALL.	MEANING.
"Eddy, I roll!"	A log belonging to Eddy is rolled over in the water so as to bring the private mark to the surface, and is sent down the gap, being seized by the proper man and pushed into the appropriate pocket.
"Eddy, 3 times!"	Three logs for the Eddy pocket.
"Perley, I see!"	A log for the Perley pocket.
"Conroy, I shove."	A Conroy log is shoved down the gap.
"Bronson at the hustings!"	A playful tribute to the greenness of a former employee who described the platform or dock on which the company's quarters are located as "the hustings" having reference to the Canadian or English term for what is known in American politics as the speaking platform at a political meeting.

Thus the monotony of work is greatly relieved and the natural witty exuberance of the French and Irish loggers finds expression.

On the piling grounds around the Chaudiere Falls at Ottawa, there is always a stock of lumber estimated at 125,000,000 feet. To keep these filled to their utmost capacity, a large number of mills cluster around the falls, some of them employing over a thousand men. They are supplied with the finest machinery and lighted with the most powerful electric light, by the aid of which, work during the season is maintained without ceasing both day and night.—*Cleveland Iron Trade Review.*

U. S. LUMBER TRADE.

THE White Pine lumber market is generally fairly active. Prices continue firm. Since our last report about one and a half million feet has gone forward to the West Indies. Trade with Cuba is very quiet. For the River Plate several small lots have gone forward and two cargoes are loading. The demand seems to keep up in moderate degree. For Rio Janiero, 500,000 feet have been shipped recently. This will no doubt meet immediate demands. Small lots are being shipped to Australia to complete vessels landing on berth. For Africa and the West Coast of South America, there is nothing being shipped to speak of. Inquiries for North Carolina Pine continue in excess of the available supply, particularly kiln-dried boards, both rough and worked. Prices are firm and with a decided tendency to advance. Mills are so overrun with orders that they refuse point blank to bid on time bills which call for delivery by a specified date. Air-dried lumber is in good supply, but for many purposes this cannot be used to advantage. The scarcity and high price of Spruce has induced an increased demand for timber and large quantities are being placed. The trade in Yellow Pine continues fairly active, the yards reporting a good business, which is becoming restricted for forward delivery, the lumber for most of the buildings to be erected having been contracted for. Boards are still dull, with an over supply. There is an improvement in the export trade, especially for the River Plate, and for Europe, especially for continental ports; but Brazil seems to be suffering from over-importation of Pitch Pine, and the only orders received from there now are to postpone deliveries. There is a very moderate inquiry from the West Indies, the Windward Islands and Central America. Prices for Spruce continue firm and without change. Arrivals have been comparatively heavy, but not sufficient to cause any weakness in values. Yard stocks had been so bably broken that holders can afford to be stiff in their askings. There is considerable now on the way and it is possible, but not probable, that a slight shading in figures may occur within the next two weeks. Laths continue without change and with light receipts. The Hemlock mills are mostly busy with orders, and the retail yards are complaining that they cannot get stock as fast as they desire. There seems to be a feeling among them that they will soon have to pay an advanced price. A number of mills report that they are behind from two to three weeks in filling orders that they are usually able to ship in from a week to ten days. Should the preseut demand continue there must be an advance of from 50 cents to $1 per M., before September. Business in Hardwoods at the yards has been a little quieter. The demand has not been so steady and the moderate activity has not been kept up. Trade fully up to what it generally is at this particular season of the year. Arrivals are slightly on the increase and while prices are fairly firm, buyers are not as anxious as they were a few weeks ago. Manufacturers are offering lumber more freely and assortments, that were broken, have been sufficiently replenished for present needs. Quotations from first hands unchanged, but there is apparently more eagerness to place stocks. Rough edge Eastern Second Growth Ash and Hickory are in steady demand. It would be difficult to secure first rate lot of either in large quantity. The usual summer quiet prevails in the Mahogany and Cedar trades, and as stocks, remain very much as at last report. Cherry stocks are firm and unchanged. There is now a demand for export, more particularly for the light grades such as light pipes, West India light hogsheads and light barrel staves. There is a ready sale for these. Manufacturers of staves should watch the mark closely, as the demand fluctuates a great deal. To-day an accumulation of heavy stock with no demand make it undesirable, while light stock is wanted next week the reverse is just as likely as not to be the case.

DISAPPEARANCE OF OAK TIMBER.

It is stated that oak timber especially is rapidly disappearing from Europe, although half of the area of Sweden, one-fourth of Norway, one sixth that of Switzerland, and 780,000 square miles in Russia are said to be yet in forest. The consumption of oak in France has doubled during the last fifty years; she requires 15,000,000 cubic feet yearly for wine casks alone, 72,000 for building purposes, 600,000 cubic feet for her fleet, and 150,000 cubic feet for railway carriages; £800,000 worth of staves were imported in 1852; £5,900,000 worth are now needed. Since losing Alsace and Lorraine, France contains 150,000,000 acres, 20,000,000 of this surface is covered with forest. Holland and Belgium are nearly denuded of timber, and are large importers. North Germany is rich in forest, but within half a century has commenced to cut down young trees. Austria has sold her forests since railroads have been introduced. In Italy no forests remain. Spain and Greece are almost woodless. The southern coast of the Mediteranean is almost forestless.—*Ex.*

BUFFALO AND TONAWANDA, N. Y.

BUFFALO, July 19.—With all due respect to dealers in pine lumber here, says *The Timberman* correspondent, I am inclined to suspect a slight dullness in the trade, notwithstanding the assurance of the majority of them that business is good. There are several reasons why the demand is not as good as during the past three or four weeks. The principal cause of complaint is that smaller markets are being drummed to death by a few representative houses here and particularly at Tonawanda. That small lumber hamlet, judging from reports received, contains a large number of very weak-kneed sellers. One from there with a heavy stock of dry lumber on hand, has by his over-anxiety to dispose of it, created a widespread feeling of distrust and weakness in future prices. The trail left by one of them has furnished a large sized wedge to split prices in every town struck by him. It is also said that drummers are more numerous this year than last, and "tally a round dozen" or "fifteen for this morning," seems to be the greeting most agents meet on the road. The best bids are taken by agents outside, and in most cases the price is lower than would be accepted for the same stock here. There is no real change in the market at present, but the outlook for future trade, in my opinion, is very favorable.

Shingles and lath are in the same condition as reported heretofore, viz., demand good, supply light and prices strong.

OUR esteemed contemporary, *Timber*, of London, Eng., recently devoted considerable space to a criticism of Prof. John Macoun's article on "The Value of Canadian Woods for Export," which appeared in these columns some months ago. Owing to Prof. Macoun's absence in British Columbia at the present time we have not been favored with his views on the subject, but we can at least conjecture that he will have something to say in substantiation of his statements at no very distant date.

FOR the next issue of THE LUMBERMAN we would like to secure as many reports from individual lumbermen in all parts of Canada as possible, concerning the state of trade; how the cut is progressing; the condition of the drives; the probable output, and any other information concerning their business that can be furnished. It is these items of news which go to make up an interesting paper, and as a post card will furnish all the necessary information, we trust that the request herewith may bring in hundreds of replies. Let each of our readers consider this a personal invitation, intended In the interest of the trade. Replies should reach this office by August 15th if possible.

THE NEWS.

ONTARIO.

—Kingston is to have a new dry dock.

—R. Bell & Co., Toronto, builders, have assigned.

—John Patterson's saw mill at Hollen has been burned.

—The making of egg barrels is a new enterprise at Fergus, Ont.

—The Government is being petitioned to increase the duty on axes.

—Perley & Pattee's saw mills at the Chaudiere commenced running July 12th.

—Mr. James Benor is about erecting a new sash and door factory at Campbellford.

—Robert Campbell, of the firm of R. Campbell & Son, Eganville, Ont., is dead.

—The Parry Sound Lumber Co.'s tramway recently fell, injuring several emp'oyees.

—Charles Conrad, lumberman, of St. Thomas, has compromised with his creditors.

—The sash and door factory belonging to Hunter & Ezard, Milton, was recently damaged by fire.

—Large quantities of square timber are coming over the Grand Junction for shipment at Belleville.

—The saw mills at Crow Bay, owned by Messrs. Gilmour & Co., have a capacity of 14,000 feet per day.

—Jones & Beaudet succeed A. G. Jones as owners of the sash and door factory at Rochesterville, Ont.

—Joseph B. Weller, a lumber merchant, Belleville, has been committed to gaol as a dangerous lunatic.

—An immense amount of property has been destroyed by a fierce bush fire at Wilmur, Addington County.

—Mr. Wm. Smith, of Beaverton, has added a new planer and matcher to the wood-working department of his business.

—Mr. John Goodman, of Minden, is putting new machinery in his mill and expects to have it again in operation this season.

—About 60,000 feet of lumber belonging to Mr. Grier, of Ottawa, was burned on July 4th. The loss is estimated at $1,000.

—Fred Pual, a young fellow working in the Cedar Mill, at Deseronto, had three fingers of his left hand lacerated by a saw recently.

—Henry Bros., Randwick, have sold their saw mill to Mr. J. D. Smith, Toronto, who intends removing the machinery to North Bay.

—The saw mills owned by McLaren & Edwards, Carleton Place, are running at full force, and expect to cut 25,000,000 feet this year.

—On July 18th Suttaby's steam joiner and planing mill, at Gravenhurst, caught fire, and in a very short time a loss of from $4,000 to $8,000 was incurred.

The amounts passed in the estimates for slides and booms in the Pembroke district were: River Coulonge and Black River, $2,800, River Ottawa, $4,000.

—At Brockville, Manhard & Co., lumber, have admitted Thos. Doddridge a special partner, contributing $10,000, from May, 30, 1887, to May 30, 1890.

—The schooner Aurora landed at Owen Sound the first consignment of the twelve million feet of lumber which will be brought there for shipment over the C.P.R.

—The milling company, at Medonte, under the management of Mr. John Knight, will cut four million feet of lumber this season. This is about the average output.

—The Str. E. B. Eddy left the Chaudiere recently with a tow of twelve barges loaded with lumber for Quebec. This is considered one of the heaviest tows of the season.

—The planing mill owned by Mr. George Cormack, of Whitby, was recently destroyed by fire, together with most of the machinery, patterns etc. Mr. Cormack's loss is about $9,000.

—Pine drives on the Gatineau and Ottawa are progressing favourably, and the mills are all cutting up in full time. The demand for the lower grades of lumber is good in the U.S. market.

—Messrs. Dowd & Co., of Oscoda, Michigan, lost a large quantity of square timber by fire recently on the Pickerel River, supposed to be the result of carelessness on the part of the employees.

—Martin Hanmore, an employee in the saw mill of R. Traux & Co., Walkerton, met with an accident a few days since, from the effects of which he died in a few hours. It appears that the man who works the rip saw allowed a piece of wood to fall against the saw, which flew with terrific force, striking Hanmore in the ribs burying them into his lungs.

—Messrs. McLachlin Bros. and Mohr Bros. are putting their drives of saw logs and dimension timber through the slide at Eganville. The drives consist of nearly one hundred thousand pieces.

—Every department of the Cedar Mills, at Deseronto, is reported as enjoying a boom. Large shipments of ties, lumber and shingles are daily made to all parts of Canada and the United States.

—Chew's lumber mill, at West Gravenhurst, was burned June 30th. The weather was calm and consequently the fire did not extend to the lumber or other buildings. The mill was insured for $2,500.

—Great quantities of telegraph poles, hoops and staves, are being shipped from the vicinity of St. Thomas to the United States the present season, the value of the exports from that city exceeding $62,000.

—All the drives in the Parry Sound district are coming down slowly and none of them will be "hung up" this year. Some of the companies are still cutting logs in the bush and intend to keep their camps going all summer.

—The Terra Cotta Lumber Company, of Deseronto, celebrated the Queen's Jubilee by starting their works on that day. They have already commenced the manufacture of their products. The new industry will give employment to many hands.

—The *Intelligencer* says that the Rathbun Company have constructed a simple, yet effective machine on their property adjoining the Grand Junction dock at Belleville, for loading railway ties on flat cars. With this machine, which is operated by steam power, a car can be loaded in fifteen minutes.

—Prices of pine lumber at Ottawa do not vary much from last quotations, good lumber of all kinds but strips rating about $2, and strips from $1 to $1.50 less than last fall. For ordinary and coarse lumber prices remain about the same. Freights by boat to Albany $3 and to New York, $3.25.

The steam-barge Scotia, from Kingston, Canada, with its consorts Gaskin and Oriental, loaded about 40,000 cubic feet, or 480,000 feet, board measure, of timber for shipbuilding at Montague, Mich., recently. The timber was to be subsequently put on a raft, sent down the St. Lawrence, and shipped to England.

—THE LUMBERMAN regrets to announce the failure during the past month of the well-known and popular wholesale Toronto lumber firm of Hargreaves & Co., which was brought about, it is said, by the depression in the lumber trade. The liabilities are placed at $15,000 and a surplus of $4,000 is claimed by the firm.

—Messrs. A. & P. White of Pembroke, have opened the steam saw mill purchased from Mr. W. B. McAllister. The mill has been thoroughly overhauled and the old machinery replaced by new or made over. An extension has also been made to the building and on the whole it is now one of the best saw mills in this section.

—Attorney-General Mowat left for New York on July 13th, sailing from there by the Sardinian. It is understood his principal business in the old country is to settle whether the case of Queen vs. St. Catherines Mill and Lumber Company regarding timber in the disputed territory shall be carried before the Privy Council or not.

—Mr. W. H. Sicsmith, of Ottawa, is having built two large barges capable of carrying 300,000 feet of lumber at McRae's ship yard, opposite the Queen's wharf. The new barges will be two of the largest on the river. Mr. Sicsmith, who has been for a number of years connected with the forwarding firm of Blanchard & Co., intends establishing a new and independent line of barges and tugs.

—The Terra Cotta Lumber Company, of Deseronto, manufactured their first lot of materials three weeks ago. Experts pronounced them first-class and indeed superior to any they had seen elsewhere. This is most encouraging. The Company have made contracts with several parties for their wares. The works attract crowds of visitors who seek to satisfy their curosity about the new lumber.

—The Burk's Falls *Arrow* says:—Mr. Monroe of William Hamilton Machine Works, Peterborough, called upon us on Monday. He was on his way home from North Bay, where he had concluded a contract for a large steam saw mill which they are to build and turn over complete for operations. He inspected the W. Train & Son's mill here, and was much pleased with the manner in which the millrights had put in the machinery.

—The William Hamilton Manufacturing Company, of Peterborough, is building band-mill machinery for the Victoria Lumber Company, at Victoria Harbor, in the Georgian Bay region. The mill is the Allington patent, an invention of D. K. Allington, of Saginaw, four of which are now being put into mills on that river. The Victoria Company will have two gangs and a band-mill in its establishment, and will be prepared to do business in the latest style.

—The lumbering firm of J. R. Booth at the Chaudiere, expect, at the end of this year's cutting in the mills, to have a reserve of logs of at least 40,000, while Messrs. Bronson & Weston expect to have a reserve of 50,000 pieces to begin sawing on next spring. Messrs. Perley & Pattee as well as E. B. Eddy, will have sufficient over to carry on sawing operations in the spring until the first of their drive comes down. The shortage in last winter's cut will only average about five per cent. more than last year, so that no great scarcity of logs is anticipated.

—The drive on the Ottawa above Des Joachims is all on the main stream. It is expected that it will be swept into Des Joachims by the 15th of August. The drive on the estate of D. Moore, on Kippewa, will not be out of the lake for some time yet. It will be too late for the main drive and will very likely be laid up for this year, on Kippewa lake. J. R. Booth and Grier's drives on Mattawa are all out of the Mattawa river. The Dumoine drive is coming along slowly; it is just possible some part of it will not get out this year. The Black river drive is all swept out.

—It is rumored in lumber circles that the biggest transaction which has ever taken place in the trade is about completed, being the sale of McLaughlin Bros.' large mills at Arnprior, and extensive limits on the Upper Ottawa, to Hon. J. G. Ross of Quebec, and E. B. Eddy, the Match King, of Hull. The consideration is $2,500,000. The cause of selling is the ill-health of the managing partner, who has been advised by his physician to seek rest. In the event of the purchase being completed it is said Messrs. Ross and Eddy contemplate building a short line railway from Arnprior through the Townships of Fitzroy, Huntley, March and Napier to Ottawa.

—A dispatch from Ottawa says: The lateness of the timber drive this spring, owing to the long winter, is now becoming apparent. Several of the leading millers have recently had to shut down their mills temporarily several times during the last month or so owing to the scarcity of logs, as many supplies expected have not yet arrived. Experienced old lumber workers also declare their opinion that the lumber cut of last winter will soon prove to have been smaller than supposed, and the mills will not work nearly so long this season as in the past years. If they do they will have to use up the reserve supply of logs ordinarily kept over to begin work in early spring.

—The Georgian Bay Consolidated Lumber Co. at Waubaushene, have issued the following notice: "This Company appreciating the stand their men have taken during the recent strikes in the neighbourhood, as well as their loyalty to the Company's interests at all times, and desiring to acknowledge the same, propose until further notice to cease work in connection with the Severn and Waubaushene Mills, at three o'clock on Saturday. While some of the men might prefer half an hour daily, this Company believe the interests of the greatest number will be served by allowing the whole reduction of time on Saturday." Would it not be well for other concerns of a like character to join in carrying out the good example set by the above company?

—At the Russell House, Ottawa, on July 2nd, Mr. W. H. Lewis, auctioneer, sold three valuable timber limits on the North Shore of Lake Huron, No. 40, 46 and 47, each containing thirty-six square miles. The river Wahnapitus waters all three, and the C. P. R. Company have a station near at hand. Among the lumbermen present were Messrs. Wm. MacKay, R. H. Klock, A. McCormack, P. H. Colton, O. Latour and R. Hurdman. Berth 40 was knocked down to Mr. Colton for $25,000. Berths 46 and 47 were sold to Mr. Joseph Riopelle of Ottawa for $13,000 and $7,000 respectively. The terms of the sale were one half cash down and balance in one year. This is the first sale of limits that has taken place in this district this year. Lumber is high now and owners of limits are not anxious to sell.

—Mr. G. B. Greene, secretary of Upper Ottawa Improvement Company, says there is not a particle of danger that there would be any shortness in the lumber this summer. All the mill-owners with perhaps the exception of one, had sufficient logs to keep their mills busy all summer. Asked if there would be any trouble next spring from want of logs, Mr. Greene said there might be some of the lumbermen who had not a sufficient reserve. Messrs. Perley & Pattee had a drive of some 30,000 logs on the Kippewa River which would not reach Ottawa this summer owing to the lowness of the water on that river making the drive float very slowly. This would, of course, leave them short on reserve logs for next year, but he thought if they had enough reserve logs to keep their mills till the 1st of June next year this drive would be down and would keep them till that year's drive was in.

—Reports from the Upper Ottawa state that the lumber drive this summer would be considerably earlier than it was last year. The logs are taken at the head of the Long Sault by Mr. Alex. Lumsden, who has the contract for drawing the logs from the Long Sault to the commencement of the Upper Ottawa Improvement Company at Schewyn. Mr. Lumsden states that when he gets the tail of the drive into the company's booms the drive will make rapid progress to Ottawa.

—The Minden *Echo* of a late date says:—Our village has been visited during the present week by one of J. M. Irwin's drives under the superintendence of Mr. G. S. Thompson with Messrs. Preston & Johnston as foremen. The drive consists of some 32,000 pieces of pine and ash, a large number of which are 25 to 60 feet in length, having been got out specially for to meet the demands of bill timber trade. Mr. Thompson informs us that he is changing the base of his operations in the woods this year and building a new depot in the township of Harbun. The building consists of an office, storehouse, blacksmith shop, stable and dwelling, built in the form of a square, with a yard enclosed of 100 yards either way. He is also clearing a farm of some 200 acres, where he proposes raising hay and roots for the use of the shanties. The front of his dwelling is surmounted by a flag pole, sixty feet high, beating a large jubilee Union Jack, on which is inscribed "Port Irwin," by which name the depot is known in the district. Three more drives are expected in the course of the next few weeks containing in all some 60,000 logs.

—Mr. Cook wants to know what compensation the Government intend to allow the Indians of Christian Islands for timber cut by licensees of the Crown on their lands on the eastern shore of Georgian Bay; how have the moneys arising from the sales of the Indian lands on Georgian Bay, Lakes Couchiching, Huron and Simcoe, and of the Coldwater reserve, been applied; what disposition has been made of the £1,200 annuity payable to the Chippawa Indians under the surrender of 1818; and what compensation will the Government make to the Indians or the Christian Islands for the lands comprised in what is known as the Penetanguishene purchase, which the Indians allege was never surrendered by the tribe to the Government. Replying to the above Sir John Macdonald informed Mr. Cook that the money arising from sales of Indian lands on the Georgian Bay, Lakes Couchiching, Huron and Simcoe, and from the Coldwater reserve, had gone to the credit of the Indians in the Chippawa reserve. With regard to the claim of the Christian Island Indians for timber cut by licensees of the Crown on lands on the eastern shore of Georgian Bay, that matter would be settled when the commissioners met to settle the claims against the old Province of Canada.

—A Canadian writing to the Montreal *Herald* from the English metropolis, among other valuable suggestions makes the following pertinent remarks anent tree planting in Canada, which are worthy of every consideration:—"The question of protecting your country against a timber famine and all its attendant evils is becoming a pressing one in Canada, and is one which your Government might judiciously take in hand—at least negatively, by being less liberal in the granting of timber limits. That the planting of a country with trees is a work in which individuals may largely share, your institution of Arbor Day is a practical proof. It may interest your readers to know of one or two "big things" in the way of tree planting by individuals which have been done in the Old Country. Lord Dalhousie has planted on his Brechin Castle estate since 1884 nearly two millions of trees, and has in the nursery over another million of young first trees ready for planting. If Lord Dalhousie goes on like this he may before long beat the Duke of Athole, who, between 1774 and 1826, planted more than fourteen millions of trees at Dunkeld and Blair Athole. Scottish proprietors have for a good while past recognized the value of thousands and scores of thousands of barren acres as planting ground for hardy, marketable timber. Think what a gift to posterity such men bequeath."

QUEBEC.

—Local prices in lumber at Montreal are reported good, but for exportation the great competition has brought prices low.

—There seems to be every prospect this year of increased shipments of Ottawa pine deals from Montreal to Europe, chiefly by steamers.

—Very little chartering has been done in this Province so far this year, as most vessels arriving have been previously chartered in England.

—The supply of white pine logs in the Ottawa valley—which is now the almost exclusive source of supply for white pine—is variously estimated at between 600 and 700 million feet, board measure. Some square timber, which was wont, years ago, to figure for 10 to 15 million cubic feet, is reduced this year to under one million feet.

—The lumbermen, a Quebec despatch says, did not succeed in getting the Quebec Government to promise to reduce the tax on timber limits, but some modifications in regard to greater fixity of tenure, etc., were made.

—In the spruce districts, from Montreal down to Gaspe, operations in some parts were either suspended altogether or considerably reduced; in others, they were materially increased over those of previous years. On the whole a full average supply of spruce will be forthcoming.

—Reports from different points in Quebec state that there have been the cleanest drives this season than for years past, This is generally attributed to the fact that the winter's snow passed away slowly, giving plenty of water in the rivers and streams for floating with great advantage.

—No doubt owing to the small sales, comparatively speaking, made by Quebec exporting houses last winter in Europe, the vessels so far arrived since opening of navigation have not been numerous. Up to June 25th, the arrivals this year have been 97 ships, 75,480 tonnage, as compared with 120 ships, 103,090 tonnage, in 1886. However it is expected that by 1st August there will have been loaded fully as many vessels as last year at same date.

—The Quebec ship labourers are again trying to obstruct the trade of the port. They have, through some petty spite against a batteau owner, passed a resolution boycotting his batteau for the season. The result, however, has not turned out exactly as they would have wished, as the first vessel boycotted turned to with her own crew, and is now loaded. The consequence is that other captains will now do the same and it is hoped Quebec will soon be free of the obnoxious rules of the Quebec Ship Labourers' Society.

—Mr. Andrew Thompson, of Quebec, who has been in London for some time in connection with the floating of the Montmorency Milling property as a limited company, has returned home. We have not learned the result of his mission.

—The spruce mills in the vicinity of Quebec have now all secured their logs, and are cutting on full time. Spruce lumber is in fair demand from the U. S., and several mills have made considerable sales. One mill in this vicinity is in negotiation for the sale of all they can cut into boards. If this sale is made, the cut of spruce deals will be reduced some 200,000 to 300,000 q.s.

—A correspondent of an English exchange, speaking of Quebec trade, says:—The present state of our market is one of complete stagnation. Our shipping houses, with few exceptions, find themselves with pretty heavy stocks; in face of a demoralized market at your side, with sales difficult, almost impossible to make, they very naturally have ceased purchasing here. There are, therefore, still some spruce cuttings unsold. The pine manufacturers of the Ottawa Valley have the advantage, however, of sawing into boards for the United States, and those who have not yet made contracts to saw deals are now sawing into boards. The markets in the United States show great strength, and our pine manufacturers will find a good market, and good prices therein, for all they can make. We are sorry to say the present aspect of your markets does not warrant similar expectations. We wish we could see some ray of hoping better things for the future, but we fail in any direction to see it. As we often in past years brought to the notice of your readers, we look each succeeding year for a constantly decreasing volume of our wood exports to the United Kingdom, and a constantly increasing augmentation with the United States. In the latter country their magnificent pine forests of the West are giving out, as those of the East have given out many years ago. Their annual requirement of wood has grown to vast proportions, and is every succeeding year growing to still greater volume. Looking on the other hand, to the United Kingdom, the future outlook seems to us as if the requirements of wood goods are decreasing year by year. Another factor is the supplies coming from the Baltic, to which there seems to be no practical limit, and with which in prices it is becoming less and less possible for us to compete, more especially in spruce or whitewood.

NEW BRUNSWICK.

—All the drives are down the Restigouche.

—Freight rates still rule low from New Brunswick to British and Continental ports.

—The output of lumber from the port of St. John for the first six months of this year will fall very far short of that for the corresponding period of last year.

—The lumber mill and some lumber owned by Hilyard Bros., Portland, were destroyed by fire July 13th. The mill was valued at $30,000, and insured for $13,000.

—Last year 95,000,000 feet B. M. of logs passed through the Fredrickton boom. It is estimated that there will be 100,000,000 feet pass Fredrickton this season. The cut of logs below that city is unimportant.

At a meeting of the English creditors of Guy, Bevan & Co., lumber merchants, of St. John, N.B., held in London recently, the liabilities of the firm was found to be £180,000, of which £106,000 is unsecured. The assets are £25,000.

Mr. E. J. Smith's saw mill at Shediac, N. B., was thoroughly repaired last winter and a new foundation put in, and is now capable of sawing 50,000 to 60,000 feet a day. About 2,500,000 feet of logs were brought down the Scadouc this spring, and the mill is now running full blast, sawing deals, boards, laths and shingles.

The St. Croix *Courier* says the drive from Katahdin is now in the vicinity of the forks of the Penobscot and includes about 18,000,000 feet of logs. One hundred men and [illegible] horses are employed on the drive. All last winter's cut, with the exception of about a million feet, and the whole of the previous season's cut have been successfully brought from the Wissatiquoik. Mr. Tracey expects to reach his destination at Greenbush boom about July 20th.

—The big jam of 7,000,000 or 8,000,000 feet of logs still hangs on the Aroostock Falls, and unless there are very heavy rains it will remain there all summer. The Dechaine drive, of three and one-half millions, is hung up in Big Black river, about 60 miles above Fort Kent. These logs are owned by Hayford & Stetson, Bangor City. The Sewall & McIlvaney drive, which was hung up at the falls in the Allegash about a fortnight was started by the rise of water caused by the recent rains, and is now coming along well with every prospect of getting into St. John in good season. Allegash enters the St. John 30 miles above Fort Kent. The last rains brought up the water in the river seven feet.

A New Brunswicker writes: The American market for our staple continues very good, and were it not for the duty that the shipper has to meet in the United States Custom houses the returns would be highly satisfactory; as it is, the prices received on lumber shipments to American ports compare very favourably with those received for lumber cut for the British consumer; and I am of opinion that it is only a matter of time when by far the greater quantity of the lumber cut in this section will be shipped to the United States, simply because that country is our natural market, and, besides that, we cannot shut our eyes to the fact that the Baltic wood, which is taking the place of ours in many ways, can be laid down in the British market in much quicker time and for much less expense than can the wood from this side of the water. Consequently the consumer invests in that article which, other things being equal, he can get for the least money, and the Canadian lumber has to suffer.

MANITOBA AND NORTHWEST.

—Considerable quantities of lumber is being shipped from British Columbia to South America.

—Gangs of men are taking out saw logs along the Saskatchewan from Pitt to Saddle lake for Prince Bros., of Battleford.

—Messrs. Leamy & Kyle have the ground staked off and arrangements made for the erection of a large sash and door factory at Vancouver, B. C.

—The Alberta Lumber Company are establishing a saw mill at Red Deer, Alberta. They have lumber limits on the Red Deer and Saskatchewan rivers.

—The Royal City Planing Mills Co., of Vancouver, are sending to Yokohama, via the Abyssinia, samples of their windows, sashes. doors, blinds and lumber.

—Latest reports from the Lake of the Woods lumber district, go to show that a portion of the "hung up" logs have been got out. It is said, however, that the supply of logs for mills in this vicinity will be very limited.

—The logs being floated down the Bow river to the Eau Claire mills at Calgary, has been jamed up at the C.P.R. bridges west of Canmore. It is stated the the Eau Claire Co. will claim damages against the C.P.R. for the detention of their logs.

—The Northwest town of Calgary boasts of a 75-horse power saw mill, with a capacity of 100,000 feet per day, a 25-horse power planing, sash and door factory, the largest in Manitoba or the Northwest, and a smaller planing, sawing and grinding mill.

—A lot of sash, door and window ware from Vancouver, B. C., manufacturers, is being taken on board the S.S. Abyssinia consigned to Yokohama and Hong Kong. It is likely that the future will develop an important trade between those places in a few years.

—The Moodyville saw mills are working night and day at present to keep up with the demand for lumber and to hasten the loading of the vessels now taking in cargo at their wharf. This is rendered absolutely necessary, as a number of vessels are now under charter and are on their way to this port to load at the company's mills.

TRADE REVIEW.

TORONTO.

TORONTO, July 27, 1887.

Lumber trade in this city is dull. The striks of the carpenters and the season of the year both contribute to the existing state of the market. Even in the present condition the demand for bill stuff is in excess of the supply. Some of the principal dealers refusing bills, not being in a position to fill them.

Shipments to the United States are not numerous. Prices are well maintained and have an upward tendency.

No indications point to an early settlement of the difficulties between tee master carpenter and men. Each side seems resolved to starve the other into subjection. In view of the fact that seven of the best weeks for building purposes have gone by it might be as well did a general strike take place, or a lockout of the various trades, and the balance of the year be spent in effecting a solution of the questions between the interested parties. It is amazing that in this the end of the 19th century men can be found who will surrender their freedom of action to the keeping of irresponsible beings, curtailing misery on those depending on them for the necessaries of life; compelling children of tender age to go to work in factories, their wives to take in washing, or tramp the streets begging, cheat the grocer, butcher and all who furnish them with supplies of any kind. From all such assemblies good Lord deliver us!

MONTREAL LUMBER MARKET.

MONTREAL, July 25, 1887.

Since our last report prices in the lumber market here have been firm and well maintained, although for exportation the great competition has brought them somewhat lower. There has been an active business done at the yards for city consumption as well as for country trade, but contractors seem to be pretty well supplied for some time now. A good export trade is being done, and shipments so far this year include 1,372,200 pieces of deals, ends and battens to Europe, and 484,638 pieces lumber to South America. Rates for freight to both South America and Europe continue unchanged.

The Quebec Local Government has received another strong protest from lumbermen against their recent increase of the Provincial tax on timber. It is understood that while the Government refused to reduce the tax, they promised some modifications in regard to greater fixity of tenure, etc.

The following are the quotations at the yards here:—

NEW YORK CITY.

NEW YORK, July 25, 1887.

Trade in this city at present is rather at low ebb, but the prospects are that in a short time an improvement will be percepitble. The yards are all well stocked but distribution is slow. Sellers are talking higher prices, but the probabilities are that rates will remain about the same as at present. North Carolina pine is cutting a prominent figure in this and other eastern markets. Its growth in popularity during the last year is astonishing. Its sale has affected spruce, yellow pine and Norway pine.

Export trade is moderate. The River Platte business is now being carried on largely from Montreal. Trade with the West Indies is fair. The Australian business is in small lots. Orders for Africa are few and small. The lumber exported for the week ending July 16, amounted to 1,375,577 feet, in addition to which five lots of shingles, amounting to 171,586 were forwarded. The shipments were all small, running from 8,000 to 150,000 feet, with one exception, a lot of 240,000 feet consigned to Demarara.

Spruce is still scarce and high priced. Yellow pine is moving moderately. Eastern spruce offerings for the past week have been somewhat heavier, considerable of which comes from St. John. Northern spruce sells faster than it can be manufactured, and as a result prices are firm. Pennsylvania hemlock is active, while Northern hemlock continues to be offered in moderate amounts. Lath and shingles are fairly active. Prices are firm and the demand as good as it was last year at a corresponding date.

CHICAGO.

CHICAGO, July 26, 1887.

The general opinion seems to be that the wholesale trade here is unusually brisk for this season of the year. Distribution from the yards is larger than at a like time last year, and there are indications that the demand is to continue. Possibly the most unfavorable condition of the business now is the universal scarcity of dry lumber, which does not seem to exist in any considerable quantity at a single point in the northwest. This condition of the market is creating no little alarm among the trade, as the cutting season does not reach very far into the future. The effect of this scarcity will at least tend to keep prices very firm for some time to come.

The load of piece stuff has been heavier for the market to carry this week than at any previous time since May. The demand for medium and picked common inch is in excess of supply. The demand for shingles is active and the tendency of prices is to advance.

The most notable feature of the week's market was the receipt and sale, by McLaren & Morris, of a cargo of mill run lumber from the mouth of Spanish river, Ont., consigned by Bushwell & Co., who are running a mill at that point. This cargo was certainly the first one to come to Chicago from the Spanish river district, and was said to have been the second one shipped from that locality. It had to pay a duty of $2 a thousand, and a freight rate of $3. As it must have sold at a price somewhere between $15 and $17 a thousand, the manufacturers could not have made a great profit on it. It is expected, however, that more lumber will be received here from Spanish river.

The following are the ruling quotations at present :—

RECEIPTS FOR WEEK ENDING JULY 21.

	Lumber.	Shingles.

SAGINAW VALLEY,

EAST SAGINAW, July 20.—A large quantity of lumber has been sold in a quiet way during the past 10 days. Opinions differ as to prices. Much of the stock sold has not been reported, and details of sales are daily suppressed. Buyers invariably claim that the valley pine lumber holders have made concessions, and I am inclined to believe this holds good as to the better grades, but common stock is firm. There is likely to be some trouble in moving by water lumber that has been recently sold and which will be wanted for the fall trade at the east. One vessel man informed me that he could keep a tow

of 2,000,000 feet capacity busy until navigation closes, and this in addition to the present available tonnage, Sibley & Bearinger have sold 7,500,000 feet to Noyes & Sawyer, of Buffalo ; 2,000,000 to Lay, Hurlburt & Co., Sandusky ; 1,000,000 to Craig, of Rochester, and 1,500,000 feet to other parties. The prices ranged from $10.50 upward. This stock is cut at East Tawas and on the Saginaw river. In addition to the foregoing I hear of sales of 200,000 feet at $8.50, $17 and $37 ; 400,000 feet at $9, $18 and $38 ; 300,000 feet of box at $10,50 ; 1,400,000 feet at $19 straight ; 1,300,000 feet at $16.50 straight ; 300,000 feet at $8.50, $17 and $36 ; two lots, one of 700,000 the other 800,000, at price not reported ; 200,000 feet at $9.50, $19 and $38. Good lumber is picking up a few friends who are inquiring as to its health. Box lumber is in urgent request ; norway strips are quoted at $11 with a fair inquiry Shingles are firm with a good inquiry. Quotations are $2.15 to $2.35 for clear butts, and $3.15 to $3.35 for the XXX grade.

The yard lumber trade keeps up well, the movement being large for the season of the year. Prices are firm. Lath are held at $1.35.

GENERAL NEWS NOTES.

—Inquiries are brisk for shingles in the city of New York.

—St Louis is still shipping considerable black walnut to Germany.

—The hardwood trade throughout the country has been exceptionally good this year.

—North Carolina pine is selling freely in New York, and is constantly increasing in favor.

—High grade hardwood lumber is in good demand in every prominent market in the country.

—The total amount of lumber shipped this season from Manistee up to July is 80,500,000 feet.

—Trade is fair at Buffalo and Tonawanda. Shipments into the interior of New York have been heavy.

—Judging by the reports from the east there is not much activity in the white pine demand in the seaboard cities.

—During the high water the boom at the mountain mill, west of McLeod, Alberta, gave way, and let loose about 15,000 logs.

—The great lumber manufacturers of the Ottawa are unanimous in favoring commercial union.

—The recent rains have raised the Pine river, Michigan, so that 5,000,000 feet of logs will be run into St. Louis to be cut this summer.

—A Tonawanda N. Y. firm recently shipped 195,000 feet of lumber on a canal barge, said to be the largest load ever sent out by canal.

—Prices of lumber are making some progress toward a higher plane than they have rested on for some time past, but the movement is slower than is universally agreeable.

—The E. B. Eddy Manufacturing Co. of Hull, Que., are putting a new sheet iron roof on their factory at Hull. The former roof was of shingles, and less safe from fire.

—One of the grandest sights ever seen in the river St. John was to be witnessed a fortnight ago at Grand Falls, where there were 15,000,000 feet of logs jammed.

—A recent report of the Forest Administration of the Madras Presidency, India, shows a net profit to the Government of 22 per cent., chiefly items from the sale of timber, fuel and bamboos.

—Mr. H. W. Petrie, of Brantford, Ont., manufacturer of wood-working machinery, has recently filled a large order for such machinery for a ship-building concern at Liverpool, N.S.

—The sash, door and blind manufacturers and dealers of Chicago have organized a local association as an annex to the Wholesale Sash, Door and Blind Association of the Northwest.

—The United States covers 1,856,070,400 acres and of this surface 486,280,000 are covered with forest—about one-fourth. And yet there are plenty of people who are crying about a lumber famine.

—The Hart Emery Wheel Company, Hamilton, Ont., of which Mr. Samuel Briggs is manager, are operating their works full time, being full of orders. Their emery wheels are in strong demand.

—Good pine stumpage, accessible to the streams of Michigan, can hardly be bought for less than $7 or $8 per M. In 1866 this same stumpage could have been bought for $1 or $1.25, and in 1885 for $4.50 or $5.50.

—The Ashland News figures out that of the 200,000,000,000 feet of pine in the United States, Wisconsin has 20 per cent. and of that Douglas, Bayfield and Ashland counties have two-thirds and over half of this two-thirds is tributory to Ashland bay.

—Gilmour & Co. have about 20,000 saw-logs hung up in the Trent. The Rathbun Company have a small number of logs stuck in the Trent and a very large quantity in the Deer River. Both concerns have, however, a sufficient number of logs to keep their mills running throughout the season.

—Sales have lately increased in Saginaw valley. It is hinted that there has been some relaxation of grip on the part of holders. Transactions have been quietly effected, and have been larger and more numerous than appears on the surface. The car load trade from Saginaw has been heavier this season than ever before.

—The Treasury Department at Washington has decided that sawed elm boards 16½ feet in length and 1½ inches in thickness, the edges of which follow the natural shape of the tree, used in the manufacture of hoops, are dutiable at the rate of $2 per thousand feet board measure under the tariff provision for sawn elm lumber.

—George Van Dyke, a big New England lumberman, is this year handling the largest drive that ever went down the Connecticut river, containing over 90,000,000 feet of spruce logs. He is said to have had 600 men and 80 horses employed in camp, at an expense of over $2,000 a day. His four mills saw about 500,000 feet of lumber daily.

—The large amount of building going on in New York, Boston and Philadelphia, is causing a continued active demand for eastern and northern spruce, the supply being scarcely equal to the requirement. The demand for dimension gives opportunity for the working in of hemlock, and sales of that kind of lumber are larger than in former years.

—A large number of logs intended for supplying the mills on Lake of the Woods are in a very precarious shape, and it is feared that about 15,000,000 feet will be "hung up" if there are not heavy rains. Logs cut in the Riding Mountains, which were "hung up" on the Little Saskatchewan, Bird Tail and other streams in Northwestern Manitoba last summer, have been successfully floated this summer.

—A lumber firm of West Bay City, Mich., has an immense pine log en route in a raft, and which it was intended to have in the 4th of July procession, providing it had reached Bay City in time. The log scales 3,800 feet and, as will be readily understood, is a monster in size. The idea of a single log which, when converted into timber, would possibly obtain a value of $200 is astonishing, even in these days of high stumpage.

—Fully a third of the band of Stonies, at Wolf Creek, near Edmonton, have died since last autumn, probably from the effects of exposure too quickly following an attack of measles. They are said to be very troublesome now, and are firing the timber limits near the mountains, in order, as they say, to kill the spirits that are killing them. They are also said to be very unruly in their behavior towards the Indian Department officials.

—At the foot of Granville street on the shores of False Creek, Vancouver, B.C., a wharf has been built and the frame of a window blind, sash and door factory and planing mill is in course of erection. The machinery to run this establishment is here and the proprietors, Messrs. Bell, M'Kay & Co., intend to rush the work so that they can have the benefit of the summer months' trade, both local and eastern, a large trade in their proposed wares being expected from the Northwest.

—We learn from the Calgary *Herald* that Mr. J. J. Dalton, of that town, has received the plant for the saw mill belonging to the Colonization Company which is to be placed on the Red Deer River as soon as possible. At the same time the men for the saw mill owned by the Alberta Lumber Company have arrived. This mill will have a 100-horse power, and with a circular saw will cut 50,000 feet daily, but by means of a gang it will average 100,000 feet. This mill will be placed on the Little Red Deer River.

—East Saginaw mill employes are quietly working to secure, in whatever manner they can, the exclusion of the French Canadians, who come over during the winter to work in the woods, at which time men can only find work in the lumber camps. In many cases these Canadians are brought in response to advertisements for men published by the local lumbermen in Canadian papers. This looks to the laboring men here very much like a violation of the statute prohibiting the importation of foreign contract labor.

—The St. Croix river is a disputed boundary line between Maine and Canada. It was recently reported to the Treasury Department at Washington, by Special Agent Moore, that the mills on the above named stream, near Calais, Me., were owned by both Americans and Canadians, and that a former collector of customs at East Port, Me., had followed the rule of considering some of the mills American and some Canadian in the matter of customs, and the Special Agent questioned the legality of the proceeding. Secretary Maynard's reply was that by the treaty of 1783 the boundary line was fixed definitely, and it is simply a question of fact as to whether a mill is on one side or the other, though it is understood to have been the practice to consider mills as Canadian when they were subject to Canadian taxation, and *vice versa*.

—A recent writer has made some interesting compilations as indicating the large amount of lumber handled at Buffalo and Tonawanda markets, in the course of which he says : "Many of Buffalo's lumber merchants run, or are interested in, yards at Tonawanda, where the receipts of lumber last year amounted to 505,426,000 feet or a total of more than 900,000,000 feet valued at $30,000,000, for Buffalo and Tonawanda together. Mere figures convey a very inadequate idea of what a prodigious quantity of lumber this is. With it a fence might be built as high as that which encloses the Olympic base-ball grounds, that is, nine feet high, and 19,000 miles long, or three-quarters of the way around the world. Or, if it would be piled up in a solid wooden monument, 100 feet square, its summit would be fourteen miles from the ground. It would be sufficient to put a wall clear around Buffalo, six inches thick and 200 feet high, and then cover the whole with a roof two inches thick.

—The following is a list of the mills at the mouth of the St. John River, together with the names of the owners and the capacity of each :—Randolph & Baker, 2 gangs, sawing capacity, 18 to 20 million feet ; George Barnhill, capacity 8 to 15 million ; Hayferd & Stetson, 6 shingle machines, capacity, 10 million ; Miller & Woodman, 2 gangs and single saw, capacity, 20 million ; Andrew Cushing & Co., 2 gangs and 2 single saws, capacity, 20 million ; Clark, 2 gangs, capacity, 10 to 12 million ; Hayferd & Stetson, 1 gang and muley, capacity, 15 million ; E. G. Dunn, 2 gangs and muley, capacity, 15 to 16 million ; R. A. Gregory, 2 gangs, capacity, 12 to 15 million ; Jewett (Grand Bay) 1 gang and single saw, capacity, 8 to 15 million ; Jewett, (South Bay), 1 gang and single saw, capacity, 8 to 15 million ; Kirk & Daniel, 2 gangs and single saw, capacity 15 million ; Hilyard Bros., 1 gang and single saw, capacity, 10 million ; C. Hamilton & Co., 1 gang and rotary, capacity, 12 million ; Warner & Purvis, 1 gang and rotary, capacity, 12 million ; R. Connors, 1 gang and rotary, capacity, 15 million ; Moses Cowan, rotary, capacity, 2 million ; Hayferd & Stetson, 2 gangs and single saw, capacity, 16 to 18 million ; Jewett (Milledgeville Mill), 1 gang and muley, capacity, 10 million. Seven of the operators mentioned in the above list are Canadians, while the balance are recorded as Americans.

SMITH'S

Mercantile & Land Reporting Agency

BANKERS—DOMINION BANK.

General Solicitor, JNO. LEYS, ESQ., Barrister, Toronto. Secretary, JOHN SMILEY, M.A.

MANAGER—WILLIAM SMITH.

General Offices—Court St., Toronto, Ont.

Telegraph Address—Agency, Toronto.

Having for its special objects the furnishing to subscribers of reliable information on the financial standing or otherwise of tradesmen and others, the collection of outstanding accounts and the procuring of the most reliable information from independent sources of the value and condition of landed and other properties in any part of Canada and the United States, with correspondents in Great Britain and other parts of Europe.

Our method of procuring for our subscribers the most reliable information is through solicitors of the highest standing, and from other equally reliable sources in the several localities indicated, who are under contract with us to supply the necessary information promptly.

The Landed Enquiry Department of this Agency, the only institution of this kind known, is invaluable to Solicitors, Loan, Investment, and Insurance Companies, Estate Agents, and others, preventing fraudulent land transactions resulting from misrepresentations.

The Department for the collection of outstanding accounts is conducted on an entire change of the system usually followed by Collecting Agencies, viz.:—Subscribers may have their collections paid either direct to themselves, or to the offices of the Agency, in which latter case remittances will be deposited to an account provided for that purpose, and immediately remitted to the parties to whom it is due, and will not be applied to any other purpose.

Another important feature in connection with this department is, that subscribers depositing accounts for collection will, if requested, be furnished with a Form of Script, on which will be entered the name of each debtor, the amount owing, and a full report of the prospects of collection, and providing that the receipts thereof be paid to bearer only, thus enabling subscribers to realize on their outstanding accounts.

The Agency will forward at least once in three months, or oftener if desired, a report and statement of all accounts in hand.

NOTE.—The offices of the Agency are open to the Solicitors and subscribers for reference to our numerous maps, atlasses, directories and correspondence, and for the transaction of business with their clients and customers when in Toronto.

Works also at NEW YORK and SAN FRANCISCO.

THE SPANISH RIVER DISTRICT.

A correspondent writing to *The Timberman* from Detroit, says :—Now that pine in Michigan is being more and more controlled by wealthy corporations and syndicates, those who have exhausted their supply are turning their attention elsewhere. Many of our Michigan men have invested in Canada, especially in the Georgian Bay region. Buswell & Co., formerly of Wyman, Buswell & Co., Grand Haven, have a very large limit on the Spanish river and are now manufacturing there, having taken their mill from Grand Haven to that point. This firm controls by purchase all the available room for mill sites at the mouth of Spanish river. But Mr. Buswell says that any one purchasing on that stream and wishing to manufacture, can secure a site of them at much less cost than theirs. They have and will cut about 7,000,000 feet of lumber this season which runs from thirty-five to forty per cent. better than common. I find that lumber from this part of the country has a good class of common.

The Cutler and Savidge Lumber Co., Spring Lake, owns an extensive limit adjoining that of Buswell & Co. The Spanish River Lumber Co., owned by Albany and Bay City parties, has been operating at that point for some years, marketing their lumber at Albany, Buffalo and Ogdensburg.

Timber on that stream, as well as on other streams, is sold at auction at so much for a limit or the privilege of cutting. An additional charge of seventy-five cents a thousand is made as crown tax when the timber is cut and in the water. The gentlemen operating on Spanish river speak well of the treatment received from the government, and say that there is enough timber on this stream to keep all the mills in Muskegon sawing for the next ten years. One of the best harbors in the country is at this point, being sheltered by numerous small islands, and at the same time having an abundance of water. The running of the logs in the stream is said to be comparatively easy.

Spanish river is also the name of the Canadian Pacific railway station where you take and leave the cars going to and from the Buswell and Spanish River Co's mills. Since the railroad has been completed logging is much cheaper. I was informed that lumber, which sells readily in the Chicago market for $17 and $18, is put in pile there at a cost not to exceed $9.

THE EXPORT BUSINESS.

Shipments to the River Platte for the first half of the present year show a marked increase over exports of last year. In detail the figures are as follows :—

	1887.	1886.
White pine.....	27,816,000	8,015,000
Spruce.....	17,550,000	12,232,000
Pitch pine.....	36,768,000	23,750,000
Oak and ash....	645,000	370,000
Other woods....	2,906,000	1,319,000

There are now one cargo afloat, loaded at the port of New York, with 575,000 feet bound for Buenos Ayres. At Portland, seven vessels are loading, and will carry out about 4,650,000 feet. At Boston, five vessels are loading, and the total amount to be shipped is not far from 2,600,000 feet. The shipments from Montreal are increasing, and June 10 there were 17 vessels loading, with a carrying capacity of about 11,575,000 feet. One vessel is loading at Quebec with about 1,000,000 feet; two at Calais with a total of 825,000 feet ; one at St. Margaret's bay with 375,000 feet, and one at Bridgewater with 325,000 feet. In southern ports, two vessels are loading at Brunswick with 825,000 feet ; 12 at Pensacola with 7,025,000 feet ; one at Tacoma with 975,000 feet, and one at Port Moody with 555,000 feet. Almost the entire list enumerated is destined for Buenos Ayres ; a few cargoes going to Montevido and Rosario.

—For months past the demand for bill stuff has been something phenomenal. Interior mills, accessible to the right kind of timbers have been filling bill stuff orders since away back last fall, and to all appearances they are as full of business as ever.

ADVERTISEMENTS.

THOSE wishing to **BUY** or **SELL TIMBER LANDS, LUMBER** or **SECOND HAND MACHINERY** will find THE CANADA LUMBERMAN an excellent medium in which to make known their wants. Advertisements of this character will be inserted at the low rate of 1½c. **A WORD**, cash to accompany the order in every case.

Address A. G. MORTIMER, Publisher,
Peterborough, Ont.

PETERBOROUGH, ONT., SEPTEMBER, 1887.

EDITORIAL COMMENT.

THE evil results of the labor troubles in the building trades at Toronto have not been confined to the immediate locality or to those directly concerned. The amount of building in hat city has been greatly reduced by this obstacle with the effect that there has been an appreciable reduction of the consumption of timber and lumber.

* * *

ELSEWHERE in this issue we publish full details of the examination of Stewart Bros., insolvents, which took place in the London courts during the past month. Ever since the Maritime Bank failed in New Brunswick, in which this firm was implicated, no small amount of criticism and censure have been lavished on the Messrs. Stewart. From the evidence taken it now appears that Mr. Registrar Linklater was perfectly satisfied with Mr. R. A. Stewart's explanations to the questions put, and Mr. John Stewart having replied to the only question put to him the examination closed. Those who have endeavored to make a mountain out of a mole hill will now have time to reflect on the old maxim: "Be sure you are right, and then go ahead."

* * *

THE big Nova Scotia raft is again assuming its natural proportions, and the owners have made up their minds that it is going to be launched some time this month. The length of the structure has been increased 160 feet, and it has been entirely rebuilt. The ways will be made of pitch pine, imported from Pensacola, and an experienced launcher will be brought from New York to guide the raft in the bay. Mr. Robertson, the inventor, it is said, feels certain of success, and the owners are laying out large sums to test the merits of the invention. If this one proves successful there are several places on the bay that have been spotted for like ventures by the same parties. The owners of coasters are naturally much concerned at the progress made in rebuilding the raft, and it is said that several offers have been made to Mr. Robertson, making it worth his while to forgo the project.

* * *

THE Chaudiere lumbermen holding limits in the province of Quebec have appointed a committee to wait upon the Quebec Government with a view to arriving at some satisfactory understanding in reference to the increase in the ground rents recently made by the Government. The object of the lumbermen is said to be principally to make some arrangement or agreement by which they may know what advance in crown dues and ground rents they may expect for a certain number of years. *L'Electeur*, of Quebec, publishes the semi-official announcement that Premier Mercier is at last disposed to favorably regard their representations asking that the ground rents be reduced from $5 to $2 per square mile. The lumbermen were represented by Mr. Lemieux, Q.C., a warm personal friend of the Prime Minister.

* * *

THE Dominion Exhibition is to be held at Toronto from the 5th to the 17th of September, in conjunction with the Industrial Fair, and the two exhibitions combined will without doubt be one of the grandest things of the kind we have had in Canada. The prizes offered amount to $30,000. The Toronto people are marking great preparations, and although their exhibition grounds and buildings are regarded as the most extensive in the country, they are adding $40,000 worth of additional buildings. Large special prizes offered for horses, cattle, sheep and pigs, to be shown during the first week of the exhibition in addition to the regular prizes to be awarded the second week. Superior special attractions will be distributed throughout the entire time, so that the show the first week will be equally as attractive as during the second. Cheap railway rates and excursions will be given and every one will be afforded an opportunity of visiting the show.

* * *

THE Montreal *Witness* says:—"One effect of Unrestricted Reciprocity would be a decided and beneficial change in the lumber trade. At present the forest products of Canada are mainly exported in the roughest state compatible with cheap shipment, as the American duty on rough lumber is much lower than the duty on dressed lumber and the manufactures of wood. The removal of the American duties would enable our saw mills to combine the business of sawing with that of planing and dressing lumber, the manufacture of mouldings, beadings, doors, window sashes, and several other kinds of finished woodwork, all of which can be made more economically direct from the log than they can from the standard lumber. The increase in the number of men who would be employed in this natural and legitimate industry, of which Canada is now largely deprived by tariff laws, would alone probably more than counterbalance the decrease in the number employed in these hot-house industries which would suffer from the lack of protection."

* * *

IF the Mercier Government carry out their proposal to increase the ground rents on timber limit holders the new arrangement will come into force on the first of September. The rise in the ground rents from $2 to $5 may be wise or it may be otherwise. If the rise in the ground rents is a matter of reform there are other reforms in connection with the forests which are pressing on the attention of the public, and amongst these is forest protection. In all the vast territory on the Quebec side of the Upper Ottawa the lumbermen say they never see a fire ranger. The whole country is left to the mercy of chance. This is a matter that concerns the limit holders primarily, but it goes further than that. The forests are the chief wealth of this part of the Dominion, and all in the lumber business and out of it are interested in the preservation of the forests from fire. Ih 1870 over ten millions of dollars' worth of timber was destroyed by fire in Michigan and Wisconsin, the igniting spark in this case being the remains of a camp fire fanned by the wind. Such a conflagration is liable to break out in the woods of the Upper Ottawa at any time. This season has been one of protracted draught, and the woods are like tinder. If the months of September and October are as barren of rain as the summer months that are gone, the danger will remain until the snowfall. It is a matter of the most vital importance that the great staple of this country should receive adeqate protection, by the appointment of fire rangers in sufficient numbers to reduce this danger to a minimum. It is opportune that the lumber manufacturers, whose interest are directly at stake, should urge this matter on the Mercier Government now that the increased prices are about being levied.—*Ottawa Journal*

* * *

THE Gilmour-Paradis case, or rather series of cases, for there seems to be no end to the proceedings in which the two parties, or one or the other of them, are concerned, have attracted much attention from the general public, and especially from those interested in operations in the forests of the Province of Quebec. As the various disputed questions of property are now or will shortly come before the courts, we reserve any discussion regarding them, for we believe that it is neither expedient nor right that matter *sub judice* should be prejudged. It would have been well if all had loyally observed this rule, but, unfortunately, some individuals, and especially certain journals, either from being too impetuous or from a desire to obtain lhe applause of the unthinking, have improperly imported into the case questions of race, tongue and creed. Now the Messrs. Gilmour have a high reputation for fair dealing, and for an honorable impartiality never influenced by such considerations. They have done much to develop the resources of the Province, and have given employment to thousands of French Canadians. They certainly might expect to escape any imputation of being unfairly actuated by prejudices of race and creed; not only, however, have they been thus assailed, but even their counsel has been attacked for daring to act for them. It would be a bad thing for the trade and for the Province itself should lumbermen or others be subject to such charges whenever they may appeal to the law courts to determine rights of property. Besides the Gilmours other English speaking lumbermen are large operators in the Quebec forests and public as well as private interests would suffer, if they were exposed to having such prejudices excited against them. We do not believe, however, that the people of Quebec as a body will sanction the unjustifiable outcry raised by some hotheads, but will give fair play to all without bringing questions of race or creed into the determination of legal rights.

THE war cloud, or clouds, in the old world, appear to have blown over for a time, and each day peace seems more likely to endure for this year at least, as the season grows more unfavorable for commencing warlike operations. There is thus little prospect of the increased demand for timber, coupled with a diminished supply from some European localities, that had been anticipated to arise from a conflict between some of the great powers.

* * *

LUMBERMEN throughout the country are already engaging men for the shanties, and the big hiring boom will be on by the first of October. Wages are likaly to range from $16 to $22 per month. From present indications it would seem as if there is likely to be a dearth of men, and the large operators will, it is thought, experience some difficulty in this regard. So tar as can be loarned at this early date the prospects are that the cut of logs the coming winter will be one of the heaviest on record.

* * *

HERE is a hint which might be noted with profit by many concerns. The manager of a large southern company says: "By dressing and drying we reduce the weight of our lumber from 4,800 to 2,600 pounds per thousand, which gives us a big advantage in freight. Besides, we save insurance, rehandling and wharfage, and gain dispatch, which is oftentimes a big item in shipping by car. All things considered, we can put dressed yellow pine into your northern markets as cheaply as can otherwise get there, in less time."

* * *

THE Montreal *Minerve* does not place implicit confidence in the disinterestedness of those in the United States who favor annexation or commercial union. It says:—"Our forests are disappearing much too fast, and it has become necessary and urgent to find some means of conserving them. Our neighbors who have ruined this portion of their capital, would not be sorry to come into our Provinces in order to find again new resources which they would not fail to work to complete extinction." There are at least two sides to every question."

* * *

THE general opinion of the people of Buffalo appears to be voiced in the following editorial paragraph from the *Commercial Advertiser* relating to the proceedings of the Canal Convention at Rochester some time ago:—"The Convention over-reached itself when it called upon the Canadian Government to abolish the tolls upon its canals. If the Convention wants to intensify the competition for business on the Erie it is a good idea to induce a reduction of expense by the Canadian route, not otherwise. The Champlain lumber business from the Ottawa river might be benefitted a very little by an abolition of Canadian tolls, but that is all.

* * *

THE editor of THE LUMBERMAN invites communications on any subject which will interest those engaged in the lumbering or wood-working branches of trade. Nearly every one of our readers could, if he would, contribute something of interest, be it either a suggestion or item of news, and while it entails but little work to each individually, taken together such items would make a paper of which the trade would justly feel proud. We have to thank several readers this month for "first contributions," and hope that scores of others may follow the good example, as the invitation is intended for *all*. So many people think that they cannot write anything suitable for publication, and perhaps, to a certain extent this is true, for it takes years of hard study and practical experience to become an adapt as a newspaper writer. But one thing *all* can do, and that is to give us the benefit of their *practical* ideas, and the editor will readily do his share towards not only making it readable but interesting. How many of our readers will send in something for the next issue?

* * *

FROM all over come reports of extensive forest fires, and although a limited amount of rain has fallen in some localities, the destruction has been but little checked. While the public are calling out against the hasty denudation of our forests by the lumbermen, would it not be as well also to give a share of attention to the disastrous work of the fiery element which every year destroys such a fabulous amount of our wealth, and see if something cannot be done to stop its progress? The damage they do is beyond calculation, as the property destroyed is that which carries no insurance. Much of this destruction at the present season of the year is attributable to the carelessness of campers, landlookers, surveying parties and those who build fires without regard to the consequences which may ensue. Some stringent meaures should be adopted, calculated to put a stop to what is now considered everybody's privilege to build fires when and where they like, and until this is done the present rapid destruction will continue. But we fear that by the time the slow-moving law makers of the country get around to the subject of forest protection there will be little left to care for.

A CERTAIN commercial journal is credited with having said that R. A. & J. Stewart, of St. John, New Brunswick, are reported to have arrived at a satisfactory understanding with their friends in Great Britain. The *Montreal Trade Journal* takes exception to this statement and retorts as follows:—"So far from Messrs. R. A. & J. Stewart having arrived at a satisfactory understanding with their creditors in Great Britain, it is a notorious fact that the latter have been waiting a long time for the promised appearance of Mr. R. A. Stewart on the other side, who, according to Mr. John Stewart, knows everything and will explain the whole matter to them, which by the bye up to the present is a puzzle. Whilst Mr. John Stewart in London has been promising the creditors that his brother Robert would be over to straighten matters the latter has postponed his trip to England on the ground that more important business of the firm's affairs required his presence on this continent. We are therefore authorized to contradict in the most positive terms the statement above referred to."

* * *

THE International Exhibition will open in Melbourne on August 1st, 1888, to celebrate the centenary of the founding of New South Wales, the first Australian Colony. Aside from the growth of America there is nothing more remarkable than the growth of Australia in all that relates to population, production and the general distribution of wealth. From a penal colony it has developed into a great nation, in which the arts, commerce and education are in hopeful process of development. Some slight idea of its marvellous growth may be gained when it is known that during the year 1885 Australasia, with a population of 3,500,000, imported from Great Britain alone goods to the amount of $165,000,000; that the aggregate length of railroads opened for traffic amounts to 7,700 miles, and that when the lines of rail now in course of construction shall have been completed they will reach a total length of 10,000 miles. Australia is a large purchaser of Pacific Coast supplies and communication between this country and Australia is also rapidly growing, and a number of Canadian industrial and manufacturing establishments have now agencies in its chief cities; so that the proposed exhibition will doubtless be taken advantage of by many of our manufacturers as offering an opportunity for making the people of the antipodes better acquainted with our natural resources and with the products of our inventive skill and general progress.

* * *

MANY of our exchanges are at the present time advocating a conservation of our forest wealth, being of the opinion that the present rapid destruction will so denude our forests that in a few years we will lack enough timber to supply the needs of our growing population. THE LUMBERMAN has on more than one occasion referred to this matter and considers it a question worthy of the closest consideration. There are many, we have no doubt, who hold the opinion that it would be detrimental to those engaged in the lumber business to legislate in favor of checking the unnecessary denudation of our timber land. But in this we do not agree. We believe that the lumbermen, as well as the public at large, are anxious for the preservation of our forests, realizing the fact that before a very great lapse of time a maintenance, to say nothing of an accelleration, of the present system must result in an absolute scarcity. The history of the past year goes to show that the lumbermen holding large limits and having large capital invested in them, have been compelled, through the hasty legislation of our governments in imposing exorbitant ground dues, to enter into a hasty slaughter of our timber lands in order to save themselves from bankruptcy. This high tax was levied for the purpose of replenishing the provincial exchequers, but while it may have its desired effect for a few years, the country will suffer to a far greater extent in the future. So long as our Provincial Governments legislate in such a way as to force the lumbermen to strip their limits, with the utmost possible rapidity, instead of encouraging them to exercise a wise providence, we may expect the cry against forest denudation to continue.

QUEBEC GROUND RENTS.

A MEETING of limit holders in the Province of Quebec has been held in order to appoint a deputation to wait upon the Provincial authorities and endeavor to obtain a reversal of the Order-in-Council increasing the ground rents of timber limits, or at least to secure a reduction of the amount. This deputation has had an interview with the Commissioner of Crown Lands, before whom the case was plainly laid, but he gave them distinctly to understand that the Government would not change its policy.

This adherence to a mistaken step is greatly to be regretted. From every point of view except that of an immediate, but temporary increase of receipts in the Provincial Treasury from this source, it is a mischievous change. The lumbermen of the Province of Quebec are by no means deriving such enormous profits from their business as to be able to afford to deduct from them the amount of this special class taxation. It must to a serious extent tend to hamper and cripple them in their operations, and force upon them parsimonious reductions, which they will be loath to adopt. Thus the great army of their employees will share with them in the loss, this being the only source from which the imposts can be borne, since profits are not great enough to bear it, and the price of lumber cannot be raised except for local sales. In some localities the local consumer can be called upon to shoulder part of the burden by paying more for his lumber, but though unpleasant for the home purchaser this will not greatly aid the lumberman, who must seek a distant market for much of his cut.

From the point of view of the public interest the change is no more to be approved. This heavy increase of ground rent will in many cases force the limit holders to hasten prematurely their operations in portions of their limits, stripping them as quickly as they can and thus releasing themselves from the burden. Those who are now conserving their timber as much as possible will thus be coerced into the opposite policy. It is not in the interest of the community to hasten the depletion of our forests, but rather the contrary, so this step is decidedly retrogressive in that respect.

Even from the Treasury point of view the prospective gain is quite fallacious. It is true that for a brief period the receipts from ground rents will be augmented, but this cannot continue. The lumbermen, eager to terminate the burdensome rental, will hasten to strip portions of their limits, thus terminating as quickly as possible their liability, and at the same time the Treasury receipts of rent. In any future sales of public lands the increased rental will be discounted, for bidding will be lowered in consideration of it, and thus no gain will be effected. The Government is simply killing the goose to obtain at once some golden eggs.

It will be seen on reflection that this increase of ground rents is a mistaken policy from every point of view. The bad effects will not be confined to the limit owner, though they strike him in the first place and most severely. We must say that in this treatment of the limit owners the Government is acting most inequitably. Their property is suddenly depreciated and they are subjected to a special class impost, after they have in good faith invested their capital in their business and have acquired public property on the conditions asked by the Government and which were with good reason understood to be permanent. The increase may be legal but it cannot be defended morally or equitably, any more than if the Government were to rack rent a tenant of public land as soon as he had built a factory on it and could not refuse to submit, except at the sacrifice of his capital and his prospects.

We yet hope that the Quebec Government may see the impolicy and injustice of its course, and yield to the remonstrances of an industry which is one of the most important in the Province and does so much for its development. A reduction of the increased rental would be both just and expedient.

THE FORESTRY CONGRESS.

THE annual meeting of the American Forestry Congress is to be held at Springfield, Illinois, from the 14th to the 16th of September. This is practically an international organization, and there should be a good representation from Canada. Sometimes it is supposed by lumbermen that forestry associations with their desire for the conservation of forests are in more or less direct conflict with the interests of the trade. That such an idea is erroneous is proved by the fact that leading lumbermen show a warm interest in forestry, and took an active part in the proceedings of the congress when it was held at Montreal. Many lumbermen indeed would gladly see better provisions made for the preservation of the forest, and regret any governmental management or regulations tending to induce a hastened cut. Unfortunately in more than one Province recent changes have had an increased tendency in this direction.

There is one branch of information certain to be offered to the meeting at Springfield which cannot fail to be interesting and useful to our lumbermen. Estimates of the extent and probable duration of the forests of this continent, especially in the United States, give valuable indications for the guidance of Canadian lumbermen, throwing light upon the question of the expediency of forcing lumber into the market or sparing the limits as much as possible. It is undoubtedly the fact that the forests are rapidly diminishing, while the manufacture of lumber and the demand for it are steadily increasing.

One subject that is sure to be discussed, with the result of yielding increased information on a debateable question, is the suggestion of reciprocal trade, as it may effect the lumber interests, and the economy of forest wealth. The discussion of this point alone should be sufficient to induce the attendance of representative Canadians and to compensate them for the time, trouble and expense of a visit to Springfield.

AN AMERICAN VIEW OF COMMERCIAL UNION.

THE Chicago *Timberman* of a recent date says :—Canadian newspapers are stirring up the subject of reciprocity with the United States with considerable persistence, which is not surprising considering that that so many of their readers are in full sympathy with the project and are anxious that it should be carried out as early as possible. The interest which the Canadian lumbermen has in commercial union is frequently pointed out, and the advantage there would be to him in a free market on this side urged as a reason why he should give his influence to securing this result. The argument is made, though perhaps unnecessarily in his case, that besides opening a larger outlet for his mill products, free trade would also give the lumber producer prices considerable higher than he can now get, which is assuming that the unrestricted importation of lumber would not make that commodity any lower, or at least not much lower, here than it is now. Probably this view of the case is measurably correct. At any rate it is not generally thought by lumbermen here that any possible inflow of stock from Canada could prove sufficient to overstock the American markets. This contingency used to be something of a bugbear, and years ago it was common for Michigan and Pennsylvania manufacturers to spend their money and time rather freely in fighting the notion of re-establishing reciprocity between the two countries. But pine timber has so strengthened in value, and is becoming so evidently scarce in proportion to the constantly increasing demand for it, that this possibility has no longer the frightening power it once possessed. Doubtless a good many mill men whose stock of pine is drawing near its end would rather welcome an arrangement that would enable them to stock their mills from the Canadian forests, and so obtain the means of continuing the lumber business that they cannot secure on sufficiently advantageous terms on this side. The number of these is increasing all the time, and it cannot be many years before they will form an eminently respectable proportion of the whole. As they are forced from time to time into new fields, they will be compelled to go south or west or north, and, other things being equal, there is not much question but that a good many would prefer operating in Canadian white pine, under conditions to which they are accustomed, than to striking out wholly afresh where not only the timber, but the conditions of the trade, the markets, and indeed everything pertaining to the business is to them entirely new and unfamiliar."

The *Northwestern Lumberman* says :—"Just why so many people would be pleased to have the *Lumberman* commit itself on the tariff question as relating to lumber is an enigma. It is difficult to understand how such an opinion, whether for or against free lumber from Canada, would affect favorably or otherwise a single individual. Southern operators do not want the duty removed ; on the other hand they would like it to be made higher than it now is. They argue that they are but getting fairly established in business, that their markets must be largely in the north, and that competition with free lumber from Canada would work to their detriment. Michigan lumbermen, with the exception of a few who are largely interested in Canadian stumpage are not for free lumber. Many of the Wisconsin and Minnesota operators would be willing the duty should be removed, providing the Canadian laws were so changed that these operators could put lumber free of import duty in Canadian territory. The spruce men of Maine would of course fight tooth and nail any movement to admit spruce from the mills of Canada into the eastern seaboard markets free. The Pacific coast lumbermen, so far as we are informed, have not, as yet, bothered their heads over the question. Very briefly, such is the standing of the American lumbermen on the subject.

"Seeing that it would evidently be some sort of satisfaction to a hundred and one correspondents to know how the *Lumberman* regards the subject, it will repeat, in effect, what has before been said in these columns. Frankly, it does not pretend to know much about it. This free trade question has been handled by politicians mostly, who by one stroke of the pen, or one oratorical flourish, have settled the whole thing. But in the minds of thinking people they have not settled it. There are two sides to nearly every question. The subject of protection is one which covers a good deal of territory, and although the lumber side of it is but a small portion of the whole, without doubt the experiment of free lumber would have to be made before any mortal man could tell what the result would be.

"The *Lumberman* has expressed the opinion that if the duty on Canadian lumber were removed the lumber business of America would not go to eternal smash by any means. There might for a time be an unsettling of values to some extent, but the ultimate result would be an advance in the price of Canadian stumpage. This opinion is given for what it is worth ; the *Lumberman* asks nobody to tie to it.

"One correspondent is wrong in his statement that if lumber from Canada were admitted free the lumber trade of the northwest would languish. If free trade were declared, and as a result the price of Michigan, Wisconsin and Minnesota white pine lumber were to decline in price, the lumber business would go right on as of old. This phase of the subject is to be looked at from a business standpoint. If the American lumberman had to compete with free lumber from Canada he would do it. The merchant who has his warehouse full of goods, and those goods decline in value, he is not going to shut up shop. The business man accepts the inevitable. He likes to obtain good prices. but, if unable to do so, he gets the best prices possible. If free lumber materially affected the price of American pine lumber there would be business failures, but the saw mills would not be shut down permanently by any means."

THE H. S. SMITH LUMBER MACHINE.

A FEW days ago the Canadian Lumber Cutting Machine Company of Toronto (whose offices are at Room 7 No. 49 King street east), made a public test of their new lumber cutting machine at the works of the John Abell Engine and Machine Works in this city. This machine consists of a large steel plate with knife-like edge, accompanied by a compressing roller and ingenious appliances to serve the log and remove the lumber when cut ; all operated by steam power. The log is held in a stationary horizontal position, and the knife, which should be operated to make from forty to sixty strokes per minute, strikes the log at an angle of forty-five degrees, passing through the entire length of the log at each stroke, and cutting off a board or veneer of any desired thickness, of perfectly smooth surface and uniform throughout. It is capable of cutting veneers perfectly true and uniform, the hundredth of an inch thick, and it is claimed for them that they are surperior in all respects to any made on rotary or other machines.

At the exhibition the cutter was operated on ash and elm logs, the lumber sliced off being perfectly smooth and solid. The power is applied to the knite directly from the cylinder of the machine, the knife being arranged to work between guides, and acts as a cross-head to the piston rod, the motion being steadied and regulated by a suitable balance wheel, and there is neither wheel, belt, crank, or pulley, nor any other contrivance intervening between the steam cylinder and the cutting knife, the simplicity and effectiveness of the arrangement being perfect.

For certain sorts of work, such as making barrel staves, etc., where curved forms are required, a dryer is used in connection with the cutting machine. This dryer consists of a series of suitably shaped hollow castings, so arranged that the lumber can be introduced and subjected to a tremendous pressure, causing it to conform to the shape of the castings. Steam at a high pressure is then introduced into the hollow castings, the effect of which is to season the lumber, which, when removed, retains its shape and is ready to be made into barrels, saving the necessity of steaming, seasoning and firing, the dryer shown accommodating about 300 staves at a time, and the operation consuming about fifteen minutes. The dryer can be enlarged and modified to meet any requirement as to capacity and shape.

Both the lumber cutter and dryer are the invention of Mr. H. S. Smith of Geneva, N.Y., who obtained patents on them only a few months ago. The Canada Lumber Cutting Machine Company have obtained the right to manufacture and operate these machines in Canada, the provincial directors being Messrs. Robert Hay, David Blain, Hon. J. B. Robinson, John Abell and J. W. Hughes. It is proposed that the Company manufacture staves, boxing, veneers and other material ; also construct the machines and sell or lease them, subject to royalty.

The process of sawing and planing by the present method of manufacturing lumber, independent of the labor expended, entails a loss of material varying from 37½ per cent. in the production of half inch lumber, to 233⅓ per cent. in lumber one-sixteenth of an inch thick. This percentage of loss, as well as the labor involved in planing, is saved in the use of this cutting machine, as no sawdust or other loss of material results from its operation, and planing is unnecessary, for the boards cut with this machine are perfectly smooth.

In view of the enormous saving of material here alluded to, it is claimed that this lumber cutting machine will quickly supersede the use of saws and planing machines in the manufacture of such lumber as it is best calculated to produce ; and as such lumber is estimated to comprise two-thirds of all that is manufactured, it would seem that those who control this machine will soon have a monopoly of this branch of the lumber cutting business.

The magnitude of such a monopoly cannot be overestimated. The manufacture of barrels for containing flour, sugar, oils and other liquids, and for all other purposes ; of packing and other boxes, and of veneers for all purposes are a few of the industries which will be largely affected by the introduction of this far reaching invention. Succcessful competiton by means of the present most improved machinery would seem practically hopeless. In the manufacture of barrel staves for instance, the best machinery now in use can produce only about 2,000 staves of certain dimensions from each 1,000 feet of lumber, while with the Smith machine here alluded to the same quantity of lumber can be made to produce over 4,000 staves. Packing and other boxes can be produced by the use of the Smith machine for one-half the cost of similar boxes made in the ordinary way. In almost all other manufactures the relative cost of production will be about as here indicated.

A tabular statement has been prepared by which it is shown that the average loss in material by saw kerf in sawing and planing is as follows, the stuff being dressed on two sides : Half-inch stuff, 37½ per cent.; ⅜ inch, 50 per cent.; ¼ inch, 77⅞ per cent.; ⅓ inch, 116⅔ per cent.; 1⁄16 inch, 233⅓ per cent.; all of which is saved in the use of the Smith Lumber cutting machine, and there is also saved the cost of planing which amounts to from $1.50 to $2 per thousand feet.

The vast saving in time, labor and material effected by the use of this machine will be more fully appreciated by observing the facts that a single machine adapted to cutting lumber of certain deminsions will cut in a working day of ten hours, 37,500 feet of inch boards or 60,000 feet of half-inch or 80,000 feet of quarter-inch boards.—*Canadian Manufacturer*.

THE DEBT OF THE DOMINION OF CANADA.

The total gross debt of the Dominion of Canada on June 30, 1887, amounted to $270,200,373.

Against this there were assets, including investments for sinking fund, etc., province accounts and banking accounts, amounting to $45,173,611, leaving the net debt on that date at $225,025,762. The statement in detail is as follows :

Funded, payable in England	$171,763,439
Funded, payable in Canada	18,675,102
Note circulation	14,975,999
Savings banks	38,996,751
Trust funds	6,948,994
Province accounts	17,303,456
Miscellaneous and banking accounts, &c.	1,496,735
Total gross debt	$270,200,373
Assets.	
Investment for sinking funds	$18,968,532
Other investments	8,761,816
Province accounts	7,522,468
Micellaneous and banking accounts	9,919,796
Total assets	$45,173,612
Net debt	$225,026,762

The decrease in the debt during June was $450,185. The statement of expenditures for the year to the same date was :

Public works, railways and canals	$3,899,876
Dominion lands	147,066
Subsidies to railways	1,364,103
Total	$5,411,015

The Dominion of Canada began business for itself in 1867. The bulk of its debt has been incurred in aiding the construction of railways and other public works.

CLASS OR TRADE JOURNALS.

In these days of systematic, distinctive work, says the *Manufacturers' Gazette*, the newspaper has found its proper place. There is the daily newspaper, which gives the current news of the world ; the religious newspaper, which is devoted to its own peculiar creed ; the scientific journal which treats of the mysteries of nature and art ; and so on through the entire list. But as every study or profession requires a text book, so does every part of technical industry require a medium of information that shall bear the same relation to the engineer, the machinist, the cotton or woolen manufacturer, the wood-worker, etc., that the text book bears to the student. The industrial journal has become a necessity ; no artizan or mechanic who would improve upon his present knowledge can afford to do without such a medium of information. It is only the best in anything that succeeds in these days, and those who excel in their various callings are those who are always in demand and at the highest rates of pay. The mechanic or artizan who makes up his mind that he "knows it all," and refuses to even consult an industrial newspaper that is devoted to his special calling, will find himself left in the great race for profit or fame. This is an age of tremendous progress and material improvement. New conditions and new demands are as continuous as the revolution of the earth itself. It is also an age of intense competition, and the margin for profits is comparatively slender. The general demand, whether it be for a locomotive engine or a lead pencil, is for the best—and the best must be afforded at a price as low as an inferior article. Hence the necessity for taking advantage, by brain power as well as by mechanical or machine power, of the things which men have to do with. It is now acknowledged that the newspaper devoted to this, that or other department of industry, as the case may be, is as much of a necessity with the mechanic or artizan as is the tools with which he manipulates his work.

THE GILMOUR-PARADIS CASE.

The Gilmour & Co. *vs.* Father Paradis case, and the counter charge of Paradis *vs.* Gilmour, owing to the intricate nature of each, have caused an unusual stir for upwards of a month past. The exhaustive nature of the evidence, or at least statements, *pro* and *con*, affecting this case, precludes anything like a full reprint of the same in THE LUMBERMAN, but sufficient will be given to enable our readers to form at least a substantial opinion of the cases now before the courts.

The contention first arose through the Messrs. Gilmour charging Father Paradis with having defaced certain marks on a large quantity of saw-logs belonging to them and situated in Egan township.

For this the rev. Father was arrested, and also on another charge preferred by one Michael White, accusing him of having forged his name on a cheque for $450. It seems that in 1885 Michael White made certain improvements on colonization roads in the township of Ammond. The cheque for $450 to indemnify him was sent by the Government to Father Paradis, who had been appointed general superintendent of the various colonization works in that region. Without consulting White, it is held, Father Paradis wrote that person's name on the back of the cheque (which was payable to White or order) and sent it to Ottawa to be placed to his own credit in a certain wholesale house there. White denies that Father Paradis was in any way authorized to sign his name or to appropriate the amount of the cheque. Thus the action.

Before the public had time to thoroughly understand the situation a still greater surprise presented itself, in the shape of a counter charge and the arrest of Messrs. John Gilmour and Allan Gilmour, jr. upon a warrant issued at the instance of a man named Anisi Brouillard, an employee of the Rev. Father Paradis. Brouillard, it appears, was arrested along with Rev. Father Paradis upon the warrant issued at the instance of Gilmour & Co., charging Paradis with cutting the Gilmour mark off saw-logs and replacing it by that of another man. The Saturday following his arrest he swore out a warrant in Hull accusing Messrs. John and Allan Gilmour of stealing logs from a man named Adam, of Gatineau Point, and upon this warrant both lumbermen were arrested. They were at once released on bail.

As the trial has been postponed from time to time, and is now set down for Sept 2nd, we are not in a position to publish the legal phase of the case in this issue, but will give the defence set up by each side so that our readers may determine for themselves the justice of the respective charges as they present themselves.

FATHER PARADIS' VERSION.

Rev. Father Paradis, on being interviewed by a *Journal* reporter, said: Many mis-statements have been published with referenee to the trouble that the Messrs. Gilmour have precipitated. There has been a systematic plan—a conspiracy I may call it—to drag me down and stuff it into the public ear that I am an unprincipled man, but I will tell the whole story without any varnish.

"The whole trouble is situated in the township of Egan, on the Sixth concession line, in Ottawa County. The seven settlers who came in April, 1886, have taken up lands. This land, Messrs. Gilmour have cut timber and logs on themselves for twelve years, and when they found it getting scarce of timber they gave the saw-log cutting into the hands of jobbers because it did not pay the concern to cut. The jobbers, who undertook to get logs out on the lands, instead of making money invariably made debt, so that you can see there was very little good timber on the land.

"Well, the seven settlers came in and took up land in this place, being duly entered in the Crown Land Office. I got a free grant from the Quebec Government of fifty acres of land for a church and bought fifty more. The price paid for all the lands taken up both by me and the settlers was 30 cents an acre, payable in six instalments.

There was no trouble until the Cormier-Rochon election. Then Mr. Donnelly, Messrs. Gilmours' agent, came to me and asked me to give my support to Rochon, saying that poor settlers or nobody else would ever get fair play or justice from such a rotten government as the Ross government. I am a Conservative myself, although I take no active part in politics, and when Mr. Donnelly came to me and solicited me to do what I could for Rochon, I put him off as quietly as I could, as I did not want to offend him. The Messrs. Gilmour supported Mr. Cormier also. When any settler asked me about the vote I always gave my views in support of the Conservative candidate. Well, Cormier was elected, and the township of Egan gave him over eighty of a majority, which was an astonishing thing, and the Messrs. Gilmour gave me great credit saying that the large vote for Cormier was all due to my influence among the people. But although the Gilmours were pleased, my action in the election annoyed Mr. Donnelly very much, and it seems he determined to make trouble, for he immediately wrote his firm stating that some very valuable timber was on the lots taken up by the settlers.

"This was last fall. The firm, of course, are guided by his advice, and consequently last fall they put a concern shanty, a thing never before thought of on the place, with twenty men in it, and these men began cutting down the bush in all directions. Myself and the settlers served a protest on Mr. Donnelly and also on the foreman of the shanty, stating that the land belonged to the settlers, and was private property, and that the firm had no right to cut down the timber, which would be of service to the settlers. No attention was paid to the protest and the havoc went on. Of course there were some logs on the land, and the settlers, acting on my advice, cut them and placed them on rollways. We offered to sell these logs to the Messrs. Gilmour, and Mr. Donnelly came to see them. Some time after Mr. Gilmour came up himself, and showed a paper which purported to be a notification from the Government that the settlers' entries on the land had been cancelled, although the document, which was written on a telegraph blank, was written by one of Mr. Gilmour's shanty clerks.

"This discouraged the people very much, and I went down to Quebec about the matter. I waited on Mr. Cormier and stated the case. He gave me a letter to the Hon. Mr. Lynch and I laid the case before him. He said the cancellation had not taken place. The thing evidently embarrassed the Minister of Crown Lands, as both parties in the dispute were supporters of the Government. Mr. Lynch said he would enquire into the affair, and we heard no more from him."

"In the meantime the Messrs. Gilmours hammer marked all the settlers' logs with their registered mark. The settlers were and are very poor, but there was a principle involved and we determined to fight the matter in the courts. People questioned the wisdom of this, saying 'Oh, the Gilmours are wealthy; even suppose you are right they will bring it from court to court and ruin you with expense.' But we determined to fight for our rights. The logs, however, were what is known as perishable goods, and it would never do to leave them in the bush. There was a change of government in the meantime, so I went down to Quebec and saw the Hon. Mr. Mercier and laid the whole matter before him, showing him that if the logs remained in the bush much longer they could not be drawn, as the snow was fast going away. This was last April. Mr. Mercier assured me that justice would be done to the poor settlers and casually intimated that it was a common occurrance for rich lumberman to take advantage of the poverty of settlers who had taken up lands near their limits that they might buy their goods at their own prices. As the matter was in dispute in the courts with regard to the ownership of the logs, it was necessary to give security to the court for their full value, and as the settlers were too poor to give security themselves, the Hon. Mr. Mercier caused an Order-in-Council to be passed giving $5,000 as security for the logs, in the event that the decision of the Court would be against us. With this security deposited in the Court we proceeded to draw our logs out of the bush to the river. We negotiated and sold the logs to Mr. Adam, of Gatineau Point, guaranteeing him against all loss should there be any further trouble with the Gilmours. About two thousand logs were drawn to the river.

"Now all the logs were with Gilmour's registered mark on their butts and tops, and of course it would never do to launch them into the water in that way, for there was nothing to prevent them from getting mixed with Gilmour's logs and Mr. Adam would have no way of identifying his property. Therefore as the culler measured the logs he chopped off Gilmour's mark although in all cases leaving the mark placed on them by the Court official, and Mr. Adams' mark was put on. I was present when this was going on and one of the logs was still with Gilmour's mark on when Mr. Donnelly happened to come around. He pointed out not to take the mark off, and I ordered the culler to take it off, and for that I was arrested."

"What were the Messrs. Gilmour arrested for?"

"Why for taking our logs. When the logs were put in the river Messrs. Gilmour directed his men to run them into his mills, and they were sawn up, and not only ours but eighty belonging to Mr. Adam. When they found that these eighty were not of our bunch they made restitution to Mr. Adam. I had them arrested for theft, as they stole the logs and turned them to their own uses although we had first the prior right of ownership, and secondly, we had bought them from the court by giving the Mercier Government $5,000 order-in-council."

"The Gilmour's," continued the Rev. Farther "are trying to over-awe us with their wealth, but there is a principle at stake, and we will fight the battle to the bitter end. Remember, I have no financial interest in the matter, but as I am organizer and director of the colony I am obliged to take the principal part in the transaction. Another thing, I have the assurance of the premier of the province that justice will be done to the colonists, as he told me both verbally and by letter that he would protect the poor man against the oppression of the rich. The Messrs. Gilmours know they are in the wrong, but a pride I do not understand, makes them think they would lose their *prestige* in the Gatineau country if they did not fight.

"How about the charge of forgery against you?"

"Oh, that's all nonsense. Mr. White does not make any such charge directly. When the trial comes on I have documents in my possession to set that matter in its proper light. I am the overseer of colonization roads in six townships and Mr. White is one of the men under me who is to see that the colonization money is to be devoted to road building. I'll throw day light on the nonsense they talk about forgery when the case is on in the court. It is only another item in a systematic effort to drag me down in public estimation. The whole point to be settled in the dispute is does the lumber occupied by a settler belong to him or does it belong to any outsider who likes to claim it? If the court decides that the settler has no right to the lumber on his land, then the sooner colonists and intending colonists know it the better. But to do the Gilmours justice, I do not think there would have been any trouble with them had it not been for Donnelly, who determined on revenging himself some way because I did not support Rochon in the election.

MR. DONNELLY'S REJOINDER.

"It was not my intention to add anything to what has already appeared in the French and English press concerning the Gilmour-Paradis *emeute*, but after reading the statements made by the Rev. Father Paradis in your issue of the 4th inst. I could not allow them to pass unchallenged because they are a tissue of falsehoods from beginning to end. In the first place the public will perhaps be astonished to learn that the "seven poor settlers" who duly entered their names in the Crown Lands office exist only in the imagination. There is not now and there never has been a single *bona fide* settler in the part of the sixth range of Egan that is here referred to. At the time of Father Paradis' advent in that locality there was one squatter there, the now notorious Francis Brouillard. This man squatted there in the midst of a thick pinery, and as this proceeding was against the interest of the firm as well as against the law of the land, as it now stands, it was our intention to take legal means to have him removed, but as he was not clearing the land to any extent, and as he was selling the firm all the logs he made, they decided to let him pass. All the other "poor settlers" who "duly entered their names" are bogus from beginning to end.

The whole trouble arose in this way: Father Paradis has a brother whom he wishes to establish in a woodenware business in the adjoining settlement. To do this successfully he must have a reserve of timber, and the most successful way of securing it was to obtain possession of some good timbered lands near by. But there must be no partnership in the business. He wanted the timber for his brother only, and the land could not be bought from the Government with conditions of settlement in the legitimate way. Accordingly our enterprising missionary borrowed the names of men on whom he could depend for this purpose, such as the priest of the adjoining parish, several members of the order of Christian Brotherhood, his own brothers, etc., and duly "entered their names for a block of 1,700 consecutive acres, upon which were standing about 25,000 saw logs. This block of land was all on the limits of Messrs. Gilmour & Co., and the location tickets were applied for in the last days of April before the annual renewal of licenses, so as to proclude the possibility of the timber being cut by the lawful owners. Father Paradis pretends that there was no timber left on the lots in question, and that we had no intention of working on them the past winter, until he refused to be guided by me at the last elections, and that the sending of men to work on them at all was an afterthought, and only a measure of retaliation; but the fact that a depot was built there in March, 1886, and a large quantity of supplies stored there with the view to cutting the timber during the following autumn will be sufficient refutation for this statement. I did not know the lots were sold until the jobbers were at work in the woods in October. I did not know it because the selling of lands in that locality was altogether illegal and I never suspected it would be done by the Quebec Government.

With the real settlers we have no trouble. On the contrary we get on very well together; they want employment and a market for their produce, and the firm wants all the logs they can cut, but when the manipulator comes along the case is different. There is a conflict of interests and trouble begins, and Father Paradis is a manipulator. As regards the election canard, I can only say that during the last elections I remained strictly neutral, as I did not consider myself authorized by the firm to interfere in the matter. I did not vote myself, neither did I solicit a single vote. Father Paradis' explanation of the reason why he was arrested does not contain a word of truth. He employed a gang of men to deface the marks and replace them with his own marks on 1,250 logs belonging to Gilmour & Co. that were cut outside of the disputed land altogether; and a more outrageous proceeding I never heard of, and it was for trying to recover possession of these 1,250 logs, with another man's mark on them, that Messrs. John and Allan Gilmour have been arrested. The penalty described by law for doing what he did on this occasion is 7 to 14 years in the penitentiary. During my connection with the firm of Gilmour & Co., which now dates back about 41 years, it has been my lot to come in contact with the Roman Catholic clergy in many ways, and during all that time I fail to remember a single instance where our intercourse has been attended by the least unpleasantness, and I think the exception only proves the rule. With regard to the forgery business I know nothing, but I do know that a good deal of money that has been granted lately by the Quebec Government for colonization roads has not been spent on the roads, and of this any resident on the Gatineau has a right to complain.

GILMOUR'S ATTORNEY SPEARS.

"As these cases, which being in litigation before the courts should until finally decided have been exempt from comment from the press, have nevertheless been made the subject of articles extremely unfair to Messrs. Gilmour, I deem it my duty as their attorney in all the civil cases and one of their counsel in the criminal charges to ask your insertion of a correct statement of the facts which gave rise to the present difficulties. Every person acquainted with the lumber business knows that on the confines of the settlement there has for many years existed a class of persons who might not unappopriately be called timber sharks. These people make a practise of obtaining, under pretense of settlement, location tickets for the best timbered lots they can find in a limit. Having thus obtained for a trifle, say an instalment of six cents per acre, possession under a title which gives them legal possession and enables them to exercise the rights and actions of proprietors, they ostensibly for the purpose of clearing the land, slash down all the pine they can find, and after having in a year or two cut and sold all the merchantable timber they can find on the lots, having completely spoiled them, and made a veritable tinder box and perennial source of danger to the surrounding country, abandon and then take up other lots and repeat the same proceedings. In order to put a stop to this systimatic devastation of public domain, the Legislature of the Province of Quebec in the session of 1883, passed an Act authorizing the Leutenant-Govenor-in-Council to set apart as a forest reserve all the ungranted lands of the Crown under license to cut timber, except such parts as are destitute of timber and fit for cultivation, and that from the date of the publication of such order in the Quebec Official Gazette no lands included in such reserve should be sold or appropriated for settlement until after the expiration of ten years. Under the authority of this act an Order-in-Council was passed on the 10th of September of the same year and published in the Official Gazette on the 22nd of that month setting apart as forest reserve certain territory defined in the Order-in-Council. In the month of October, 1886, the Rev. C. A. M. Paradis, the Rev. Hector

Maurais and seven others of whom two belong to the Christian Brotherhood and one or two others are theological students, obtained writs of injunction to restrain Messrs. Gilmour & Co. from cutting timber on a dozen lots of land on the south range of the township of Egan, some of the most richly timbered lots in the limit. The complainants based their damand on location tickets obtained from the Crown Land Agent at the Desert in the month of April previous. These lots were within the boundaries of a timber berth, then and now held under license by Messrs Gilmour & Co,, and were also within the boundaries of the forest reserve. The petitioner alleged that they had had the lands inspected by a bushranger and they fyled the report in which he stated that their was a large quantity of merchantable pine growing on the lots and that about 35 per cent of the land was fit for cultivation.

Being consulted by Messrs. Gilmour & Co., I gave it as my opinion that, as the law said the land in the forest reserve could not be sold for settlement the location ticket was null; but foreseeing that there would probably be an expensive batch of law suits I told my clients that in a matter involving such serious consequence I would like them to take additional advice, and it was agreed to get the opinion of the Hon. Mr. Irwin, Judge of the Vice-Admiralty Court of Quebec. Mr. Irwin was as decidedly as I was of opinion that the sale was null, and Gilmour & Co. had the right to cut the timber, and I accordingly contested the injunctions. It was admitted by the petitioners that the lots were within the boundaries of the forest reserve. At the hearing Judge Wurtell raised a question as to whether the act should be construed as depriving the Government of the power of selling or merely as giving directions for the observence of which they were responsible to Parliament, upon this point however I found a decision of the Privy Council which settled that question in our favour, but the judge discovered a technical reason on which he based a judgment in favor of the petitioners, viz., that as the Order-in-Council excepted from the forest reserve such lands as might thereafter, on the examination of competent and authorized persons, be found destitute of timber and fit for cultivation; this was a question of proof and therefore, although the lands in question were admitted to be clothed with timber, the sale was not null, although possible annullable on the seal of the Crown.

Mr. Irwin, as well as I, failed to see the force of this reasoning, and the cases are now before the Court of Appeal in Montreal.

The Ross Government had given notice that the location tickets would be cancelled, but Mr. Mercier refused to carry it out.

The saw logs, the marks on which the Rev. Mr. Paradis is accused of defacing, where not cut on the lots in dispute, but on other lands, and it is for taking these very same logs out on lots with respect to which there is no dispute that Messrs. Allan and John Gilmour have been arrested on a charge of larceny on the information of one of their vexatious litigants. And although I have heard of many strange cases I cannot recollect any case of a man being arrested for the larceny of property, off his own property, in his own possession. If there be anything in the facts above related to justify the opprobium which certain journals have attempted to cast on Messrs. Gilmour & Co., I must confess I am unable to see it.

CORRESPONDENCE.

THE CHANGE OF EIGHTY YEARS.

MADAWASKA, N. B., August 10th, 1887.

To the Editor of the Canada Lumberman:

DEAR SIR,—I begin to feel a streak of guilt for not reporting before this, but the fact of the matter is that there is so little new to report from these parts that I imagined that anything I could say would be insignificant.

In my travels a few days ago I chanced to fall in company with an old respected gentleman by the name of Clark, a resident of Andover, Victoria County, and was much interested in hearing him relate his experience as one of the pioneers of this Province. The old gentleman is now in his 88th year, but is still quite robust, and has a very retentive memory. Thinking that your readers might feel an interest in reading the reminiscenses of the past eighty years as related to me, I will, as near as possible, use Mr. Clark's own words. He says:—

"Samuel Lee came out to this country from England about the year 1792, and located at Restigouche, where he engaged in the salmon fishing business. Shortly after he went back to the old country and brought out a few more with him, who also started in the same business. My father comprised one of the party. I was born in the year 1800.

"Alexander R. Ferguson was the first man who did any lumbering on the Restigouche. His lumber business at that period was considered large. He was also engaged in shipbuilding. Frank Peabody was the first man who shipped lumber out of the Miramichi. Then Gilmour & Rankin came from Glasgow and opened up a large business, and, strange to say, one Dick McLauchlin, who was formerly a hostler for Peabody, got into Gilmour & Rankin's good graces, and they employed him to get out lumber for them. He was freely supplied with money and for a time did well, but finally overshot the mark. His last year's operation was a noted one and excelled any of his previous efforts. He put forty span of horses and 150 yoke ot oxen in the woods. On Christmas day he brought out all the horses from the woods and hired 60 span more, and loaded them up with 400 pounds of corn meal, 300 pounds of pork, and 300 pounds of flour. When they got all ready for a start he mounted his grey charger with the Union Jack floating in the air, and called on the rest to follow. With three cheers they moved forward their long cavalcade for the camps. McLauchlin had forty parties in the woods, and in all they got out 60,000 tons of timber.

"My father was appointed a Magistrate, and for 20 years he had to tramp on snow shoes to Fredericton, a distance of about 300 miles, and report to the Government. He would take his pack of possessions, and sometimes he employed an Indian to go with him. I remember well going to Montreal 77 years ago, when only ten years old. I saw a little steamboat try to go through the rapids at Moson's Brewery. She was compelled to drop back five or six times and at last had to give up the attempt. One week after this five or six yoke of oxen were attached to it and succeeded in taking it through. This was the first steamer that ever run the St. Lawrence. In 1832 I was there again, and saw a tug take two brigs through at once without the slightest trouble. In 1833, I, with some others, went up the Restigouche in canoes, and struck the Grand River which empties into the St. John. When we got to Grand Falls there were only two log houses with two old couples to occupy them; children there were none. From there we went to Tobique. I stopped at Murphies, which at that time consisted of but four families. Not one stick of timber had been cut above this at that time, or above Grand Falls either, except at Baker Brook. John Baker had an old-fashioned saw mill those days which had dropped into his hands through marrying the widow of his deceased brother. The lumber and other product of this mill was floated down to Grand Falls, a distance of fifty miles, and from there hauled to Fredericton."

I shall intrude here and add the following taken from the Bangor *Whig*, which will, doubtless, be of interest:

"Mrs. Sophia Baker, who recently died at Fort Fairfield, at the age of 89 years, had a somewhat interesting history. Sixty years ago a party left the town of Moscow, in Somerset County, consisting of Nathan Baker, his wife Sophia Baker, and Mr. Simpson, for the purpose of lumbering on the river St. John. Their journey was through a wilderness country, a distance of two hundred and fifty miles. They carried their household goods in ten birch bark canoes, crossing lakes and carrying their canoes on their backs from river to river and from lake to lake, until they reached what is now called Baker Brook, on the north side of the St. John river, some six miles below Fort Kent. They were 15 days on the journey, having no other shelter than a tent. Some years after Mr. Baker's settlement the boundary question created considerable excitement, and as he lived on the disputed territory he naturally became very much interested in it. He and his wife believed they were on United States land, and Mrs. Baker was determined to stand by her supposed rights. On the approach of Independence Day she went a long distance in a canoe to procure material for a flag, and with her own hands fashioned a banner bearing the stars and stripes of her beloved country. When the fourth of July came she flung it to the breeze, notwithstanding the threats of her neighbors who were under the King. For this act Mr. Baker was arrested and confined in jail for a year, and the story is that when they came to arrest Mrs. Baker she drove them off with a broom. The boundary having happily been settled by the Ashburten Treaty, Mr. Baker was released, and with his wife continued to reside for many years at the place where they suffered persecution for the sake of patriotism. Mrs. Baker spent the last year of her life with her daughter, Mrs. Slocomb, of Fort Fairfield village. Several years ago ex-Governor John D. Long, of Massachusetts, wrote a poem on Mrs. Baker, suggested by an article in the *North Star*, entitled: "The Barbara Fritchie of Aristooke."

Now we will again take up the thread of Mr. Clark's reminiscensis where we left off. He says:

"I went to Frederickton and engaged to run a raft to St. John, and on the completion of this undertaking returned on the first steamer that ever run from St. John to Fredericton. If my memory serves me right this boat was known as the 'Old St. George.'

"Tom Gardner was then in his prime, and considered the strongest man in New Brunswick. I was well acquainted with him. We happened to meet one day in Indiantown, and he told me there were three Yankees who had sent him a challenge to wrestle, one at a backhold, one at collar and elbow, and one at arms length. He had accepted the challenge and invited me then to accompany him. I went with Tom to the place chosen, and there was quite a large crowd gathered. When the Yankees saw Tom they asked if he was the man to face them. He said he was. They told him to step out, and a large raw-boned Yankee, looking as smart as a steel trap, stepped back and looked at Tom, and said: 'Well, I guess that will do me,' and the rest dared not take hold of him. This little experience had the effect of putting a stop to any further crowing on the part of the three worthies referred to. Why I have seen Tom Gardner take a barrel of flour under each arm and walk off with them without a struggle.

"In the year 1825 I was present at the laying of the corner stone of the new Government House. After the deposits had been placed into the hole in the stone cut for the purpose I threw in a seven-pence half penny, commonly called a york shilling. Then Sir Howard Douglas took his wife's hand and kissed her, then assisted her to lay the stone. About this time was issued about the first paper money I had ever seen. It was handed me as part payment for wages. I asked what it was and was told paper money. I shoved it back and told the man that I would not take anything else but gold or silver, and I got it too.

"I worked on Tobique river in the year '23 for Mr. Greenlow, who was engaged in lumbering. No timber but red pine was allowed to be cut. Mr. Greenlow purchased ten tons of hay in Woodstock to be delivered to his camp, for which he paid the handsome sum of £10, or $40, per ton. I remember seeing a fine white pine close to the stream, and intimated my intention of cutting it, when Mr. G. said no, it was worth £1 and red pine was worth £1.7.6; but towards spring I [illegible] and made five tons of timber out of it, all sound as a nut too. Whether he put it in or not I never knew.

In 1835 a company was formed, and several large mills were erected at the red rapids on the Tobique, but they failed and were soon destroyed. This was a death blow to Tobi[illegible] Sir John Caldwell also built extensive mills at Grand Falls, in which he sawed nothing but pine deals. He floated them to St. John and shipped to England. He had a large number of men in his employ, who settled above the Falls, many of whom are yet living."

The above brief history shows how rapidly our lumber resources are leaving us. I can recollect about 36 years ago I came to Madawaska, and at that time there was nothing but pine timber cut above the Grand Falls. Now, but little, if any pine timber is left, and nothing but small sized spruce. For the last few years Americans have taken the cream off of our cedar to manufacture into shingles on the American side. But at last it seems as if our Government had awakened—Rip Van Winkle like—from a long sleep, and discovered that there was an export duty on cedar, and had made up its mind to inforce it. But how are they going to do it? As I mentioned in a former communication it is simply folly to tax cedar logs at the rate of $1.50 per cord of 128 cubic feet, instead of cutting the same into shingle bolts on the Canadian side and taxing the same as so much per cord. Now I suppose Brother John [illegible] with our Ministers' consent, will have our cedar for telegraph poles, posts, wharfing, etc., as usual free of export duty, for another year at least.

Where can be our officials excuse for not collecting export duty on our spruce and pine logs? I suppose by the same token there is no duty on clapboard logs—its only on spruce and pine logs for boards. The wisdom (?) of our officials is something extraordinary.

Inside of 25 years our lumber business will be one of the things of the past, and we will have to import instead of export.

Yours truly,

P. O. BYRANE.

LONGFORD MILLS, Ont., Aug. 19—Our mills are both running to their full capacity, 125 thousand per day. Bush fires in the vicinity of our limits in Longford are well under control. Fire has done a large damage in townships of Dalton and Rama, reducing many poor settlers to penury, sweeping away all their crop and buildings in many instances. Fully fifty families have suffered more or less in these two townships.

LONGFORD LUMBER CO.

THE Montreal *Herald* attacks the lumbermen of the Province of Quebec with much asperity, accusing them of fraud, dishonesty, blustering and greed. It especially charges them with aiming at fixing for themselves the amount of the dues payable by them on mileage and stumpage. It remarks:—"The Government will not be [illegible] Province if they fail to secure a proper return for the immense quantity of timber that is yearly stumped from the public lands." The lumbermen are not fixing the amount of rental, but are protesting against an arbitrary increase of the amount already fixed. This amount has been considered to be stable, so that limit-holders have been able to sell their property in the limit or pledge it as security to the banks, but those who have thus acted in confidence that the Government would observe good faith, now find their property or security suddenly depreciated. This great industry has contributed very largely to the revenue and to the development of the Province, so the *Herald's* censure is undeserved. As to stripping timber from the public lands, nothing could do more to hasten this than the heavy increase of rental.

THE NEWS.

ONTARIO.

—A large furniture factory is to be erected at Burlington, Ont.

—Van Allen & Son purpose moving their planing factory from Aurora to North Bay.

—R. Hurdman & Co., of Ottawa, are making arrangements for the construction of a new circular saw mill.

—The water in the Ottawa river is said to be lower than for years past. The drives on all the small streams are completed.

—The Rathbun Company are slackening speed at their Campbellford mill, having got through the heaviest part of the season's cut.

—The Berlin, Ont., council, at a late meeting, decided to exempt Mr. Kaufman's planing factory from any higher taxes for ten years.

—The Terra Cotta Lumber Co., of Deseronto, are enlarging their works to keep pace with the increasing business of the establishment.

—Mr. Henry Cargill, of Cargill, Ont., informs the LUMBERMAN that the price of lumber in Bruce county is firm, with a very active demand.

Mr. Chas. Vickery has opened a lumber yard in Whitby for J. M. Irwin, of Peterboro'. The lumber will be shipped from the latter's mills at Nassau.

—Mr. Robert Bickle has commenced the manufacture of cheese boxes in Peterborough, his works having a capacity to produce 2,000 boxes per week.

—Messrs. Hurdman & Co., lumber merchants, Ottawa, have exchanged limits with Messrs. Gilmour & Co., receiving from the latter their Kippewa limits.

—Messrs. G. A. Grier & Co., Ottawa, have just completed one of the finest mills on the continent, and are now turning out a superior quality of lumber in splendid style.

—An apprentice boy opened one of the valves of the steam pipes too fast on starting up in Dorman's mill at Mitchell, and in consequence a general smash-up occurred.

—Mr. Hurdman, the Ottawa lumberman, is already send-up a large number of men to work on his Kippewa limit, seventy have been sent there in one day recently.

—A considerable quantity of lumber was burned at Chew's mill, Midland, August 19th. The fire spread to the railway station and baggage room, which were entirely destroyed.

—Suttaby's steam joining and planing mills at Gravenhurst, Ont., were destroyed by fire on Sunday July 17th, together with a large quantity of lumber. The loss ranges from $5,000 to $8,000.

—The water in the Ottawa river at Ottawa is lower than it has been at the sam etime in any previous year for the past seven years, and the bargem n find considerable difficulty in avoiding the sawdust banks.

—Mr. J. M. Irwin, proprietor of the "Red Mills," Nassau, near Peterborough, has plans ready for the erection of an extensive and costly residence at that point. Mr. Irwin's new mill is now running in good shape.

—There is now in the Ottawa Improvement Company's works, between Des Joachims and Ottawa, a million and a quarter of saw logs, which will be supplemented later on by the Madawaska river drive which is not yet out.

—The lumbering firm of Hurdman & Co., have purchased from Messrs. Gilmour & Co., their fine pine limit on the Kippawa for $186,000. Messrs. Hurdman & Co. intend working this new limit extensively this winter, and expect to nearly double their cut.

—All the logs have been released from the upper boom at Buckingham, but large numbers still remain on the river's banks, and the river is still gorged. Two or three weeks more will about see the end of the sawing season. The Pulp mill is still silent.

—The outlook for lumber at Ottawa is said to be very favorable. There has been a gradual advance in prices during the past couple of months. An outside dealer states that three-inch deals now sell at $7 per thousand, being an increase of one dollar.

—The Upper Ottawa Boom Company are making extensive improvements in their booms and works on the Upper Ottawa. Some four miles of new boom is being put in near the Schyan. The addition will very much lessen the difficulty in passing the logs through the company's booms in stormy weather. As it is now, rafts of logs have to wait a considerable time in stormy weather until the water is calm, and the logs can be passed into the boom without danger of scattering.

—McLachlin Bros. have a large drive hung up in the Madawaska for the winter and part of the last drive on that river which is about 30 miles up will also have to be tied up, but on the other streams and main river there are very few more logs than usual stuck.

—Messrs. Tutton & Sons, of the Orillia foundry, have received the contract for building a new engine and supplying the entire machinery to refit Chew's mill, Gravenhurst, lately destroyed by fire. The whole work is to be done within six weeks from the time it was undertaken.

—The tail of the timber drive on the Ottawa river is now a few miles below Fort Eddy, and the Upper Ottawa Improvement company expect to have the tail into the booms at the Chaudiere by the 1st of October. The timber is moving very slowly owing to the shallowness of the water.

—The Gatineau Valley railroad is now located definitely as far as the Peche and ready to have the work of construction tendered for. The road runs in a direct line with the macadamized road as far as the Peche, at which point the company already have eighteen or twenty thousand ties.

—Nearly all the square timber to be sent out of the North Bay district this season has been loaded and shipped. There are, however, about 2,000 pieces yet, 800 of which will be loaded at North Bay. There is a large decrease each year in the quantity of square timber which is being taken out.

—Messrs. J. Hadden & Sons, of Foxmead, write that the lumber trade in that section is very brisk this season. They state that they have been unable to supply the demand for long length bill stuff, of which they make a specialty. Next fall they intend adding three-quarters of a mile to their logging railway.

—Messrs. Dean & Baptie of Three Rivers, have commenced the construction of extensive mills opposite the village of L'Original where they expect to turn out an annual cut of 25,000 feet of lumber. The former limits are situated on the Nation River. The mills will not be ready for operation before next spring.

—A gentleman who has recently returned from the Gatineau district says :—"There is one thing I noticed up the Gatineau: whiskey selling seems to be the chief occupation of a large number of people, and the Maniwaki Indians are suffering from it. The Government ought to take some steps to prevent the sale of liquor to these Indians."

—The statement has been published that there is a difficulty between the lumbermen and the settlers on the Gatineau, but this is authoritively stated to be untrue. It is simply a difficulty between the firm of Gilmour & Co. and Father Paradis, and not with settlers. The other lumbermen and the settlers are taking no action in the matter.

—The cut of square timber in the Ottawa district this season has been small, and a large quantity of this has been shipped by the Canadian Pacific Railway from points between Mattawa and Sudbury to Papineauville and from there taken by water to Quebec. In all some two million feet have been manufactured. The principal shippers by rail have been Barnet and Mackay, Timmins & Gorman and Alex. Fraser.

—The tail of Bingham's big drive has passed out of the Gatineau into the Ottawa river. There was an accident last spring which somewhat delayed this drive. A large pier in what is known as the Big-Eddy twenty miles above the Desert on the Gatineau river and which was used to direct the logs out of the eddy gave way, and all the logs had to be pulled out by hand. The pier will be rebuilt this fall.

—The timber limit berths, 2 and 4, township of Laurier, in the Nipissing district, owned by Mr. Thomas Mackay, of Ottawa, were recently auctioned at the Russell House in that city by I. B. Tackaberry. There was a fair attendance of of lumbermen ; amongst those present were Thomas Mackie, Robert Booth, Thomas Hale, and Robert Gorman. The limit is conveniently situated on the line of the Canadian Pacific Railway, and the lumber cut can be taken to market either by the Georgian Bay route or down the Ottawa. The dimensions of both berths are 34¾ square miles, held under license from the Ontario Government. The bidding was not at all lively. The first figure offered was $30,000, and after that it climbed by a slow process upward, until it reached $60,000, when the limit was knocked down to Mr. John Mackay, son of Wm. Mackay, of Renfrew. Lumbermen present were chary of bidding, as many of them believe the territory was run over by fire. The purchaser, Mr. Mackay, has saw mills on the Amable du Fore river, and within convenient distance of the limit.

—A large raft of white pine from the Petewawa, the property of Mr. Barnard, commenced running the rapids at Britannia a fortnight ago. The job was a troublesome one for the raftsmen, as the water is now less than two feet deep in some places, and thus the cribs stick in their descent. The men on this raft are of Indian, French, Irish and in one case, African origin. When the timber "hangs" on the rocks, the men take to the water to get it off and considerable fun for the boys, and girls, too, who take passage down the run-way, follows, for there is a medley of loud language among the hardy raftsmen as they ply their oars and handspikes, standing in the water to their waists or shoulders.

—The Pembroke *Observer*, of August 12, says :—"The cut of square timber this season has been small and a large portion has been shipped per Canadian Pacific railway from points between Mattawa and Sudbury to Papineauville and from thence taken down to Quebec by water. Some 2,000,000 feet in all have been manufactured. The principal shippers by rail have been Barnet & Mackay, Timmons & Gorman and Alex. Fraser. Mr. Richard White's square timber drive on the the Du Moine has been 'hung up' for the want of water, owing to the unusual want of spring and summer rain and the great length of the drive. Within the last two or three weeks the water diminished very fast in the Du Moine which caused the timber to stick."

—The Peterboro' *Review* furnishes the following figures showing the rise and fall of the lumber business in the Peterborough district. Speaking of the Midland railway it says that in its early history the chief staple for shipment was lumber. In 1858 12,000,000 feet was taken from Peterborough ; in 1860, 15,000,000 ; in 1863, 34,000,000 ; in 1865, 46,000,000 ; and in 1868, the amount had risen to the large figure of 72,500,000. At this time the Midland was operating about 100 miles of road and it was paying well. Each year the receipts swelled larger and larger. In 1873, on Mr. A. Hugell's appointment to the Presidency of the road misfortune overtook it. Owing to the lumber crisis there was only a small increase over the earnings of the previous year. In 1874 the lumber trade was in a bad condition and a decrease in the earnings of $14,000 was shown. The running expenses as compared with the receipts rose as the receipts fell. In 1875 there was a further decrease in the earnings of 19,000 and in 1876 of $11,000 more. These decreases were caused principally by the falling off in the lumber trade, from 142,000,000 in 1871 to 58,000,000 in 1876. From that time to the present, although the road has been doing a prosperous business the lumber shipments have not been nearly as great as during the years above mentioned.

—The Yard Department of the Rathbun Company are having a very busy season and have already got through an amount of work most creditable to all concerned. More work has been accomplished than during any former season. Some idea of the work performed may be gained from the fact that the steamers *Resolute* and *Reliance* have been each making four trips a week to Oswego, for the greater part of the season. The *Resolute* carries on an average 300,000 ft. of lumber and the *Reliance* about 200,000 feet each trip. The loading of these vessels, it can be easily seen, involves a very great amount of labor. In addition to these steamers a large number of barges, schooners and other craft are loaded every week for Oswego, Charlotte and other ports, and heavy shipments are made daily by the Bay of Quinte and Grand Trunk railways. As a specimen of the rapid despatch which is made by the department, we may mention that on Monday night the *Reliance* was loaded with 4,576 railway ties in the short space of five hours and ten minntes, and that by a crew consisting largely of green hands. It is doubtful if this feat was ever equalled on the lakes. Michael Marrigan and three hands also accomplished the feat the other day of loading the barge "Anglin" with 125 cords of woods in two hours and forty-six minutes. The department intend some of these coming cool nights to beat the record in loading the *Resolute* and *Reliance* and thus for once satisfy Capts. Gowan and Bartley who still pace the quarter deck muttering at being delayed so long in port. Each of these mariners will remain discontented until he can make daily trips to and from Oswego.—*Deseronto Tribune.*

QUEBEC.

—A man named Deslaurier, residing in Hull, and employed in Messrs. G. A. Grier's new mill on the Chaudiere, had one of his fingers taken off by an edging saw.

—The E. B. Eddy manufacturing company of Hull are making numerous improvements and putting a considerable amount of new machinery into their sash factory.

—The rumor is current among the lumbermen at the Chaudiere that the new iron bridge to replace the present Suspension Bridge across the Ottawa River just below the Chaudiere Falls, will be commenced early next spring.

—J. F. Tessier, proprietor of *Courier Federal*, has been arrested charged by Thos. P. Foran, advocate, with criminal libel. Tessier, who is a Catholic, acted as counsel for Gilmour & Co., in an action against Father Paradis. The article complained of said Foran sold his services to priest-eaters.

—Reports from Three Rivers state that most of the drives being in things are taking on a lively appearance.

—A. Baptist's mill has commenced sawing on both pine and spruce logs, and it is estimated that the cut will amount to 150,000 to 200,000 Quebec standards 3 in. pine, and from 60,000 to 75,000 3-in. spruce, besides about 250,000 feet of red pine, principally 11-in. × by 3-in. This mill would have begun to run sooner, had not the Government booms stopped the logs to pick out a small quantity for an up river mill, and in consequence of which, owing to the falling of the water, a considerable number were hung on the banks, necessitating their having to be rolled off at great expense.

NOVA SCOTIA.

—There has been a big jump in the price of lumber in the West Indies, and two Cubans are now in Nova Scotia making extensive purchases.

—W. J. St. Clair, of Bridgetwon, N. S., has sought a compromise with creditors at 50 cents, payable in eight months and unsecured.

NEW BRUNSWICK.

—Leithead Bros., a saw mill firm of West River Station, have assigned.

—Most of the mills at St. John are cutting deals for the American market. Very few charters are being made for England.

—A. L. Wright & Co., Salisbury, N.B.are building a large steam power mill on the Cloverdale River, near that place. This mill is being fitted with the best maehinery of Canadian manufacture.

—Hayford & Stetson, of St. John, stand in the front rank of spruce manufacturers, and have a reputation of the old school conservative order. An opinion from such a firm is worthy of respect, and in commenting upon the spruce market they say, "The supply of logs in the St. John river this season is very light. On account of deep snow the cut was about 30 per cent. less than estimated, and although there was a flood of water early in the driving season it soon ran off, and as no rain fell for about three weeks we have 25,000,000 feet of logs hung up. If the demand which has prevailed for the last few months continues, we do not see why spruce lumber will not bring as high prices in New York as it did in 1882, when it sold for $17 to $21. There is a heavy demand all along the coast, and all the information we get points to the fact that yard dealers have been buying sparingly, and that stocks on hand are light and must soon be replenished. These comments refer to logs cut on the American side of the St. John river.

MANITOBA AND THE NORTHWEST.

—The new mill of the Eau Claire company has been completed.

—Badgley & Hamilton has opened a lumber yard at Emerson, M.T.

—A lumber yard will be opened in Emerson, Man., by Messrs. Badgely & Hamilton.

—Davis & Co., lumbermen, with headquarters at Winnipeg, have been succeeded by the Manitoba Lumber and Fuel Company.

—Davis & Co., wholesale and retail lumber merchants of Winnipeg, Man., has been succeeded by the Manitoba Lumber and Fuel Co.

—Lumbermen on the North Saskatchewan are said to be having considerable trouble in floating their rafts this season, owing to low water.

—The new C.P.R. Hotel now being erected at Banff, in the Canadian National Park, will require about 1,000,000 feet of lumber, which will mainly be supplied by the mountain mills.

—Already it is said the business which the Rat Portage and Keewatin mills had in shipping lumber to the far west, has been considerably curtailed, by the competition from the mountain mills, and the former are now being confined to Manitoba and the eastern portion of the territories.

—The latest news from the Lake of the Woods is to the effect that the Rainy Lake mill has been obliged to close down, having run out of logs. It is not likely that the mill will be put in operation again for some time, perhaps not this season. A new mill will be established in the Lake of the Woods district by Hughes & Kennedy. They have selected a site on the Rainy River, whence the lumber will be carried by water to the railway at Rat Portage, awaiting shipment. From Calgary comes the news that S. J. Hogg & Co., lumber dealers, have brought suit against the Calgary Lumber Company for breach of contract, claiming damages for $1,200.

—The Minneapolis lumbermen are at present making very vigorous kicking about lumber rates to the Southwest. They point out that lumber is taken from Chicago to Omaha, 500 miles, for 20 cents a hundred; while they are charged to the same place, 380 miles, 22 cents. On the C.P.R. from Keewatin to Winnipeg, 130 miles, the charge is 15½ cents per hundred and for 504 miles 33 cents.

—The Rainy Lake mill at Rat Portage has resumed cutting, but will not be run regularly in all probability. Enough logs had been got together, however, to commence operations. There are about 3,000,000 feet of logs belonging to the estate yet to be cut, but the difficulty is that they are scattered about the lake, the booms in which the logs were confined having been broken away by the spring freshet and the logs carried down to the lake.

—Mr. Peter McLaren, of Perth, Ont., arrived in the city on Saturday. Mr. McLaren was for many years one of the largest lumbermen in the Ottawa Valley carrying on an extensive business on the Upper Mississippi. He became widely known as one of the litigants in the famous suits of Caldwell vs. McLaren and *vice versa*. Some time ago he sold his entire Ontario limits for $900,000. He owns the Mountain mill near Maclead, operated by his brother-in-law, Mr. Lees, and he left Sunday morning to pay a visit to that district. He is accompanied in his trip by Miss McLaren, Miss Lees and John G. Haggart, M.P. for South Lanark. Banff and possibly the Pacific coast will be visited before they return.—*Winnipeg Free Press.*

BRITISH COLUMBIA.

—British Columbia advices state that considerable valuable timber is being destroyed by fire in that Province this season.

—The recent rise in the price of rough lumber at Vancouver, B. C., including building, wharf and street planks, was 25 per cent. The advance on dressed flooring, rustic and double-dressed finishing lumber was from 5 to 10 per cent. Shingles and lath are 10 per cent higher.

—Messrs Buchanan & Ferguson, of Illecillewact, have a large number of men employed in their mill at present getting out material for the construction of snow sheds on the railway. Altogether about three miles of snow sheds will be built in the mountains this season, requiring 7,000,000 feet of timber, and giving employment to 2,000 men.

—It is rumoured that the Hastings Saw Mill at Vancouver will be started to work again in a very short time and that negotiations between the owners and the late lessee have ended in a combination between the two parties, and after a thorough repair has been made the mill will be kept running to its utmost capacity. Sidings are to be run in to connect with the railway.

—The Vancouver *News* says:—There appears to be good grounds for expecting that the next twelve months will witness the development of a large trade from Vancouver in the shipments of manufactured articles such as sashes and doors, and other goods of a like nature. One factory of this kind is already in operation here, and another one is now in course of construction.

—Fred Robinson has just about completed a new saw mill at Beaver, in the Selkirk range of mountains. It is 70x30 feet, and will be run by water power. About all the mills in the mountains are supplied with water power from the many rapid streams with which the region abounds. The water for the new mill mentioned has a fall of 27 feet. The mill will have a capacity of 30,000 feet, to which is added lath, shingle and planing machinery. Mr. Robinson owns another mill at Beaver, which he intends moving to another point further west.

—It is quite common to fell trees in British Columbia, yielding 15,000 feet, board measure, or a log 50 feet long and four feet square at the small end. These immense trees are sawed down, wedges being used to make them fall in the desired direction, and the sawyers become so expert that two of them will in one hour cut down a tree six feet in diameter. When downed, three men with single saws cut it up into lengths from 16 to 40 feet, or longer as required. A saw mill man from Columbia told me that trees six feet through showed an average of 175 rings or annual growths.

—A considerable lumber industry has been established on the line of the C.P. Railway in this province during the past two or three years. These mills have been mainly utilized in preparing material for the construction of the road, such as bridging, and cutting lumber and timber for snow sheds on the railway. There has also been a considerable local demand for lumber for building up the numerous little towns which have sprung into existence of late. Lumber from the mountain mills has been shipped eastward as far as Calgary, at which place yards have been established to handle the product of these mills.

UNITED STATES.

Thirty million feet of logs are hung up in the tributaries of the Tittabawassee.

Muskegon mills are afflicted with a scarcity of men, especially for night crews.

It is said that there are many people at Sault Ste. Marie who have never seen a train of cars.

—A lot of saw mill machinery was lately shipped from Bangor, Maine, to Valparaiso, Chili.

—Canal freights on lumber have touched bottom, viz.: $1.50 to Albany and $2 to New York from Tonawanda.

—Joseph Campain, a Canadian, was drowned while working on Butters & Peters' boom, Ludington, Mich., August 4th.

—The price of stumpage in Michigan is causing to be thrown on the market several tracts of pine which have been held for years.

—Saginaw and Detroit parties are reported to have bought 30,000,000 feet of standing timber on the Point River, Menominee district.

—The Calkins planing mill at Tonawanda, N. Y., disposes of its surplus shavings by pressing them into bales, in which shape it finds a market for them at some eastern point.

—The New York lumbermen embraced in what [illegible] as the New York Lumber Trade Association, are making a heroic endeavor to prevent the jobber from selling to the consumer within a radius of 20 miles from New York.

—A Chicago lumber firm has contracted to furnish a bill of over 9,000,000 feet of lumber for a single building—a grain elevator to be built by Armour. The contract price for the material furnished by the company is over $100,000.

—A raft of logs from Au Train, Lake Superior, reached Bay City recently, in tow of the tugs "Gladiator" and "Mockingbird." It contained 8,000,000 feet, and is said to be the largest raft of pine logs ever towed in the world.

—The aggregate movement of lumber and shingles from Saginaw River ports from the opening of navigation to August 1, was 236,553,627 feet of lumber, 34,993,000 shingles and 13,666,000 lath, a decrease of about 10 per cent. over 1886.

—The Duluth mills are busy at work, and are finding all they can do to keep up with the demand. The five mills running are turning out lumber to their full capacity, and at present have about half finished their prospective cut for the year.

—One of the most prominent timber land buyers in the South says that take the South all through, meaning the yellow pine belt, the timber will average not more than three thousand feet to the acre. He thinks the timber very freely cut in Alabama.

—The receipts of lumber at Tonawanda by lake for the first three months of the season—May, June and July—foot up the handsome total of 229,689,000 feet. With four months yet to hear from, it is very probable that she will reach last year's astounding figures.

—The mills of M. & J. O'Donell, of Jersey City, N. J., situated east of Brigden, Ont., on the St. Clair branch, were ignited by brush fires August 9th, and all the sheds, together with two million feet of matched staves, were burned. The loss is $150,000.

—The burning of John G. Owen saw mill, at Saginaw, Mich., takes 14,000,000 feet out of the sawing capacity of that historic lumber producing section. It is undecided whether the mill will be rebuilt, but the probability is that if reconstructed at all, it will be much smaller than the old one.

—Reports from Boston say there is a scarcity of small light-draught vessels, and rates on lumber from St. John N.B., are well maintained at the advance last reported. At Eastern ports the advance in freight rates is well sustained. From St. John, N. B., the rate is $1 per ton higher than a year ago, and vessels are very scarce.

—During the first half of the last four years, beginning with 1887, the number of buildings erected in New York were repectively 2,923, 2,458, 1,804 and 1,739, and the sums invested were, in round figures, $47,000,000, $38,000,000, $27,000,000 and $29,000,000. This year's investments are 28 per cent. ahead of last year.

—A deal is now being consumated by which Henry C. Jewell, Seymour Hollister, and Senator Sawyer, of Oshkosh, and other local parties, will come into possession of land containing about 75,000,000 feet of pine in the Province of Ont., near Sault Ste. Marie, the purchase price being $150,000, one-half to be paid on delivery of deeds and one-half when the timber is cut, which will be shipped to Quebec as lumber, because the $2 duty operates against marketing it in the United States.

TRADE REVIEW.

TORONTO.

TORONTO, Aug. 19th.

Appearances point to a good trade to be done this fall. Buildings, which have been in an unfinished state since the strike began, are now being hurried to completion, and an increased activity is to be seen in the building line, over the city.

The scarcity of long lengths of bill stuff is greater as the season advances, in fact bill stuff of even short lengths is getting more and more scarce. As a consequence prices are well maintained by the mill men, necessitating an advance in the retail line. The diversity of prices among retailers is something passing the ken of ordinary mortals, yards a few blocks from each other differing from 50c. to $1.00 per thousand, in price, all things apparently equal. It is useless to quote prices but while not altering the usual quotation it is safe to say that these prices may be understood to be not less than 50c. per thousand higher in some, if not the majority, of yards. Shingles XXX are quoted in one yard at $2.75 per thousand, and in another not over three blocks away at $2.60. Whence the difference? That there is an advance in prices all must admit.

The strike has ended, lasting10 weeks. *Cui bon?* Not the strikers, not the employers, except the negative one of not having to pay large amounts in wages. Some must benefit by strikes. Who are they? Possibly the rank speculation of the impecunious dealer in real estate may have received a check. It is to be hoped that such is the case, and that fewer compromised accounts will stare at the lumber dealer from the pay office ledger. The speculative builder is, as a rule, a very unsavory mortal, and should the strike just ended be the means of preventing any more buildings of the class usually erected by the speculative creature, being offered for sale, that if nothing more would be a decided gain to this city— the foundation whereof is sand.

With the remarks above borne in mind the quotations are as follows :—

Mill cull boards &scantling	$10 00	Dressing stocks	14 00@15 00

MONTREAL LUMBER MARKET.

MONTREAL, 25th Aug,

Business in the lumber market in Montreal has slackened off somewhat since our last report ; no great importance however need be attached to this fact, as it is usual at this season of the year. The amount of business done so far this month shows a decrease over that done in the corresponding period of last year, and dealers do not expect much improvement until next month. A large number of contracts are being given out for this fall's work, and contractors will naturally be on the outlook for supplies. Prices still remain firm, bur they may tend towards an increase soon, in view of the bright prospects in the building line. The tendency towards an advance in prices seems general, as the stocks throughout the country are small on account of the cut of logs being lighter than usual. While receipts have been large, especially in spruce and hemlock, shipments have been comparatively light.

The following are the quotations at the yards here :

Pine, 1st quality, ℔ M	$00 00@40 00	B ss, run of log culls out, ℔ M	$18 00@20 00

NEW YORK CITY.

NEW YORK, August 23rd, 1887.

The back-bone of the torrid wave seems to be broken, and already new life has been instilled into the market. Around the yards the dealers have braced up and evince a disposition to push trade for all it is worth. Taking the market as a whole it probably consumed as much lumber during June and July as last year, but somehow the average dealer expects such succeeding season to yield a distinct increase of business over the previous one, and if it falis to materialize they cry, "dull times."

To all appearances trade this fall will be heavy. In the upper part of the city there is an immense amount of building going on, and the same statement applies to Brooklyn. The situation at Long Island points is encouraging, while the New Jersey trade, although persistently drummed, is still in good shape. At points along the Hudson River, as far as Peekskill, there is a steady demand, and not only the yards but manufacturers are preparing for an active fall demand. A casual glance at many yards would give one an idea that stocks were large and complete, but a careful inventory would show that few are in condition to stand much of a drain without speedy replenishment. Undoubtedly many dealers have more or less stock purchased which is yet to arrive, but it is by no means probable that enough lumber is thus secured to meet the demand likely to arise ; hence purchases will have to be made, and already we hear of dealers and large manufacturers making enquiries, that undoubtedly mean heavy purchases in the near future.

Aside from poplar, the market is not at present overstocked with consignments. Mill men, jobbers and brokers are straining every muscle to secure orders for direct shipment ; failing in that endeavor, we may then expect to see an avalanche of consignments, the result ot which can only prove detrimental to the interests of all concerned, except the final purchaser.

The general disposition of visiting as well as local wholesalers is to sustain values ; but in the face of a restricted consumption, purchases being made only as against future demand, it is an easy task to convert buyers to the ideas of sellers, and that phase of the business will not undergo much change until the demand becomes imperative.

Walnut continues in the same old rut. The market does not present favorable opportunities for disposing of good stock in regular widths.

Poplar is consumed in large quantities, and the new uses to which the wood will be put are almost numberless.

Ash is steadily increasing in sale. Arrivals on the market are small, and all such stock is readily absorbed. The call is principally for boards and 1¼ inch. Thick stock is not in active demand.

Oak, both plain and quartered, is destined to sell in large amounts before the snow flies.

Cherry shows up better as the season progresses. Few dealers have complete stocks, and as the wood is still popular with architects, it must be had. There is a small request for common and culls, due to a revival of small manufacturers. In good stock, the call for plank is better than boards. Strips sell fairly well.

Balusters remain unchanged. The best trade is in walnut. Ash are a close second ; but cherry are slow. Poplar squares have a moderate sale.

Miscellaneous woods are fairly steady. In a general way, we can advise steady shipments of really good stock, as such will always sell ; but off color stock had better remain at the mill.

Logs are quiet, from the fact that good stock is a minus factor.

Mahogany is beginning to show life, and our local dealers are well prepared to meet any emergency.—*N. W. Lumberman.*

DETROIT, MICH.

DETROIT, Aug. 27.—The market here is generally quiet, with prices steady and fairly firm. The lower grades are chiefly called for, and are the firmest items on the list, upper grades being in plentiful supply and a little inclined to weakness. Thick selects, it is said can be got for something less than full list prices, and so can clears, but shop stock, common and cull lumber are stiff, and it is claimed in some cases even higher. Most of the yards here are getting in lumber rapidly, and the present outlook is that they will go into the fall season with a pretty fair stock in pile.

The following are the quotations :

Uppers, 4x4	$45 00	Siding, clear	21 50

TONAWANDA.

TONAWANDA, Aug. 27.—The past week has held its own, the record, as far as can be ascertained, being just about the same as that of the seven days previous. Car trade is active, and shipments by canal have been a little in advance.

The table of receipts shows an increase of about 4,000,000 over last week. A brisk demand continues for lumber of all common grades, for shingles and for lath. Norway is very popular with many buyers, and really seems to grow more in favor each year.

Prices unchanged as follows:—

CARGO LOTS—MICHIGAN INSPECTION.

Three uppers	$46 00@47 00	Culls	12 00@13 00
Common	20 00@25 00

Coffin boards, 12 in. and up	16 00@18 00	Do. XX do	@ 2 50
		Lath	1 90

SAGINAW VALLEY,

SAGINAW, MICH., Aug. 28.—The cargo market is by no means active, although sales are made in a quiet way daily. There is a fair request for common grades, and Norway strips are firm at $11. Box stock is quoted active at $10.50, and a number of mills are cutting on contracts made some time ago at the quotation named. There has been some speculation as as to the probable effect of the long draught on the consumption of lumber, but the idea obtains that all the lumber will be sold that lake and rail transportatiou can provide for. Some mill docks are pretty well cleared of stock that is in the market, and this strengthens the situation here. No changes in values have taken place, nor is any likely to take place.

Shingles are active, and good brands sell readily at $2.50 for clear butts and $3.50 for XXX. Mills in the interior are selling stocks at $2.20@2.25, and $3.20@3.35. Really choice country made shingles may bring a slight advance on these figures. Some mill men expect that there will be a scarcity of logs the rest of the season that will restrict production.

The yard lumber trade is fairly active, and dealers report a good inquiry.

Prices are as follows:

CARGO QUOTATIONS.

Shipping culls	$ 9 00@10 00	Under straight Measure	16 00@21 00

CHICAGO.

The Timberman of the 27th August, referring to the cargo market says: The slight promise of improvement which this market held out a week ago has not been fulfilled. There has been no gain made, and in fact the commission men have not been able to do more than hold it steady. At present there is no prospect of an early reaction of prices.

Piece stuff is a sale and also a purchase at $10 for short lengths, 18 feet and under. About all the average No. 1 stock has moved at this figure, but lots not quite up to the grade, and without any 18 or 20 feet lengths to improve their average, have been sold at $9.87½. It has not been learned that any standard cargo has sold at this, while there have been a good many transactions at $10. A sale was made by a Muskegon manufacturer at $10 and $12.50 for the short and long respectively, dividing on the 20 feet length. Long lengths, however, are not in quite so good demand as they were.

Inch lumber is selling about a $1 a thousand lower than it ruled before the break. It is said to take some careful figuring to get $12 for common stock that sold for $13 and even $13-25 earlier. One cargo of Manistee stock with some of the best lumber taken out, the load running well to strips, however, went at $14.25. The same lumber is said to have sold to Chicago parties at the mill this season at $12.50 which with $2 freight would make it $14.50 here. It is to be said, though, that at that time it could have been sold at $15.25 at the market, so it is evident the buyer made what was then a good trade. The character of the demand for inch lumber has not changed. The better the quality the less anxious the dealers are to take it, and therefore No. 1, choice and selected cargoes are the hardest to place, and relatively the lowest in price.

Shingles are weak, but there seems to have been no further drop in them, although it was rumored that some standards had sold at $1.87½. The report was not confirmed, however, and handlers of the regular brands of standards say they have uniformly refused to name any price below $1.90. Some makes that have sold as high as $2.10 are nominally still held at that, with $2 bid and no sales. Some of the producers have confidence enough in the value of shingles to stand by them, and are refusing to sell at the lower figures which buyers demand, stacking them down at the mills in preference. There is a good deal of inquiry for shingles, and those arriving have sold readily when the price has not been too high. Extra shingles are not so much talked of, and are held fairly firm at quotations. Lath are in demand and as firm as anything on the list in price. Dry lath sell up to $1.70 for white pine, and $1.65 was paid during the week for dry mixed.

Lake freights are nominally unchanged, though there is a rather easier market for vessels, and probably occasional concessions that do not see the light of day.

The following are the ruling quotations at present:—

RECEIPTS FOR WEEK ENDING AUG. 25.

CORRESPONDENCE.

MUSKOKA MILLS, AUG. 12th, 1887.

To the Editor of the Canada Lumberman:

DEAR SIR,—No doubt there are a great number of your readers who do not know where the Muskoka Mills are, and for the benefit of such permit me to inform them. The mills are situated on the North shore of the Georgian Bay, at the mouth of the Muskoka river, about eighteen miles from Penetanguishene. The entire place is owned by the Muskoka Mill and Lumber Co., of Toronto, A. H. Campbell, Esq., being the President. They own at this place three mills, the principal one being the lumber mill which has two large stock gangs, one pony and a large circular, one band mill, two sets of trimmers, double edger and slab table. They use the electric light when the days are short in the fall. The timber mill is used for cutting bill stuff only; they are able to cut a stick 60 feet long and almost any size. The demand for bill stuff at the present time is very great. The shingle mill has a 14 block machine and does good work. The mills cut from 12 to 15 million feet each season. All the lumber is shipped by the Company's own vessels. The following vessels comprise the fleet: Tug "Wales," barge "L. Hotchkiss," barge "Wales," barge "Minnie," schooner "Otonabee." The capacity of the barge "Hotchkiss" is 1,400,000 feet of dry lumber; she is 1,001 tons burthen. The fleet generally goes to Buffalo or Oswego. The firm also own the tug "Tender" which carries supplies to the mills and tows scows to Penetanguishene and Muskoka. The vessels are loaded by the Indians from Christian Island. It takes from three to three-and-a-half days to load the whole fleet. The company generally has from 40 to 50 braves at work for which they pay them $1.50 per day. The Indians are under the directorship of J. M. Bird, who possesses great skill in handling the "noble red men.

The staff of officers is as follows: A. H. Campbell, jr., manager; F. W. Wilcox, salesman; J. M. Bird, shipper; James Wood, foreman; D. J. Carmichael, book-keeper and paymaster.

The mills have been running steady since May and will continue to run till cold weather. The driving on the river is nearly finished. There have been no logs hung up on the Muskoka river. The principal part of the driving was done by the M. M. & S. Co., under the superintendence of Mr. Webster who always does his work well, and is one of the oldest veterans in the business. Several bush fires are raging and if we do not get rain soon great damage will be done.

An accident occurred here last week. Joseph Pozey foolishly undertook to cut a rubber belt in two on one of the lath saws. As soon as the belt touched the saw it jerked his hand on to the saw and he lost two fingers of the right hand. Dr. Campbell was speedily summoned and dressed the wound and the patient is now doing well.

Yours truly,

SAWDUST.

UTTERSON, Ont., Aug. 15.—I have been in receipt of your valuable publication for a month or two now, and as I recognize its value in the object you desire to attain, I do not wish to benefit by it without paying the small price of subscription, therefore please find enclosed one dollar the price named. I am engaged here in the manufacture of a good quality of shingles, the only kind I will put upon the market, and situated in the centre of a large tract of valuable pine limits I am enabled to do so. My capacity is from 45 to 50 thousand per day of eleven hours, and am cutting both 16 and 18 inch shingles for the Canadian and American markets respectively and find a ready sale for all my cut.

I contemplate enlarging my capacity at an early date.

Yours Respectfully,

L. WILSON.

STRATHROY, Aug. 17.—There is not any pine lumber made here. We have to import all such by rail, and the community around are our only customers, and according to their prosperity ability to pay, is the demand for lumber. The very low prices for grain, the equally low prices for cattle, and the very large falling off in the production of chesse owing to the draught, and the consequent falling off of feed for cows, is seriously injuring the pockets of the farmers and their ability to build, thus lessening the demand for lumber.

R. NICHOLSON.

OWEN SOUND, Ont., Aug. 23rd, 1887.

To the Editor of the Canada Lumberman:

DEAR SIR,—Building is lively in this town and houses are going up in every direction. Dry dressing and cutting up lumber are scarce and in good demand. Messrs. Tennant & Co., Willmott & McIntosh and Donogh & Oliver are shipping from here this season. They get their lumber from the north shore of the Georgian Bay, and fetch it here by vessel and then ship on cars to different points west. There is a large quantity of freight coming here intended for upper lake points, which gives abundance of empty cars, while a yard engine is always on hand. Mr. J. R. Taylor, the Agent, is a very obliging official, and is always ready to show a favor to shippers if at all possible. Mr. Wm. Foster is also on hand at all times, with an efficient staff of assistants, to give a vessel good despatch. So taking everything into consideration this is one of the best points on the Georgian Bay to handle lumber.

LUMBERMAN.

FRENCH RIVER MILLS, Aug. 25th, 1887.

Editor Canada Lumberman:

We have little to report from this section, but I may mention that our mill has had a hand saw put in and works well. This is said to be the only hand saw that has gone off without trouble from the word go, in this country. Our mill is averaging 100 M per day. Shipments are going on lively. This place is improving fast, a large number of logs being rafted here this season for the south shore of the Georgian Bay. We have three passenger boats in and out every week, and a large fishing trade is done by an American firm who have a boat regularly running between here and Metegan every week with fish. There are two mills of a combined capacity of 150 M per day.

Yours truly,

ONTARIO LUMBER CO.

THE STEWART FAILURE.

THE adjourned meeting for public examination under this bankruptcy was held in London, Eng., on Tuesday, Aug. 2nd, before Mr. Registrar Linklater. The joint accounts which have now been filed show total liabilities £399,817, of which £160,378 are expected to rank, and assets estimated at £19,-977, leaving a deficiency of £140,400. The following is a summary of the liabilities and assets in New Brunswick, as taken from accounts forwarded by Mr. R. A. Stewart : Liabilities, £39,570 ; assets, £68,766. The separate liabilities of John Stewart are returned at £2,500, and assets £250. The following is taken from the observations of the Official Receiver, which have just been prepared :—The Debtor R. A. Stewart is stated to be in Canada, and the statement of affairs has only been sworn to by the debtor John Stewart, who has attended for examination thereon. He states that he entered into partnership with his brother, R. A. Stewart, in May, 1878, their joint capital then being about £40,000, and that, about two years ago, they entered into an arrangement with R. T. Gibbs to purchase a half share of the Llnir Valley Colliery, Glamorganshire, in respect of which they have sustained a loss of £7,663 16s. 7d. He further states that about eighteen months since his brother arranged to purchase for the firm a half share in a lumbering estate at Ottawa, Canada, a Mr. Grier, being entitled to the other half ; that last autumn the latter's share was sold to the New Brunswick Trading Company (Limited), and the business is now being carried on for the joint interest of the debtors and the aforesaid company under the style of G. A. Grier & Co., and Guy, Bevan & Co., but that the arrangement was never carried out. It appears doubtful, however, whether such business was not in fact the property of the debtors, but the statement of affairs is made out on the supposition that they were independent firms. The above is a summary of the statement of the joint affairs so far as they are disclosed by the London books, together with the Canadian assets and liabilities as shown by the accounts forwarded by R. A. Stewart. The debtor John Stewart attributes the failure partly to loss on the trading during the last three years, but chiefly to the refusal of certain Canadian bankers to honor the firm's cheques against funds in their hands, in consequence of which he states a telegram was published in the newspapers stating that the St. John's house had failed, which had the effect of cutting off their credit, causing the stoppage and transfer to other hands of cargoes coming forward to them, and also stopping negotiations then in progress for certain credits which they usually got in Canada during the winter season. The books of account produced relate only to the London business. They have been well kept and balanced, and balance sheets and profit and loss accounts prepared annually which show that at 30th April, 1883, there was an apparent surplus of £51,271 14s. 9d., namely, £22,237 9s. 2d. to the credit of R. A. Stewart, and £29,034 5s. 7d. to the credit of John Stewart. On 30th April, 1884, there was a surplus of £48,607 5s. 1d ; on 30th April, 1885, a surplus of £41,582 4s. 11d ; and on 30th April, 1886, of £46,-401 13s. 4d. The loss of that surplus, and the contracting of the deficiency of £138,124 now shown on the statement of affairs, is explained in an account furnished by John Stewart, the loss on the trading since 30th April, 1886, being put down at £12,270 13s. 9d., and the estimated loss by doubtful and bad debts at £40,156 4s. 8d. Other losses and liabilities, amounting to £23,909 8s. 1d., include an estimated depreciation of £8,000 in certain ships. The securities held by creditors treated as fully secured are stated to consist of the following :—Cargoes of timber, £6,526 13s. 2d.; liens on debtors' interest in G. A. Grier & Co., £26,041 13s. 4d.; mortgage on debtors' interest in ships and shares of freights, £25,725 ; shares in the New Brunswick Trading Company, Limited, £9,100 ; mortgage on premises in Albany Road, Camberwell, £2,000 ; and sundry bills of exchange, £725. The securities held by creditors treated as partly secured are stated to consist of a mortgage on the property at Bathurst, Canada, estimated at £10,000 ; sundry bills of exchange estimated to be worth £5,125 ; and mortgage on the debtors' interest in the ship *Nellie Wise*, valued at £1,450. The "other liabilities, £29,-022 0s. 8d., expected to rank," are stated to consist of £15,-500, in respect of guarantees, £7,522 0s. 8d., bills accepted for account of George Guy & Co., and £6,000 for liabilities on calls on shares in the North Atlantic Steamship Company, Limited (in liquidation). Mr. H. Reed, Mr. S. Woolf, and Mr. Tanner appeared in the case. It was stated that R. A. Stewart was on his way from Canada, and his arrival in England was shortly expected. It was hoped that he would have arrived before, but he had been detained by illness. A short adjournment was requested in order that the examination of the bankrupts might be proceeded with as soon as possible, Mr. Reed stating that a scheme of arrangement was pending, and that it was, therefore, desirable to avoid delay. His Honour accordingly ordered a further adjournment to Tuesday next.

LATER.

AUG. 9th.—Adjourned meeting for public examination of these debtors, was held before Mr. Registrar Linklater. The debtor, R. A. Stewart, was now present and was examined as follows :—By Mr. Tanner, on behalf of the Official Receiver : I have seen my brother's examination and am prepared to swear to the facts contained therein. The firm had an interest in a company at New Brunswick, which was the joint property of Guy, Bevan & Co., and Messrs. Stewart Brothers, and also had an interest in the North Atlantic Steam Shipping Company, but I do not know the value of the shares. The chief cause of the failure is the loss on trading during the last two years, amounting to £12,270. Since 1876 we lost a surplus of £46,400, and have made the deficiency as stated. A great many liabilities crop up when a firm is about to be wound up—things crop up that would not otherwise do so. A very large portion of the loss is partly owing to the change of policy in the Government of New Brunswick ; and the mileage charge is also increased. The causes of failure will be ully explained in a deficiency account which is about to be filed by Mr. Gore. My firm had an interest in the firm of Guy, Bevan & Co. The memorandum dated the 21st March, 1882, was written by them to me ; Mr. R. G. Guy was a partner. The proposal mentioned in the memorandum was subsequently accepted. The agreement dated 22nd March, 1882, was for the purpose of carrying on the business. The books of the firm will show that the agreements were cancelled. By the Registrar : The agreements were never acted upon ; the money mentioned in the agreement—I refer to the £10,000—was used for another purpose. By Mr. Gore : An agreement of February, 1885, was also entered into, that is the only agreement subsequent to March, 1882. The first time I communicated with Guy, Bevan & Co. was in 1884, suggesting the repudiation of the agreement. The whole thing depended on their books, and their books did not show their position. I communicated with Bevan on the 7th Febuary, 1884, suggesting the repudiation of the agreement. I have now no books at all, they were taken by the trustee. We found no money after 1882 in respect of Guy, Bevan and & Co's. liabilities. We never paid anything for them, they were perfectly solvent. The agreement of March, 1882, was not carried out because their books would not justify it. They wrote a letter, which was concealed from us, in which they said, it would be well to press us to buy them out at any sacrifice ; I never knew their position until I went out in 1885 ; they were engaged in mines, &c. We simply said it was impossible to carry out the first agreement. Mr. Richard Lee Bevan was also a party to the agreement. After the agreement I never received any assets of the firm—that is the agreement of 1882 ; I never received any assets after that date, not did my firm. I am, of course, only speaking to the best of my knowledge. By the Registrar: We never paid them interest, and never thought of taking the transfer. Mr. Richard Guy did not receive £250 a year for assistance. By. Mr. Gore : My firm had a half interest in the firm of A. Grier and Co., of Ottawa, Canada, and we assigned our share and interest in that firm to Mr. Wm. Tucker. The agreement is dated 5th April, 1886. The bill dated 17th December, 1886, is in respect of a ship, of which we were mortgagees in possession ; two of the bills were current at the time of the bankruptcy, I saw in the newspaper a statement in December, 1886, our firm had telegraphed to Holt, the captain of the ship, asking him to sign bills, forms of exchange, but I know nothing of the telegram. I know nothing of the bills dated November 16th, 26th, 24th, 29th, and December 17th. Mr. Donald was in charge there in December, 1886, and he attended to those matters. I went to Boston in November or December, 1886, and left in charge the person who endorsed the bills. Holt's bill does not appear to be accepted by the London house. I do not know anything about the matter. The cashier informed me that only one draft was filled up for the ship's account, at St. John's. My firm had made large disbursements for the Clifton, and the balance sheet shows the company owed us over £4,000. The two bills dated 30th December, 1886 (£836 and £940) I see were drawn by a young gentleman named Dill, who was but a short time in our office. The disbursement was actually made ; it was for freight and disbursements. These bills were negotiated by the Maritime Bank. The bills were for general indebtedness of the ship, and were drawn by the master of it. I know the firm of T. C. Jones & Co., of Liverpool. I can't say whether they accepted bills just before our failure. T. C. Jones & Co. were largely indebted to us. We had balance sheets made out for each year, our books are well kept. I do not think our firm would have become insolvent, as Grier & Co. were realizing us a large profit when the Maritime Bank failed. We had certain cheques dishonoured by the Bank of British North America when there was money at our credit, and that ruined our credit. The business was realizing a profit of from £12,000 to £15,000. Two days after the action of the Bank of British North America we found out that we should fail, and we are now suing the Bank for £100,000 damages, in Canada. The bill of sale given to the People's Bank was upon certain lumber and other property belonging to us—it was a lien on our Bathurst property. When the company in New Brunswick was formed, Richard Guy sent over £25,000 shares. I have not got the shares now. Guy, Bevan & Co. passed them over to the Bank ; they were given as security in order to settle with Bank of Montreal for Guy, Bevan & Co.'s indebtedness. The Maritime Bank have £15,-000 and £10,000 of shares. The examination was then ordered to be concluded.

REBUILDING THE RAFT.

St. John *Telegram* : Quietly, but steadily and surely, the mammoth raft on the Joggins shore is being rebuilt. When the public read of this venture last year, the progress made in the construction of the raft, and subsequent failures to launch it, it was thought that the scheme was impracticable, or could not be successfully carried out in that place, and under the same conditions. Winter set in and operations on the structure ceased ; but this spring the inventor of the method and superintendent of the work began again with a gang of men, not only with the intention of rebuilding the old raft but of making it larger in every way. There can be no doubt that Mr. Robertson has every faith in his invention, and that this feeling is possessed by the owner of the raft is assured, from the fact that they are spending thousands of dollars in the attempt to successfully transport lumber to the United States by this method. When work was begun this spring the prospect was a dreary one. Debris on all hands, a mass of lumber partly under water at high tide, held from the mud and earth by crushed ways and timbers, were not encouraging to a man with a handful of men to work upon. To make matters worse, the rain and melted snow of the preceding fall and winter had penetrated the raft, and every timber was embedded in and bound to its fellow by solid ice. The winter's frosts had taken less time to solidify the mass than the summer sun would to undo its work. A gentleman who has been spending some time near the raft was interviewed by a *Telegraph* reporter yesterday. He reports excellent progress being made upon the raft. When work was begun this spring, he said, it was carried on according to the original plans of Mr. Hugh R. Robertson, the inventor, which, last year were diverged from somewhat. The first thing that was built was the foundation, which was made as solid as possible—so solid, indeed, that there can be no possible sinking of the raft, or any portion of it, in its descent upon the way. Although the raft is longer by 106 feet than last year, the grade of the launching ways will only be ¼ inch to the foot or 1-16 of an inch less than at that time. Part of the additional length of the raft is placed upon its lower and part upon its upper end. One of the first jobs was the erection of a huge crane about 90 feet high and with a boom 90 feet long, capable of lifting 20 tons or more. Of course such a lift as that is rarely if ever taken, the usual load being from 15 to 20 sticks of timber. The crane erected and a powerful engine to hoist, the gang began to empty the old cradle of its logs and to place them on the brows close at hand. This took some time, June being well spent before the cradle was clear. When the logs were all out the rebuilding of the cradle was commenced, and when it was completed it had been improved in many ways from the former structure. July the 4th they began to rebuild the raft, placing 300 sticks a day in the crib at first and afterwards increasing the number to 400 and more. The crane would lift a number of the logs clear of everything and then would be guided upon a car placed upon a track laid through the centre of the raft. The moment they are secure the signal is given the engineer and the car traverses the whole length of the raft, dropping a log here and a log there as the foreman may direct. The surveyor and his assistant follow on keeping track of the unsurveyed lumber and surveying it while another load is being procured. The railroad is ascending and a car would descend the 560 feet in a short time, but the work is pushed along with such celerity that its descent is assisted, and in less than 30 seconds from the time that it stops at the upper end it arrives again at the lower portion of the structure to receive the timber already dangling in the slings ready to be placed upon it. At the present time the raft is nearing completion, and the last of this month or the first of next will probably see it finished. In order that there may be no delay in launching, such as occurred last year, the owners have taken the precaution to import pitch pine timber from Pensacola, Georgia, 12x14 inches, and in sticks fifty feet long which will be used for the ways. The intention is, if the raft goes off well, to use the pine again. A number of the lumbermen in the vicinity of Three Rivers have lumber ready to sell to fill out the raft, but want big prices for it, or they did some time ago. It was thought that they would accept a fair figure rather than lose the sale of it. There are between 20 and 30 men at work, all of which are boarded at the raft—a substantial and comfortable building being erected and a good cook obtained. The roads to the shore, which last year were practically impassable, have been improved greatly, and although the work is being done as quietly as possible, large numbers go to see the huge structure, and, of course, talk about it. The launching will take place sometime during September if the conditions are favorable.

A NEW LABOR-SAVING DEVICE.

Messrs. G. A. Grier & Co., of Ottawa, have introduced a new labor saving feature into their new saw mill at the Chaudiere which is the means of saving thousands of dollars worth of labor every year. Grier & Co's new saw mill is situated north of their old mill and there is no way of getting into it with a horse and cart except through the the old mill. In consequence of this, some device had to be thought of whereby the lumber cut could be removed from the mill after sawing to the platform south of the old mill, or to the sorting sheds where the lumber is sorted.

The method in which this lumber is removed is a simple and ingenious one. The lumber after leaving the saws is wheeled a short distance on rollers, then shoved on to a standing table which is covered with projecting iron spikes attached to three rows of iron cable, which is always revolving. The lumber, when placed on this table, is taken board by board, each board getting caught in order on these projecting spikes, and the entire cut of both mills is taken down underneath the mill on this table. After descending about 20 feet, the lumber passes on to another table of the same description, with three endless iron chains working in the same manner. This second table runs in an upward direction under the old mill where the cut from that mill is received, and the whole continues a distance of about 100 yards to the sorting sheds. Here the table extends for a distance of some 200 feet, and as the lumber moves past, each board being caught on its respective iron spike is taken of by a number of men and placed in that part of the sorting shed to which it belongs.

WORKING CLASSES ATTENTION We are now prepared to furnish all classes with employment at home, the whole of the time, or for their spare moments. Business new, light and profitable. Persons of either sex easily earn from 50 cents to $5.00 per evening, and a proportional sum by devoting all their time to the business. Boys and girls earn nearly as much as men. That all who see this may send their address, and test the business, we make this offer. To such as are not well satisfied we will send one dollar to pay for the trouble of writing. Full particulars and outfit free. Address GEORGE STINSON & Co., Portland, Maine.

A Full Stock always on hand. Write for Price Lists and Discounts.
Works also at NEW YORK and SAN FRANCISCO.

EUROPEAN NOTES.

The mahogany trade, which the last year or two had assumed very large proportions, has latterly become dull, and business with the cabinet-makers seems, figuratively speaking, at a standstill.

During the past month there has been considerable activity in selling, especially by auctions. The quantity thus disposed of has considerably exceeded the quantity arriving. The market for all kinds has been considerably depressed; but at the last auction there was some improvement in competition and a better tone prevailing.

Amongst the passengers by the Allan liner Parisian, which arrived at Liverpool on Saturday, Aug. 6th, were Mr. J. Burstall (Burstall & Co.), Mr. C. G. Davies (agent at Quebec for Messrs. Bryant, Powis & Bryant, Limited), and Mr. R. A. Stewart (R. A. & J. Stewart). Mr. Beckett (Dobell, Beckett & Co.), who was also a passenger landed at Londonderry.

The (London) Board of Trade returns for July are as a whole satisfactory. There is an increase in the exports for July, and a decrease in imports. Turning to the department of wood goods we find that the import of hewn timber for July was 188,467 loads, as compared with 193,223 for the corresponding month of 1886, a decrease of 4,756 loads. For the seven months ending July 31st, the figures give 893,243 loads for 1887, as compared with 847,913 loads for 1886, an increase of 45,330 loads. Taking sawn timber for July, the increase is still larger, the figures being 636,897 loads, as compared with 621,114 loads for last year, an increase of 15,783 loads. For the seven months ending the 31st ult., the returns give 1,686,814 loads, as compared with 1,521,835 loads for 1386, an increase of 165,079 loads. The increase in sawn timber is mainly with Russia, Norway and Sweden. For July, staves show a larger importation than in the same month of the previous year. Mahogany on the other hand shows a lessened quantity, the importation being 2,573 loads, as compared with 3,876 loads in 1887. For the seven months ending 31st ult., the total import of the latter has been 25,824 loads, as compared with 29,906 loads for 1886, a decrease of 4,071 loads.

TIMBER LIMIT FOR SALE—WOULD take property in part payment. Box 2, LUMBERMAN office.

YOU can live at home, and make more money at work for us, than at anything else in this world. Capital not needed; you are started free. Both sexes; all ages. Any one can do the work. Large earnings sure from first start. Costly outfit and terms free. Better not delay. Costs you nothing to send us your address and find out; if you are wise you will do so at once. H HALLETT & Co., Portland, Maine.

ADVERTISEMENTS.

THOSE wishing to **BUY** or **SELL TIMBER LANDS, LUMBER** or **SECOND HAND MACHINERY** will find THE CANADA LUMBERMAN an excellent medium in which to make known their wants. Advertisements of this character will be inserted at the low rate of 1½c. **A WORD**, cash to accompany the order in every case.

SMITH'S

Mercantile & Land Reporting Agency

BANKERS—DOMINION BANK.

General Solicitor, JNO. LEYS, ESQ., Barrister, Toronto. Secretary, JOHN SMILEY, M.A.

MANAGER—WILLIAM SMITH,

General Offices—Court St., Toronto, Ont.

Telegraph Address—Agency, Toronto.

Having for its special objects the furnishing to subscribers of reliable information on the financial standing or otherwise of tradesmen and others, the collection of outstanding accounts and the procuring of the most reliable information from independent sources of the value and condition of landed and other properties in any part of Canada and the United States, with correspondents in Great Britain and other parts of Europe.

Our method of procuring for our subscribers the most reliable information is through solicitors of the highest standing, and from other equally reliable sources in the several localities indicated, who are under contract with us to supply the necessary information promptly.

The Landed Enquiry Department of this Agency, the only institution of this kind known, is invaluable to Solicitors, Loan, Investment, and Insurance Companies, Estate Agents, and others, preventing fraudulent land transactions resulting from misrepresentations.

The Department for the collection of outstanding accounts is conducted on an entire change of the system usually followed by Collecting Agencies, viz.:—Subscribers may have their collections paid either direct to themselves, or to the offices of the Agency, in which latter case remittances will be deposited to an account provided for that purpose, and immediately remitted to the parties to whom it is due, and will not be applied to any other purpose.

Another important feature in connection with this department is, that subscribers depositing accounts for collection will, if requested, be furnished with a Form of Script, on which will be entered the name of each debtor, the amount owing, and a full report of the prospects of collection, and providing that the receipts thereof be paid to bearer only, thus enabling subscribers to realize on their outstanding accounts.

The Agency will forward at least once in three months, or oftener if desired, a report and statement of all accounts in hand.

NOTE.—The offices of the Agency are open to the Solicitors and subscribers for reference to our numerous maps, atlasses, directories and correspondence, and for the transaction of business with their clients and customers when in Toronto.

A RUMOR has been current in the Quebec press of the discovery of frauds in regard to cutting timber in that Province, and there is talk of an investigation. So far there is nothing to show whether there is any foundation for these reports or whether they are mere election *canards* or even empty gossip.

IN the September number of the *Century Magazine* there is an article discussing the question, "Shall we plant Native or Foreign Trees." The author, who seems to have studied the subject thoroughly, adduces a number of facts and authorative opinions in support of his contention, that however foreign trees may thrive at first, they fail after a time, either dying or becoming enfeebled and stinted, while native trees from our American forests continue to do well and to flourish.

THE agitation in favor of commercial union with the United States is still proceeding in Canada, and it is a matter in which Canadian lumbermen are naturallly much interested. More light will be thrown upon the probable fate of the movement at the next session of the United States Congress, both by their direct action in regard to the matter, and indirectly by the attitude they assume as to the fishery negotiations with which the tariff question and reciprocity may be connected.

ACCORDING to the *Northwestern Lumberman* the pine owners of the northwestern States are somewhat divided in their views as to the effect of the removal of the duties on Canadian lumber through the adoption of commercial union, the general view seeming to be that they will not be injured, prices not being reduced by the influx. The hostility of the eastern Michigan pine-owners has been mitigated by many of them having invested heavily in Georgian Bay pine. Of course if this view is correct the Canadian lumberman would obtain the benefit of the remission of the duty.

THE actual enforcement of the increase of timber land ground rents from $2 to $5 a square mile in the Province of Quebec was postponed from September 1st to October 1st, some hope being held out that the change would be reconsidered. As yet no indication has been given official of the decision in this matter. Some lumbermen have paid their rent at the higher figure subject to a return of the excess if the old rent is to be maintained. Others have not yet paid but are awaiting developments. The public feeling as to the impolicy and unfairness of the increase has been strengthened by the hesitation of the Quebec administration.

THE Toronto *Globe*, after detailing the destruction caused by bush fires, which it says swallow up far more timber than all our lumbermen put together, besides causing enormous loss to farmers, continues :—

"In most cases fire is the result of carelessness of the settlers themselves, who, regardless of the condition of things, and of the laws governing the setting of fires for clearing land, start fires with a simple regard for their own interests. If each manicipality were granted the power to regulate and even prevent the setting out of fire in times of great heat and drouth, there is little doubt the annual destruction of property would be lessened. To say nothing of the loss to the settlers of the country, the destruction of the domain, year after year, demands the attention of the Legislature at as early a date as possible."

The suggestion is an excellent one, we think. It should not be passed unnoticed.

FROM our English exhanges we learn that the shipments to that country from Canada, for the seven months recorded this year, exceed those of the same period of last year by over 4,000 standards, and 1885 by close upon 29,000 standards. It is true that the year last mentioned was an exceptional one, but with trade so depressed the large and continuous increase within the past two years must prove serious to prices in that ountry. The gossip about white pine being at such a premium is certainly not borne out by the repeated heavy shipments to Great Britain, there being nearly always more of the wood in stock than the market can digest. It is known that in London pine stocks are heavy, yet the shipments were not regulated in any way by the state of the market, the usual spring and summer fleet from Quebec and the lower ports, having gone forward as if the consuming powers of the British trade were inexhaustible.

THE prediction is being realized that Pacific coast lumber would find a market in Eastern cities. It is stated that the Puget Sound mills are getting large orders both for lumber and shingles from cities as far east as Council Bluffs. British Columbia is similiarly situated, and such shipments of lumber as have been made east got a ready sale. The prairies of the Northwest should furnish a large market for lumber, and as they become better settled no doubt they will. Much depends upon rates. The erection of mills in the eastern part of the province may be in a position to supply the demand to better advantage than those located near the coast. Still, if they can supply the rough lumber cheaper, the manufactured articles, such as sash, doors, blinds, etc., ought to be supplied from New Westminster, Vancouver and other contiguous points.

ALTHOUGH spruce is growing in favor in this country, the *Lumber Trades Journal* of London, while admitting that in comparison with its intrinsic value spruce is sold lower than any of the American woods, does not believe there is any probability of its selling for more in the European markets. This is in consequence of a wood of a similar character which is supplied from the forests of Russia and the north of Europe generally. Spruce deals have always been supplied so cheaply to builders, says the *Lumber Trades Journal*, that the real value of the wood has been underestimated, or, perhaps, overlooked, and it has merits that do not appertain to other descriptions of whitewood. It has great strength, and is, nevertheless, easily worked, and for the construction of ordinary dwelling houses, roofs, and light work it is especially adapted. The principal growth of spruce is in Lower Canada, including New Brunswick and Nova Scotia. There is little spruce west of Quebec and of the Ottawa River in Canada.

THE American Forestry Congress held its sixth annual session last month at Springfield, Illinois. A number of papers were read on different subjects connected with the preservation and reproduction of forests. A memorial was prepared to the United States Congress in favor of a bill providing among other things for the appointment of a forestry Commissioner with a salary of $5000, to have the care, management and control of the public forest lands, and four assistant commissioners with salaries of $3000. Mr. Fernow, the corresponding secretary of the Forestry Congress, who is also chief of the forestry division of the United States department of agriculture, urged arguments based on statistics to show that the cost of an organization would be amply repaid by the prevention of fires alone. He would have the government make accurate surveys of wooded lands and withdraw them from settlement, and then employ a trained staff to protect the forests. The Hon. Mr. Joly, of Quebec, was elected one of the vice-presidents.

THE Gilmour-Paradis *embroglio* in its various manifestations is still unsettled, though some progress has been made in various directions. A decision has been given in favor of Father Paradis and the settlers, but Messrs. Gilmour intend to carry the case to the Privy Council, where it is reported that Mr. Mercier will intervene against them on the part of the Province. Mr. Tache, the Deputy Commissioner of Crown Lands, has reported officially that in a conference with Father Paradis and Messrs. Gilmour he proposed that for the timbered lots in dispute those better adapted for cultivation should be substituted, and made a personal, unofficial offer to propose that the Government should assume the costs. Father Paradis declined to consent to this arrangement. The charge of forgeries seems to have fallen through, the cheque endorsed by Father Paradis being produced and being in reality payable to his order. Messrs. Gilmour's counsel has obtained a verdict giving him damages for an attack made upon him in a journal for acting against a priest.

AT a meeting of the creditors of Messrs. R. A. and J. Stewart held in London, recently, the following scheme was proposed :—The bankrupts to undertake to pay the sum of £70,000, the payments to extend over a period of five years, conditional on their (the bankrupts) obtaining their immediate discharge. No security was offered. This would mean about 5/- in the £ unsecured. Some of the creditors agreed to accept the scheme, but considerable opposition prevailed, and many refused to sign. After a certain amount of excitement and discussion the meeting terminated.

A RECENT report by M. Fabre, the agent of the Dominion of Canada at Paris, speaks hopefully of the prospects of closer commercial relations with France, and expatiates on the great advantages which we would derive. He shows that if we were placed, as we are not now, on the footing of "the most favored nation," the duties on goods exported by us to France would be greatly reduced. He especially mentions flooring, boards, battens and other partially manufactured timber as gaining by this reduction so much as to stimulate the trade. For instance, he shows that the duties on flooring deals, planed and grooved planks, &c., would be reduced 25 per cent., on iron hooped casks, empty or in staves, 60 per cent., and on wooden hooped casks removed altogether, and so with other goods. He argues that a considerable demand would be created for such goods. France, he says, would grant us this proposition in return for a reduction of our duty on light wines.

A RETURN to Parliament as to timber licenses in the disputed territory give little hope of the termination of the present conflict of authorities, so annoying to the lumbermen and mill owners of the district, till the litigation in regard to this matter ends in a final judicial decision. The present dispute is as to the rights of the Province or Dominion in view of the extinction of the Inland title. The rival authorities seem more anxious as to the maintenance of their respective claims than for the interests of those who have invested their capital and whose operations are impeded and rendered uncertain by this dispute. Why should there be any difficulty at arriving at a provisional agreement for joint action, with an understanding to abide by the decision when given, the successful party confirming titles and receiving any moneys that have been paid; At present it seems that it is the Dominion that is willing to make such a provisional arrangement so as to relieve those interested from their dubious position, while the Province appears to hesitate, probably from the fear of prejudicing its claim.

Bradstreet's, usually well informed in all trade matters, speaks of the increased export duty on saw logs as having succeeded in its objects of retaliation for the duty on our lumber, and frustrating those Michigan lumbermen, who, while enjoying this protection, bought pine lands in Canada, in order to get a cheap supply of logs. This importation of logs has, it says, now been abandoned, and it mentions a concern, which, owning one billion of Canadian pine, put in twelve million feet of logs last winter, in order to tow them to Tawas and Saginaw, a project which has been abandoned. This is satisfactory and it is still more satisfactory to learn that these logs, sold to a Boston concern, are being sawn at Midland. According to the same authority other lumbermen from the States are withdrawing from these attempts to carry off Canadian logs. *Bradstreet's*, as might be expected, is better informed as to the real position of affairs than many who are laying down the law with more confidence than knowledge. It places the responsibility on the right shoulders by remarking "meanwhile the Canadian government is ready to permit free exportation of logs whenever the United States allows free importation of lumber." And until the United States sees fit to accept our standing offer, the export duty, which seems to work as was intended, will be retained.

A FOREST DEPARTMENT.

The Gilmour-Paradis litigation and a recent return to Parliament concerning timber licenses and Crown land in the formerly disputed territory, both afford evidence of an unsatisfactory state of things in the two chief Provinces of the Dominion from the intermingling of lumbering operations and agricultural settlement. Attention is thus called to a well-known evil. The influx of settlers into timbered lands under license is not in the interest etther of the lumberman, the farmer or the general community.

It is the fruitful source of ill-will, disputes, litigation frauds on the Government and pillaging of the lumbermen by pretended farmers, distruction of property and loss of public revenue. To the lumbermen it is especially injurious for besides minor annoyances it often forces upon him inconvenient and premature cutting of timber on parts of his limit and exposes him to greater risk from fire. It is impossible to prevent the flames sometimes spreading to the forest when settlers are clearing their new land by burning in the immediate vicinity, to say nothing of increased danger trom the presence and possible carelessness of persons over whom the lumberman has no control and who have little personally at sfake if their camp fire while hunting or match when lighting a pipe should cause a devastating conflagration. In such cases the community at large suffers, for there is a distruction of the wealth of the coontry, and a loss of revenue, a share of it being borne by every individual. Nor does the settler gain by the system, for forest land is rarely so well adapted for agriculture as other portions of the public domain which are or should be open for settlement.

To remedy this evil or at least to check it, each Province and the Dominion should establish departments or sub-departments of Woods and Forests. One of these should be. in conjunction with the Crown lands department, to mark out the land to be classed as forest and the area open for settlement. No farm settlers should be allowed on the forest reserves unless they are thrown open after the timber is removed. On the other hand the lumberman might be called upon to conclude his operation upon certain portions of his limit within a reasonable time if it were held expedient to withdraw it from the forest reserve and open it for settlement, In this way the lumberman would be protected from loss and interruption, the agricultural settler would not be lured into wasting his energies on unsuitable land and the public revenue would be protected. The lumbermen would also be benefitted and the public finances improved by the forestry department ezploring, setting aside and making public by maps or otherwise the available forest land not yet appropriated, thps ensuring readier sales and increased competition. It would also facilitate the reservation, if it is not too late, of permanent forests as in the chief countries of Europe.

From every point of view the establishment of properly organized Forest Departments is advisable.

SCHOOLS OF FORESTRY.

A SPECIAL committee of the British Parliament has presented a report on the advisability of a Forest School or other means of rendering the woodlands of the Three Kingdoms more remunerative. After a thorough investigation they recommended that there should be a Board of Forestry with a responsible head reporting to some Department, the members being chosen from the societies, the two Houses of Parliament, owners of extensive woodland, &c. The Board is to manage forest schools in each of the three Kingdoms and instruction in forestry. The committee call attention to the fact that the British imports of timber from abroad amount to no less than £16,000,000 or about $80,000,000 and they hope that good management may cause a portion of this to be supplied from the home forests. The improvement in the public forests would, they say, amply repay the cost of the School, and the private woodlands are far more extensive. Official figures give the area of woodlands in the Three Kingdoms as 2,788,000 acres, England having 1,460,000, Wales 163,000, Scotland 829,000, and Ireland 330,000. They call attention to the fact that nearly every other civilized nation has forest schools and an organized system of instruction in forestry. The want of such a system in Great Britain will be called to the attention of the general public by this report, and it is expected that the Government will act upon its recommendations. It is not the first time that the want of scientific and practical instruction in forestry has been felt, for on the establishment of a forestry department in India the officials had at first, if they do not still have, to acquire the requisite knowledge in the schools of France and Germany. The same was the case when the Australasian and South African colon took steps in this direction, for it is Canada alone that has followed the Mother Country in ignoring this subject.

CORRESPONDENCE invited on all relevant topics.

CANADIAN HARDWOODS FOR CARRIAGE BUILDING.

THE following letter has been addressed by Mr. George Norgate Hooper, F.R.G.S., F.S.S., President of the Institute of British Carriage Manufacturers, and its representative in the Council of the London Chamber of Commerce, to the Canadian Minister of Agriculture at Ottawa :—

SIR,—It may be asked what induced me to make a journey to Canada when I might have enjoyed a quiet holiday with change of scene, a pleasant rest, and far less fatigue in some nearer country. To such a question I would reply, the motives were somewhat mixed. I had this year made the acquaintance of many colonists through the medium of the Colonial and Indian Exhibition, as also through the congresses, conferences, and entertainments of the London Chamber of Commerce ; I had besides promised one of my sons an opportunity of visiting Canada before he settled down in England as a land agent, and so had opened up a sort of sympathy with the colony and its people. I had also received many invitations from Americans to visit them, and in addition, believed that I might acquire some useful knowledge and perhaps be able in some slight degree to assist in promoting a friendly intercourse, and developing trade between the Mother Country and her nearest large colony. Having these views, hopes, and intentions, I left England for a few weeks with a definite plan sketched out, but at the same time one which would have to be enlarged, curtailed, or altered according to circumstances.

Provided with letters of introduction from Sir Charles Tupper, High Commissioner of Canada in London, England, to Professor Saunders, of London, Canada, from Professor Macoun to H. B. Small, Esq., of Ottawa, and from the London Chamber of Commerce to the Secretaries of the Boards of Trade at Toronto, Ottawa, Montreal, Quebec, and Halifax, I was offered opportunities of procuring information under a variety of heads.

My time, however, being limited, others moving about besides myself, some being away, and in one case too distant, and entirely out of reach under the conditions of my journey, and again the time of my calling being in some cases inopportune, my credentials were not of such assistance as under more favorable conditions they might have been.

It did not fall to my lot to see many large trees, such as I had been in the habit of seeing in England, except in the public square of the pretty town of New Haven in the United States. I ought not to say that I was disappointed, as in the States and Canada, for many years past, the settlers and farmers have looked upon timber trees as their natural enemies, and have got rid of them by every means in their power. This wholesale destruction has been carried on to such an extent that good timber trees of commercial value can now only be found in places remote from civilization ; that is to say in the primeval forests of the Dominion. Woods that we now import from our colonies and many foreign countries are really from wild or naturally grown trees that have matured without care or cultivation. Much of the timber I have seen growing in European and Canadian forests is of so inferior a quality as to be fit only for fuel, for which purpose a large proportion of it is grown in various parts of Europe. Some of our British timber trees are partially cultivated and cared for ; nowhere have I seen so good and fine an average of timber and ornamental trees as in England ; they are here planted in parks, hedgerows, and on farms, sometimes singly, sometimes in well defined rows, sometimes in groups ; but English treer are rarels planted in forests.

Planted in this open manner they are fully under the influence of light and sunshine, storm and rain, and have the benefit of plenty of fresh air ; they spread their limbs, they grow slowly, and their wood becomes hard and tough ; on the other hand, trees which grow close together in forests get little sur shine and light on their trunks, little fresh air or the bracing influence of wind, rain and storm.

I contend that with scientific forrestry timber trees can be cultivated and thereby improved in quality just as by scientific and careful cultivation flowers, fruits, vegetables and all garden and farm produce can be improved and rendered more excellent, and therefore more valuable ; the partial success that has followed partial cultivation encourages us to believe, nay, assures us, that, with better methods, better results will be obtained : *Arte natura durabit.*

The establishment of high schools and elementary Schools of Forestry in England and her colonies would render excellent service to landowners, as also to manufacturers requiring sound and fine woods for their work ; nor would the general public fail to reap a benefit, since it would get good articles of British growth and manufacture, thus keeping the money of the country to pay its own rents, rates, and taxes, instead of sending it away to pay those of other people who now profit by our distinct negligence in not turning to good account our manifold resources.

Having carefully read the evidence given before the Committee of the House of Commons in 1885-86, as to the utility of Schools of Forestry, and the advantages of establishing one or more in England or Scotland, I was prepared to believe that great waste must occur, in forests and forest products, without careful and systematic management.

I was quite unprepared, however, to see and hear of wholesale and indiscriminate waste, probably as a sort of necessary sacrifice to the production of wood, but waste for all that. It may possibly be that many trees left to themselves uncared for and uncultivated are fit for nothing but fuel ; and it may be that trees fit only for cooking and warming purposes have their value, but all unnecessary waste should be avoided as a loss to the colony. It would be conceded at once that what may be a small individual loss, when multiplied ten thousand times, becomes a heavy national loss, and it is evident that the Dominion of Canada is at present suffering in this way.

In many parts the presence of trees seems to have been looked upon with as much dread as pestilence or famine, and to be got rid of at any cost, by felling, burning, blasting, rotting, &c. ; and indeed there are districts which bear traces of a sort of hatred of trees, a hatred that leaves behind it scars, sores, and distortions on the face of the fair earth, tolerable to behold under the bright sun, but which must be gloomy, sad, and forbidding in dull, rainy, or foggy weather.

From the experience of Switzerland, Italy, France, Norway, England, and other countries, it has become evident, and has been proved, that trees are the friends of man, and not enemies to be destroyed by any means, fair or foul ; for they moderate and equalize the rainfall, the temperature, the climate, and promote the even and safe flow of rivers. They protect crops and cattle from the keenness and violence of winds and tempests, and they also afford shelter for those necessary birds and animals which keep insect life within due bounds, besides providing shade and shelter to man.

The stately trees of England grown in parks and hedgerows are not only ornamental, but give a character of beauty to the country, to say nothing of the fine quality of the timber contained in their massive trunks to which storm, sunshine, and air have free access ; their very beauty, however, is a snare for their owners unless they happen to be imbued with the mercantile spirit of the age and who are apt to delay, and do delay, felling them while in their prime, especially if there are ladies in the case who venerate the sentimental old English ballad "Woodman, Spare That Tree." This and other reasons combine to cause a large percentage of splendid timber trees to virtually rot as they stand, not ultimately to have no value whatever, not even realizing the cost of felling and removal.

Thus one passes from waste of one kind to a waste of a totally different kind in different countries, and under different conditions.

The evidence shows that by skilled management such as would become general were good forest schools established and maintained—schools which would turn out skilled foresters of various grades-districts, that cannot now be cultivated with profit as farms, might be made to afford good returns under timber, and probably fruit cultivation, with skilled and careful supervision.

If this has been put to the test by the intelligent foresight of the British Government in India, and will probably come to be considered an advantage in England, where timber cultivation has not hitherto been carried on under the best possible conditions for success, how much more would it advantage a country like Canada, that abounds in immense natural forests, which could be rendered highly productive and more profitable under scientific management.

These volumes of evidence to which I have alluded are well worthy of perusal by statesmen, members of Parliament, government officers, timber merchants, and all persons interested in the growth and improvement of trees as well as those using wood in their manufactures ; for it behooves the people of all countries to employ their national products with prudence and discretion, by avoiding waste and promoting their best possible use for the general welfare.

Finding that professor Saunders, to whom was addressed my first letter of introduction, was away from his home in London, Ontario, I rapidly retraced my way sixty miles by railway to Chatham, and visited the hardwood mills of Messrs. Van Allen & Co. there. I found fine samples of straight-grown oak being cut and squared for special purposes ; but there seemed to be a difficulty in disposing of the outside slabs and planks. These, if of good quality, might be sawn up into straight bars, packed in rough crates or cases, and sent to London, England, at a small cost, for use in many trades ; if sorted according to quality, and marked in a manner to be understood both by the seller and buyer, they would readily sell at the carriage auctions, held fortnightly at the Baker Street Carriage Bazaar, London : if they could be sent sound and seasoned so much the better : but in any case the timber should be of good marketable quality, fit for manufacturing pusposes, and well worth cost of

packing and freight. American makers send seasoned spokes to the English market, which command a good price, and I see no reason why this waste timber, which is at present unproductive, should not in a similar manner find its way into our factories.

Various timber yards were visited at London, Chatham, Ottawa, Aylmer, Hull, and New Edinburgh, but at only one (Mr. Cormier), at Aylmer, did I see hard and tough timber suitable for carriage building purposes, although large quantities would have to be very carefully examined, selected, and sorted by competent persons in order to secure woods of fine and suitable quality.

Where elasticity is an essential quality required, the trees should be felled and sent to market in youth or middle age, when such quality is naturally in the wood, for it is with trees as with the human body, strength and elasticity must be sought in youth and middle age, not at full maturity or old age.

In order to economise weight, transport, freight, etc., it is desirable that trees should be converted into planks, as is done by timber merchants in England, who convert it where or very near to where it grows, so as to avoid all needless expenses for handling.

Moreover, after planking, great care should be taken to avoid another cause of loss by the timber splitting; for the harder and better the quality, so much greater is the chance of splitting in seasoning. Unless this is provided for and prevented, there may be a waste and loss of 20 per cent. when fully seasoned. Samples have been sent to Mr. John Dyke, the agent of the Canadian Government in Liverpool, to forward to the Department of Agriculture at Ottawa, showing how the various woods used in England by carriage builders are protected by wood clamps strongly nailed on the ends of all boards and planks 1 in. and upwards in thickness, and glued canvas smeared with strong paint on the thin boards used for panels.

With timber thus prepared and carefully handled in transport there need be little injury or waste, and thus the price can be so arranged as to be advantageous both to seller and buyer; every unnecessary waste should be avoided, and producer and consumer should be brought into close contact for their mutual advantage.

A system of second or artificial seasoning of timber seems to be very general in the United States in addition to the natural system of seasoning wood in the open air, thus—many factories I visited had hot rooms and drying closets and boxes in which seasoned converted wood is kept for several days previous to the framing being finally fastened together. This is probably a wise precaution for objects made of wood and intended to sustain the great heat of the summer in some of the States; but the system is carried a step further in some cases, as for instance at the great factory of the far-famed Pullman Railway Carriage Company, at Pullman, near Chicago. The timber there is exposed to the influence of steam for several days in closed chambers in order to wash out the sap; after a certain time, ascertained by experiment and experience, the steam is turned off and a current of hot air is blown in, the moisture being carried away by exhaust fans. It is contended by scientific experts that the sap of the wood is the part that sooner or later causes decay, containing as it does certain proportions of starch, sugar, or syrup, according to the nature of the tree. Under conditions more or less favorable, this has a tendency to ferment, changes its character and decays, carrying the fibrous portions of the wood with it. If the steam and dry air really carry off the elements of decay and dissolution, and the cells that contained the sap close firmly, decay is deferred or becomes impossible. Be this as it may, the materials and workmanship of these choice and ingenious Pullman cars leave little to be desired, and if this American system has as much merit as its inventors and agents claim for it, a new era for workers in wood may have set in at which many will rejoice. The system has already been introduced into England, and before many years have elapsed we may possibly be able to hear the experience of those who have put it to the test.

At St. Catharines, in Canada, near Niagara, I found a prosperous branch of an American wheel manufacturing company, and it is probable that with care and enterprise its business may be extended, and others established in the colony to meet the demand for good wheels in England.

While receiving the assistance of the Canadian Government through the courtesy of H. B. Small, Esq., of the Department of Agriculture, and his colleagues at Ottawa, I was afforded opportunities of seeing the enterprise, industry, skill, and rapidity of work of some of the chief timber merchants, lumbermen, and their assistants in that hive of timber industry, Ottawa.

At one of the leading mills great balks of pine were neatly hauled up from the river near the Chaudiere Falls, and, almost solely by the water power judiciously applied from the falls, they were placed in position on the great saw benches, the process being watched and directed by a foreman, so situated that his range of vision took in all that was going on; and I was informed after seeing the sawing done, and the great mass of timber moved by machinery, apparently as easily as a skilled nurse turns over a tiny infant, that a great tree can be converted into joists cut to a given thickness and length at an average of eight minutes per log.

Of course there is much refuse from these logs, and men and lads have to be tolerably active in clearing this away in order to prevent impediments and delays.

The larger refuse is rapidly converted into water pails by very ingenious machinery. Such as is not available for pails is used by a neighboring match manufactory, which work up the scraps, except the bark, and what adheres to it, and the sawdust.

But there is a leak, and a very troublesome one, notwithstanding all this use of refuse, much of which finds its way into the river and becomes interlaced, forming shoals, banks, and impediments that must inevitably cause difficulties and troubles hereafter, which will have to be dealt with by the municipality or the Government.

(To be continued.)

As will be noticed by the present issue very important improvements, both typographically and otherwise, are being made in the CANADA LUMBERMAN. The late arrival of our new printing outfit has not only delayed pnblication for some days, but also compelled us to mix the old stock with the new in order to get out in at least a reasonable time. With the November issue, however, we hope to show one of the handsomest publications on the continent, and our friends of the trade and also of the press, will please forgo criticism until the November number reaches them.

WE have received the number for Sept. 17th of the edition for Canada and the United States of the *Illustrated London News*. It is printed from duplicate plates and is in every respect a *fac similie* of the original London edition, so well-known and highly appreciated. The double page illustration of "an episode of the Thames boating season" is excellent, and some of the other principal illustrations are scenes in Burmah, the United States, Lindisfarre (the pilgrimage), New Zealand, Bulgravia, Morocco, etc. Krupp's latest big gun is depicted on its railroad journey towards Italy. Beside the attractive illustrations, the letter press gives in a compact, readable form the current news of Great Britain and the rest of the old world. The office of publication is 237 Porter Buildings, New York.

Do You Do These Things?

Do you take a squirt can in one hand and project a stream of oil as far as you can throw it, in order to save going to the the hole itself?

If you do, don't do it any more; wilful waste is downright robbery.

Do you use an oil can at all for oiling, except on emergency, or for the moment?

If you do, don't do it any more, for much better lubrication can be had by automatic apparatus.

Do you keep an old tin coffee pot full of suet on the steam chest, and every time you have nothing else to do pour a dipperful into the steam chest?

If you do, stop it, and get a sight feed cup, which will save you the trouble of slushing the cylinder and save the cylinder and valve seats, the piston and follower, and all other places touched by the grease.

Do you feed up on the boiler until the water is out of sight in the glass, then shut off the feed, put in a big fire and sit down in a dark corner with a four-horse brier pipe and smoke until you happen to think that maybe the water is low?

If you do these things you should notify the coroner that some day his services will be needed, but it is better to cease the practice mentioned before the coroner comes.

Do you stop leaks about the boiler as fast as they occur, or do you wait until the place sounds like a snake's den before you stir?

If you do, you waste heat, which is the same word as money, only differently spelled. Every jet of hot water leaking from a steam boiler is just so much money thrown away, and if it were your money you would be bankrupt in a short time, in some boiler rooms.

Do you take a screw wrench and yank away at a bolt or nut under steam pressure?

If you do there will come a time, sooner or later, when you will do so once too often, and either kill yourself or some one else. Bolts or nuts are liable to strip or break if tampered with under pressure, and they never tell anyone when they are going to do it beforehand.

Do you attempt to stop pounding in the [illegible] for the crank pin as it comes around and trying to hit the key once in a while?

If you do, ask the strap and neck of the connecting rod how it likes it, when you don't hit the key and do hit the oil cup.

Do you pack the piston by taking it out of the cylinder, laying it on the floor, setting out the rings and then when the piston won't go into the cylinder, try to batter it in with a four-foot stick of cord wood?

If you do, you should reform, and pack the piston in the cylinder where it belongs, being sure to get it central by measuring from the lathe center in the end of the piston rod.

Do you put a new turn of packing on top of the old, hard burned stuff when the piston rod leaks steam?

If you do you will have a scored piston rod and broken gland bolts some day. Packing under heat and pressure gets so hard that it cuts like a file when left in the stuffing box, and as soon as one begins to leak, all the old stuff should be pulled out and new put in its place.—*The Milling Engineer.*

CORRESPONDENCE.

MADAWASKA, N. B., Sep. 20th, 1887

Editor Canada Lumberman.

DEAR SIR,—I can see no excuse for any one who has [illegible] to express failing to use them for the benefit of his fellow lumbermen, particularly when you, Mr. Editor, promise, as you do in the last issue of THE LUMBERMAN, to make them interesting.

I am going to take exception to your remarks regarding Quebec ground rents, for as you know there are two sides to every question, and without opposition there is no investigation, without investigation there is no proof, and without proof authority is no better than so much sawdust or chaff.

Quebec ground rents, like everything else, finds its level. It is a well-known fact that our lumber trade is on the wane, and unless strongly protected our country will soon find itself in a similar, if not a worse, position than are the Americans to-day. Experience proves that the lumbering business of this country is being carried on extravagantly, and in many cases recklessly, which sooner or later will bring this great industry to grief, leaving the country in a much worse state than the operator found it. I contend that it is the duty of all governments to check, before too late, this wholesale slaughter of our forests, regulate the trade and keep it within the limits of Government control. They should encourage economy, and so protect our forest wealth that for generations to come it may be utilized to build up our country, instead of giving it body and bones to syndicates and monopolists by which to augment their exchequer to the detriment of the general public. We never should allow one stick of timber to leave our country before being manufactured, and this granting of a monopoly of our timber lands to speculators is a curse, and an imposition on the people of this country. And the screws are getting tightened up more and more every day. The wholesale slaughter now bing carried on is making our forests a prey to forest fires, and otherwise destroying the wealth which rightly belongs to the public. I hold that if our lumber lands were highly protected, and domestic mills encouraged in the interior of our country, we would then have one hundred settlers where now we don't have one. Towns and cities cannot be built without a country to support them, and if this natural wealth is removed all prospects of a local trade is removed also. The rapid construction of railroads throughout the interior of our country, adds strongly to the argument to encourage domestic mills to feed and support these iron highways. The starting up of such mills would make a boom in settling our lands, in railroad traffic, and in the manufacture of many things now not thought of. What do our cities gain by their lumber speculators cutting and floating our lumber to the large centres to be manufactured? They increase a small army of labor, hard worked, half fed, and increase the rum traffic, with poverty staring the laborer in the face through the winter, and at the year's end no better off.

What may we expect when our lumber boom ceases? It's all very well as long as high prices are maintained to fill the coffers of syndicates and monopolists, but when a stagnation takes place it will prove a serious affair to the tens of thousands of laborers who now depend on the lumber industry to supply them with the substance of life. The sooner therefore that our wise officials draw the attention of farmers and domestic millers of the necessity of building up our neglected local markets the better it will be for all, and the sooner we will learn to say:

"Ye earnest men, no longer shrink
From speaking what you truly think;
Proclaim the truth you find!
And let free search, free speech, free thought,
By blood of ancient worthies bought,
Advance the human mind."

P. O. BYRAM.

EXCHANGE ECHOES.

Mississippi Valley Lumberman.

There is evidently a growing sentiment among the Canadian people in behalf of commercial union with the United States. If the signs are not mistaken a large majority of our Canadian neighbors are in favor of it, although the central government is opposed to it. Recent events in Manitoba touching the construction of a line of road to connect with the Northern Pacific, indicates that the people of that province are ready not only for commercial union but possibly annexation. Such material prosperity as the Canadas now enjoy may be attributed to her proximity to the United States. The country is rich in raw material, not the least of which is lumber. Her own consumptive demands are not as large as her supply of raw material, and naturally she would be glad to market her products unrestrictedly on this side of the line. A movement in behalf of commercial union has been started at some cities on the border line where freer trade would contribute to their prosperity, but we are not of the number who are ready to believe that the time has yet come to batter down the protective bars. When the existing relations are dissolved let it be by annexation absolute and unequivocal. The friends of commercial union may claim that the one is a step to the other, and that the opposition of the central government to commercial union springs from fear of political union, but we can bide our time. The time has not yet come for any other relations than now exist.

Lumber Trade Journal, Chicago.

The anxiety of the people of the Dominion to consumate a reciprocity treaty with the United States, which will give both countries a free exchange of business, cannot be watched too carefully. The initiative oppositionto the measuresi nstituted in 1877 by the National Association of Lumber Dealers, should be followed by all other leading industries. The real object of the Canadians is nicely hidden by the offer to give us, free of duty, such commodities as we stand in need of; but how will it be about such as we do not need? How will it be about iron, on our lake borders when that which has been supplied by the furnaces of Pennsylvania, Ohio, Indiana, Illinois and Upper Michigan, will be no more. Iron could, by the success of this reciprocity measure, be brought from England to Quebec, and given to us as a Canadian product, far below the prices at which it can be manufactured in this lake boundry. Our furnaces and mines might remain idle, to the profit and gratification of our Canadian neighbors. As Mr. Butterworth of Ohio is fixing up some sort of a reciprocity scheme with Canada, we hope to see the National Association of Lumber Dealers, at their next meeting at St. Louis, give voice to their views on this important question.

Northwestern Lumberman.

The observing person who visits the lumber office of any of the great logging and manufacturing concerns this fall will notice a peculiarity that will attract his attention. The universal sign on the door "no men wanted for the woods," is conspicuous for its absence, and the droves of men with red shirts, top boots and slouch hats are not hanging around street corners or lounging in the corridors of mill offices to any perceptible extent. The general activity has picked them up, and given them employment in other branches of industry, and the gruffness of employers bored by applications for work no longer blanches the cheek of the hardy woodsman. He won't apply very numerously, and the hunting will be transferred to the other side of the outfit. And men will have to be given big wages and furnished with an apple pie chromo to induce them to go into the woods this winter. They are a scarce commodity. Wages, I am told, will range from $20 to $30 a month. It's a very enviable position for labor, even if a little tough on the employer. Men hunters are now raking Canada with fine tooth combs for men for the woods, and the chap who wants work will be cheerfully accommodated.

The Timberman, Chicago.

The lumber business on the Saginaw river has become "the creature of circumstances" to a most remarkable degree, more so, perhaps, than at any great lumber manufacturing centre in the country. In the first place it is very largely dependent on territory which is very remote for logs with which to stock the enormous productive capacity of the monster mills, about eighty of which still continue their work of devastation of the forests of Michigan. In fact, a very large proportion of the pine which now comes to Bay City and Saginaw in the log, and is finally cross-piled on the docks ready for shipment, a few years ago would not have been considered tributary to this market. But necessity, besides being the mother of invention, often forces the adaptation of themselves to circumstances, of the American people in the business departments of life; and this is especially remarkable in the history of the lumbering interests in the Saginaw district. * * * The next important circumstance in the connection alluded to is that of the Canadian pine timber supply. Disguise it as he may, the Saginaw river manufacturer has builded his hopes very largely on the source of supply embraced in the Georgian Bay country, and very many of them invested their money there, intending to make enormous drafts on the forests of our Canadian neighbors. But these full-blown blossoms of hope have been nipped in the bud by the chilling blasts eminating from the legislative building at Ottawa, in the imposition of a tax on logs exported from the Dominion to be converted into lumber in Uncle Sam's domain. Among those who made heavy investments in Canadian pine may be mentioned: Folsom & Arnold, the Emery Brothers, Charles H. Bradley, the Eddy Brothers, Eddy, Avery & Eddy, and Green Pack, of Oscoda; of course these are only a few of the prominent ones. The first named firm, Folsom & Arnold, have had an extensive mill in operation a few years in the midst of their Canadian pine, which keeps several vessels constantly employed transporting the lumber.

Northwestern Lumberman.

After the old English and Scotch elements of the lower provinces shall have died out, and the younger element of the Canadian communities shall have become embued and vitalized by American ideas and commercial influence, the feeling against complete national union with the United States will have become nearly or quite extinct. The United States can afford to wait for the national, if it can have the commercial union. Uncle Samuel is not vain-glorious for extending his borders. He is benevolent, and willing to take Canada under his waistcoat, when Canada is willing to thus hover. The United States does not need the commercial union as much as does Canada, but is willing to enter into such a relationship for the sake of comity and good neighborhood. The Michigan lumbermen who have invested money in Canadian timber limits will hail with satisfaction the movement that is gaining some headway towards the establishment of completc reciprocity between the two countries.

FORESTS WANTED.

The last three or four years, which cover the whole history of our North-West settlements, are said to have been exceptionally, and in some parts, disastrously dry. The hope of better things is supposed to lie in tree planting, but for this there is no adequate provision, as little can be expected to be done in this way by settlers who have to bend their utmost powers towards keeping soul and body together. Moreover, no practical person will waste his time nursing forests in a country where they are almost sure to be swept away by fire. The most practical measure for the afforesting of that country would be the most stringent possible regulations with regard to prairie fires. But for these the country would be full of forests in about ten years; the trees which flourish best, cotton wood, poplar, ash-leafed maple, would spring up of themselves and under their shelter or, as a later crop on the same ground, trees of greater usefulness might perhaps be made to grow. In view of the interests of the vast territories under its guardianship should not the National Government conduct a series of sufficiently comprehensive experiments to secure the best results in the way of tree planting? Diligent observation on the spot and scientific enquiry abroad should be brought to bear to discover, as speedily as possible, by what process of sheltering, from what source of supply or by what rotation of species the most valuable timber can be made to grow. As with our fruit and ornamental trees in the east, the foresters of the great west must look largely to Russia for experience.

A NEW DAM ACROSS THE OTTAWA.

The lumbermen of the Chaudiere and Thos. McKay & Co., have began the work of constructing a roller dam 1,500 feet in length across the Ottawa river, from the small island in the river below the Canadian Pacific Railroad Bridge on the south side of the river, and connecting with what is known as the O'Connor dam on the north side of the river.

To those who are acquainted with the appearance of the river about the Chaudiere Falls it will be remembered that on the south side of the river Messrs. Perley & Pattee's saw mills are situated a little above the falls, and that extending for over a thousand feet from the mill directly up the river is a large dam which composes the northern boundary of their mill dam. Outside of this dam from a point near the saw mills there is a lower roller dam, only apparent during low water, which extends to the island about six hundred feet above the falls and about four hundred feet in a direct line from Messrs. Perley & Pattee's mill dam.

On the north side of the river Eddy & Hurdman's mill dam extends from the rear of E. B. Eddy's large saw mill directly up the river about 900 feet, where it is joined to the O'Connor dam, which latter extends three hundred feet in a slanting direction along the upper extremity of the large flat rock on the Hull side of the Falls.

The new dam which it is proposed to build will extend from the upper end of the O'Connor dam to the island in the channel on the south side of the river. The new dam will be 1,500 feet in length and between five and six feet in height and built as a roller dam, that is five feet in height on the side nearest the falls and slanting down to two feet on the upper side so that at high water the water will pass over the dam.

The object of this dam is to raise the water in the river above the Falls to furnish sufficient water to run the mills at the Chaudiere during the period of low water in the river. In addition to giving more water with which to run the mill machinery the new dam will be very useful to the city waterworks in furnishing additional power to drive the additional machinery which is now being put into the pump house extension. The building of this new dam, it will be seen, will complete a chain of dams, which stretch across the Ottawa River just above the falls. The new dam as well as the old dam, from Perley and Pattee's mills to the island will of course only affect the flow of the river during very low water, as during high water the dams will be covered. The work of construction was began to-day and will be pushed through to completion as fast as possible which will probably be before the ice takes on the river. The estimated cost of the work will be between six and eight thousand dollars.—*Journal.*

GALT'S SUBSTANTIAL PROGRESS.

[CONTRIBUTED.]

Below will be found a few of the new buildings erected in Galt during the present year. It was thought by many that considering the great activity in building operations during 1885 and 1886, there would be a decided falling off this year. On the contrary, however, it amounts to the handsome showing of nearly $210,000. Galt is to be congratulated upon the evidences of prosperity and enterprise which the result indicates. The following are some of the most important structures: Jas. Anderson, 2 brick stores and stone livery stable, $5000; Imperial Hotel Co., block of brick stores and bank, $17,000; Town of Galt, stone vegetable market, $1,800; Fitting up new fire hall, $613; Victoria Wheel Co., addition to factory, $500; Goldie & McCulloch, rebuilding of machine shop, $10,000; Victoria Rink Co., opera house and stores, $17,000; Young & Main, 2 brick stores, $4,000; Shurly & Dietrich, Saw Works, stone addition to factory, $1,000; MacGregor, Gourlay & Co., Machine Works, stone carpenter shop, $1,500; A. I. Campbell, stone carpenter shop, $1,650; Geo. Hespeler, addition to saw mill for the purpose of manufacturing sash and doors, etc., $1,000. Until lately the local saw mills supplied the lumber required for building purposes here, but the pine in the vicinity is almost exhausted. On enquiry it was found that the five saw mills which used to supply Galt had cut as follows: D. Clemens, 750,000; W. K. Dryden. 1,000,000; G. Hespeler, 1,000,000; R. Gilholm, 1,500,000; Reid Bros., 750,000. Galt builders and lumber merchants imported as follows: The town, for sidewalks, etc., 150,000 feet; R. Freer, for builders'. supplies, 450,000 feet; A. McAuslan, 500,000 feet; A. I. Campbell, 200,000 feet; W. & F. A. Scott, 550,000 feet; D. Murray, 2,000,000 feet.

A CHANCE FOR "CRANKS."

Some plan must be devised by which cypress logs can be got out of the swamps, rain or no rain. This is a fine opening for inventors, as there is "millions in it," but we want to warn everybody that it is not a problem that can be solved by figures and drawing. One of these pushing, energetic "cranks," who don't value anybody's advice, can do it, provided he is at the same time a first-class mechanical engineer. The field is open and the reward sure and free to all.—*Southern Lumberman.*

NOTES.

Mr. David Griffith, late foreman for Bronson & Weston in the Gatineau district, is dead.

Messrs. S. & J. Armstrong, McKellar, have a large force in the bush near Maganettawan. They expect to get out over 3,000,000 feet during the winter. The logs are for the Georgian Bay Lumber Company.

A discussion is going the rounds of the press as to the relative strength of wet and dry timber. We do not believe there is much to be made out of the discussion. Some kinds of timber are stronger when dry, while other kinds are stronger when wet or green. But most hardwoods when wet will possess more tensile strength than when dry. Timber thoroughly seasoned is more brittle than when green, and with the necessary force will break square off, while the same timber green would stand about the same pressure by bending more or less without breaking. Take a hickory sapling that is almost impossible to break in its green state, although it may bend double, and thoroughly dry it, and you may easily break it almost "square off," as the boys say. So with almost any kind of timber. Drying makes it stiffer, more unyielding, but in very few instances stronger.—*Scientific Press.*

NEWS NOTES.

A. L. Wright's saw mill at Berry Mills, has been burnt.

Lumber shipping by boat is dull in Ottawa at present.

A. Dickinson, Lower Brighton, lumber-dealer, has assigned.

Miller & Crosby, saw millers, of Carleton, Ont., have dissolved.

Messrs. Grier & Co.'s little mill, at Ottawa, is closed down owing to low water.

An incendiary fire destroyed Spence & Williams' planing mill in Cobourg.

The saw mill firm of McBurney, Laycock & Co., of Gravenhurst, is about dissolving partnership.

The demand for shantymen is steadily increasing, and large numbers of men are leaving for the woods every day.

Lumber shippers are agitating for a new siding at Hull station. Considerable shipping is going on there at present.

The Eddy Manufacturing Company's new pulp mill is being roofed, and when completed the building will be fireproof inside and outside.

This season's cut of deals of the Baptist mills at Three Rivers is said to have been purchased by a Quebec firm, Messrs. Dobell, Beckett & Co.

Large quantities of spruce lumber are being shipped by barges to the United States markets, principally from the Montmorency and Chaudiere mills.

The steamer "Levi Young," one of the Upper Ottawa company's towing fleet on the Chats Lake, was burned opposite Braeside during last month. The crew were all saved.

The ocean freight market in Montreal still continues depressed and unsatisfactory, and there is more space offering than can be filled, deals being quoted at $9.40 to $10.

The West Cumberland, British Steamer, from Montreal to Pictou, has put back to Quebec leaky, having been ashore at Coudres Island. She must go into dock for survey and repairs.

The captain of the barque Emily for Bordeaux reported that on the 22nd August, in lat. 40·20 north, and long. 54 west, he passed large quantities of spruce deals drifting broadcast over the ocean.

Grading on the "Soo" between Gagen and Gladstone will be completed Oct. 10th. Track is now being laid east from Gagen, east and west from Hermansville and west from Sault Ste. Marie.

It is understood that the increase of ground rent on timber limits, which was to have come into operation Oct. 1st, in the Province of Quebec, has been indefinitely postponed by the Mercier Government.

Business on the Quebec wharves appears almost at a standstill, there being so very little doing; it is years since the like was seen, and the prospects of a revival for the rest of the season seem very doubtful.

The Ottawa *Citizen* understands that the Messrs. Hurdman, lumber dealers, are likely to double their cut of last year. It is not long since that this firm purchased from the Gilmour estate a fine limit for $186,000.

The employees of the Moodyville Saw Mill Co. support a comfortable reading room supplied with the best leading British and American papers with the leading local ones, also a library of over a thousand volumes.

Owing to the good demand for lumber at River Platte, the Export Lumber Co., of Montreal, have secured every available sailing vessel to load lumber for that place, and there is quite a scarcity of tonnage for other shippers.

The Eau Claire Lumber Company have experienced a great deal of trouble in getting their logs down the Bow river to their mill at Calgary. They have been working away all summer and have only now succeeded in getting the logs down.

North Gower has been completely surrounded by bush fires, many farmers losing valuable tracts of timber and several have had great trouble in saving their buildings. The loss of timber in this township must amount to thousands of dollars.

Prices for lumber in Kingston have been higher this year, especially in coarse lumber, such as hemlock, basswood and ash. Birch lumber is coming into use more each year, and is taking the place of walnut in house finishing at about one-quarter the cost.

The popular king of the Gatineau, Mr. Alonzo Wright, M.P., had a narrow escape from serious if not fatal injuries from fire a few days ago. He was up the Gatineau, and while walking on a piece of ground that had been burned over, fell into a pit of fire burning underneath the surface. Had it not been for the timely assistance of one of his men he would have certainly perished. Fortunately he escaped without any serious injury.

The village of Danby, Que., was almost entirely destroyed, Sept. 20th, by fire communicated by bush fires which have been raging in the neighborhood for some time. Twenty-two houses and the station were entirely consumed and many families rendered homeless.

George Spencer, of Wiarton, was adrift on the Georgian Bay on a raft of lumber for three days and two nights during a big storm last month. As he was without food and being partly submurged in water the greater part of the time, his escape from death is considered a miracle.

Another disastrous fire occurred in Montreal a few days ago, completely destroying the planing mill, saw mill and lumber yard belonging to the Messrs. Craig. The loss will be heavy. This is the second occasion in which the Craig's have been burned out, the last fire taking place in December, 1883.

The outlook for the local lumber trade in Quebec is said to be very favorable, and prices are well maintained. Latest advices from mill owners say that the demand is good, and they are busily engaged sawing and filling orders; large quantities of lumber have changed hands during the past month.

A disastrous fire took place at Calumet recently, McIntyre's saw mill being burned to the ground. The fire was first noticed about ten o'clock and in a few minutes the flames had gained such headway that all efforts were in vain to save the structure. The machinery in the mill was destroyed. Total loss $30,000.

We regret to have to announce the death, on the 10th ult., at his summer residence, Cacouna, after a short illness, of Mr. John Ross, the head of the firms of John Ross & Co., Quebec, Ross Bros., Buckingham, and Ross, Ritchie & Co., Three Rivers, and one of the oldest and most respected merchants in Quebec.

Mr. Henry Lovering, of the Georgian Bay Lumber Co., left recently for the Georgian Bay lumber district, with one hundred and fifty men to work in the shanties of the company during the coming winter. The men were all hired at Ottawa at wages ranging from $19 to $25 per month and board. Mr. Lovering expects to take two or three gangs more from Ottawa before cold weather sets in.

Wooden ship building has not totally ceased in Nova Scotia. as several fine vessels have recently been launched on the Bay of Fundy shore. One ship of 1535 tons, built by Messrs. Frieze & Roy, of Maitland, was launched recently and several more are rapidly approaching completion. The Burrill-Johnson Iron Co., at Yarmouth, is engaged on the large ferry steamer for the Halifax and Dartmouth Steam Ferry Co.

The work of constructing the new roller dam across the Ottawa River at the head of the Chaudiere Falls is progressing favorably and the lumbermen expect that before the ice becomes set upon the river that the dam will be completed. The work is under the supervision of Mr. G. B. Pattee. The lumber being used in the dam is white pine of large dimensions, so as to resist the heavy pressure of water and ice during the spring season.

They are talking of holding a world's fair in Montreal to celebrate the completion of the Canadian Pacific railway, and the *Witness* says: "Certainly Canada has never had a more important national event of a material sort or one more worthy of celebration than the connection of ocean ports three thousand miles apart by a single railway which, while being by far the longest in the world, yields to none in magnificence or perfection of management."

It is estimated that the timber forests of British Columbia cover an area of 100,000 square miles, or about one-fourth of the entire province. Some districts are very heavily timbered especially toward the coast, where it is said some forests will yield 600,000 feet of lumber to the acre. Owing to the mountainous nature of the country the timber is very hard to get at in many parts. As yet the timber resources of the country have been but little drawn upon. Exports from the Province last year were about 30,000,000 feet, and this year will probably exceed 40,000,000.

Everything is exceedingly dull in shipping in Montreal, although small shipments of deals are being sent forward to the United Kingdom, induced, no doubt, by the low rates of freight. Deal freights to United Kingdom ports by steamers are quoted at 37s. 6d. to 40s. by regular liners, and several steamers are offering for October and November loading. It is considered doubtful if deal freights will stiffen much this fall, as there will be several coal boats on the market, unless cotton freights are high enough to offer inducements for them to go south.

Bush fires are creating great devastation in many parts of the country, notably in the Ottawa district, where the damage to timber and farm property is enormous. Similar complaints of destruction come from the neighborhood of Kingston and the Montreal district. Between Montreal and Quebec a dozen vessels are detained by the density of the smoke. Against forest fires, Ontario has taken precautions in the [illegible] stringent law with fire-rangers to enforce [illegible] rangers can cover only a limited space, and [illegible] in a time like the present is not confined to the [illegible] exceptionally combustible has the drought [illegible] that a lighted match thrown in a grass field would [illegible] cases produce a conflagration. In such a condition [illegible] we fear it is quite hopeless altogether to prevent farm and forest fires; but much can be done by careful precaution, and [illegible] thing which it is possible to do in the way of pr[illegible] ought to be left undone.

EUROPEAN NOTES.

Perhaps the healthiest article in the London market at present is spruce, as the stock there is only very moderate, and if any reliance is to be placed in the reports from abroad, the supplies for the remainder of the season will be limited.

None of the brokers' circulars for the month, which have just been issued, speak hopefully of the future of the market; all give expression to a want of confidence, which has, no doubt, been influenced greatly by the late suspensions here and abroad.

The chief point of interest at the present time is the probable extent of the autumn imports, but it is as yet too early to form an opinion on the subject. The rise in freights may be expected to be counterbalanced in some measure by a reduction in free-on-board prices, especially by those who are anxious to move some portion of their somewhat heavy stock before the close of navigation.

Things in the free-on-board business are at a complete standstill on account of the large advance in freights which has been a feature of the autumn trade, and the transactions of the past few weeks have been almost exclusively confined to filling up parcels for ships already chartered. Importers are getting very chary of closing contracts unless they know where to lay their hands on suitable tonnage, and it is almost useless submitting prices unless a ship accompanies the offer.

Burmah, now an English possession, has immense forests of teak, a wood which has become of much reduced supply in India, with increasing cost. It is regarded, in some respects, the most valuable commercially and practically of all oriental woods. It is neither too heavy nor too hard, does not warp or split under exposure to heat or dampness, no matter how prolonged, is handsome, having several varieties of color and grain, and contains an essential oil which keeps it from rotting when wet, acts as a preservative for iron, and repels insects. The wood takes a good polish.

Timber, under date of Oct. 1st, says: "It is somewhat singular that, notwithstanding the sharp rise in freights, and the moderate stocks here, the market, instead of advancing, shows on the contrary a downward tendency. This more particularly applies to mixed and 3rd deals which have had a marked fall, 4ths and 5ths fully maintaining their price. It is of course possible that we may even yet witness some improvement in the demand, but it is not likely. The weekly dock deliveries continue to fall of, and the Millwall docks, which have for some months past shown an increase, are this week behind last year; the deficiency may, however, be balanced by increased deliveries overside. There is one feature, however, at the present time, which compares favorably with last year, and that is the sounder state of the trade. Last autumn, it will be remembered, there was a considerable number of failures which created uneasiness and distrust all round. Recently we have been fairly free from such disturbing influences, and we hope this may continue.

Deliveries of wood goods at Glasgow have of late been going on pretty freely; compared with last year's they show a decided improvement in trade. The quality of deals (Quebec and lower ports) delivered from Yorkhill yards during the last three months shows an increase of fully 25 per cent. over that of the corresponding period of last year. There has, however, been an ample importation of Quebec deals to Clyde this year, and the market is at present well supplied, especially with the lower grades, which have constituted the bulk of the arrivals, the stock of 1st quality being comparatively small. Altogether there has been handled at Glasgow this year, ex steamer from Quebec and Montreal, 247,156 pieces deals and planks, and ex sailing vessels from Quebec, including imports at Greenock and Bowling, there have been 166,702 pieces. The Clide import list of the week ending Sept. 8th includes a cargo of teak timber, arrivals of which have been on a moderate scale this year. It is consigned to Messrs. Thompson & Gray. The small stock of birch timber held here has been slightly augmented by the arrival of 400 logs per *Vera*, from Campbellton, N. S., to Messrs. Singleton, Dunn & Co. Better prices for birch are now ruling than was the case at this time when the stock was considerably larger.

THE NEWS.

ONTARIO.

The lumber firm of Black & McKellar, Strathroy, has been dissolved.

The saw mill belonging to W. K. Dickenson, Manotick, has been burnt.

Adam Wright's saw mill at Newburgh, was totally destroyed by fire recently.

Louis and Charles McDonald's saw and shingle mill at Walton has been destroyed by fire.

A saw mill at Omaha has been burned by the bush fires which have been raging of late near the Mississippi.

Mr. James Mackenzie, lumber merchant of Sarnia, younger brother of Hon. Alex. Mackenzie, died September 15th.

J. R. Booth is extending his piling ground in the vicinity of Rochesterville, and a siding is being put into it from the C. A. Railway.

H. A. Patterson & Co., of Chatham, have imported two million feet of lumber this year, and are expecting another consignment soon from the Georgian Bay.

M. &. J. O'Donnell, of Jersey City, N. J., lost their stave mill at Brighton, Ontario, by fire. The mill, sheds and 2,000 feet of matched staves burned. Loss, $10,000.

The Cheboygan Lumber Co., recently sold their pine in the Spanish River region to Stephen Baldwin, of Detroit, for $100,000. About three years ago they bought them for $60,000.

Lumbermen in the Upper Ottawa are very shorthanded. Mr. Noah Gareau who tried to engage about forty men in Ottawa could only secure three although he offered the highest wages.

The last raft of square timber which will arrive this season from the Upper Ottawa has already run the Chaudiere slides. The timber is the property of W. H. Klock & Co., and was cut in the Temiscamingue district.

Seymour Hollister and Henry Jewell, both Americans, have bought a large tract of pine in Canada, near Sault Ste. Marie, and are making arrangements for extensive logging operations. These gentlemen are thoroughly practical loggers and command abundant capital.

T. L. Nichols, a lumber dealer at Welland, has been absent from his business for some time and the sheriff has seased and is disposing of his stock. He never made any headway although in trade for some years.

A move is being made by the millmen at Norman, a suburb of Rat Portage, to separate the mill districts municipally from the town. The lumbermen claim that they do not receive benefit in return for the amount of taxes paid.

Messrs. R. Hurdman & Co., of Ottawa, have a gang of men employed at present, putting up the frame of their new dimension mill whch will be in running order in about two months. They have also added a pump and first-class fire apparatus.

The Minnesota and Ontario Lumber Company's mill at Norman, Lake of the Woods district, will cut nearly ten million feet of lumber this season. The logs are principally drawn from Minnesota, where the company has extensive timber reserves. The output of Cameron & Kennedy's mill at the same place will be about 6,900,000 feet.

The outlook for lumber at Ottawa is said to be very favorable. There has been a gradual advance in prices during the last couple of months. An outside dealer states that three-inch deals now sell at $7 per thousand, being an increase of one dollar.

Two slides of 1,400 and 800 feet have been constructed by J. R. Booth on the Kabaskong, and another is under construction which will be 480 feet long. Over 350,000 logs have been driven through this season, and it is expected that 100,000 more will be pushed through before the season closes.

The lumbermen at the Chaudiere are apprehensive of a shortage of power for their saw mills, owing to the almost unprecedented lowness of the water in the Ottawa river. It is stated that the water in the mill dams is at present lower than it has been since 1876, when the mills at the Chaudiere were compelled to shut down altogether. If the water in the river falls a foot lower some of the mills will have to cease operations.

M. Brennan & Sons, lumber merchants and saw and planing mill proprietors, are building a new saw mill on their timber limit, Huntsville. This mill will have a capacity of about 75,000 feet per day and will be the largest of their three mills. The mill building is now up and the two 75-horse power boilers are in place. The engine of 150-horse power is also in position. The weight of the steam machinery will not be less than 50,000 pounds.

Mr. Richard Allen, of Bay City, Mich., formerly an old resident of Ottawa, is in the city. Mr. Allen left Ottawa about twelve years ago for Bay City with a few dollars in his pocket. He arrived there when the lumber industry of that State was in its infancy, and by perseverance and business tact became finally the owner of a large saw mill near Bay City. He is now chief partner of one of the wealthiest lumber firms in Bay City. Mr. Allan worked as a corporation laborer in Ottawa for two years.—*Ottawa Journal.*

On Monday morning shortly after midnight the men of the yard department of the Rathbun Company commenced to load the steam barges Resolute and Reliance. The whole work was done under the supervision of M. Marrigan, with G. P. Sills as foreman on the Reliance, and Wm. Wilson and Chas. Dryden on the Resolute. At 6.36 o'clock the same morning, the Reliance was, after two shifts, loaded with 161,286 feet of lumber; and at 7.10 o'clock the Resolute, after three shifts, had received 295,837 feet of lumber. This beats all previous records. The boys are proud of their achievement and are looking forward now to a grand oyster supper as a fitting termination of the season's successful work.—*Deseronto Tribune.*

A dispatch from Kingston, Sept. 16th, says:—There have not been in years as destructive bush fires as those which have burned this year. They are still consuming valuable timber, fences, buildings, and in some instances the crops of the season. At Eganville, in the next county, fires are raging in every direction. On Sunday morning one fire started below the Cascades, and by night had travelled half a mile towards the village. The fires in the vicinity of Golden Lake are probably the largest. The farmers have been night and day battling against the flames. Mr. Brisco was working between two fires when a heavy wind arose spreading the fire so rapidly as to encircle him. He made a bold dash through the burning pinery and lost his hair and whiskers.

Messrs. Hurdman & Co., the extensive lumbermen of the Chaudiere, are making arrangements for the construction of a new circular saw mill, which will utilize a part of their unused water power in the rear of their office, in Ottawa, and next to the works of the Chaudiere Electric Light Co. The new mill will be used entirely for sawing dimension timber and will be 150 feet in length by 74 in breadth. The building will be of wood and will have sufficient capacity to saw all the dimension timber the firm will be able to turn out. The firm have a gang of men engaged in preparing the timbers for the new structure, and the foundation for the new mill was started during the past month.

A very peculiar circumstance occurred in the new saw-mill of Messrs. Grier & Co., Ottawa, a few days ago. While a log was being put through one of the edgers the man in charge heard the saws strike against some hard obstacle, when he immediately had the gang stopped to find out the cause. The log was drawn back, but before anything could be found, it had to be cut into, when it was discovered that near the centre there was embeded an old Indian hatchet, which, judging from the quaint shape and the depth it was buried in the log must have been stuck there quite a number of years ago. The hatchet though very well preserved, must have been left sticking in the tree while very small, as it had completely grown over it, leaving no trace whatever.

An exchange says:—Mr. Johnston, of Rockland, who is taking down a raft of dimension timber to Lachine, has met with unusual bad luck. When the timber reached the Deschenes rapids the water was remarkably low. In running the first few cribs over the rapids three of his men were injured. The biggest part of the raft was tied at the head of the rapids, when the recent gale struck it, scattering it here, there and everywhere. On the raft was a lot of chains, ropes and other goods, which on the timber breaking up went to the bottom of the river and will be a dead loss. Mr. Johnston's loss is put at $1,000. To add to the series of misfortunes, a number of men deserted their employment; on the whole Mr. Johnston's attempts at getting down the timber have met with disasters seldom experienced on the Upper Ottawa.

Ottawa lumbermen generally expect to cut about as much in the woods this year as was cut last year, if nothing interferes with the season's operations. In connection with this it is interesting to note that it is estimated that the busy saws at the Chaudiere will cut this summer about the following figures, which are somewhat less than last year's figures, which were the largest for the previous twenty years: J. R. Booth & Co., 90,000,000 feet; Bronson & Weston 75,000,000 feet; E. B. Eddy & Co. 80,000,000 feet; Perley & Pattee 70,000,000 feet; Hurdman & Co. 50,000,000 feet. The cut of Messrs. Grier & Co. last season was about 16,000,000 feet, but since the building of their new mill which has given them increased facilities it is expected that they will more than double that amount this year. James McLaren will cut over 50,000,000 feet this season.

The shipments of sawn lumber from Ottawa during the first seven months of the present year, as also for the same period of 1886, are as follows:

	Ft. B.M. Lumber.	Ft. B.M. Lumber.
JANUARY	4,416,887	4,587,083
FEBRUARY	7,174,531	5,382,395

The foregoing includes shipments to points in Canada, as well as what went to the United States.

QUEBEC.

The sale spoken of in the last issue of the LUMBERMAN, stating that negotiations were going on between McLaughlan Bros., of Arnprior, and the Eddy Manufacturjng Company, of Hull, for the purchase of the mills and limits of the first mentioned firm, has, it is understood, fallen through.

Charette & Co., lumbermen, Coteau St. Louis, have dissolved.

The firm of McArthur Bros., of Quebec, Que., Toronto, Ont., and East Saginaw, Mich., lumber and timber manufacturers and dealers, has been changed to "The McArthur Bros. Co., (Ltd.)." No further change has taken place.

D. LeClaire's saw and planing mill, Montreal, and adjoining lumber piles, burned August 29. Loss, $15,000; insurance, only $2000.

The following is clipped from an American lumber exchange and we re-produce it for what it is worth, not knowing whether it is true or false: "It is announced in official circles that extensive frauds, committed by wealthy and well-known lumbermen, on the government are coming to light in the province of Quebec. Timber has been cut on limits for which patents were held and the certificates of settlers as to the number of trees cut has been falsified so as to defraud the government."

MANITOBA AND THE NORTHWEST.

D. Cameron, saw miller, of Minnedosa, has sold out.

Prince Bros. mill at Battleford has closed down temporarily owing to shortage of logs.

John A. Christie, of Brandon, has sold out his large mill and business to Durham & Mann.

The mills of the Rat Portage district, six in all, have all been running this season with the exception of one.

Fox's mill at Illecillewalt, west of Donald, barely escaped destruction from fire lately, caused by a spark from a railway engine.

A good deal of spruce lumber has been cut on Lake Winnipeg this season and importations of furnishing material have been made from British Columbia.

Joseph Davis, manager of the Manitoba Lumber and Fuel company, has returned from a trip through the timber districts of British Columbia.

The Canadian Pacific railway mill recently burned at Donald, near the rockies, is being replaced. The machinery from the mill in the district at Six Mile Creek will be utilized for the purpose.

Charles Balfe, a pine cruiser recently connected with Capt. Bent's party of Manitoba surveyors running the Brainerd & Northwestern line between Leech lake and the Mississippi river, is supposed to have been drowned in Leech lake.

In the Riding mountains, a timber country of considerable extent in northern Manitoba, preparations are being made for a large cut this winter, the extension of the Northwestern railway into the district having started up a number of new towns, which are callin for a supply of lumber.

Dick & Banning have, it is said, been about the most fortunate of the Lake of the Woods mill men this season in the matter of floating their logs. Logs on the Big American were the most unfortunate, and here was the principal cut of the Minnesota & Ontario company. A large number of logs are hung up on this stream, though there is still some hope of getting them afloat.

Favorable advices come from the Lake of the Woods district regarding the result of the season's operations in that quarter. The mills from this vicinity continue to furnish the main supply of lumber for the province of Manitoba, as well as the western country some distance beyond.

Mitchell & Bucknell, who have a mill on the Assiniboine river at Millbroke, Man., have closed down for the season, after a successful summer's operation. Whimster & Kyle, Strathclair, have also closed down for the season. They report having had a good local trade.

From the western territorial country comes the news that Peter McLaren will build a saw mill at Macleod, Alberta district. The machinery for the mill has been shipped. The mill will be supplied with logs from the foothills of the mountains. The Alberta Lumber company will have their mill at Deer river completed early in November.

During the early part of September trade was decidedly dull in Winnipeg lumber circles, owing principally to the farmers being very busy and a scarcity of help. An improvement is now confidently expected, however, as those contemplating building improvements will of necessity have to hurry up before winter sets in. The crops have been harvested in good condition, and the yield is fully up to expectations. In the city building operations are quiet, largely owing to the unsettled nature of things in connection with the railway situation.

A saw mill is to be established in the Red Deer country, about 100 miles north of Calgary. The Rocky Mountains lie to the west, and along the base of the mountains extends a timber country which is said to cover a considerable area. The mill referred to is being built by the Alberta Lumber company. The machinery is being hauled from Calgary, and the mill will have a capacity of 50,000 feet per day. It will be completed this fall and ready to commence cutting in the spring. The Alberta and Athabasca railway is projected to run through the district.

The nature of the Canadian Pacific railway monopoly in Manitoba and the Northwest Territories will be seen from a reference to freight rates on lumber. Van Horne, vice president, and general manager, promised the Winnipeg board of trade as early as 1882, that lumber, fuel and wheat would be carried at very low rates. How he kept his word will be observed by the following: For green lumber shipped from the mills at Rat Portage to Winnipeg, a distance of 133 miles, the freight rate is $4.65 per M; for dry lumber the rate for the same distance is 15½ cents per 100 pounds. This rate is over four times greater than is charged by the railroad company on its lines in Eastern Canada, where it has not a monopoly. The rates from the mills in the mountains on lumber shipped eastward to Calgary and other points are even higher than the figures given above.

The Keewatin Lumber Company has kept its mill at Keewatin busy all the season, and about 8,000,000 feet will be the output. About that quantity of lumber is now in the yard. About 12,000,000 feet of logs were taken out last winter by this company on the American river, about one-third of which are hung up. This company is prospering under the management of Messrs. Mather. Dick & Banning's mill, also at Keewatin, will run steadily during the season, and cut six or seven million feet. A good deal of trouble was experienced in getting out logs, but nearly all of the cut amounting to about nine million feet, some of which had been hung up the previous year, was finally got out. The Keewatin mills are run by water power from the falls of Winnipeg river, and therein differ from the other mills of the Rat Portage district which are run by steam.

A correspondent writing from Winnipeg to the Mississippi Valley *Lumberman* says:—The remarks made in a former letter regarding the state of prices here, and the necessity existing for the establishment of a regular schedule to guide dealers in disposing of their product, seem to be already having some effect. It has been whispered around within the past few days that a movement is to be undertaken for the formation of a lumberman's association for the Canadian northwest. The difficulty heretofore has been to get the first steps taken. Lumbermen recognized the necessity for such an association, but no one wished to make the first move in the matter, owing to a feeling of jealousy or distrust which, rightly or wrongly, was supposed to exist among mill men and dealers. If one firm proposed the formation of an association it was feared others might hold back, and so the matter stood. It is now understood that to obviate this difficulty an outside and entirely disinterested party will issue a call to lumbermen to hold a meeting, for the purpose of fixing prices and forming an association. In this way no individual firm will be taking the lead or assuming a position of undue prominence. There is every reason to believe that the issue will result successfully. All the lumbermen are unanimous as to the benefits which would follow the formation of an association. Moreover, it is recognized that the present is a most opportune time for making a start. Circumstances have not been more favorable for four years than they now are for such a move. While stocks were large, business depressed, and every one anxious to reduce their stocks, even at times at a loss, it would have been almost an impossibility to have succeeded in forming an association, and still more difficult to have kept it together and sustained list prices after it had been formed. Now, however, circumstances are quite different. Stocks of lumber are light, logs not too plentiful and the demand good. Mill men can afford to be reasonably independent and demand fair profits. Under these conditions there is no reason why legitimate profits should not be made. Still, so long as there is distrust among manufacturers and dealers, it will be difficult to keep uniform prices and at a fair figure. The only way to accomplish this is to form an association and arrange prices at intervals, as the exigencies of the industry may demand. The proposed association will include the Lake of the Woods mills and eastward probably to Port Arthur, Lake Superior; also the Lake Winnipeg district.

NEW BRUNSWICK.

Dimension deals remain at about $8.50 per mille at Halifax, and this is not a profitable figure for the manufacturer.

Freights from St. John to transatlantic ports are quoted at about 41s. 3d. to Liverpool, 42s. 6d. W. C. England, 43s. to Dublin or Belfast, 65 francs to Marseilles.

Flemming & Son, St. John, N. B., have the contract for erecting 16,000 feet of snow sheds at St. Fabien, Que., on the Intercolonial railway. There will be a large lumber requirement for the roof and sides.

The amount of wood goods forwarded from the port of St. John up to date has, contrary to expectations, exceeded the exportation for the same period of last year. The timber shipment (that of the square timber and pine stock) has this year been handled entirely by Mr. Mackay, and, indeed, he and Mr. Gibson have handled the great bulk of the shipments to date.

The condition of the New York lumber market is said to have reacted favorably upon the the business of St. John, N.B., which ships largely to New York. The coastwise trade has been more flourishing from St. John than for years, lumber constituting the bulk, though at this season there is gererally a stagnation. The activity of building in the eartern part of the United States has stimulated the demand for Canadian timber at good prices. Among mill men and shippers renewed energy has been induced, and now the market is termed a healthy and springy one, while the freight carriers, as before mentioned, have profited materially by the general activity.

A St. John, N. B., journal represents the present condition of the lumber trade at that market as somewhat peculiar. The northern manufacturers seemed to think that conditions were ripe for an advance, and sent out notices proclaiming a raise of $1 in spruce, which buyers, encouraged by large water receipts, declined to meet, some even claiming to have received overtures involving a 50-cent cut on old prices, instead of any advance being asked. The effect of the demoralized bull movement, however, was to make cargo prices firmer, while foggy weather advance water rates 50 cents and $1. The increased demand for carriers because of heavier water movement made vessel men more autocratic, for the craft were taken as soon as they put in an appearance, the cargo demand for lumber being active. On the whole the attempted advance is viewed in its effect in about the same light as the last alleged advances in Chicago—it has resulted in firmness of old prices, but little or no actual advance. Spruce quotations are therefore unchanged. There was said to be a very remarkable request for shingles, but heavy receipts kept up the supply so as to head off an advance. The demand for clapboards has improved, but the supply was full and prices easy.

BRITISH COLUMBIA.

It is said that Puget Sound lumber is now being shipped from Vancouver, via the Canadian Pacific, to Albany, N. Y.

Shingles in British Columbia are worth $2.50 a thousand, and first-class cedar lumber $40 f. o. b. Boat lumber cut to dimension sizes is worth $45. Common lumber sells at $12.50 a thousand. The demand, both local and eastward along the Canadian Pacific, is good.

George W. Hotchkiss, es-secretary of the Chicago Lumberman's Exchange, and now editor of the *Lumber Trade Journal*, announces that he has consented to take charge of a party of lumbermen to the far west, over the Canadian Pacific railroad. The excursionists will make a short stop at St. Paul, one day at Winnipeg, one at Baniff, one in the glaciers of the Rockies, one at Vancouver, one at Victoria, one at Seattle and one at Westminster. Interesting objects, such as the hot springs in the Canadian national park, lumber camps, saw mills, etc., will be visited. Several lumbermen with their wives have announced their intention of going.

UNITED STATES.

Manistee has shipped 200,122,000 feet of l[illegible]

Men for woods work are reported very scarce [illegible] saw valley, Mich.

Chicago is said to double her consumption of mahogany about every two months.

Australian forests are said to be practically dest[illegible] and woods of that nature.

The South is coming to the front with cypress, gum, [illegible] wood and yellow pine lumber.

The Cheboygan Lumber Company, Cheboygan, Mich., will cut pine this winter from its Canadian lands.

The demand for shingles in the Saginaw market is goo[illegible] present and the prices fully 60 cents better than last year

Alpena, Mich., had shipped to Sep. 1 an aggregate of 104,303,000 feet of lumber, 4,960,000 shingles, 151,900 railroad ties and 65,400 cedar posts.

Jewell & Hollister, of Oshkosh, Wis., will put in 15,000,000 or 20,000,000 feet on the Canadian tract of 125,000,000 feet, near Sault Ste. Marie, recently purchased.

CANADIAN investors have recently purchased, through Lamb Bros., of 1 Broadway, New York, a tract of 134,000 acres of North Carolina Pine lands.

The shipment from Saginaw River to Sep. 1 aggregated 323,888,627 feet of lumber and 52,365,000 shingles, which is a decrease of 57,000,000 feet of lumber and 16,000,000 shingles from shipments to same date in 1886.

It is expected that about the usual amount of logs will be put in the Menominee, in Michigan, the coming winter, which, with 150,000,000 likely to be left over, would make a total of about 650,000,000 feet for next season's sawing.

Bangor, Maine, has a new enterprise. Every mill on the river wastes great quantities of saw-dust. It has not been available for shipping because of its bulk. Now a hydraulic press has been invented to press the saw-dust and reduce its bulk some 75 per cent., and in this shape it can be easily handled.

At Minneapolis, Minn., a conflagration broke out September 10, in the lumber manufacturing quarters, which resulted in the total destruction of five saw mills, which are as follows, with the estimated losses: Merriman, Barrows & Co., loss $50,000; insurance, $31,000. McMullen & Co., loss, $35,000; insurance, $25,000. Eastman, Barry & Co., loss, $40,000; insurance, $30,000. C. A. Smith & Co., loss $27,000; insurance, $17,000. W. W. Eastman, owner of the mill operated by Cole & Weeks, loss, $50,000; insurance, $21,500.

The Export Lumber Company, of New York, which does good service to those interested in lumber matters by issuing in sheet form the export of white pine lumber from the port of New York, has just sent out a statement covering exports up to July 1. This report shows that from January 1 to July 1, 32,507,000 feet were exported. Comparisons are as follows: From January 1 to July 1, 1886, 22,794,000 feet; 1885, 32,947,000; 1884, 34,873,000; 1883, 30,559,000; 1882, 29,223,000; 1881, 33,703,000; 1880, 26,999,000; 1879, 27,919,000; 1878, 20,200,000; 1877, 26,976,000.

A correspondent of the *Northwestern Lumberman* writes:—The Hon. R. A. Loveland, of East Saginaw, has gone to Midland, Ont., on business connected with the holdings of the Emery Lumber Company, of which he is a member. This company own 100,000,000 feet of timber on the line of the Canada Pacific road in the Georgian Bay district, and intended to bring it all to Tawas and Saginaw to be manufactured, but the doubling up of the export duty on logs knocked it out and the stock put in last winter, 12,000,000 feet, was sold to the Shepard & Morse Lumber Company and is being manufactured at Midland. I understand the company will lumber this winter on the tract, and in the event of commercial union between Canada and the United States, the logs will be rafted to this side, otherwise they will be manufactured in Canada.

The papers in and about Muskegan, Mich., are calling on the State game and fish wardens to stop this outrageous trespass on the rights of the public. The same thing is being done at several points in Wisconsin, where millers are filling up lakes with everything that is unsaleable. All lumbermen are not vandals and there ought to be some organized sentiment among them that will stop such things. The Raquette, Grau and other streams running out of the Adirondacks, into the St. Lawrence, have been rendered malarious by decaying sawdust and lumber refuse. So, too, the back water of dams built to give floatage, often kills the trees over a great area, and transforms beautiful silver paradises into hideous fever-breeding wastes. This has occurred in several places in the Adirondacks.

TRADE REVIEW.

Toronto, Ont.

TORONTO, Oct. 7th, 1887.

The cargo trade in this city is at present in a favorable condition, but the one great difficulty now is the car famine on the Grand Trunk railway. The car supply has literally broken down, and the company's officials seem to be unable to do anything to supply the wants of the trade. It is getting to be a serious matter for those mills depending on the Grand Trunk railway for shipping facilities. It might also be truthfully said that from such points as Midland, Waubaushene and Coboconk scarcely a car has been shipped in three weeks. There is plenty of lumber to be shipped if cars can be had to carry it.

Prices are firm and steady. The local trade is improving as the fall contracts are now being let. The American demand for good lumber has fallen off and sales have been slow, although wholesale dealers are not disposed to make concessions.

Retail dealers have no complaints to make regarding the amount of trade done since my last communication. As was expected the retarded work when once under way is being pushed forward and quite a number of new buildings started.

An addition has been made to the city by taking in some of the suburbs, which have to be built up in the very near future. The consumption of lumber in this city is increasing greatly and will, doubtless, be in much greater demand in a very short time.

As some of the mills are closing for the season we may look for a greater scarcity of long bill stuff and consequently greater difficulty in filling bills.

Prices are still well maintained with no perceptible indications of a fall.

The quotations given may, as in last month, be read from 50c. to $1.00 per M higher; the yards throughout the city having no fixed prices, each conducting business on the go-as-you-please plan, irrespective of what may be the prices in a yard not more than a block off.

		White Ash No. 1 & 2.	25 00 30 00
		Black Ash, No. 1 & 2.	20 00 25 00

Montreal, Que.

MONTREAL, Oct., 5th, 1887.

The demand for lumber continues to be fairly satisfactory both wholesale and retail, though it is scarcely as brisk as it was a few weeks ago. This is due to the high wages current which has had the effect of checking building operations, though the amount of improvements of this class that are going on in Montreal and its vicinity is fairly astonishing. The prospects of a glut of lumber are very slight and dry stuff is really scarce. We note no change in values. A comparative statement of the amount of deals and sawn lumber shipped from this port in ocean vessels, and compared with that of last year, from the opening of navigation to Sept. 3rd, gives in 1886, deals, (St. Petersburg standard) 41,289, and for 1887, 32,251; sawn lumber, 1886, 19,865,355 feet, and for 1887, 13,508,414 feet.

The following are the ruling prices at the retail yards:

Pine, 1st qual'y ℔ M	$38 00	40 00	Basswood, run of log culls out per M	$18 00	20 00
Pine, 2nd " "	28 00	30 00	Oak, per M	40 00	50 00
Pine, shipping culls ℔ M	14 00	16 00	Walnut, per M	60 00	100 00
Pine, 4th quality deals ℔ M	10 00	12 00	Cherry, per M	80 00	100 00
Pine, mill culls, ℔ M	8 00	10 00	Butternut, per M	35 00	40 00
Spruce, per M	10 00	13 00	Butternut, per M	35 00	40 00
Hemlock, per M	9 00	10 00	Birch, per M	20 00	25 00
Ash, run of log culls out per M	20 00	25 00	Hard Maple, per M	25 00	30 00
			Lath, per M	1 50	00 00
			Shingles, 1st, per M	2 00	3 00
			Shingles, 2nd, per M	1 00	2 00

Saginaw River, Mich.

OCT. 2nd.—The *Courier* says: The cargo market is practically lifeless, the sales being fewer in number than during any previous week this season. The high lake freights have put an embargo on trade and many who have purchased stock are arranging to carry it over. In fact the dock room is likely to be taxed to its utmost limit the coming winter. Norway bill stuff manifests signs of weakness, and sales have been reported at 50 cents to $1 off from the quotations that prevailed during the early months of the season. In other grades there are no material changes. Complaint is made by buyers that prices are too high, and a concern that bought 3,500,000 feet at Upper Michigan points asserts that lumber of corresponding grades can be purchased at Upper Michigan points at $1 to $1.50 a thousand less than the asking price on Saginaw River. The docks are filling up rapidly and manufacturers are concerned at the outlook as many of them will be forced to shut down their mills unless stock can be moved off their docks.

Shingles continue active and firm and XXX have been sold at $3.55, an advance of five cents over the ruling quotations. The scarcity of timber is bothering a number of manufacturers. The product of the season will be short of last year. The car lumber trade is active and is likely to continue so. The high lake freights is giving the railroads a large amount of lumber freight, and the movement during the fall and winter will exceed that of any previous year.

New York City.

NEW YORK, Oct. 5th, 1887.

The condition of the White Pine export trade of New York is inactive. the demand being light. Prices remain firm. Arrivals of Spruce have continued heavy but shipmentc now on the way are very light and receivers are making no efforts to force sales, looking for a better market after present cargoes are out of the way. Prices show a slight decline. Lath are firm at $2.25. The Pitch Pine market continues steady without special feature. There does not seem to be enough business to occupy all the mills at renumerative prices, and lumber is being offered at figures which will net the manufacturer less than the cost of production. There is still a large inquiry for export, but principally for delivery at ports in the Gulf of Mexico. where prices remain the same, and the mills are fairly stocked with orders. They show some indisposition to make large engagements, owing to a short log supply. North Carolina Pine Timber can be had all the year round, at short notice, and judging from past experience the price will not vary over 50 cents per 1,000 feet. In spite of the recent heavy arrivals of Spruce, orders are being given at old prices. The over supply of Spruce has had a damaging effect upon any but bills of long length. There is a good demand for boards in the rough. Southern dressed lumber is increasing in popularity. The White Pine Timber market is without any noticeable change. The demand continues fully up to supply, and the mills are shipping about as fast as they can cut. There is but little change in hardwoods. The yards are not as busy as they could be. While there is a complaint of dullness, considerable lumber is being quietly worked off and the dealers are all ready to buy good lumber in larger quantities than it is being offered. More good Black Walnut lumber is now offering than for some time. The demand, however, does not show any improvement. There is a steady sale for rejects and culls; Mahogany and Cedar continue quiet for the season of the year. The fall trade seems to be somewhat later than usual in opening, but there is a fair amount of business being done, and the increase is sure to come.

Black Walnut.

Philadelphia, Pa.

OCT. 1st.—The Northwestern hardwood market is good, from the standpoint of wholesaler and retailer. The wholesalers have had a good summer, and are now anticipating the winter's requirements, and the retailers are selling liberally to builders, who are bringing the most extensive building operations for years to a close.

The general situation is this: Supplies, which were of only moderate proportions in early summer, have been pretty well run down, even with frequent additions to stocks. Only about so much hardwood will sell, be the price what it may. Dealers and manufacturers recognize this fact, and hence endeavour to supply only the actual demand. Just now contracts are being made for forward requirements. Sellers are not

rushing into the market, but are satisfied with the way stuff is going. If cherry would sell, plenty of it would be forthcoming at present prices. Furniture manufacturers take very little of it, for somehow it does not fasten on the popular taste. But little business is done outside of the common grades of walnut; perhaps because consumers earlier in the season purchased freely. Culls sell well at $30. Poplar from West Virginia is generally in good request. All kinds of ash are selling well, and, in fact, good regular stock is sought for, either for immediate use or for piling. Both plain and quartered oak are in good request, though there is some complaint in regard to the quality of quartered oak. Birch, redwood, hickory and butternut once in a while loom up in the market, but there is nothing in them. Yet samples are always to be found in certain yards. Two or three mahogany firms have done a good year's business, but the lower grades are a drug. In yellow pine the usual heavy business is reported, and at full prices. An enormous amount of Pennsylvania hemlock is handled, and the old story must be repeated that dry stock is scarce. Boards are in active demand and a great deal of business is placed for winter delivery, which gives hemlock an upward tendency.

Buffalo and Tonawanda, N. Y.

BUFFALO, Oct. 5th.—The New York *Lumber Trade Journal* says: The weather has been cool and beautiful all of this month, and this or some other cause, has infused new life into the lumber trade, and nothing but a panic will prevent a splendid fall trade. Cargoes are again coming freely, our dealers evidently being of the opinion that it is wiser to pay existing freights and have their lumber sorted and piled during the good weather than to await a possible decline in lake freights. Such a course is undoubtedly wise.

Trade in the Pine yards is good, with prices in advance of our last quotations, but not sufficiently settled to admit of intelligent quotations.

Hardwoods are fairly active, the sale of Ash, Oak, Maple, Whitewood, &c., for local consumption is very large. Buffalo is a good hardwood market, one in which a buyer can always depend upon finding a good assortment of almost anything in the Hardwood line, and at reasonable prices. Much of the coarser grades of Oak lumber, and largely the timber, is produced near the city, and with the competition of so many railroads freights are reasonable. Probably 80 per cent. of all Hardwood handled here arrives by rail, the other 20 per cent. by lake. Fifteen years ago the figures were directly the opposite.

The condition of trade at Tonawanda so far as can be learned is very satisfactory, and reports from the travelling men point to a good fall and winter trade, and no difficulty in obtaining prices. The demand for shingles still continues good, and standard brands are picked up almost as fast as they can be obtained. XXX 16 inch, C. B. 18 inch, are firm at $4.25 and $3.25 respectively, and at the close of navigation it will be difficult to obtain them at those prices, from the present outlook. The trade through the central part of the State is good, and all the retail yards report a good season and look for a continuation of the same.

Hardwood is booming and the local yards are bothered not a little to supply the demand for dry stock, especially in Whitewood, which is meeting with favor among the retail dealers and is affecting the trade and price of the upper grades of Pine, much to the sorrow of the wholesaler with a good stock of selects and uppers.

Chicago, Ill.

OCT., 1st.—There is a decided improvement in the cargo market. Lumber sells easier, and it is firmer than it has been for some time. The receipts for a couple of days the early part of the week were rather free, owing to a pretty heavy blow that happened to be in the right direction, and the market was consequently liberally supplied. There is an evident demand for lumber among buyers, and it seems to be of that omnivorous character that will absorb anything available. There is a greater call, of course, for dimension and common inch, but offerings of better stock are not hard to place, there being still a good many that have not yet filled in their assortments of lumber to carry over exactly to their liking. There will be from now on a good deal of miscellaneous buying to piece out stocks, and if the market is not too liberally supplied, the brokers ought to have a comparatively easy time disposing of the lumber. It can hardly be said that much actual gain has been made in prices, though a quotation for short piece stuff is given a range a quarter of a dollar higher than last week. The price for average standard cargoes is $10 streight and firm, but there are some choice lots coming to hand that admit of a slightly higher figure. There has been no piece stuff sold during the week below $10, unless it was of a quality too low to be considered standard. The market is so quick and easy at $10, that there is a possibility that the next fleet may be crowded up a point; but on the other hand present buyers are exerting themselves a little to discount the advance likely to soon occur in freights, and the attempt to get mere value for the lumber might considerably abate their anxiety to purchase. Some sellers claim that they have done better this week with their common inch to the extent of about 25 cents. The dealers are aware thar they will not be able to get it cheaper this year, and they have room yet for a good deal of common lumber, which is admitted to be about as good property as one can have in his yard.

There have been a good many shingles offered, but evidently no more than was required, for they are reported a shade firmer. For standards $1.82½ @ $1.90 is the range now, which is better than it has been for a month or more. There is a sharp inquiry for shingles, and it is thought they will go higher very soon. Lath are steady and firm as a rock.

The peculiarity of the present trade at the yards still continues. Its variable character, as between different firms, seems in fact to be its most noticeable feature. While in some offices the searcher after truth will be told that trade is excellent and that orders are flowing in from the country in a steady stream, at others he will hear in response to his query that "business is only just fair." However, one cannot take a trip through the district without seeing unmistakable indications that the stock is somewhat slow, and that the business done is accomp- without much rush or excitement. Orders where they are plentiful in number, are not usually for very heavy amounts. Retailers are moving cautiously, and the policy of careful buying which has obtained among them of late is now most faithfully adhered to.—*Timberman.*

Minneapolis, Minn.

OCT. 1st.—This market is fairly active, although trade is generally considered below the average for this time of year. No effort is being put forth to make it otherwise, either because orders cannot be filled with dry stock, or because it is deemed to be the part of business policy to hold lumber for an even better market in the spring. An average local demand is likely to absorb about all there is to be marketed. The mills, too, are falling short of their estimated productiveness. Dealers are basing some of their confidence in future values upon the shortage in the sawing capacities, brought about by the recent fire. The local trade in both St. Paul's and Minneapolis continues large. The permits issued in Minneapolis last week numbered 130, for structures to cost $421,275. In the week included $146,000 to be expended on the Soo shops. In St. Paul the building permits numbered 132 for buildings to cost $128,800. All this means a very large local consumption demand and that it is being enjoyed is evidenced by the large receipts of lumber in both cities. In Minneapolis the receipts are fully double what they usually are at this season of the year.

THE QUEBEC TIMBER TRADE.

According to the Quebec *Chronicle* there is little doing in the timber market in that city at present. That journal has heard of two rafts of small, ordinary timber changing hands at 16 cents per foot. The following is a comparative statement of timber, staves, &c., measured and culled to 14th September, 1887.

AMONG THE MANUFACTURERS.

Mr. Peter Bertram has bought out Mr. R. T. Wilson's axe factory at Dundas, Ont., and will increase the capacity of the works. These works have been in existence for about fifty years and their products are widely and favorably known.

Mr. James T. Milne, of Peterborough, manufacturer of Milne's Oscillating Steam Gang and Solid Wheel Band Mill, recently made contracts with J. Milne, of Agincourt, and James Hay, of Woodstock, for the setting up of a band mill in each of these places, to be running by 1st December. All the latest improvements are being added. The bearings will be finished with Spooner's finest Copperine.

One of the main features in the machinery department of the late Toronto exhibition was the extensive display of Emery Wheels and other machinery made by the Hart Emery Wheel Co., of Hamilton, Ont. The popular and accommodating Secretary of this company, Mr. James T. Barnard, was in attendance and demonstrated to all enquirers the superiority of the machines manufactured by his firm. We learn that the business at these works is increasing daily and that it is often difficult to keep up with the orders which are pouring in from every part of the Dominion. A change of advt. appears in this issue.

Attention is directed to the advertisement in the present issue of Spooner's Copperine, which is rapidly replacing the use of babbit metal in all kinds of manufacturing establishments. Copperine is the result of careful study and consideration for all its intended uses. It is claimed there is not a point wherein it fails. It has been tested in many establishments, and by some of the most practical engineers and machinists in this country and pronounced a success. Copperine is made with copper and tin, in each quality sufficient, by careful and scientifically-tested proportions to be thoroughly anti-friction, and to do its intended work. The following are a few of the large firms who have it in use:—Georgian Bay Consolidated Lumber Co., Waubaushene, Ont.; The Rathbun Co., Deseronto, Ont.; The Wm. Hamilton Manufacturing Co., Peterborough, Ont.; Longford Lumber Co., Longford, Ont.; E. B. Eddy, Hull, P. Q.; Withrow & Hillock, Toronto, Ont. Alonzo W. Spooner, of Port Hope, is the manufacturer and wholesale dealer.

CHIPS AND SHAVINGS.

ELM has become a favorite wood with chair makers.

"OAK is the grand, everlasting wood of the ages," quotes a lumber journal.

IN the east mahogany is being used more extensively than ever for inside finish.

PAPER picture frames which are a good imitation of walnut moulding are being made, and unless cut with a knife it is hard to tell the difference.

FOR interior house finish soft wood seems to be becoming obsolete, if there is any pretense to richness in design. Hardwood is used almost altogether in houses of the better class.

IN time now long past, flooring strips were supposed to be thoroughly seasoned before they were put down, but now the tree that stands in the forest to-day may form the floor that is laid a week or ten days hence.

THE two oldest trees in the world are supposed to be the one in Calaveras county, Cal., that is believed to be 2565 years old, and the cypress of Somma, in Lombardy, Italy, that is 1911 years old, or planted forty-two years B.C.

ALL sorts of vessels, culinary and otherwise, including pails, tubs, basins, water coolers, spittoons, as well as various other articles, are now manufactured in one piece from wood pulp, under the name of indurated fiber ware, and are called indestructible.

ON account of its weather-resisting qualities, there would seem to be no good reason why cypress should not make headway as a material for siding, in competition with white pine. It is being used to a small extent for house finish in some northern cities. It has a pleasing appearance.

IRONWOOD and lignum vitæ are preferred for heavy canes, and bamboo and malacca sticks for light ones. British Columbia redwood, however, is said to make as heavy a cane as any wood known. It has a rich port wine color and is very handsome.

IN London, 20,000 men earn their living at carpenter work, 4,000 in Paris, and 4,000 in Berlin. Hours in London are 52½ per week, wages, 18 cents per hour. In other cities in England carpenters work 58½ hours and at 12 cents an hour. Employment is precarious. In Paris the eight-hour day prevails and wages are $1.70.

IT is thought with good reason, that cypress interior finish will serve a purpose in keeping out bugs and moths like that of red cedar. The latter is costly and not very attractive to the eye; while cypress is comparatively cheap and handsome. It is a cedar, and has a slight aroma, and will tend to keep a house sweet and free from vermin.

RED oak grows in favor. It is in some respects and to some tastes more in favor than white oak. It is easier worked, shows up as ornamental a grain, is just as durable, and far more easily obtained. Maple does not hold its beauty to the eye like oak, but discounts it when you come to flooring. Both are wanted in increasing volume every year.

BANDS are superseding circulars, in old as well as new mills, and have reached a stage of development and utility which the circular did not attain for decades after its introduction. The more economical production of lumber by utilizing in the pile that which formerly went into sawdust, is the study of all manufacturers.

PERSONS who may not know the nature and color of black birch after dressing and polishing may be interested in knowing that the grain of the wood is very close, the color mottled and slightly darker than satin wood. Black birch makes beautiful furniture, and the only complaint made against it for house trimmings is the care and extra time required in nailing the boards, to prevent splitting.

THE following will interest many of our readers who spend the winter months in the lumbering camps:—An old Mount Washington guide says that he never carries a compass in the woods. There are three sure ways, says he, that I have for finding the points of the compass. You will notice that three-fourths of the moss on trees grows on the north side; the heaviest limbs on the spruce trees are always on the south side; and thirdly, the topmost twig of every uninjured hemlock tips to the east.

CHERRY is not what it once was in the popular estimation, and cannot be had in size, quality or quantity as of yore. Yet it is unquestionably one of the most beautiful of our native woods, and will never wholly go out of fashion as long as it can be obtained, which will be in greater or less quantities forever. Of walnut the same may be said; at present it is not so fashionable as it was 20 or 30 years ago, but while trees grow the black walnut will not be allowed to become extinct. The neglected varieties of our forest growth, such as sycamore, elm, birch, black ash and beech, are all finding a place in public favor.

HANDLING CIRCULAR SAWS.

IN reading an article by Mr. Hobart in your paper recently, I was led to think he had had but little experience in the use of saws, or else that he did not place a very high estimate on human life.

The lifting up of a board from a pinched saw or placing one over its top appears to be a very hazardous operation, and the word "dodge," is very appropriate. Circular saws are cranky machines. The way they knock things, when on a rampage, throw clubs, knots and chips, will make a man dodge if anything can. Like a mule, they seem to hold a grudge against every one. They may appear to be quiet and gentle. but they never fail to get their work in when an opportunity occurs.

The novice who should try to follow Mr. Hobart's advice, in adopting this "dodge," would be very likely to find himself sprawling on the floor, with a cracked jaw, a broken head or no head at all, a moment later. The man who knows the vicious nature of saws, when he sees an edging or strip of lumber balancing over the edge of the table behind the saw, usually ducks his head or gets out of the way as soon as he can.

I have had twelve years' experience in the use of saws and have learned that one cannot well be too cautious in handling them. Nearly all of the accidents which occur in their use are simply the result of carelessness.

Nor long since a man here was running an edger in the night, his lamp being secured to a post behind the table. Placing his stub pipe in his mouth he leaned forward over the saw to light it by the lamp, when his feet slipped back, letting him down, and in a twinkling his arm was cut off just above the wrist.

There is great danger in running saws at too high speed, especially when the power is variable. The speed may be proper and safe when cutting; but while changing the stuff the speed will sometimes be nearly doubled. I have known saws to burst under such circumstances, and fly about the mill like shot. I recollect one instance where a piece from a 22-inch saw flew off, parting in a straight line across the plate some five inches deep. This piece was thrown with such force as to pass one-half through a window shutter one inch thick. The instant before the saw burst the sawyer was standing directly in front of it.

A number of years ago, when I was building knitting machines in Ballston, Spa., a lumberman from a couple of miles up the creek, called to consult with me about a saw which ran crookedly. I went up to see it, but on examination it appeared to be stiff and in good order. I requested him to start it up slowly, when it appeared to run truly, and on applying a piece of edging, found that it cut a clean, narrow kerf.

Said I, to the man, "That saw appears to be all right."

"Let me show you." he replied.

Then he lifted on a full gate. The speed began to increase and kept on increasing. It was a 28-inch saw used for sawing ash for fork handles. The speed soon reached a fearful rate, and I stepped back out of the way. Taking up a plank the man started toward the saw, when I caught him by the shoulder and said, "Come away, quick!" He looked at me with surprise, saying, "I see nothing wrong."

I held him back and pointed to the saw, which had now attained such a speed that the plate was so expanded as to vibrate sidewise, like the stem of a boy's top with a whiz through the air enough to make one's hair stand on end. It was weaving back and forth at least three-quarters of an inch out of line, and apparently as limber as a piece of leather.

I expected every moment to see it fly to atoms. I motioned to him to shut the gate, and when it had stopped I told him that I would as soon stand before the cannon's mouth as before a saw running at such a fearful speed.

"Why," said he, "I have been using it so for the past three days."

"Well," I said, "you may consider yourself a lucky man."

We then changed the pulleys, reducing the speed one-half, when he had no further trouble, and could saw more stuff than before the change.

To be a good sawyer is an achievement to which very few men ever attain, and although thousands spend their days at the business, yet they never fully understand the true science of putting and keeping a saw in perfect order. Every one has notions of his own, and the less he really knows the more notions he will have. Many of them believe that the machinery runs faster and will do more work in the night than in the day time.

A good sawyer will make a mill earn the full amount of his wages more, every day, than an ordinary man can, and double the amount that a poor man will; not only in the quantity of work done, but also in the quality, and at the same time he will appear to make less effort than either of them in accomplishing it.

In setting saws the tooth should not be bent in a true line with the plate, but should be given a twist carrying its front or cutting edge further out of line, and allow clearance for the back part of the tooth. This is very important, as the front edge at the outside (*i.e.*, the side toward the tooth which is bent), soon wears away, leaving a smooth rounded corner which tends to spring back into line with the plate, leaving a bearing further back on the tooth, while by giving it a twist the tooth will bear much more wear before this can take place.

Swaging the teeth with an upset is much to be preferred to bending the teeth, for with swaged teeth there is no chance of the tooth to spring away from the work. Whether the teeth be swaged or bent, it is most important that the saw be trued after the operation so that every tooth shall cut, and run in line with the others. If the sides of the teeth are dressed with a file, the points should be bevelled back to give clearance the same as the twisted tooth.

The upset was unknown in my sawing days as it is a later discovery. In sharpening splitting saws the front edge of the tooth only should be touched with the file, and this filed exactly square across the plate, or in line with the mandrel.

A saw should run perfectly true. If a 54-inch saw should show more than a thirty-second of an inch variation it should be corrected. The collars may be out of truth, and a trifle here may work mischief at the circumference. This may easily be tested by taking off the saw and running the mandrel slowly. Place a wedge between the collar and the journal box to prevent any vibration of the arbor, then by placing a stiff rest near the collar and holding the end of the file down upon the rest with the end against the collar, the slightest variation may be detected.

If the collar should prove to be out of truth it may be trued up by scraping the face of the collar while it is running slowly allowing the file to cut only on the high side of the collar.

Inserted teeth are doing away with filing and setting saws at the present day, and are also doing away with a large amount of timber.

A first-class 54-inch solid tooth saw, No. 9 guage, will save six per cent. of the timber and double that amount of power, and make as good lumber as the best inserted tooth saw in the market. This would save the value of the cost of the saw in every six days' work, sawing clear pine.—*Journal of Progress.*

BRITISH BOARD OF TRADE RETURNS.

An increase in quantity of timber and lumber received into the United Kingdom, but a decrease in aggregate value, is shown by the official returns for the eight months ending August 31st, 1886 and 1887 compared:

Eight months ending August 31st.

	Quantity. 1886.	Quantity. 1887.	Value. 1887.
TIMBER (Hewn).	Loads.	Loads.	£
Russia	113,234	132,574	210,494
Sweden and Norway	371,874	383,342	497,242
Germany	104,301	137,924	293,817
United States	60,165	63,979	249,755
British E. Indies	26,638	10 566	110,564
British North America	80,533	76,297	324,238
Other countries	268,209	307,805	303,089
Total	1,024,904	1,112,487	1,994,199
Timber (Sawn or Split, Planed or Dressed).			
Russia	469,188	579,594	1,103,825
Sweden and Norway	859,797	954,712	1,878,392
United States	209,206	165,702	407,375
British North America	479,393	495,188	1,137,359
Other countries	39,626	51,418	140,184
Total	2,057,209	2,246,614	4,707,135
Staves (all sizes)	75,688	88,082	347,405
Mahogany (tons)	33,472	27,449	227,030
Total of Hewn and Sawn	3,082,113	3,859,101	6,701,334

The total for eight months of this year is thus 3,359,101 loads, hewn and sawn, aggregate value £6,701,334; while that for same period of 1886 is 3,082,113, costing £6,758,755. The returns from Canada (B. N. A. in above list) shows a lessened import of hewn timber, but an increase of sawn, with a value smaller in the proportion of £1,137,359 to £1,147,046.

In iron, steel, tin, &c., the quantities exported from the United Kingdom during eight months ended with August last, are in all cases larger than in the like period of 1886. Values are all higher, too, with the exception of wire and tin plates:—

	8 mos. 1887	8 mos. 1886
Pig and puddled iron	755,922 tons	688,532
Bar, angle, &c	165,418 "	153,013
Railroad, all sorts	642,543 "	502,250
Wire	27,748 "	26,892
Cast and wrought	239,482 "	232,646
Hoops and sheet	220,327 "	198,608
Old iron	205,010 "	94,200
Steel unwrought	214,708 "	73,041
Tin unwrought	66,228 "	61,334
Tin plates	235,901 "	232,730

SAW MILL BOILERS.

I HAVE been interested in the various articles on boiler explosions that have appeared in your columns from time to time, and especially in those on saw mill boilers, and would like to state a few facts that have come under my observation, which I think will help to solve the problem of saw mill boiler explosions. It is my belief that, whenever there is a leak in a boiler, or the fire box of a boiler, the alkali formed thereon and about the leak, by the combination of the wood ashes from the fire and water, eats the iron very rapidly. I was running an engine and boiler in a basket factory where a good deal of the refuse wood was used as fuel. There were three leaks in the fire box, two at the end of the tubes, and one on the side, about two or three inches above the level of the fire, the other two being a foot above the fire, or about fifteen inches from grates.

Every morning and night I noticed that the tube ends, or, in other words, ends of the flue sheet, were covered with a coating of wood ashes, for a distance of about fourteen inches from the leak. This coating averaged about a quarter of an inch thick. Every time I blew out, which was once a month only, I wiped these ashes off, and found that whenever the ashes had adhered to the iron, it was pitted and grooved. I knew it could not have been the water, as it was "pure pond," and the barrel of the boiler was in good condition inside. I wiped the ashes off the side, and found the iron, for a distance of about eight or ten inches from the leak, the same in appearance as the flue sheet, but in worse condition, the pits and grooves being much larger and deeper, and from all appearances pretty nearly through the iron, which is ⅜-inch or 7-16 inch in thickness. I immediately notified my employers of the matter, who said: "Those leaks have been there for a long time now, and have never done any damage, and I guess they will last for a while longer, anyway." I had just previously heard, through one of the oldest employes of the firm, that the smoke box, through which the exhaust was carried, had been replaced only twice in three years, as it had been "rotted out," as they termed it, and it was almost ready to be replaced again.

Failing to get necessary repairs done, I looked elsewhere for a job.

This experience did not satisfy me, however, so I began to investigate matters a little. I went to several saw mills and wood-working shops and found thut five out of six had leaky boilers—some to a dangerous extent—and no engineers. These boilers were in the same condition and using different water; nearly all used wood and shavings exclusively for fuel. One was a horizontal tubular boiler which had a leak just in front of the bridge wall and about half way up the side from the centre. I went there Sunday, when all was cold, and wiped off the ashes which were on and around the hole for a distance of eight or ten inches. The iron was pitted and had a crumbly appearance; that is, it looked as though the iron had been pounded and had jarred the small particles out.

The ashes on this boiler were only one-eighth or three-sixteenths-inch thick. I examined five or six others and found that when the leaks were anywhere in range of the fire they were invariably covered with ashes and fine dust.

It can be safely said that two-thirds of the saw mills in this state at least, have their safety valves overloaded to a very dangerous extent, or no valves at all, and as the men in charge are thoroughly incompetent to run a steam boiler, and are required to run some other machine in connection with their engine and boiler, the steam is allowed to run up to a dangerous pressure, and of course these parts that have been weakened by this process I have just mentioned give out under the strain.

Owners of saw mills, that is the majority of them, do not do a very rushing business, and consequently do not feel like sending forty or fifty miles for a boiler maker to put on a patch, as long as their feed pump is in good condition, so the boilers are allowed to run just as long as they will hold together. Sometimes not quite so long, as we often see.

I can cite instances where mills were running with engineers, and a farmer boy came along and offered to do the work for them 25 to 50 cents less a day, and the engineer had to make room for him. The great evil wit saw mills is cheap labor for skilled work.—*H. H. K., Willoughby, Ohio, in American Machinist.*

THE REPORTER COULD NOT DRAW HIM OUT.

The Ottawa *Evening Journal* says:—Mr. Mercier stayed at the Russell and warded off interviewing reporters with great skill. He was polite and nice and all that kind of thing, but he would not talk. He looked like a man who felt decidedly at home as he sauntered up and down the rotunda of the Russell, but when a newspaper man drew near he relapsed into stonewall taciturnity.

The leader of the national party in the Province of Quebec is rather above medium height, big made and brawny with a good crop of black hair, a bright dark eye and hawk nose. He has a square chin and a twinkle in his eyes, that a Yankee would call cute. He is affable and polite and has a way of shrugging his shoulders when debating within himself, that has a charm of novelty about it.

"Would you care to speak about that burning question to lumbermen, the price of ground rents" asked a *Journal* reporter after he had shaken the hand of the Premier who showed every symptom of a fraternal feeling.

"I do not care to talk. I will speak in Hull and then you can print what I say, but I don't care for talking now."

"Will the ground rents go up from $2 to $5 a square mile?" went on the scribe.

"I cannot say. I have such a sore throat."

"Some of the lumbermen think that it is not only a rise in the ground rents that will take place, but the other fees will also take a jump."

"My throat is very sore," said the Premier, and he backed away enveloped in the folds of a large sized you-don't-catch-me-talking smile, "very sore indeed. Bonjour."

AMONG THE PINES OF GEORGIA.

By Edward Jack.

To us Canadians who find our forests so difficult to travel among in summer time, owing to the quantity of brushwood one encounters almost everywhere, as well as to the obstructions offered to ready progress by tracts of burned or broken lands, the forests of the interior of Georgia offer a pleasing change, especially during the mild and agreeable southern winter. Here are to be found no cradle knolls, no broken ground, no no burned land, no underbrush—for miles and miles, nothing but lofty pines standing so far apart that I have driven for hours among them, seated ina buggy drawn by a pair of horses, making only an occasionaldetour to avoid a few square rods of scrub oak or some blown down tree. One of the latter, which I had the curiosity to measure, was 108 feet long, while the first limb was 71 feet from the root. There were many trees at this time aroundme, which certainly attained a height of not less than 120 feet.

THE SURFACE OF THE COUNTRY

where I travelled for 60 miles was as smooth as the streets of any city. It was not level but gently rolling. The streams by which it was intersected often had banks from fifty to sixty feet in height. These were not abrupt but with a steep slope. Sometimes there were flats along other shores on which magnolias, oaks, bays and other evergreens grew in the greatest abundance. In the early spring these shores are fragrant with the perfume of the Yellow Jassamin which grows abundantly all over this country, while here and there about the small round ponds scattered through these forests the lilac flowers of the Redbud mingle their blossoms with the white bloom of the May-haw, and here may be seen our robins as well as the turtle dove which abounds in these woods, as does the southern partridge or quail. The brilliant cardinal bird and the gay blue bird wtth robe of deepest cobalt may be seen also flitting from bough to bough.

One may judge of the genial character of this climate from the fact that near Flint river I saw peach trees in blossom on the 4th of February, while in a small garden which I passed on the 5th of that month, peas were already above ground. On the 7th Ionquilles were in full flower and strawberries were in blossom. What added much to the pleasure of travelling among the pines of the part of Georgia which I was visiting was the absence of mosquitoes and black flies.

THE GEORGIAN PINE

is in general much larger and of better quality than that of Florida. On the Flint river the soil is very different from the white sands of Florida, into which the wheels of one's carriage sink deeply, forbidding rapid rate of progress. In the locality where I was travelling through the pine woods, the dark gray sandy soil was firm anywhere; the only benefit of the highway was that it led to bridges by which streams could be crossed, and avoided the occasional fallen trees which the traveller now and then encountered. A good road could be found anywhere among the pines.

The southern pine does not grow so thickly on the same extent of territory as does the white pine of the West, where it is no *very* uncommon thing to find a 40 acre lot yielding a million feet (board measure) of this lumber. In the West one tract may be very thickly timbered with white pine, while there may be next to none on the adjoining lot. The southern pine, on the contrary, although not found growing thickly in any one place, is yet far more generally distributed over an equal area of ground than its western relative.

Southern pine lands also possess a very great advantage over many others in this, that fires will not destroy them, even when the wire grass, which grows beneath the trees, is burned every spring, so that the tender growth may afford better nourishment to the sheep and cattle that wander through the forests. Besides this, when the pines have been cut down, especially on the Lime Sink region of Georgia, the land which is free from stone can, with the aid of fertilizers, be made to yield magnificent crops of cotton, Indian corn, melons, or other vegetables or fruit, and peach; pomegranate or fig tree will flourish anywhere here without manure, and yet these pine lands of Georgia are so little prized that they were selling in large lots last winter at from $1.50 to $2.50 per acre, where the trees were adjacent to large streams and where the timber could be cheaply placed in the same and driven to the sea.

It must not be inferred from what I have said that all the pine lands of the south or even of Georgia are equally well timbered. On the contrary, there are vast tracts the timber on which is of little value, and many an English capitalist has been swindled by the false representations of designing men into purchasing large tracts of land which are of little or no value. Instances of this have came under my own observation, and no one should allow himself to be drawn into the purchase of any southern lands until he has sent his own trusted and competent explorer to carefully examine and report on the same. Should he not do so he may in general make up his mind that he has been cheated in his investment.

FORESTRY MANAGEMENT.

The importance of forestry management in the estimation of older nations, better skilled than we in Ontario have shown ourselves to be in economic administration, appears in a volume of U. S. Consular reports lately published. The reports cover the particulars of Government control and management of forests in Austria-Hungary, Germany, France, Italy, and Switzerland, and are full of matter of great use to students of the subject in this country as elsewhere. Consul-General Jussen reports that no proper returns are published in Austria-Hungary of the profits of Government forests for the whole empire, but for Bohemia alone the clear annual profit is about 14,000,000 florins. The net income from the Prussian State forests, Consul-General Raine reports, stands at about 24,000,000 marks annually. The French net annual income is about 16,000,000 francs, as reported by Consul Roosevelt. Consul-General Alden reports that is impossible to give trustworthy figures of the revenue and cost of forestry in Italy. According to Consul-General Winchester, the Swiss Confederation derives no revenue from forests. The total value of yield from cantonal forests, however, is about 33,000,000 francs, and the returns from the forests of the Canton of Zurich show a nearly three-fold increase of profit yielded during a period of fifty years of cultivation—from 31 28 francs per hectare (nearly two and a half acres) in 1830-40 to 90 58 francs in 1870-78. Returns in money, however, while of great importance in a Province like Ontario, are the lightest evidence of the true value of the forests. Their influence upon climate and rainfall, and the consequent benefit to agricultural land and to public health, are considerations of far greater importance, besides which is the provision of useful and wholesome employment for great numbers of the population—the number of forest officers of all grades is about 32,000 in Austria alone. It is interesting to note the difference existing in the views of the Governments of the older countries of Europe from those prevailing with some of our own rulers. They attach the greatest importance to forest culture and assume every responsibility in regard to it. Here there seems a desire to shrink such responsibility. To get rid of the forest domain as soon as possible, to put it out of the government hands and into the hands of private speculators, has been the policy in Ontario heretofore, the excuse being that the cost of supervision is too great and onerous. It has been the motto of the Mowat Government that it is better to sell the timber off than have the trouble of preserving it from fire and pillage. But what of the future? Is there any thought of where the supply of timber is to come from after the present stock has been exhausted, which will not be many years at the rate of depletion that has been going on. The forests constitute the capital of the Province, which must shortly come to an end, if drawn from without any effort made to preserve or replace them.—*London Free Press.*

HEMLOCK.

The *Lumber Trade Journal* says hemlock, which a few years ago was wholly ignored in this and other markets, is rapidly coming to the front in coarser uses and is becoming a familiar sight not only for paving foundations, but for joist and small timber, and not a few western dealers have placed it on their price lists. To the initiated, hemlock is known as a far superior timber to pine in various uses, and western prejudices against its use are rapidly giving way, as they did in the east more than a score of years ago.

The Canada Lumberman to Jan. 1st, 1889, for $1.00.

SAWDUST.

Many a lumberman can mend his ways by simply making better roadways before wet weather sets in.

So much green lumber is used and houses are built so fast in Birmingham, Ala., that when the builder asks the owner to settle up for a house, the owner tells him to wait and let the house settle down.

It is announced that a German chemist has succeeded in making a first-class article of brandy out of sawdust, whereupcn an exchange is moved to enquire: "What chance will the prohibition movement now have when a man can take a hand saw and go out and get drunk on a fence rail?" May be it will relieve the poor, over-worked wives from the arduous labor of sawing their own stovewood.—*Southern Lumberman.* It will on the other hand prove another incentive to increase the denudation of our forests. Shoot the chemist by all means and preserve our forests at all hazards.

Old Sawyer has a son whose conduct is not the best in the world, and he was telling to a crowd many of the boy's bad habits and ended by saying that he was drunk all the time and was the worst boy in the neighborhood. An old farmer whose sympathy was aroused, said: "That is so, Mr. Sawyer, your son is a bad one, awful bad." Old Sawyer looked astonished and then thundered out: "He is just as good as your boys, confound your old meddlesome picture."

To try to run a saw mill or a lumber business without a lumber paper is like presenting the play of Hamlet with Hamlet left out. Neither is satisfactory. People *did* run saw mills before there was any lumber papers published, and they also beat their hominy in a mortar before mills were built, but, as an East Tennesse woman once remarked to us, "It is a mighty poor way of living." It will not do in this day and time. A lumber paper is now as indispensable to a mill man or lumber dealer as a file or rule. There are a great many lumber papers published now—some think too many, but we have never seen one yet that was not worth five times its subscription to any one engaged in the lumber or timber business. Therefore we say to every one in the lumber trade: take one or more of the papers devoted to your interest. If you can't take but one, and can find a better one than ours, or one more earnestly devoted to the lumber trade, take it, and we will think no less of you. But take one or two anyhow, no matter how small your business is. In a multitude of councils there is wisdom, and the managing editor of a lumber paper has daily, weekly and monthly communication with the best, most enterprising and successful men in the trade, and can collect, arrange and diffuse their ideas, their experience, their suggestions and all the facts and conditions of the trade in such a manner as cannot fail to prove profitable to all others engaged in the same business. You can not succeed in the lumber business or in any other business now without the aid of a paper devoted to that interest. You must "keep up with the procession" or make up your mind to get left.—*Ex.*

The American Lumber Tax.

Taxed lumber is a feature in the United States tariff that is not over-popular with our American cousins. They recognize two facts: (1) that the duty on lumber makes them pay more for everything made of wood, and (2) that by restricting importations they are causing their own wooded land to be fast cleared of the "forest primeval." The Chicago *Herald* says that on this point that "protected lumber exhibits in both its direct and ultimate results a fair example of the 'benefits' of legislation for a privileged class. Canadian forests are here forbidden competition," says the *Herald*, "and, denuding our own lands of our trees, we are so changing the climate that drought and floods more frequently occur. Tempests unknown in lands where timber belts break the winds annually cause increasing devastation. Americans are doing what the great geographer, Malte-Brun, says occurred in France, drying up the sources of our fertility and handing down to the next generation a degenerated evil. To hurry this wasting process the aid of the law is invoked." The American tax on lumber is from $1 to $2.50 per thousand. The average tax is $2 per thousand on the quality of lumber used in building a cottage. Its greater market price is $14 per thousand. The duty constitutes one-eighth part of its selllng price. The way in which the builder of a cottage has to foot it up for these protective taxes is thus put by the *Herald*:

"The lumber in a $500 cottage is one half the cost, the labor three-tenths, and other multifarious protected material cost the remainder. In the price of the lumber there is more than 12½ per cent. on $250. Call it that—$31.25; in the glass, nails, screws, locks, hinges, etc., summing up $100, there is certainly a charge of 33⅓ per cent., as the average duties are 47 per cent. This dwelling is thus protected from being built by about $65, added to its natural cost. Thirteen per cent. of its cost is simple inflation. There is no revenue from it whatever. The duty is guaged at precisely the advance that will keep Canadian lumber out. The cheap hardware in the same category."

'Tis ever thus when legislators, instead of turning their attention to reducing the burdens of a people, employ their powers in adding to the cost of life's necessaries. Our Chicago contempory must see that the points it has brought out are strong ones in favor of commercial union, and especially strong from an American point of view. The influx of Canadian lumber would lower the prices to the American consumer, and at the same time afford a new market for Canadian lumber.

To Utilize Sawdust.

Along the shores of Georgian bay are hundreds of sawmills. The sawdust is not only worthless, but it is a nuisance, the getting rid of which costs money. If thrown into the water it kills or drives away the fish, hence furnaces are built in which it is burned. The millers would be very glad to put this sawdust on board vessels. It would be better and cheaper to for them to do that than to convey it to the furnaces and burn it. It could be brought to Hamilton, converted into fuel gas and sent through mains for domestic use just as illuminating gas is now sent; the pyroligneous acid and other chemical products could be saved; and the remaining charcoal could be used as fuel direct. There would be no trouble in the burning of it. The green sawdust direct from the saw is used in the mills and no other fuel is required with it except to start the fire in the morning. Wood gas is largely used for illuminating purposes in Switzerland, Germany and Russia, and wood was used instead of coal in the Philadelphia gas works, some years ago, when it was affirmed to be cheaper than coal and to produce gas of greater illuminating power. Difficulties have been encountered with the gas in consequence of the fact that greater pressure is needed than in using coal gas, and that there is greater tendency with it to smoke. These objections would not be felt in using it as fuel.—*Hamilton Spectator.*

Notice to Contractors.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Goderich Works," will be received at this office unill Friday the 14th day of October, for the construction of works at Goderich, Ont., in accordance with a plan and specification to be seen at the Department of Public Works, Ottawa, and at the office of the Town Clerk, Goderich.

Tenders will not be considered unless made on the form supplied and signed with the actual signatures of tenderers

An accepted bank cheque payable to order of Minister of Public Works and *equal to five per cent.* of amount of tender, must accompany each tender. This cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL,
Secretary.

Department of Public Works, }
Ottawa, 14th September, 1887. }

HENRY PORTER,

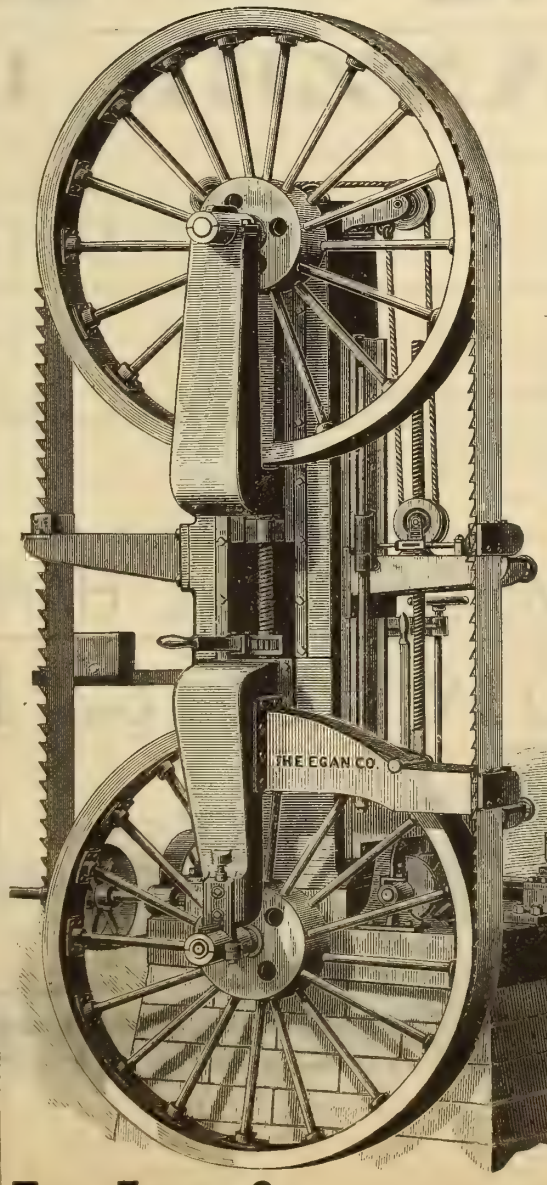
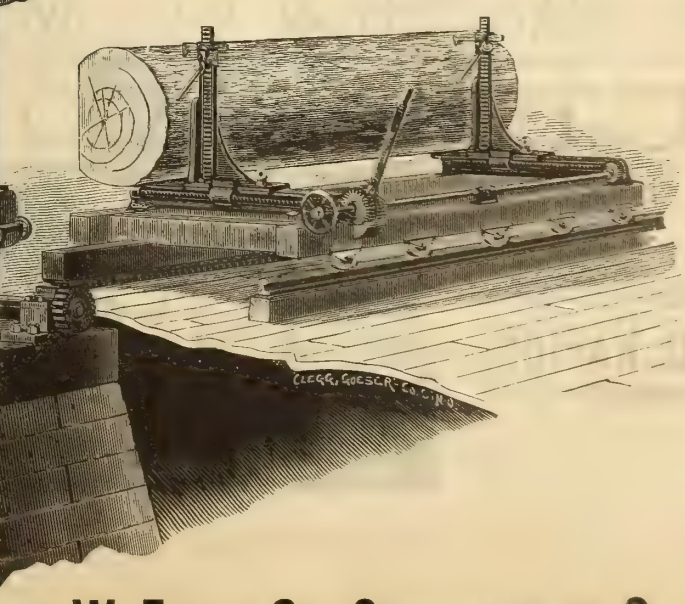
IMPROVED LOG BAND SAW MILL.



WE present to the trade of Canada our New Improved Band Saw Mill, and as we are the pioneer manufacturers of Band Mills, having been building them for the past ten years, and have more Band Mills in active operation throughout the United States than almost any other manufacturer, we present this new mill to the consideration of lumber manufacturers, and know an investigation of its merits and advantages will show us to be still in the lead.

The mill is built in the most perfect manner. The best materials are used throughout, and we test and run the mill in our works before shipping, and will warrant it in every way.

For prices of this, or cuts and prices of any other Improved Wood Working Machinery address us direct.



Correspondents will please mention this paper.

THE CANADA LUMBERMAN.

VOLUME VII. NUMBER II. } PETERBOROUGH, ONT., NOVEMBER, 1887. { TERMS, $1.00 PER YEAR / SINGLE COPIES, 10 CTS.

THE CANADA LUMBERMAN

PUBLISHED MONTHLY BY

ARTHUR G. MORTIMER,

OFFICE: OPERA HOUSE BLOCK, PETERBOROUGH, ONT.

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

BOTH from Great Britain and Quebec the reports as to square timber show some improvements. Prices are a little better and the market is by no means glutted, especially when the revival of trade in Great Britain is taken into consideration.

NEWS comes from New Westminster, B.C., of a large shipment of timber from that port for Shanghai, China. This is only one instance of the possibilities of the trade on our Pacific coast. There are extensive markets that can be served from that quarter and are susceptible of being developed with a little shrewdness and energy.

OWING to the scarcity of ship building timber in San Francisco and the dearness of Oregon pine, yellow fur from British Columbia is in demand in that city and seems to be well appreciated. The lumbermen of the Canadian Pacific coast seem to have excellent prospects before them. For the important Australian market they have every advantage over competitors.

WE learn from the *Northwestern Lumberman* that in the Southern States there is a feeling of hostility to the efforts that are being made by the Northern lumbermen to obtain sawlogs and square timber from Canada to supply their mills. For the same reason it is likely that the South will be opposed to a repeal of the duty on Canadian lumber. They do not want competition.

ACCORDING to the opinion of Mr. Durant of the Timber Manufacturers' Association of the Northwest, the lumbermen of the northwestern States are limiting the output of their mills so as to avoid overproduction and are carefully husbanding their standing timber. Canadian lumbermen should note this tendency and be cautious how they play into the hands of their competitors.

SOME of the lumbermen of the Upper Ottawa, amongst others Messrs. Timmins and Gorman, who hold limits bordering on Georgian Bay, are not going to ship their winter cut by rail to Quebec. They propose utilizing the water route, by way of Georgian Bay and Lake Huron for reaching the market. It is said there will be a great deal more square timber business done next season than last.

IT appears that in the Boston market the pine of Canada and the Northwestern States is being in a large measure supplanted by poplar and cypress from the South. This is one of the indications that our lumbermen should be active in securing new markets and developing those that may be more fully supplied from the Dominion. There is much trade that can thus be done by us directly, which is now in the hands of foreign middlemen, who reap an unduly large share of the profit.

THE British Board of Trade returns for September and the first nine months of this year are not unsatisfactory. There seems to be some revival in trade and the timber interests have participated in the general improvement. Importations have not been very heavy, in square timber less than last year, and the immediate prospect is brighter. There has been no sudden advance but the situation is improved with every prospect of its maintenance.

REPORT states that Sir Alexander Galt, who is the moving spirit in the construction of the Port Arthur & Duluth railway, has been successful in his financial negotiations and that the road will be constructed. This is the line which is to be built from a connection at Port Arthur on the Canadian Pacific to a connection in Minnesota with the Duluth & Iron Range. Ore and lumber are the things which the line would make accessible and at the same time afford a very direct and available connection between Duluth and the Canadian Pacific.

WE make the same offer to new subscribers this fall that we did a year since, namely, that any one remitting us a dollar now will be entered for the twelve numbers of the CANADA LUMBERMAN for 1888, and, in addition, for the remaining issues of this year free. As the great majority of readers prefer to have their subscriptions commence and end with the year this is one of the most attractive premiums that can be offered. The paper is still growing in popularity, and, we believe, our subscribers will bear us out in usefulness and influence also. We shall be glad to have a large addition to our list based upon this offer.

A NUMBER of Canadian capitalists have purchased a mill and a large tract of timber land on the St. John River, Florida, and having formed the Satsuma Lumber Company, recently incorporated, with a paid up capital of $150,000, will manufacture Cypress lumber extensively. Vessels that can cross the St. John River bar can load full cargoes at the mill. The officers of the new Company are: F. C. McIndoe, president; F. Vaughan, treasurer; Samuel Hatt, secretary; E. A. Bates, manager and E. O. Parsons, superintendent. John W. Russel, of 200 Broadway, will be the New York agent.

THERE has been revived at Ottawa the project of forming a Lumber Board of Trade, or Exchange. In the past each firm has made sales independently, has acquired its own information as to the markets, and so forth, as best it could, and has been shy about communicating any knowledge it possessed to the others. Far from anything being gained by such secrecy and isolation, the system, if it could be so termed, has been neither convenient nor advantageous. It is proposed to have a building where the latest market quotations from various points will be received and where sale can be made without inconvenient and expensive journeys. By this means much unnecessery expense will be saved, sales can be made with fuller knowledge and therefore more advantageously, and the necessity will be obviated for reduplicated trouble by each firm. When it is well started the lumbermen of the Chaudiere will have no inclination to go back to the old plan with its waste of labor and money.

THE commission that has been appointed to make enquiries regarding the Trent Valley Canal has a considerable interest from the lumber trade. There are extensive limits in the counties of Peterborough, Victoria, Hastings, Haliburton, Simcoe and others that are served by these waters, and there are very large mills operated by its water power. Much lumber and timber is already carried by means of barges on the Trent, the Otonabee and the chain of lakes on this route, and the quantity would be greatly augmented if this cheap means of carriage were extended. The opening of the locks at Fenelon Falls, Buckhorn and Burleigh, which will be open for navigation next spring, will in itself be of considerable service to several large mills.

DUN, WIMAN & CO. state that in the quarter ending with September, 308 failures occurred, a considerable increase over the corresponding period last year. The liabilities were $2,996,000, considerably over those of last year. Keen competition and the long existence of declining prices, are said to have affected the stability of trading firms. The following are the totals of the failures in the Dominion of Canada and Newfoundland for three quarters of 1887: Ontario, $3,906,225; Quebec, $3,341,359; New Brunswick, $5,253,515; Nova Scotia, $527,160; Prince Edward Island, $115,600; Manitoba, $213,505; Victoria, $160,900; Total for the provinces, $13,458,264; Newfoundland, $232,250; Grand total, $13,690,514.

IT is only in a very general way that the common law makes it a larceny to take a newspaper and refuse to pay for it. Just how the law is inforced is something with which people generally are not very well acquainted. According to an exchange the publishers of a paper in Illinois, a short time since, brought suit against forty-three men who would not pay their subscriptions, with the result that it obtained judgment in every case for the amount of the claim. Of these judgment debtors, twenty-eight made affidavit that they owned no more than the law allowed, and accordingly, attachments were avoided. This, however, did not end the case. Under a decision of the Supreme Court, our contemporary continues, they were arrested for petty larceny and bound over in the sum of three hundred dollars each. In Canada the law provides that anyone taking a newspaper or other periodical from the post office three times in succession is held liable to subscription to the same whether he has subscribed or not. We regret to say that quite a number have been regular readers of THE LUMBERMAN for some years, and when billed for their account either do not respond at all, or when they do endeavor to evade payment. We have no desire to follow the course adopted by our American contemporary, but must gently hint to those to whom this matter applies that it takes money to run a paper, and the same must be forthcoming, otherwise we may have to adopt stringent measures to secure our rights. How many will take the hint?

IT is with satisfaction, not unattended with a little modest pride, that we present the current number of the CANADA LUMBERMAN in new attire and thorougly remodeled in every way. Improvements have steadily been going on for upwards of a year, and no better indication of the appreciation of our efforts could be found than the rapidly increasing support given it, not only by the lumbermen and wood-workers of the country, but also the advertising public. Something over one month ago an order was placed in the hands of Mr. J. T. Johnston, of the Toronto Type Foundry, for a carefully selected and complete new printing outfit. Possessing the best of facilities, we have spared no pains to give THE LUMBERMAN as handsome a typographical effect as any trade journal on the continent. Whether or not we have succeeded our readers are left to judge. Whilst transforming the mechanical appearance of the paper we have also endeavored to elevate it in a literary sense, and while yet open for many improvements, we hope to make it more and more valuable to the trade throughout the Dominion. Though we have to thank many of our readers for their efforts in the past towards furnishing information, we think that more interest should be taken by the trade in the matter of correspondence on relevant topics, and

the furnishing of news regarding operations. A journal of this nature, which is supposed to furnish the news of the trade throughout the Dominion, must of necessity seek the co-operation of all interested parties towards this end. As has often been stated in the past, the columns of THE LUMBERMAN are always open for the free and fair discussion of all matters relating to the lumber and kindred trades. Will not those who have ideas and opinions to express endeavor to pay more attention to this department, and by so doing assist us in making the CANADA LUMBERMAN on a par with any similar publication? We cordially invite criticism and suggestions from all regarding matter for publication, and will try to benefit by such and allow our readers to do likewise. Those not already subscribers who may receive a copy of this issue, will be kind enough to give it a careful reading, and if they think it worth the price of subscription—$1 per year—a remittance of that amount will do us more good than any amount of praise.

THE project of forming at Toronto a Provincial Lumbermen's Association, or a special division of the Board of Trade, seemed to be regarded with favor, and there was some movement towards carrying out the idea. But the matter has been allowed to sleep and no progress has been made, to our knowledge. It would be unfortunate if the attempt should be allowed to fall through, for such an organization would be very beneficial to the timber trade of the country. Union is strength, and such an important industry has many interests that might be furthered by concerted action. Individual lumbermen, however influential, when acting separately and without unison, cannot have the same weight as their claims would possess if pressed on behalf of the whole trade by those speaking authoritively in their name. There are also many points as to which they would do well to develop a common policy after consultation and discussion. The matter should not be permitted to remain dormant, but now that some interest has been excited practical steps should be taken without delay for the permanent organization of the timber trades.

THE rain that fell early last month had the good effect of extinguishing the forest fires that were being vainly combatted. Unfortunately before the ravages were stayed there had been much destruction of our forest wealth. Not only did the owners of standing timber see much of their property thus destroyed, but there has been another bad result. On some imits where the destruction was not total the trees have been killed by the scorching to which they were exposed. These lifeless trees must be cut at once or they will be rendered valuless by the various boring worms. By this necessity the plan of operations of many lumbermen will be disarranged, they will be driven to cut prematurely with a tendency to glut the market. Though greater precautions have been taken lately to preserve the forest from destruction by fire the damage that has been done this year shows that still more is required in the way of prevention. It is true that the season was exceptional with its prolonged drought, but there are few years when there is not a period of danger. The lesson should be learned that even greater precautions are not only desirable but would be profitable.

SINCE our last issue the Mercier Administration has come to a decision regarding the ground rents for timber limits in the Province of Quebec. They have decided not to carry out their proposed increase from $2 to $5, but to make it $3, being an increase of $1 a square mile over the old rental. But while thus seeming to yield to the protest of the lumbermen, the relief thus given is deceptive. Since they have adopted the expedient of drawing larger sums from the trade in another way. The regulation for collecting the dues has been changed, and in future the charge, instead of being by the log, will be by the thousand feet board measure, $1.30 for pine and 65 cents for spruce. It is calculated that the receipts from this source will thus be increased by 20 per cent., the total increase being altogether more than the additional $138,000 estimated by the Provincial Treasurer from the increase of the rental to $5. It appears that the Quebec Government is determined to exact by some means a heavy contribution from this important industry, which was by no means so remunerative as to warrant this addition to its burdens. Another new regulation will be even more obnoxious to many lumbermen and others interested in timber limits. In future the leases are only to be for one year and the tariff is to be subject to annual revision. This will not only reduce the value of such property, but what is of even greater consequence it will deprive the value of stability. One effect of this will be to render it of less credit as a security, so it may be more difficult and will certainly be more costly to obtain advances. This will have a tendency to cripple operations and curtail these operations to the loss not only of themselves but of the whole community. The only mitigating circumstance attending this change of base, is that the smaller advance of the ground rent, will obviate the pressure that would have been put upon the lumbermen to strip part of their limits prematurely in order to relieve themselves of so much of their ground rent. This, however, is partially counteracted by the instability of the tenure. Altogether the new regulations are for the benefit neither of the trade nor of the community.

AN official report has been presented to the Secretary of the Interior at Washington by his own request, which, if adopted, will effect a complete revolution in the management of the forests of the United States, and by the force of example very possibly of those of Canada. The head of the Forestry Division of the Department of Agriculture, having been requested to prepare a scheme for the organization of a forestry department, has done so in a very thorough manner. Having graduated in a German forestry university, he adopts the scientific system of forest culture and management in that country with such modifications as his long experience on the continent suggests as suited to local requirements. He lays stress upon the principal that no more timber should be cut from a forest that is replaced by growth, that renewal by planting should at once follow, and that the enormous devastation by fires should be checked. To attain the objects he suggests, that the forests should be withdrawn from sale and settlement, that the forest reserves should be divided into great blocks, further subdivided into districts. Over these he would place trained inspectors with a staff of foresters, a bureau of commissioners having the general control. There would then be no further leasing of limits, but the right to fell the trees selected by the inspectors would be sold. This is a modified form of the system in vogue in the countries of the continent of Europe where the management of forests is a science. It would be a total change from the system that prevails in North America with minor variations in different portions. It is obvious that such a system if adopted in the United States, and this is far from improbable, would have important effects upon the lumber industry of Canada. For a time the cut in the United States would be likely to be diminished, and there would be a greater demand which might be supplied from Canada. But when the system was fully established among our neighbors there would be a steady supply and that prolonged in a manner which does not seem hopeful under present circumstances. If the system should prove successful in the United States there would no doubt be a strong tendency to imitate it in Canada. In our country we differ from our neighbor, the forests not being controlled by the central authority but by the Provinces. This, however, would not prevent the change being made piece meal, for if one Province moved in this direction the others would be likely to follow. The rights of private holders would undoubtedly be respected, but European experience goes to show that individual proprietors would be led to follow the public system. The lumbermen of Canada and others connected with our forest wealth, will watch with interest to see what action is taken by the Washington cabinet and by Congress in regard to this very important report.

BRITISH COLUMBIA TIMBER LANDS.

In the *Canada Gazette* of Oct. 15th is to be found the amended regulations for the survey, administration and disposal of Dominion Lands within the forty-mile railway belt, in the Province of British Columbia. Among other changes which have taken place we find that sub-clauses 4, 5, 6 and 7 of clause 13 are new, and are intended to facilitate the settlement of timbered lands, which would not otherwise be opened for homestead entry. The regulations are copied from the Timber Regulations of the Province of Ontario, and the object is, while permitting such lands as contain merchantable timber to be taken up and cleared for agricultural purposes, to prevent persons who merely desire to obtain the timber, from getting possession of land under cover of a homestead entry, stripping the land of its timber without paying any dues, and then leaving the land much less valuable for all natural purposes, than if it had remained in its natural state. The sub-clauses referred to above read as follows:—

(4.) All merchantable timber growing or being upon any land entered or sold within the limits of Dominion lands in British Columbia, and all gold, silver, copper, lead, iron, petroleum, coal or other mines or minerals shall be considered reserved from the said land, and shall be the property of Her Majesty, except that the homesteader or purchaser, or those claiming under him, may cut and use such merchantable timber as may be necessary for the purpose of building, fencing or road-making on the land so entered or sold, and may also, under the authority of the Crown Timber Agent, cut and dispose of all timber required to be removed in the actual clearing of the said land for cultivation, but no merchantable timber (except for the necessary building, fencing or road-making as aforesaid) shall be cut beyond the limit of such actual clearing; and all merchantable timber cut in the process of clearing, and disposed of, shall be subject to the same dues as are at the time payable by the holders of licenses to cut timber:

(5.) The patents on all lands, hereafter entered or sold as aforesaid, shall contain a reservation of all merchantable timber growing or being on the said lands, which merchantable timber shall continue to be the property of Her Majesty; and any person or persons now or hereafter holding a license to cut timber on such land, may at all times during the continuance of such license enter upon the uncleared portion of such lands, and cut and remove such timber, and make all necessary roads or water-ways for that purpose, and for the purpose of hauling in supplies, doing no unnecessary damage thereby; but the patentees or those claiming under them may cut and use such timber as may be necessary for the purpose of building, fencing or road-making on the lands so patented, and may also, under the authority of the Crown Timber Agent, cut and dispose of such timber to be removed in actually clearing the said land for cultivation, but no merchantable timber (except for the necessary building, fencing or road-making as aforesaid) shall be cut beyond the limit of such actual clearing; and all merchantable timber so cut and disposed of shall be subject to the payment of the same dues as are at the time payable by the holders of licenses to cut timber:

(6.) Holders of timber licenses, their servants and agents, shall have the right to haul their timber over the uncleared portion of any land entered as a homestead or purchased as hereinbefore provided, and to make such roads or waterways thereon as may be necessary for that purpose, doing no unnecessary damage, and to use all slides, portages, roads, waterways, or other works previously constructed or existing on any land so entered, sold or leased, and the right of access to, and free use of all streams and lakes theretofore used, or that may be necessary for the passage of timber; and all land necessary for such work is hereby reserved:

(7.) All merchantable timber growing or being upon any land hereafter entered as a homestead or sold under these Regulations, shall be subject to any timber license in force at the time of such entry or sale, and may, at any time during the currency of any license or licenses to be issued during such period be cut and removed under the authority thereof

RAILWAYS AND FORESTS.

The report of the Forestry Division of the United States Department of Agriculture gives information respecting "The relation of Railroads to Forest Supply and Forestry," which should be of much value to the people of Canada.

The total length of railroads in the United States was at close of

1840	2,795 miles.
1850	9,021 "
1860	30,635 "
1870	52,914 "
1880	93,349 "
1886	137,615 "

It is estimated that about 12,000 miles will be completed in 1887.

The quantity of timber required for ties, bridges, station buildings and other structures over these roads is much greater than most persons suppose. It may, indeed, be justly called enormous. In many of the districts in which railroads have been built timber was so abundant that it was used for every conceivable purpose, as being the cheapest of all materials.

The length of track, it will be understood, considerably exceeds the length of road. The report assumes that it is 187,500 miles. Allowing 2,640 ties for each mile, the whole number would be 495 millions, and as each contains three cubic feet of timber on the average, the whole quantity embedded under the entire mileage is 1,485,000,000 cubic feet.

It is difficult to ascertain the quantity used in bridges, trestles and piles; 2,000 feet per mile is considered a fair average. The total at that estimate is 375 million cubic feet.

Telegraph poles number 30 to the mile and in all about five million. At an average of ten cubic feet for each they require 50 million feet more.

But for every cubic foot ready for use in ties, bridges, etc., 1⅔ feet of round timber is used.

The total quantity cut is therefore 3,150,000,000 cubic feet. It is almost impossible to conceive what these figures mean.

The average life of ties is about seven years; the average life of bridge timber and poles about ten years. To maintain the present roads requires therefore 70,714,286 new ties every year. Allowing for renewals of bridges, trestles, etc., the total quantity required is nearly 255 million cubic feet per year.

Then putting the construction of new roads at the low average of 5,000 miles each year, 13,200,000 new ties and ten million feet of timber, bridges, etc., are required for this purpose.

The total annual demand is now 305,712,858 cubic feet. The demand must increase every year if nothing be done to prevent it. The waste in getting out ties and railway timber is very great. The railroad managers require the best material. When wood is so abundant that much is burned in order to clear the land, the farmers who generally get out ties and timber do not feel the necessity of care or economy. Young oak, larch and pine trees, which furnish but a single tie each, are recklessly cut down, and the means of restoring the forests from which the larger trees have been taken for other purposes are thus destroyed.

The effects of this recklessness are now very perceptible, especially in the wooded districts from which supplies for the prairie roads have been taken. In vast districts what were valuable forests are now mere wastes of brush and firewood.

It is calculated that all the valuable timber on 296,847 acres of well wooded land is required each year to meet the demands of the railroads, assuming that every acre will yield 300

ties. Vast as is the supply it must soon be exhausted if the consumption continue at this rate ever increasing.

In Europe, where timber of all kinds is comparatively scarce and dear, steel ties are used by some roads and are found satisfactory. It is hardly to be supposed that steel ties will come much into use on this continent for many years to come. Other European roads use antiseptics to prolong the life of ties and to render wood hitherto not used suitable for this purpose. Antiseptic preparations, it is suggested, could be profitably used in those parts of America in which suitable wood is scarce. The Union Pacific and the Atchison, Topeka & Santa Fe roads have established works at which soft woods are treated to make them suitable for ties, piling, etc.

In Canada the scarcity of wood for railway purposes has not yet been much felt. But there are some districts to which ties and timber must be hauled for a considerable distance even now, not to speak of the prairie roads, for which in most cases only soft wood can be got.

The report urges the owners of land, and especially those railroad companies which have obtained great land subsidies from the Government, to provide against future want by planting extensively now. It tells of instances in which aboriculture has been carried on profitably and satisfactorily on a large scale, as well as of the great success which has crowned the labors of those who have planted trees for farm and homestead purposes on the treeless prairie.

It is asserted that farmers who sell hardwood or pine ties at 30 to 35 cents each waste what must be very valuable in a few years—what indeed is worth now much more than the price they get, and farmers are urged to combine wherever they can to obtain better prices.

QUEBEC TIMBER DUES.

The following is the text of the official circular recently issued by the Quebec Government regulating the timber dues :

EXECUTIVE COUNCIL CHAMBER,
Quebec, 6th October, 1887.

Present—His Honor the Administrator In Council :

His Honor the Administrator has been pleased to order that the regulations based on the Order-in-Council, No. 160, of the 7th of April last (1887), establishing the ground rent per square mile, on all the limits for the cutting of timber, and those including the tariff of stumpage dues, in so far as they relate to pine and spruce logs, as established by the Order-in Council, No. 39 (Crown Lands), of the 7th of April, 1881, be rescinded, and that from this date the following be substituted therefor.

The ground rent payable on all limits under license to cut timber, granted up to the present, or to be granted in the future, shall be three dollars ($3.00) per square mile, payable in cash on or before the first day of September in each year. Default of payment in this case, at the proper time, will entail the forfeiture of the right of renewal of said license.

The stumpage dues imposed on pine logs, of which the contents shall be reduced to a standard of two hundred feet, board measure, shall be one dollar and thirty-six cents ($1.36) per thousand feet, on all timber cut after the first of September of this year.

The dues on spruce logs, cut after this same date, reduced to the same standard of two hundred feet, board measure, shall be sixty-five cents per thousand feet.

The payment of those dues shall be made in conformity with the affidavits of the cullers and foremen employed in the forest operations by the lumber merchants, proprietors of limits, or their representatives, also according to the affidavit of said proprietors, the whole to be revised and verified by the written report of the forest ranger.

The statement of measurements affected by those cullers must be sworn to before the Crown Timber Agent or forest ranger ; and shall be subject to any inspection and verification that the Commissioner of the Crown Lands may judge it advisable to order. Those annual statements of forest operations must be transmitted to the aforesaid agents, on or before the 30th of Sebtember, following the season in which the said operations took place.

It is further ordered that the regulations based on the Order-in-Council No. 36, (Crown Lands), of the 6th of December, 1883, concerning the dues liable to be imposed on culls and pieces of small dimensions, be abrogated.

EXCHANGE ECHOES.

Timber Trades Journal, London. Eng.

On the continent we understand that pitch pine, both deals and timber, is selling freely at full prices. The reason for the decline in prices on this side of the Channel is, rightly or wrongly, attributed to a falling off in the actual consumption ; and, as the stocks are not abnormally large, there is very fair ground for the assumption, not that the wood is going out of use, but that not so much of it is now required as formerly.

Southern Lumberman.

It is intimated in a good many directions that lumber will be advanced next year. The reasons for this belief are not easily given. It is true the demand for lumber may advance, but on the other hand the amount of new lumber territory constantly being opened up and the enterprise displayed by sawmill builders as an off-setting factor which is well worth while to keep in sight. Even in the far Northwest there is speculative fever at work. We are constantly reminded by forestry congresses of the rapid depletion of American forests. This possibly is encouraging and stimulating a great many to make purchases of desirable timber territory and hold for future exigencies.

Hamilton Times.

The Toronto *Globe* ascertains from the records of recent sales that the price of Ontario timber lands is on the advance. A square mile that was sold for $160 in 1881 has since been withdrawn at $539. The *Globe* thinks that commercial union would still further advance prices. Mr. Mowat can hardly be blind to the fact that these values belong by right to the people of Ontario, and not to speculators. If a lumberman can afford to pay such a price to a speculator for the right to cut, he can afford to pay the same price to the Provincial Government. There is an easy way of diverting the "boodle" into the Provincial treasury, and Mr. Mowat should promptly adopt it. Mr. Mercier has set the example in Quebec.

Chicago Timberman.

It is practically settled thus early that logging operations this winter, are going to be expensive. Many kinds of camp supplies are slightly higher than they were last year, and there are no important items cheaper. Labor is not plenty and while prices are nominally about the same, the existing conditions point to a higher average during the season. In general, the difficulty of getting logs to water and the amount of labor required to accomplish it increases slightly every year, because it is natural that the more accessible timber should be first cut. In the older sections, there will be a good deal of clearing up work done. A good many logs put in over long hauls, the added expense of which there is nothing to counterbalance. The differences in every case may be small and apparently unimportant, but the sum of them is likely to be considerable, and to make the aggregate as well as the per thousand cost of logging the coming season, greater by an appreciable percentage than it was last year.

Southern Lumberman.

It seems a hard fate that a mill man, after having his mill blown to pieces, should have to pay out large sums of money to assuage the grief of the surviving relatives of the man whose carelessness was the cause of the destruction of life and property. Nevertheless, there is both justice and mercy in this ruling of the law. The prime cause of the accident was the placing of an inexperienced fireman in charge of the boilers. Generally a negro is selected who possesses the ability to toss a cord of wood or a load of sawdust per hour, and who will manage to keep up steam sufficient to move the saws properly. The negro is so interested in the contest thus engaged in that he fails to keep up enough water, and presently there is a crash and everything goes to pieces, taking his boiled remains with it. Both the damage that is thus occasioned and the suits that follow should teach the mill owner that it is cheaper in the end to employ a competent engineer. We think that the number of accidents that are occurring in various parts of the country are doing a great deal in educating the mill owners to a proper sense of the responsibility resting upon them. Unfortunately the experience of one man does not seem to teach another man anything.

Mississippi Valley Lumberman.

There are indications that there are better things in store for the lumber trade in the Canadian northwest, as elsewhere. The trade up that way, since the disastrous boom of 1882 has been even more badly in the dumps than it has elsewhere. Mills have been idle and lumber has blackened in the pile. Owners of pine lands tributary to that market have been without a market and demoralization has been supreme. But there is again inquiry for pine lands and our advices from that locality bring the information that mills which have been idle are to be operated next season. Minnesotians have an interest in this renewal of business, because much of the timber which is tributary to Rat Portage—the chief source of supply for Manitoba and the territory west—will be cut from Minnesota soil. New railroads may make some of this timber tributary to the Minnesota markets, but the large and valuable tracts of pine lying on the north slope are naturally tributary to the Canadian markets. It is likely to be some time before a large consumptive demand on the other side of the line will make very serious inroads into this almost virgin timber, but how great a proportion of the whole amount will find its way into the Minnesota markets will depend somewhat upon the extent of consumption in the Northwest and the amount of development in the railroad building line which is accomplished in the northern part of this state. Minnesota men are large holders of pine on the northern slope and they therefore have more than a passing interest in the development up that way.

CHIPS AND SHAVINGS.

—Resin is frequently used for producing an immediate adhesion of the belt to the pulley, and for this it is well suited, but if the owner has any regard for the consequences he will soon learn that while the resin will give an instant grip to the slipping belt, it will soon be ground into the leather, stiffen the material and make the last state of that belt worse than its first.

A manufacturer who uses considerable oak, [illegible] get oak into which the worms have not worked one [illegible] gradually go further south. The reason for this [illegible] to him, though he believes that the more the country is [illegible] up the wormier the oak becomes. To get oak absolutely [illegible] from worm holes he must now go to those sections of the country south where the forests have been but little molested.

—Happening to want a place to strike a parlor match to light a gas stove, says a writer in the Chicago *Journal of Commerce*, I struck the match on the top of the stove over the [illegible] The gas ignited but the match did not. I laid the [illegible] aside, and as the gas burner was wanted I used the same match until I had lighted it twenty-three times, and the match is apparently as good as ever. Cannot some one invent an improved lighter from this suggestion?

—A sash, door and blind maker says there is more waste of lumber in the business than is always taken into account. Says he : "A man figures that his lumber costs him so much, his labor so much, and interest, taxes, insurance and what not so much more, and that there ought to be so much left for profit ; but when he comes to figure up at the end of the year, he has to inventory his plant at all it cost him to make his books balance." This will apply to others besides the sash, door and blind makers.

—Prof. D. P. Penhallow, having studied the relation of annual rings to the age of trees, concludes that the formation of rings of growth is chiefly determined by whatever operates to produce alternate periods of physiological rest and activity. In cold climates the rings are an approximately correct, but not always certain, index of age ; but, in warm climates, they are of little value in this respect. The influence of meteorological conditions in determining the growth of each season is most important, particularly with reference to rainfall. Periodicity in rainfall corresponds with periodicity in growth.

—The brick saw mill of the Kirby-Carpenter Lumber Co., at Menominee, Mich., is as near fire proof as a saw mill can well be. It is so much so that not a dollar of insurance has ever been placed upon it. The walls are of brick with an iron truss roof, leaving the sawing floor entirely free from posts or any sort of obstruction. A very heavy brick bearing partition runs lengthwise through the middle of the lower storey, doing away with the great number of posts and beams necessary to supportthe floor and shafting of an ordinary mill. The company's total sawing capacity is about 450,000 feet a day of ten hours.

—The largest manufacturers in the country, says an exchange, are the most diligent and constant students of the question of supply and demand. No educator is too expensive for such persons. The mill man operating at remote points, with an outfit of the most primitive character, superintended by sawyers that, ten chances to one, never set foot outside the county limits, in his own estimation knows more about lumber matters in general than all the veterans in the business put together—in fact such men know so much that it keeps them constantly poor. The class deserving of these comments is large ; it has a powerful influence, and it refuses, yes even spurns, well meant advice. Their labors overcrowd the markets with undesirable stock, and they whine and kick at settlements which are monuments to the shrewdness of the seller who made them, albeit the mill man brands the transaction as "a cold blooded steal."

—In nearly every case of a boiler explosion a trifling cost would have saved the lives of one to three men. In all seriousness, we think the suggestion we made recently, that the offices should be situated directly over the boiler, would be the best preventative of boiler explosions in the present laxity of all reasonable precautions. If the owners were the only ones exposed to the folly of using boilers unfit for service, controlled by ignorance, it would not be worth while to plead for inspection laws. But unfortunately, as a rule, they are not exposed at all. Boiler insurance has done a good deal to lessen explosions, yet the principal of insurance is not understood as well as it should be. We heard this exemplified during the past week in a way that would be amusing if it were not something worse. It was the case of a man owning two large boilers. Said he, "I am about tired of paying for insurance on boilers ; I have paid regularly for nine years, and there hasn't been an accident from the results of which I could collect a cent ; besides this I have been forced to make repairs at a cost of nearly four hundred dollars!" Comment on the above would be superfluous.—*American Machinist.*

THE NEWS.

ONTARIO.

A lumber exchange is being talked of at Ottawa.

The timber slides at the Chaudiere have been closed for the season.

Spence & Kuhlman, a planing mill firm of Cobourg, have assigned.

Quite a large quantity of hemlock logs will be cut at Deseronto this winter.

Grant & Ranger have the job of cutting 50,000 logs on Fraser & Co.'s Black River limit.

Fraser & Co.'s limit bordering on Sheenboro' township is considerably damaged by fire.

Fraser & Co., of Ottawa, have decided to employ jobbers henceforth instead of concern shanties.

Mr. John Mills, Merrickville, has recently made considerable enlargement of his cabinet factory in that place.

The Otonabee river has been filled for some time with J. M. Irwin's drive. They are getting down in good shape.

The water has risen about six inches in the River du Lievre, but is still far too low to run the lumber mills full power.

Messrs. Grier & Co.'s saw mill at the Chaudiere was closed down, temporarily, on the 19th ult., owing to lack of water.

Emery Bros., of Saginaw, intend doing some heavy log cutting this winter on their limits in the Georgian Bay district.

On the Spanish river the Spanish Lumber Co. are going to exceed all their previous efforts in log cutting the coming winter.

J. O. Long, an employee in Mickle's saw mill, Gravenhurst, recently had his left leg and collar bone broken by a tram-car running over him.

A shantyman named John Ryan had his legs broken recently by the falling of a tree while engaged in cutting in the upper Ottawa lumber district,

The Rathbun Company's mill at Campbellford has all ties cut for this season and is now cutting lumber, and will finish operations about November 1st.

As the last block for the season was being cut in Thompson's shingle mill, Orillia, G. W. Brown, who was operating the saw, had a thumb and four fingers taken off.

Bronson & Weston's Schyan limit was seriously threatened by fire, but hard work and care averted the danger till rain came. Heavy local showers have killed most of the fires.

Building operations are very brisk at the works of the Terra Cotta Lumber Company, Deseronto. Large extensions are being made to the buildings which now enclose a large space.

The Upper Ottawa Improvement Company have purchased fifteen hundred pieces of boom timber to be used this winter in making the necessary repairs to their works on the Upper Ottawa.

Lumberman Bingham, of Ottawa, states that his drive on the Gatineau river has been laid up at Gilmour's mills, Chelsea, for over a month past. This stoppage of the drive is owing to a dam built across the river.

The Georgian Bay Lumber Company will cut 200,000 feet of square timber this season, and Messrs. Timmins & Gorman 100,000 feet. The former firm will cut ten million feet of timber on the Wanipite river this season.

The new furniture factory of the Lindsay-Seldon Furniture Company at Peterboro' is rapidly approaching completion. It covers an area of 80x40 feet, and is four stories high. It is located close to the river and adjoins the railroad track.

Bronson & Weston, of Ottawa, have two company shanties and three jobbers. J. F. Inglee has two shanties and expects to get out about 10,000 logs this season. Benjamin Moore and R. W. Eady are also jobbing for Bronson & Weston on Schyan limit.

It is rumored that Thomas Mackie, is negotiating for the purchase of Messrs. A. & P. White's steam saw mill at Pembroke, along with their mill and limits at Deux Rivieres. The Messrs. White are said to be willing to sell either property separately or both together.

In the Keepawa District there was recently some uneasiness among the log makers, owing to an outbreak of typhoid fever in one of Hurdman's camps, from which, fortunately, being isolated, the disease has been kept from spreading. Such cases as did occur, were, however, of a very mild type.

The Orillia *Packet* says that considerable difficulty is being experienced by the lumbermen operating back north in procuring the required number of men to carry on the work upon the enlarged scale rendered necessary in consequence of the limits being so overrun by the bush fires, many dams and sluiceways being also destroyed, and which will have to be replaced this fall so as to be ready for the spring freshets.

Mr. Rowen, C. E., has discovered what is thought to be a forest of petrified trees on the Storrington side of the Rideau canal. The columns are among sandstone, and while the latter splits horizontally the former splits perpendicularly, thus proving the contention that a forest has been discovered. The discovery will create a sensation among the geologists.

The Parry Sound and Conger Lumber Companies are making some extensive additions to their fire extinguishing apparatus by laying pipes from their engines and other ways. One very pleasing feature in connection with these arrangements is the spirit of reciprocity shown between the Companies in allowing a mutual use of the appliances for the benefit of both.

J. R. Eaton of Orillia has his planing mill in operation again, after a thorough overhauling, which renders it "as good as new." He is procuring a drying kiln, which will enable him to transform green timber into seasoned, within five days. This has been much needed in Orillia, where seasoned lumber is more difficult to obain than in places distant from the mills.—*Packet.*

The mill owners at the Chaudiere have to pay for driving, towing and boomage, as well as for passing their logs through Government works, it does not pay them to bring down logs of 12 inches and under in diameter, apart from the fact that their slabbers, nearly all our mills being fitted up with upright gangs, are never set for less than ten inch stock; such small logs cost more than they are worth when sawed up.

Lumber cutting as well as lumber shipping in Ottawa is now at low water mark. Numerous barges are lying about waiting for a load and there is nothing to load with. It is said that up till August the shipping interest was a booming one, but since then there is difficulty in moving the boats about at the lumber wharves, for their bottoms scrape and bump on the rocks to a troublesome extent. Never since the mills were erected at the Chaudiere has the water been so low.

Mr. A. J. Maxwell, of Mattawan, states that the Mattawan is a lively place just now. Every day shantymen are pouring in from Ottawa on their way to the various lumber shanties, and the lumbermen are shipping large quantities of supplies to the Mattawan to be taken by teams to their various shanties. All the firms this year expect to do fully as much as they did last year, a little more perhaps, to make up the shortage in the cut last winter owing to the depth of the snow.

A large lumber operator on the Whanapitae is reported as saying: "I think we'll get our square timber to Quebec by the water ways just as speedily and as cheaply as by way of the C. P. R. to Papineauville, and then taking the Ottawa river. As for water there is no better river in Ontario to drive than the Whanapitae, there is always plenty of water and the river is not broken up by rapids and the timber can be rushed into the Georgian Bay in double quick time."

A few days ago men belonging to the firm of McLaren & Edwards, saw-mill owners, of Carleton Place, were in Almonte inspecting the slide, taking measurements of necessary repairs, etc. It is their intention to float down their logs anyway, whether the slide is repaired or not, taking the falls for the highway, as they did last summer. It is said to be their present intention to close their Carleton Place mills and remove the plant to Rockland, on the Ottawa river, where mills will be erected to receive the machinery.

The Midhurst grist and saw mills recently burnt, said to be the oldest in the country, were erected by George Oliver on the site granted by Government in 1819. In the year 1841, Mr. Boys, the late County Treasurer, purchased them, improved them and worked them for several years, doing a large business. At this time a distillery was attached to the mills, which supplied all the hotels north of Bradford, and the grist mill did the grinding for all the settlers between Barrie and Lake Huron.

The bush fires around Eganville are all out and reports come from all sides of the great amount of valuable lands cleared by the fire. Hundreds of acres of beaver meadows and alder bushes were burnt over so that they are entirely cleared, and people are commencing to plow them just like prairies, only they are a lot richer than most prairies. Thousands of acres of fine swamp land is laid flat, that is a tract of fifteen square miles was burnt, that will undoubtedly ere long make the finest valley of farming land in the country. Most of the men in this county who were determined on going to the shanties this fall have now to remain at home clearing land. In this instance, at all events, the bush fire has resulted in doing good instead of harm.

Messrs R. W. Thistle & Co. expect to cut a larger number of saw logs on the Kippawa this year on their limits, which have only been worked to a very small extent for the past two or three years, and it is probable that Messrs. Grier & Co. will cut about double what they did last year in order to keep both their mills at Ottawa working. J. R. Booth will cut more logs this year on his Temiscaming limits, than ever before, and Bronson & Weston will cut extensively on their Bonchere limits. Hamilton Bros. will cut a little more than usual on the Dominion limits, and Moore & Co. will turn out a large quantity of square timber from their Kippawa limits.

The prospect for Ottawa securing the mills of the Canada Lumber Company, of Carleton Place, does not appear certain after all. There will be a change in the location of the big establishment, but the advantages of half-a-dozen sites have not been fully considered. This was in effect the information given by Mr. W. C. Edwards, M. P., to a *Journal* reporter. Said Mr. Edwards: "The firm has come to the conclusion that the sawing capacity of the mills will have to be increased. This cannot be done at Carleton Place, where the water-power, for one thing, is not sufficient for our requirements. Then again better shipping facilities can be secured elsewhere, the railways not allowing competitive rates from Carleton Place. Ottawa is among the list of available sites. Mr. Folger of the Kingston & Pembroke railway has also brought before our notice the advantages of Mississippi, which is west of Carleton Place. Different points down the river, such as Point Claire, sixteen miles above Montreal, and St. Anne's, a few miles further up, are available. The proximity of these latter places to market is considerable advantage, and we think logs can be towed that distance and sawn there at a greater profit than to saw the lumber at Carleton Place and freight from there. The nearer we are to Montreal, too, the better chance we stand of disposing of the cuttings and refuse. No decision has been reached regarding the use of steam or water power. According to present indications the mills, wherever they are located, will be running next spring. About three hundred men are employed now at Carleton Place, and work is kept up night and day." Mr. Edwards added that exemption from taxation was not as great a consideration as the attainment of the best shipping facilities.

QUEBEC.

The lumber firm of Malo & Thomas, Montreal, has been dissolved.

The Lachute mills are again running full time owing to the raise of water in the river.

The Quebec *Official Gazette* advertises the ground rent on timber licenses at $3; stumpage dues, $1.30 per 1000, and the dues on spruce logs 65 cents per thousand feet.

The Canada Paper Company propose cutting some 25,000 cords of wood the coming winter for grinding into paper pulp at their pulp mills at Windsor Mills, Ont.

The Upper Ottawa Drive Association is constructing dams in the Cascades Rapids, at Portage du Fort, for the purpose of facilitating the driving of logs through that part of the Ottawa river.

There will probably be a scarcity of lumber vessels at Montreal this autumn, in the opinion of the *Herald*. There are about eight cargoes yet on the Export Lumber Company's wharf waiting transportation. The rate now offered is $12, an increase of $1.50 over that given in the spring. There are still some vessels unchartered at Quebec and no doubt several of these will come to Montreal to load.

We learn from the Quebec *Chronicle* that the timber market has been pretty quiet, and no sales were reported last week; though, since we last gave a report of the market, we understand three large Ottawa rafts changed hands at 24 cents for 35 feet; 26 and 28 cents for 58 feet, and 22 to 22½ for 50 feet; the former being 1886 timber and the latter being 1887 wood. The demand for old wood is sluggish, and the stock at present on hand comes under that category.

Owing to the fire in its premises, the Montreal Furniture Company is in financial trouble. Bulmer, jr., & Bro., and Kerr Bros., large creditors presented a petition in Court, asking for an order to wind up the company, to avoid useless litigation, as the company was now unable to meet its liabilities, and a number of actions had already been instituted. The application was not opposed, and the order was granted, Mr. H. Bulmer being appointed provisional liquidator.

The following comparative statement of timber, spars, staves, etc., measured and culled to Oct. 26th, is furnished by the Quebec Supervisor:—

	1885.	1886.	1887.
Waney White Pine	2,830,948	3,047,480	2,020,094
White Pine	2,711,467	2,941,158	1,168,143
Red Pine	70,758	271,693	591,040
Oak	1,566,968	1,036,766	746,243
Elm	1,018,932	398,950	221,300
Ash	287,595	134,472	113,478
Basswood	95	432	535
Butternut	3,265	192	1,079

Spars	17 pcs	— pcs	— pcs
Std. Staves	77.7.3.20	65.1.2.28	44.1.1.15
W. I. Staves	185.9.3.25	128.7.0.29	156.0.0.5
Brl. Staves	209.2.0.24	19.0.3.16	15.4.0.11

MANITOBA AND THE NORTHWEST.

Clark & Sutherland, lumbermen, St. Boniface, have sold out.

Fotheringham's new mill at Rainy River, a few miles above Rat Portage, will cut 30,000 feet daily.

The Keewatin Lumbering and Manufacturing Company has increased its capital stock from $160,000 to $500,000.

The Minnesota and Ontario Lumber Co., have opened a branch yard at Oak Lake Man., with Mr. Chisholm in charge.

Mr. Peter McLaren will build a saw mill at Macleod, Alberta. The machinery for the mill has been shipped. The mill will be supplied with logs from the foothills of the mountains.

Clark & Sutherland, of Winnipeg, who bought out the stock of the late Winnipeg Lumber company last spring, have sold out their branch lumber yard at St. Boniface, Man., to Mr. Fred. Walker.

It is reported that the timber country on the Red Deer river, northern Alberta, has been almost destroyed by fire this season. This is the district where the Alberta Lumber company are now erecting a saw mill.

On Lake Winnipeg matters in connection with the lumbering industry are quite active. Every day or two steamers with barges of lumber are arriving at Selkirk, and every available boat is engaged in getting out lumber before navigation closes.

The new Eau Claire company's mill at Calgary is now thoroughly in operation and cutting about 30,000 feet per day. A plentiful supply of logs is on hand to keep the mill busy for the balance of the season, and there will be a surplus over to commence with in the spring.

There is a good deal of speculation going on among lumbermen as to who are operating the Rainy Lake company's mill at Rat Portage. This company it is well known has long been in course of liquidation, and was some time ago put up for sale, but was bid in by the principal creditors—the Bank of Montreal. The claim of the bank against the estate is a very heavy one, running up in the hundreds of thousands. The mill is an excellent property, and the estate also includes valuable timber limits; but it is doubtful if a large proportion of the claims against the estate will ever be met. The heavy indebtedness is a relic of the old boom days, when money was plentiful and could be obtained readily for almost any scheme, often without investigation into the value of the security offered. Lately preparations have been made to operate the mill on a large scale next season, and mill men are enquiring who are the movers in the matter. Many think that the bank is now the real owner of the property, though the liquidator is still in charge. About 10,000,000 feet of logs will be taken out this winter from the limit of the company on Rainy Lake and tributaries, and men have already been procured for this purpose.

Contracts for the construction of two railways have been let within the past week or ten days, in the Canadian northwest. One of these is known as the Great Northwest Central. The proposed route of the road is from Brandon, on the main line of the Canadian Pacific, 150 miles west of Winnipeg, northwestward to Edmonton, a distance of nearly 1,000 miles. About 50 miles will be completed this fall and 100 miles next season. The projectors say that in time the road will be extended through the Rocky mountains, via the Yellowhead pass, to the Pacific coast. This is the route which it was originally intended the Canadian Pacific would take. The country is prairie as far as Edmonton, but beyond that is timber mostly. The other railroad is the Port Arthur and Duluth, which will run from the place named, on Lake Superior, to the Minnesota boundary, a distance of about 90 miles, where it will be connected with the Iron Range road from Duluth. About forty miles are now under construction. This road will open up a good timber country, and also one of the richest mineral regions in the world, silver and iron being the principal metals found. United States capitalists are largely interested in the territory.

A correspondent writing to an American exchange says: Manitoba is usually spoken of as a country of rolling prairies, illimitable prairies, etc., and those who are not personally acquainted with the region would be led to believe that the topography of the country presents a continuous landscape of meadows. Such, however, is far from being the case. The southern boundary of eastern Manitoba is also about the northern boundary of the true prairie country. A few miles north of Winnipeg, a solid timber country commences, and extends northward to the limit of vegetation. The timber, however, is usually of a light nature, and farther north it is simply scrub. Spruce, poplar, tamarac, jack pine, white birch, etc., are the principal varieties. Spruce is about the only thing used for lumber. Instead of being a prairie country, the northern portion of the province is in reality more of a timber country. There is a little pine, but the area is very limited, to an odd tree here and there. The number of saw mills will show that there is some timber in the country. There are about forty mills located at points through the country, not including mills to the east of the province, in the Lake of the Woods district. Were Manitoba the country it is often supposed to be, there would be little use for these saw mills, except as ornaments, and your readers will be well able to estimate the ornamental properties of the average saw mill. About the dismantled and partially dismantled ruins of the old mill, which stands as a remembrance of the early days, and which was itself the pioneer of civilization, there certainly is something sublimely ornamental, but even the more poetical mind will find little beauty in the saw mill in its palmy days. West of Manitoba the northern boundary of the timber belt is found farther to the north, and here the true prairie comes in, only broken by occasional patches of cypress and cottonwood.

NOVA SCOTIA.

Mr Robertson, the projector of the big timber raft at the Joggins, expects to launch the raft in the November spring tides. Should the launch be successful another raft will be started immediately, Mr. Robinson having signed a contract with New York capitalists to that effect.

The demand for lumber, says the Bangor *Commercial*, has continued unabated, and the market is active, with no falling off in prices, the reverse of the usual state of affairs at this season of the year. Receipts of lumber at the leading centres have been large but have found a ready sale, and manufacturers have had all the orders which they care to fill, indicating a firmer tone for the fall trade, with no accumulation of stock at points of shipment. In fact the demand promises to keep the mills busy up to the close of the season. The general outlook for the remainder of the year is good, with fair profit both to dealers and manufacturers.

There is a boom in the shipbuilding yards of Lunenburg, no less than six fishing schooners being in course of construction. Six others will be built during the course of the winter, which vessels will be a desirable addition to the fishing fleet of that port. The people of Lunenburg county are almost wholly of German descent, and nearly the whole population is engaged in the deep sea fishery. The vessels are models of adaptability for the business, and are said to be stronger than American craft of like class.

NEW BRUNSWICK

At St. John the mills are likely to stop running shortly for want of logs.

The Woodstock wood working factories are crowded with orders and are working extra time.

During the last fiscal year the Cumberland Coal and Railway Company, of New Brunswick, carried nearly fourteen million feet of lumber over the line.

The Hilyards, at St. John, will have a mill equipped and ready to operate by December 1st, to replace the one recently burned. The main structure is 45x60, and another 40x52.

Mr. J. L. Cutler, a large shingle and short lumber manufacturer in Bangor, Me., was in St. John recently, looking up a site for a mill. It is understood that an offer has been made to purchase the Stetson mill in Carlton.

The boiler of J. & W. Atkinson's steam saw mill at Moncton burst some days ago making sad havoc among the men generally. The engineer is not expected to recover from the injuries received. Some five others were hurt, not seriously though.

UNITED STATES.

The fires in Michigan prairies are about all out.

There is still considerable disturbance in railroad rates in the western States.

Chas. M. Charnley, the well known Chicago lumberman has assigned on a judgment of $100,000.

On the Saginaw river, in Michigan, the burden of complaint for some weeks past has been the steady accumulation of lumber on the mill docks.

Shippers have been complaining a good deal this season of scarcity of cars, and several times it has been reported from different points that a very respectable car famine existed.

The hopes of the holders of lumber have been slightly revived of late by the announcement that the Tonawanda dealers have advanced the price of all grades of lumber $1 per thousand.

Now that it is evident that the log supply for the mills at Muskegon and Saginaw is a thing of but a few years, the newspapers over that way are discussing the feasibility of rafting logs down the lake to the mills.

Everywhere in the northwestern States it has been noted this season that the shingle market has improved. It appears, though it is impossible to be quite certain of the fact, that proportionately more shingles have been sold than lumber. It is alleged by some operators that this has been what they call a shingle year; that there has been a general demand among consumers for shingles beyond the usual call.

Makers of planing machinery are reported to be doing a very large business this season. Many of them, if not all of them, are away behind with their orders, and they are still receiving new contracts faster than they are filling the old ones.

By the explosion of a boiler in David Young's saw mill, Amanda, Ohio, George Lape, Perry Lape, Simon and Amos Young were instantly killed, and Mrs. Simon Young, who was at the time 200 yards from the mill, was seriously injured.

The scarcity of walnut in the Eastern and Middle States has sent the prospector westward, and the Indian Territory now contributes this wood, of which it is no uncommon thing for these hardwood dealers to sell a dozen car loads without removing them from the track.

The present year has seen something of a boom in white cedar. It began early, and has lasted well through the season, with apparent vigor enough to carry it forward into another in pretty good shape. The cedar industry has prospered largely, if not mainly, as a result of the activity in railroad building.

On Friday morning, Sept. 30th, at the age of 83, occurred the death of Joshua Rathbun, one of the oldest and best known lumber merchants in the Albany market. Deceased was the founder and senior member of the Hardwood firm of Joshua Rathbun & Co., and conducted a wholesale business in the Albany lumber District since 1845.

A company has been organized at Sault Ste. Marie, Mich., to utilize the power of St. Mary's river, connecting Lake Superior with Lake Huron. There is a fall of eighteen feet in a distance of about three-quarters of a mile. It is proposed to cut a water power canal from a point above the falls to a point below, from which an almost unlimited flow of water can be obtained. It is said that the capital, $1,000,000, is secured, and that the canal is to be completed in two years.

The confidence in a good trade next season throughout the country is shown in the extensive preparations for work in the woods this winter. If the signs are worth anything, more than the average stock of logs will be put in and the supply now back will ensure an early commencement of sawing at all the mills. Under these circumstances a very large trade will be necessary next season to sustain the values which now prevail. There is little disposition to shade now, and lumber may be said to maintain a steady value all around.

Lumber shipments from Muskegon, Mich., and suburban ports, this year show the following monthly totals: April, 42,753,000 feet; May, 78,331,000 feet; June, 84,263,000 feet; July, 94,406,000 feet; August, 84,514,000 feet; September, 73,665,000 feet; total, 457,932,000 feet. Shingle shipments were as follows: April, 15,390,000; May, 49,695,000; June, 37,861,000; July, 44,126,000; August, 46,475,000; September, 26,950,000; total. 220,524,000. Other totals for the six months were as follows: 22,989,000 lath, 26,253 cords of slabs, 816,000 pickets, 15,900 railroad ties, and 845 tons of sawdust. On one day nearly 6,000,000 feet of lumber were shipped. It will be seen that July was the heaviest month, but that a large average was maintained from May to September, inclusive. In addition to these figures there has been an important increase in rail shipments over any previous year.

EUROPEAN NOTES.

Business in the pitch pine trade seems dull and sales very difficult to effect.

The Quebec built wooden barque *Jane Law*, 1,273 tons, belonging to Mr. David Law, has been sold to a Glasgow firm, the purchase price being stated at £500. The *Jane Law* was built at Quebec in 1869, and was subsequently employed in the timber trade, but during the late depression she has been laid up in Garelock. On Saturday the barque was towed to Glasgow, where she will receive a thorough overhaul previous to loading coal for Demerara. Another timber ship, named *Forganhall*, 1,070 tons, belonging to Greenock, built at St. John, N.B., 1857, was exposed for sale, by public roup at Greenock, at the upset price of £450, but there being no offer at that price, the sale was adjourned.

The quantity of Quebec log timber at Glasgow is shown to be lighter on the whole than at the corresponding date last year and the one previous, which is due to the very restricted imports of logs from Quebec to Clyde this year; and prospective imports are so limited that the diminution in stock compared with former years may be expected to become more marked. As regards the consumption of Quebec log timber of late, the following is an approximate note of the principal items:—

	Quarter ending 30th Sept., 1887.	Quarter ending 30th Sept., 1886.
Waney boardwood	2,800 loads.	3,600 loads.
Yellow Pine Timber	3,800 "	4,400 "
Red Pine	700 "	600 "
Oak	1,000 "	1,300 "
Elm	310 "	500 "
Birch (Quebec and lower port)	550 "	750 "

Of Quebec deals it will be seen there is a big stock, while the quantity of lower port is moderate. The consumption for the past quarter has been about 140,000 pieces of the former and 180,000 pieces of the latter.

NEWS NOTES.

H. Dinning & Co., ship builders, Quebec, have assigned.

Saw and File works are shortly to be established at Peterborough, Ont.

The *Register* wants a copper shop on an extensive scale established at Norwood Ont.

It is said that one of the lumbering firms now doing business at Keewatin, will erect a large barrel factory during the coming winter.

Mr. E. H. Smith has sold 200,000 feet of his fine Basswood lumber and will begin shipping it on Monday next.—*Burk's Falls Arrow.*

The Christy Lumbering Company, of Muskoka, have purchased the Strickland limits north of Minden, and commenced operations in the township of Hindon and Oakley.

The Lake of the Woods Milling Company's lumber mills at Keewatin, are to be lighted with Edison's incandescent electric lights, the plant to be furnished by Mr. A. J. Lawson, of Montreal.

Mr. Campbell, of South River, has a mill in full operation under the superintendence of Mr. Fred. Thomson, which next season when in full blast, will have an output of 3,500,000 feet.

One of the fingers of H. Clegg was cut off obliquely by a saw in Gilmour's mill at Crow Bay, Seymour. The bone was cut even by a surgeon while the sufferer was under the influence of chloroform.

Mr. J. E. Gould, of Uxbridge and Coboconk, Ont., has a big contract on hand in supplying the Grand Trunk with 300,000 railway ties. It will give the wood trade in the north country a regular boom this winter.

The Parry Sound Lumber Company are busily engaged in building another new mill. They intend to put in three of the best shingle machines and a planer. The mill is being erected on the flat behind the company's east tramway.

The big mill now run by Messrs. Melville and Cooper closed down after a most successful season's run, says the Collingwood *Bulletin.* During the time it was in operation from the 25th of May to the 6th of October it cut about 6,000,000 feet of very superior stock.

The Hastings Saw Mill Co. have been incorporated at Victoria, B.C., with $150,000 capital. The incorporators were Messrs. W. C. Ward, R. H. Alexander, C. J. Dupont, F. S. Barnard, J. C. Nicholson and J. L. Raymur, with head offices at Victoria.

The cooper shop belonging to the Imperial Oil Co. at Petrolia, Ont., was totally destroyed by fire October 29th. The loss is about $3,000, fully covered by insurance. About 40 coopers were employed in the shop, who lost all their tools. Cause of the fire unknown.

Frank Loucy, of Minden, met with a fatal accident while working in Michigan. He was engaged loading a car with timber, when he slipped and fell and a log fell on him. A fellow workman, a stranger, brought the body home.

Cars loaded with lumber for the United States have been detained at Moncton, N. B., on account of some technical infringement of the law governing custom entries. A penalty of $250 is provided for, and this the authorities threaten to enforce, unless all the regulations are complied with.

Exports for the quarter ending with September, from Chatham, Ont., to the United States, were of the value of $119,287. Forest and farm furnished nearly all of them. Some of the principal items are:—Staves, hoops etc., $53,902.34; Lumber and planks, $7,879.45; Logs, $5,109.00; Wood $3,409.

Bangor, Maine, has a new enterprise. Every mill on the river wastes great quantities of saw dust. It has not been available for shipping because of its bulk. Now a hydraulic press has been invented to press the sawdust and reduce its bulk some 75 per cent., and in this shape it can be easily handled.

Notice is given from the Department of Crown Lands, Toronto, Ont., that timber berths in Livingston, McClintock, Lawrence, McLaughlin, Hunter, Bishop, Devine, Butt, Biggar, Wilkes, Balantyne, Chisholm, Cainsbay, Pentland and Boulter townships will be offered for sale by public auction on Thursday, December 15th.

The outlook for next year in London, England is encouraging. Considerable sales have already been made of various descriptions of goods, including white battens, at the highest rates current this season. Telegrams recently received from Australia report a decided recovery in the timber trade there, so that a good demand for the higher qualities of deals may be anticipated; but it is too late for shipments to be made this season, as nothing but bright and well-seasoned goods are suitable for that market.

At Pembroke, Oct. 28th, Walter Beatty's sash and door factory, together with Angus' paint shop, Shield's hotel, Mr. Beatty's lumber yard and other properties were destroyed by fire. Mr. Beatty was one of the largest contractors of the place, and his loss at this time of the year will be more particularly felt. His loss is estimated at $17,000; insurance $2,500.

An Ottawa despatch says: In order to insure exporters of lumber and other goods from Canada making their entries as required by law, it has been ordered that a penalty of $200 shall be incurred by any infringement of the rules, and as a first step the collector at Moncton, N.B., has detained a number of Intercolonial railway cars with a view to carrying it into effect. Hitherto the Customs athorities have had much difficulty in getting exporters to comply with the regulations in many ports.

Some of the industrial enterprises carried on and improvements being made at and about Nashwaak, N. B., are described in the St. Stephen *Courier.* The Alex. Gibson, jr., saw mill, containing five gangs, is running at its full capacity, giving employment to sixty men, and with a fair head of water cuts about 150,000 feet a day. It is carried to St. John from whence it is shipped to all parts of the world. Further down the river there is a three gang steam lath mill, which is said to be the largest of the kind in America. Over fifty men are employed, and the average daily output is 120,000 laths.

The activity with which lumbering operations are to be carried on this coming season can be judged from the fact, says the Manitoulin *Expositor,* that in addition to large shipments already reported, the Atlantic on her last trip up left five cars of lumbermen's supplies at Meldrum Bay and three at Cockburn Island and that there are about eight cars to be shipped to those ports yet.

Mr Robert Conners, the big lumber operator of the St John, is preparing to carry on heavy operations this winter in the Temiscouata lake region. He has struck districts covered with pine and spruce which have never been lumbered on before, and expects to cut 12 or 15 millions this winter. His lumber will be put in Lake Camino, which is connected with Lake Temiscaouta. He has seventy men in the woods at present.

Hall Bros. began as general storekeepers at Feversham, Ont., in 1883. The senior member of the firm had much experience in preaching but none in storekeeping. The other brother was a farmer, not a very much better equipment for business life. They bought a saw and grist mill and a store, paying about $7,000 for the same. In 1886 the mills were rented and the lessee lately absconded. They are understood to have lost by him, and have made an assignment.

The present condition of the timber trade in London may, we consider, be fairly regarded as in a healthier state than for some years past. A good deal of unsoundness has been removed, and the trade has been conducted in a quieter and more cautious manner than before. Stocks also have been kept in moderate compass, and the buying has been of a hand-to-mouth character. Prices have remained fairly steady, with an occasional slight advance in some descriptions, which, with the lessened number of failures, has enabled the trade to be carried on with some profit.

According to the statement received from the Export Lumber Company, New York, the amount of white pine lumber exported from there from January 1 to September 30 was 48,396,000 feet. The River Platt took the largest amount—12,562,000 feet—and the other ports, numbering 75 or so, all the way from 3,574,000, down to 3,000 feet. The shipments were larger than for the corresponding period in 1886, but not so large as in the two succeeding years. The heaviest shipments were made in March, when 7,289,000 feet were sent abroad.

St. John, N. B., is again stirred up to the importance of having a dry dock. In 1882 the local Government passed an Act providing a subsidy of $50,000 for such a dock, and in the same year the Dominion Government passed an Aet providing for a subsidy of two per cent. for twenty years on the cost of construction, the subsidy not to exceed $10,000 a year. The company formed to build the dock are desirous that the Government should make them a loan of $200,000 at four per cent interest, holding a first lien on the land, dock and revenues as security. It is estimated that the dock will cost about $300,000.

It is rumored among lumbermen that the E. B. Eddy Manufacturing Company of Hull, Que., will this winter purchase the extensive timber limits of Messrs. McLachlin Bros. on the Upper Ottawa. The price mentioned is in the neighborhood of $2,000,000. For a number of years back the E. B. Eddy Co. have had an insufficient supply of saw logs and have been compelled to purchase from jobbers and other lumbermen. This season the company ran short of logs and were somewhat hampered in their operations. In consequence of this the firm have, it is said, decided to purchase the extensive limits already mentioned. It is estimated that the lumber out of this district during the coming winter will reach 780,000,000 feet.

A general opinion exists that f.o.b. business is finished for the season, and with, perhaps, a few stray transactions, we do not expect to hear of the closing of further contracts this autumn, as neither sellers or buyers are prepared to make sales at the sacrifices rendered necessary by the high freights. On the one side a disposition is manifested to carry on through the winter with a small stock, tn the hope that the loss in the volume of business will be more than compensated by an increased profit, while, on the other side, shippers seem determined to show their ability to carry over their stocks till next year, and benefit by the spurt which would probably thereby be given to opening prices.—*London (Eng.) Exchange.*

The Canadian patent law enâcts that the importation into Canada of goods protected by a Canadian patent, after the expiration of one year from its date, shall void the patent. The Commissioner of Patents, however, has power to grant, upon petition filed before the expiration of the year, further time, not exceeding one year, within which to import the goods. It is the practice of the office to grant not more than six months at a time. The law also requires that Canadian patents must be put in operation within two years of their date on pain of voiding the grant, but it empowers the Commissioner of Patents to extend the time upon petition filed before the expiration of the two years. This privilege is used somewhat extensively, a year being generally granted upon one petition.

We have received a communication from Mr. A. C. Manzer, New Westminster, Brit. Columbia, giving an account of a big shipment of big timber from that place to Shanghai, China, by the British Barque Penshaw, Capt. Parker. We cannot give it in detail, but will summarise it.

42,000 feet	1 and 1¼x6	T and G.
28,000 "	1 and 1½x12	20 to 40 feet
84,000 "	2x10 and 12	24 to 40 "
7,000 "	3x6	24 to 40 "
320,000 "	3 to 12x6 to 16	30 to 40 "
56,000 "	4 to 12 x 8 to 16	45 to 50 "
63,000 "	6 and 10 x 16	51 to 60 "
14,000 "	18x18	61 to 70 "
14,000 "	20 and 22 sq.	71 to 80 "
21,000 "	14x14	85 to 90 "
21,000 "	16x16	88 to 90 "
21,000 "	20, 22 & 24 sq.	81 to 90 "
7,000 "	24x24	91 to 100 "
700,000 feet.		

UNITED STATES GENERAL REVIEW.

Since our last issue trade in all sections is reported more active. As the close of the season approaches, more activity is manifest on the part of dealers here to complete their stocks for winter business; on the part of manufacturers who ship by water to clean their docks as far as possible, and upon the part of contractors and consumers to clean up the work in progress. Reports from the East indicate a very active October business. Sales have been larger than was anticipated, and dealers who thought they had stock in pile adequate to all winter demands find that they will need to seek the supplementary sources afforded by car shipment long before navigation opens in the spring. Many are straining every nerve to replenish before the lakes freeze, but freights are advancing and prospects are dubious for a protracted season of navigation on the lakes and canals. It is safe to say that there is no surplus of stock in Eastern yards. A telegram received here a day or two ago asked for figures on 5,000,000 lath to be loaded on vessel for Eastern market, which would indicate that the Eastern market was not plentifully supplied with that article. Quotations of $2.05 in reply would indicate that the dealers here do not care so largely to deplete their present stock at figures below present quotations of $1.90.

From the southeast portion of this State we learn of heavy sales during October, depleting the yards far beyond earlier calculations, and traveling men assure us that this is but an index of the general condition throughout the State. It is now generally conceded that the corn crop will be from 25 to 35 per cent. larger than was feared a month ago, and this has given rise to greater buoyancy of feeling on the part of the consuming community, which is buying lumber more freely. From nearly every section of the West we have reports of an increased demand for lumber, which indicates an exhaustion of all stock now in wholesale yards long before another season's supply can replenish it. The readiness with which lumber is now handled by rail to all sections of the country, precludes the necessity on the part of retail dealers in the country to lay in large supplies in the fall, and present appearances indicate that there will be a lively car trade throughout the winter. The advance in freights added to the inclemency of the weather (the past two weeks having been among the most disastrous upon the lakes which we can recall in the past thirty-seven years) will no doubt retard the movement of a large part

of the lumber at Lake Superior ports, which had been counted upon as a portion of the available stock of this and other lake markets. This will be available for early spring trade. It is early to speak of the result of the season's work at the mills, but what with low water in most of the streams of the Northwest, and the shutting down of mills with an average loss of at least a month of the sawing season, we doubt if the increased capacity and the facilities afforded for night sawing through the use of electric lights will compensate to bring the season's cut up to a full average.—*Chicago Lumber Trade Journal.*

Condemned Saws in Perfect Mills.

TAKE two saws from the same maker, that are alize in size, guage, speed, feed and hammering, and running in the same kind of timber. One saw works well when often the other will not work at all. They, being alike, should certainly run near enough alike that neither should be condemned. What can be the trouble? To take the theory of some saw makers, we can not get out of the trouble, they claiming that no two saws can be made to run alike, same size, etc. We take it for granted that they allow us the discrimination, or the assertion would not be made ; so when we find that two saws do not run alike, there is a vast difference in the saws somewhere.

When we take into consideration temper, teeth, etc., we find often why two saws made to run alike do not. We hear a great deal said about more teeth, theories being set forth claiming the more teeth the saw has the more feed it can stand, and make better lumber. To show how a great many are thus deceived when certain conditions are not considered. I know of a man who has a good mill, making good lumber, running on four-inch feed in yellow pine. This idea of teeth struck him and he concluded to increase his capacity. He made due allowance in his estimation of how much more he could cut, and so he cut his claims in half. He was running 50 teeth in his saw, but concluded to order 90 teeth. He ordered of the same saw maker, and the saw came, hammered properly, and to speed. It was tried. It wouldn't go straight. Several trials were made. Saw heated so badly on the rim that it was impossible to run it. So it was sent back to the saw maker and he couldn't tell why the saw did not go. The trouble was the saw had too many teeth, and the feed (4-inch) was not sufficient for each tooth to cut a chip but cut, or rather scraped, the dust so fine that it escaped on each side of the throat of the teeth, and binding between saw and board, heated the saw. If this saw could have had the feed increased to eight inches it would have worked better. Both saws were alike. One run well ; the other would not run at all.

But, says one, they were not alike, one having 40 teeth more than the other. We will then take them of the same number of teeth, speed, feed, guage, timber, etc., hammered alike, and yet one saw will run well and the other will not, one being of a milder temper than the other. The mild temis soon condemned, the higher temper running well. The trouble is this : the mild temper expands more from centrifugal force, and from the start is weaker on the rim and soon lets down ; the higher temper remaining more firm, has slightly changed in its adjustment, The other is laid aside or sent back to the saw maker. The mill man is impressed that saw making is a kind of guess work, and that occasionally they make a good one. I am not claiming the high temper to be the best of the two when certain things are taken into consideration. The milder temper might have suited him best ; speed might have been high enough to crack the higher temper, then the milder temper would have been the best saw. Two saws can be made to run exactly alike even when there is a slight difference in the temper. There are saw makers that claim to make saws to run alike, and so they do. This little difference in temper is considered something, and the saw is hammered a little more open, and when a man jumps up to twice as many teeth on the same saw, the saw maker notifies him that the saw will not work satisfactorily and explains why ; and if the saw is sent to him he does not blame the saw maker if it does not go right. There can be a little more deviation to this teeth business when a man is sawing soft timber, but in hardwood the teeth are confined to a limit.—*Foreman, in The Woodworker.*

A Steam Wagon.

At Auburn, Maine, is a novelty in the shape of a common wagon, having all the appearance of a common Concord wagon, with the exception that a part of the boiler and its covering will show above the body of the wagon. All the motive power is concealed under the flooring. The power is furnished by two small engines of about three-horse power ; the boiler is made from iron pipe in spiral form ; the wagon body contains two seats, easily holding three each. A small tank for holding water is placed in the forward end of the body in a place especially adapted for it, and a small bunker for coal on the side and end.

The Kiln a Positive Necessity.

Where time is of little consequence and ground room of no value, hardwood manufacturers can air their lumber generally to good advantage In fact, some varieties of wood present a better appearance by air-drying, as the kiln is apt to crack some woods and develop the defects, especially if any haste is attempted in the process. This is clearly the case with cherry, and kiln-dried stock will run more to the lower grades than if air-dried. But there is a southern wood—the North Carolina pine—that requires the kiln to bring it to a state where it is proper to use in house finish. Boards which have been on sticks 60 days and put in the kiln will shrink one-eighth of an inch in width in a twelve-inch board. Sawyers who understand the nature of the wood, saw 12¾ inches for 12-inch boards, and practical results have shown that the shrinkage in thoroughly drying amounts to that. Any lumber sent to market without being fully kiln-dried is almost sure to give dissatisfaction in the working, as the matching will soon begin to gape and unseemly seams will sour even a sweet tempered man. This is doubtless the cause of the numerous complaints from the eastern markets, especially New York. There is only one proper method of curing North Carolina Pine and that is to dry it in a kiln before shipping. The evidence before us is convincing upon the point and it is and will be impossible for shippers to send lumber to market which has been on sticks for a number of months and ship as kiln dried without running onto a snag, and in the end injure their own business. Every mill should be equipped with a kiln. The present requirements of the market make it a positive necessity

Band Mills and Small Logs.

All reports of band saws hitherto have been in regard to putting them in, and of their wonderfully successful and economical operation after they have been set up, and now, for a change, comes the news that one has been tried and found not to be the right thing in the right place. The superintendent of the Penoyer Brothers' saw mill, at Oscoda, Mich., who has had a band saw under his charge for some time past, is quoted as saying that in his judgment it is not the thing for small logs, with which rapidity of manipulation is of more consequence than the highest economy of sawdust. Though this has not been determined upon, it is thought likely that the proprietors of the mill in question will remove the band saw, which has never been put forward as a desirable machine for small, cheap timber. It has been omitted from the equipment of some new mills of the most modern construction, in the building of which no expense has been spared, simply because the timber to be cut is not good enough to warrant the additional expense of band sawing. Those who have in mind the purchase of band saw mills, will do well to make some figures before they place an order, especially if their pine runs largely to small logs of medium, or low grade. For the cutting of such, a circular saw is doubtless the cheaper tool, and will remain so until pine is a good deal scarcer than it is now. Sawdust is worth saving, it is true ; but sawdust worth $25 a thousand will justify a greater expense in saving it than will that which could not be sold for more than $9 or $10. There are two sides even to band saw economy, and it is not wise to rush blindly into a trial without counting both the cost and the profit. To do so may save a disagreeable later surprise should it happen that the cost sums up the larger total.—*Timberman.*

Sawing by the Thousand.

In nearly all the saw mills which "saw by the thousand," lumber is not manufactured as it should be, and there is a great deal of unnecessary waste. The interest of the mill man are not naturally those of the log owner. The mill man generally wants to get as many thousand logs through the mill in a day as possible, and he is not particular whether the lumber is well made or not, or how much material goes into sawdust or mill wood which might go into lumber. The log owner is interested in getting as much good mercantile lumber out of his logs as possible, and he does not care particularly how long it takes to accomplish it so long as he pays for the work by the thousand. Lumbermen who will take the pains to go to the mills where the mill men for the most part cut their own timber, and job and retail their own lumber, will have it demonstrated to them very quickly that better lumber is made in these mills. —*Indianapolis Wood Worker.*

Glasgow, Scotland.

GLASGOW, Oct. 22.—Business on the Clyde is quiet, but there is a little more doing with firm prices. First class square pine is in moderate stock, and ship-builders seem more disposed to supply themselves. There was a sale at Port Glasgow by Hunter & Sheriff on the 20th, chiefly waney boardwood, red pine, pitch pine and spruce deals, when fairly satisfactory prices were realized.

Among the Manufacturers.

The Gutta Percha and Rubber Manufacturing Co., of Toronto, call attention to the fact that Mr. T. McIlroy, Jr., who was their manager, in now no longer in any way connected with the Company, nor authorized to sell or purchase the goods made by the Company. Their advertisement appears in this issue of the LUMBERMAN.

Messrs. Geo. F. Haworth & Co., of Toronto, are pushing work on their leather belt factory, and expect to have it ready for operation early in December. This factory is located in the four-storey brick building at 11 Jordan street, lately occupied by the Grant Lithographing Company. It is being equipped with the best and most efficient machinery, and will be conducted by experienced men.

We have much pleasure in drawing the attention of our readers in general, and the members of the Art Preservative in particular, to the advertisement of the Toronto Type Foundry, which appears on third page of cover. As is stated elsewhere the new outfit with which this paper is printed was supplied from this foundry, and is a fair index of the class of material handled by this firm. Our plant is on the point system of interchangeable type bodies and works admirably. A long personal acquaintance with Mr. J. T. Johnston, the manager of the Toronto Type Foundry, enables us to recommend him with confidence to our contemporaries of the press, as a courteous and obliging caterer to the wants of the craft, and deserving of the most liberal patronage.

The current issue of THE LUMBERMAN contains an unusually large amount of additional advertising, all of which is intended to prove of considerable interest to our readers. Prominent among these is the full page display of Chas. Esplin, Minneapolis, Minn., manufacturer of the Esplin Band Saw Mill. This gentleman having made arrangements with the Wm. Hamilton Mfg. Co., of Peterborough, Ont., for the manufacture of his celebrated band mill, is now able to supply the trade of Canada with complete machines on the shortest notice. The enterprise of the Wm. Hamilton Co. in supplying the latest class of machines is to be commended.

After an absence of a few months the announcement of the Montreal Saw Works again appears on back of cover. This firm is too well and favorably known to need an extended notice here.

The DodgeWood Split Pulley Co., Toronto, who recently sent specimens of their pulleys to Australia for exhibition, are in receipt of numerous enquiries from that country regarding them, and also from parties in San Francisco, California. The article finds much favor in Sidney and other Australian markets, and a good trade is being worked up for them there.

Messrs. Eastman Bros. & Co. of Boston, Mass., are advertising in this issue of THE LUMBERMAN for a large variety of hardwood lumber. We have much pleasure in directing attention to the same.

Steam vs. Water Power.

The cost of steam power in small amounts is greater than in large amounts, but for mills requiring 500-horse power or more as economical results can be obtained with steam as with water, in almost every case. To this add the advantage of a uniform, steady power, independent of the rise and fall of a river, and the saving which this may mean, also consider the better results attained by steam power and we can plainly see why this statement is practically proved at Fall River and elsewhere, and there is no better proof than this, that steam mills can successfully compete with other mills driven by water power.—[*Chas. T. Main, in lecture before New England Cotton Manufacturers Association.*

Gilmour vs. Paradis.

The Gilmours have appealed their case against Father Paradis to the Judicial Committee of the Privy Council. The hearing will not take place till next spring. Mr. Dalton McCarthy, Q. C., will appear for the Gilmours. Father Paradis has been transferred by his ecclesiastical superiors from his parish, Egan, on the Upper Gatineau, to Quebec.

To raise steam to a pressure of 90 pounds, the water must be heated to a temperature of 324° Fah. If a quarter of an inch of scale intervenes between the shell and the water, it would be necessary to heat the fire surface of the boiler nearly 600° or 100° Fah., above the maximum strength of iron.

A Canadian journal has taken a vote among its readers on the question of annexation to the United States. Out of nearly a thousand answers over seven hundred oppose the step while only about two hundred favor it. Votes taken on this side of the line would probably give similar results. Until decisive majorities in both countries favor it a union is quite out of the question. It is an issue of years, of generations.—*Philadelphia North American.*

TRADE REVIEW.

Toronto, Ont.

TORONTO, Oct. 31st—Notwithstanding the apparent stringency of the money market, the building trade and consequently that of lumber, is very good; in fact it may be said to be exceptionally so. How long this state of affars may continue it is hard to say. The demand for lumber of all ordinary grades remain as great if not greater than last month. The complaint of lumber dealers regarding cars is to a great measure done away, the railway companies supplying them in fair numbers. We are having very fine weather, during which the time lost last summer may be to a certain extent redeemed. The continuance of this will afford work to a great many who, but for it, would have been unemployed. Car load lots are finding ready sale. The quantity of lumber unloaded in the railway yards is, comparatively speaking, very small, the Midland noticeably. The Grand Trunk railway continues to charge the 5 cents per thousand for each week and any part thereof. Prices in the yards are the same as the previous month.

Montreal, Que.

MONTREAL, Oct. 30.—Though business has been quiet and the amount small, prices have been fully maintained. On the other hand there has been no rise, though it is looked for. The exceptional low water has reduced the cut at the mills, and if there is anything like a satisfactory demand prices must go up. The setting in of winter will probably cause an improvement.

Goderich, Ont.

GODERICH, Oct. 28th.—The state of the trade here is very similar, in one respect at least, to that given by your Toronto correspondent in the CANADA LUMBERMAN of 7th inst. Business might be good and brisk if dealers could but obtain cars as they require them. The car service at this point is in a wretched condition, and only those interested can understand the worry and trouble and in not a few cases serious loss, resulting, not alone to the shippers, but to their numerous customers and to the ultimate users of lumber scattered over the whole country.

Shipments of lumber to this port are nearly over for the season. Probably four or five cargoes, say one million feet, will come in yet. There will then be in the yards about nine or ten million feet of pine lumber of the usual grades. Dealers sell only in car or cargo lots.

PRICES IN CAR LOTS.

Lath 1½x4 feet	1 85

Philadelphia, Pa.

OCT. 29.—Trade is satisfactory, is not very brisk, and prices are fully maintained, the stocking up for the winter helping to strengthen the market. White pine is generally strong, and yellow pine is decidedly active. In hemlock the consumption is heavy, the supply being hardly equal to the demand, so that an advance is anticipated, There has been a large business in lath, with rather weak prices. Shingles have been active at full prices.

New York City.

OCT. 29.—There is an active business, as the dealers are filling up their winter stocks. White pine is steady, with good sale. The export trade has been somewhat dull, one of the largest shipments recently being over 200,000 feet of Melbourne. Spruce and hemlock are in good demand, and the market is strong. Lath is in light supply and held firmly.

Buffalo and Tonawanda, N. Y.

BUFFALO, Oct. 29th.—There is an evident improvement in the market, the approaching winter bringing in orders more freely. The demand from the east in particular is better. Prices are firm, for with rather lighter stocks than usual, holders are not disposed to make sacrifices. Canal shipments are nearly over and there is a great scarcity of cars.

The Tonawanda trade is good, there being a brisk demand for all lines except uppers. Shingles are in short supply.

Chicago, Ill.

CHICAGO, Oct. 29th.—Though the arrivals of cargoes have been heavy for the season they did not hang on hand, and there was no occasion to sacrifice them. In a few instances there was a little shading in order to hasten a vessel away. Many dealers are well stocked, but there are enough whose stocks are low or incompletely assorted to absorb the supply. Strips and boards are in especial demand but must be dry, for green is hard to sell. Piece stuff is selling from $10 to $12, the latter price, or even better, for long stuff.

Shingles are in good demand and lath steady, with dry in request. There are some complaints of insufficient car accommodation. The local demand continues good, and altogether the market shows strength with a favorable outlook.

The × Gutta × Percha × and × Rubber × Manufacturing × Company × of × Toronto.

Offices : 43 YONGE STREET, TORONTO. - - Factories : PARKDALE, ONT.

SOLE MANUFACTURERS OF

RUBBER "MONARCH", "RED STRIP" AND "LION" BRANDS OF BELTING

Particular attention given to special Belts for Lumber Mills.

Our celebrated "Maltese Cross" Rubber; "Baker Fabric" and Ajax Cotton; "Giant" and Light Linen, and Fire Hose constantly in stock.

LUMBERMEN'S * HEAVY * RUBBER * CLOTHING, * OUR * OWN * MANUFACTURE.

Address all Communications to THE GUTTA PERCHA & RUBBER MFG. CO. OF TORONTO, 43 Yonge St.

Saginaw River, Mich.

BAY CITY, Oct. 28.—Trade has been dull and stocks have accumulated faster than they have moved off. The shipping season is, however, now nearly over, which should have its effect. Some weakening of prices, especially for good lumber, has been apparent. Strips, shingles and lath have remained firm, and there has even been an advance in shingles. Complaints of short car accommodation have been heard.

Albany, N Y

ALBANY, Oct. 30th.—The lumber market has remained quiet, and even dull in uppers, though lower grades have been in more demand. The high lake freights have kept lumber back at the mills, but recent arrivals have helped to fill the yards, becoming heavier with the advancing season. Hemlock boards are in demand but are firmly held and there is considerable activity in cull hemlock and spruce. Shingles are scarce and are advancing in price.

Minneapolis, Minn.

MINNEAPOLIS, Oct. 28.—Trade is only fair and there is some weakness in the market. The demand has been below the average, and would have been still worse but for some impetus given by railway construction, which is now falling off. Shingles are scarce and firm. The railways are busy moving the crop and have not much accommodation for timber.

London, England.

LONDON, Oct. 22.—Prices remain steady but the looked-for advance has not arrived, heavy sales without reserve checking the tendency upwards. Buyers show more readiness, while holders are not disposed to give way.

Liverpool.

LIVERPOOL, Oct. 22.—The docks look rather more busy with recent arrivals, among them being the P. G. Carvill from Quebec with a large cargo of square and waney pine deals and oak. The other late arrivals have been chiefly spruce deals. Business is not brisk and there is not much sign of improvement at present.

CANADIAN HARDWOODS FOR CARRIAGE BUILDING.

THE following is the conclusion of the interesting letter addressed by Mr. G. N. Hooper, President of the Institute of British Carriage Manufacturers, to the Canadian Minister of Agriculture, the commencement of which appeared in our last issue.

Many years ago some French merchants discovered a great waste going on in England. Immense quantities of coal-dust could be had at the collieries almost for the asking; they secured it, mixing it with some simple compound, they had it compressed into brick-shaped lumps, and now use it largely for heating the furnaces of their steam boilers. I would suggest that the waste sawdust, chips, &c., instead of choking the flow of the river, be compressed, converted into charcoal, and sent to England, where such fuel is valuable and necessary for many trades, especially for metal workers, and where its use might be indefinitely extended, could a regular abundant supply be relied on at moderate price.

Abundant and cheap charcoal in many parts of continental Europe enables the people to carry on many metal trades which cannot thrive without it. Canadian charcoal might relieve England of a difficulty, and help to establish and extend various profitable branches of trade now neglected for want of it.

England is at present largely dependent on Sweden for "safety matches," where a lower quality of wood seems to be utilized, possibly by the use of improved processes of splitting, and the Swedish matches have the further advantage of being "safety matches," lighting only by friction on the specially prepared surface of the boxes.

This seems a trade that should naturally fall to the lot of Canada, and it probably only requires a little tact, energy and perseverance to secure it.

I was in some parts of Canada surprised, almost, indeed, painfully startled, at the apparent want of care to avoid the risk of setting fire to factories and workshops. In many cases I saw iron forges being worked on floors of wood, the ceilings also of wood. I had never in any part of England or of Europe seen such, to my mind, hazardous risks of house burning incurred. Invariably, when I remarked on this, the owner, occupier, or manager smiled, or passed off the incident with the answer "No danger, we always do so." In England, fortunately for us, other ideas prevail. Let us hope that they will spread; that our Canadian friends will not need to keep harness continually slung over the backs of horses at their admirable fire engine stations, ready to run out at thirty seconds' notice, lest some neighbor or dear relative's life should be sacrificed by one of the most horrible forms of death.

Before I conclude let me cast a glance at the effect of good home social legislation. Driving through Hamilton, my coachman remarked: "Hamilton is a prosperous place, sir, they are very strict about the liquor here. 'Tis drink that makes and keeps a country poor."

I had an opportunity of reading an extract from the law forbidding gambling in Canadian railway carriages; could such a regulation be put in force in steamers crossing the Atlantic, many a well-to-do young emigrant or visitor might have the contents of his purse preserved for his own use instead of enriching the professional card sharpers and gamblers who haunt the ocean lines and are constantly on the look out for young dupes.

Before concluding, I desire to express my cordial and grateful thanks to all those gentlemen who kindly assisted me with letters, information or advice.

Very imperfectly, I am aware, have I endeavored to throw out a few ideas, hints, and suggestions that may possibly turn to the mutual advantage of colonists and the mother country; had time permitted I might have carried my inquiries and investigations further; but if, as a wandering member of the Council of the London Chamber of Commerce, I am permitted to assist in promoting trade and friendly and profitable intercourse between the capital of the Empire and a colony as loyal and patriotic as Canada, I shall not have made a journey of 9,000 miles in six weeks entirely in vain.

THE COMING WINTER'S CUT.

The following is a carefully prepared estimate of the out-put of logs which will be got out in 1887-8. The gentleman who prepared it is himself engaged in the lumber trade and knows of what he speaks.

Beginning with the Ottawa and its tributaries the following is the calculation :—

Canada Lumber Co., 80,000,000 feet; Bronson & Weston, 60,000,000; Gilmour & Co., 60,000,000; J. R. Booth, 70,000,000; McLaughlin Bros., 75,000,000; J. & B. Grier, 45,000,000; Richard White, 20,000,000; Booth & Gordon, 20,000,000; Hurdman Bros., 50,000,000; Hamilton Bros., 30,000,000; Perley & Pattee, 50,000.000; E. B. Eddy, 60,000,000; Alex. Fraser, 15,000,000; A. Barnet, 200,000 square feet; Thistle & Fraser, 150,000 square feet.

ON FRENCH RIVER.

J. McLean, 4,000,000; Ontario Lumber Company, 7,000,000; New York & Tonawands Lumber Co., 7,000,000.

PARRY SOUND, SOUTH RIVER AND WHAUAPITAE.

J. Jackson, 3,000,000; Beck & Bates, 4,500,000; J. R. Booth, 6,000,000; Alex. Fraser, 2,500,000; S. McKay, 4,000,000; Emery Bros., 5,000,000; A. Coburn & Fraser, 2,000,000; Timmins & Gorman, 100,000 sq. feet; John Dolan, 30,000 feet logs; — MacKay, 3,000,000.

STURGEON RIVER.

J. R. Booth, 5,000,000; Booth & Hale, 3,000,000; J. R. Booth (Deschenes Creek), 1,000,000; Edward and Charles Moore, 6,000,000.

Besides the above, Mr. Campbell, of South River, has a mill in full operation under the superintendence of Mr. Fred. Thomson, which next season when in full blast will have an output of two millions and a-half feet.

The above does not by any means represent all that will be done in the Ottawa lumber world for the year 1887-8. The above table represents the cut of the chief firms, but there are many smaller concerns which will likely turn out between ten and twenty millions.

In the Parry Sound district, nearly all of Mr. Booth's cut will be done by jobbers, and in fact the same may be said of the other firms there. Everything promises well for the season, and if there is an ample but not too much of a snowfall the work will go ringing along.

This year, owing to the extreme lowness of the water, many improvements have been made on creeks and other small tributaries, in order to facilitate driving, and the lowness of the water gave the lumbermen an abundance of opportunity to make the improvements thorough and permanent. These improvements will be a great aid in getting the season's cut of logs safely out to the main streams. With the exception of what will be cut on the Whauapatae, all this vast quantity of lumber will come down the Ottawa; the Whauapatae cut taking the waterway of the French River, Lakes and St. Lawrence River to market.

Mr. Bolier says that the Georgian Bay Lumber Company will put a large number of men into the woods this winter and will get out in all 200,000,000 feet of logs. The fire has damaged over 15,000,000 feet in the company's limit.

Oxford & New Glasgow Railway

SECTIONS.

1st.—Birch Hill Road to Pugwash Junct'n..13 miles.
2nd—Pugwash Junction to Pugwash..... 5 miles.
3rd—Pugwash Junct. to Wallace Station.. 7 miles.
4th—Wallace Station to Mingo Road.....17 miles.

Tenders for Grading, Bridge and Culvert Masonry, Fencing, etc.

SEALED TENDERS, addressed to the undersigned and endorsed "Tender for Oxford and New Glasgow Railway," will be received at this office up to noon on Friday, the 18th day of November, 1887, for the grading, bridge and culvert masonry, fencing, &c.

Plans and profiles will be open for inspection at the office of the Chief Engineer of Government Railways at Ottawa, and also at the office of the Oxford and New Glasgow Railway at Wallace, Cumberland Co., Nova Scotia, on and after the 10th day of November, 1887, where the general specification and form of tender may be obtained upon application.

No tender will be entertained unless on one of the printed forms, and all conditions are complied with.

This Department does not bind itself to accept the lowest or any tender.

A. P. BRADLEY,
Secretary.

Department of Railways & Canals,
Ottawa, 20th October, 1887.

Notice to Contractors.

SEALED TENDERS, addressed to the undersigned, and endorsed "Tender for Hospital at the Royal Military College, Kingston," will be received at this office until Monday, 14th November, for the several works required in the erection and completion of the Hospital at the Royal Military College, Kingston.

Plans and specifications can be seen at the Department of Public Works, Ottawa, and at the office of Messrs. Power & Son, Architects, Kingston, on and after Tuesday, 25th October.

Tenders will not be considered unless made on the form supplied and signed with the actual signatures of tenderers.

An accepted bank cheque payable to the order of the Minister of Public Works, equal to *five per cent. of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order.
A. GOBEIL,
Secretary.

Department of Public Works,
Ottawa, 21st October, 1887.

Notice to Contractors.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Post Office at Trenton, Ont," will be received at this office until Thursday, 17th November, for the several works required in the erection of the Post Office at Trenton, Ont.

Specifications can be seen at the Department of Public Works, Ottawa, and at the Office of G. W. Ostrom, Esq., M.P.P., Trenton, on and after Saturday, 29th October, and tenders will not be considered unless made on form supplied and signed with actual signatures of tenderers.

An accepted bank cheque payable to the order of the Minister of Public Works, equal to *five per cent. of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL,
Secretary.

Department of Public Works,
Ottawa, 26th October, 1887.

Auction Sale of Timber Berths.

DEPARTMENT OF CROWN LANDS.

(WOODS AND FORESTS BRANCH.)

Toronto, 18th October, 1887.

NOTICE is hereby given that under Order in Council Timber Berths in the following Townships, viz.: Livingstone, McClintock, Lawrence, McLaughlin, Hunter, Bishop, Devine, Butt, Biggar, Wilkes, Ballantyne, Chisholm, Canisbay, Pentland, and Boulter, will be offered for sale by Public Auction on Thursday, the Fifteenth day of December next, at 12 o'clock noon, at the Department of Crown Lands, Toronto.

T. B. PARDEE.

NOTE.—Particulars as to locality and description of limits, area, etc., and terms and conditions of sale, will be furnished on application personally, or by letter to the Department of Crown Lands.

No unauthorized Advertisement of the above will be paid for.

CHARLES ESPLIN,

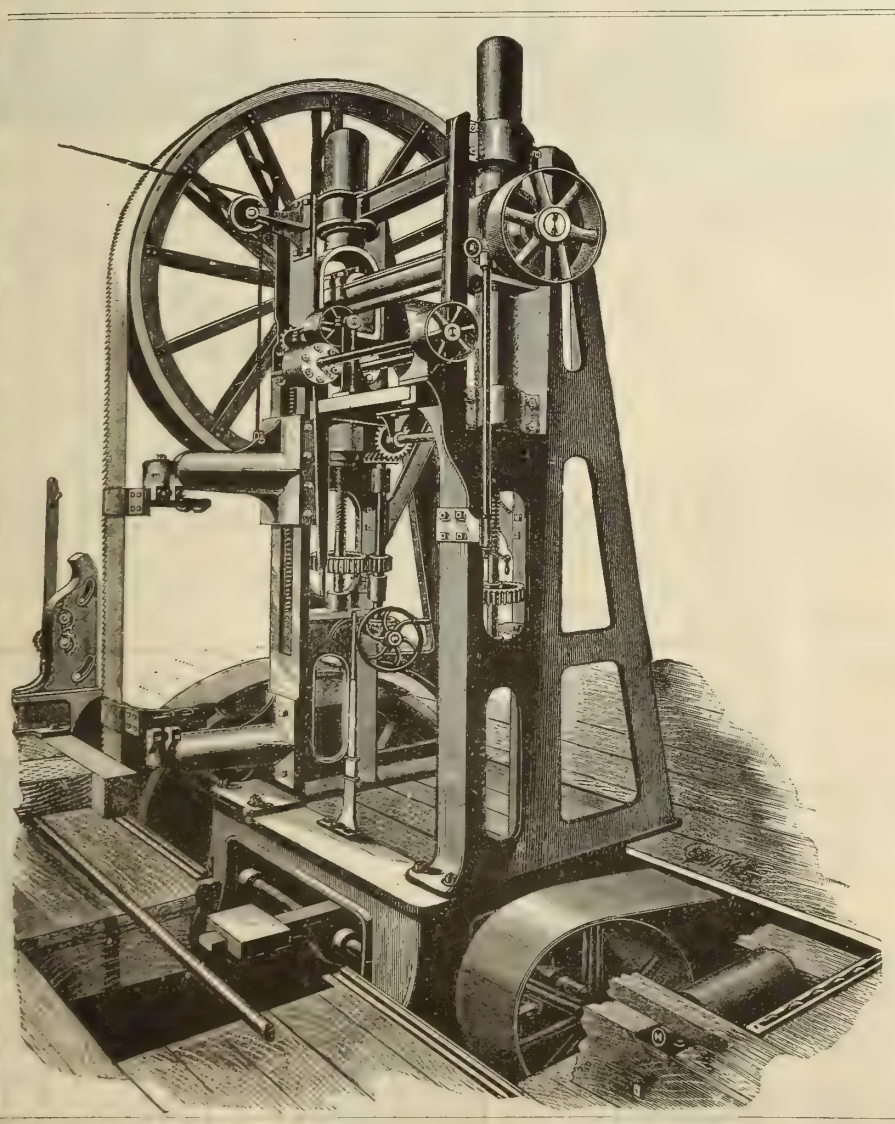
MILLWRIGHT * AND * MECHANICAL * ENGINEER,

Patentee and Builder of the

ESPLIN BAND SAW MILL

The Only Perfect Mill in Use.

THE following statement of Dimensions will give some idea of its proportions: Diameter of Wheels, 8 feet; diameter of lower and top Wheel Shafts, 5⅜ inches; length of Lower Shaft, 8 feet 6 inches; length of Top Wheel Shaft, 8 feet 4 inches; length of Bearings for Wheel Shafts, 18 inches; Weight of Mill alone, 22,000 Pounds.



ENDORSEMENTS

IN ABUNDANCE.

The Following is Only a Sample:

ASHLAND, Wis., Nov. 10th, 1886.

CHAS. ESPLIN, ESQ.,

Minneapolis, Minn., U. S. A.

DEAR SIR,—The band mill placed in our saw mill by you we consider the best and most complete band mill we know of. It has advantageous features which we have not seen in any other mill. The strength of all its parts is ample for every demand upon it. It is massive. The guide arms in their proportions and adjustments seem beyond improvement. The drive wheel by taking up the tension of the saw from below is a great advantage gained. The long distance between the bearings of the upper wheel shaft steadies the motion and the whole machine moves with ease and steadiness.

We have never seen lumber so perfectly manufactured as made by this band mill. The mechanic that planned it and the company that manufactured it deserves the congratulation and thanks of all manufacturers of lumber,

Very respectfully,

SUPERIOR LUMBER CO.

John H. Knight, Secretary-Treas.; D. A. Kennedy, Supt. and General Manager.

Address, CHAS. ESPLIN, care of Wm. Hamilton Mfg. Co., Peterborough, Ont.,

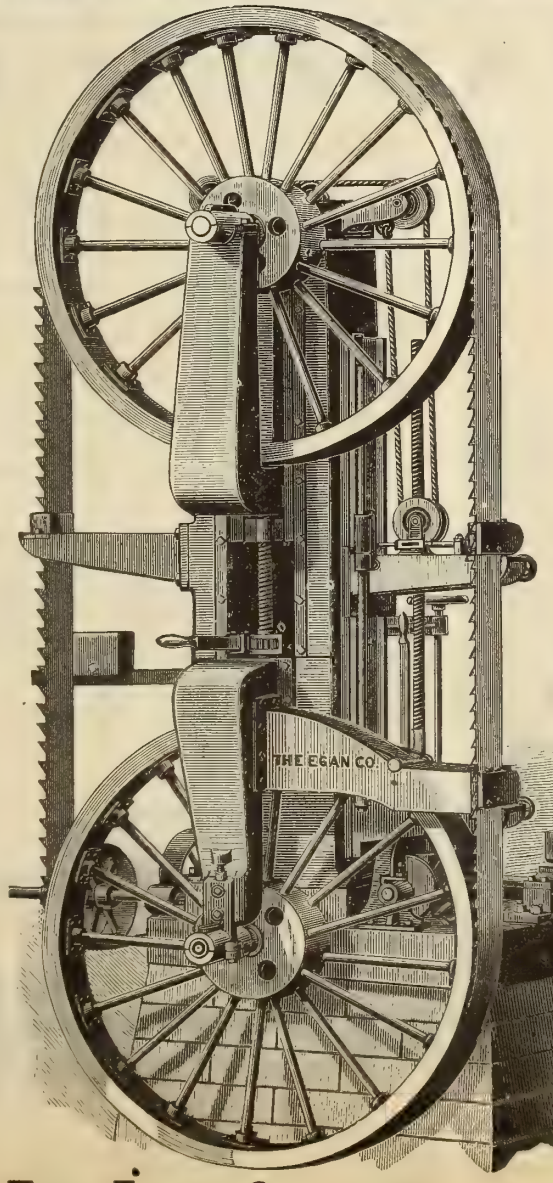
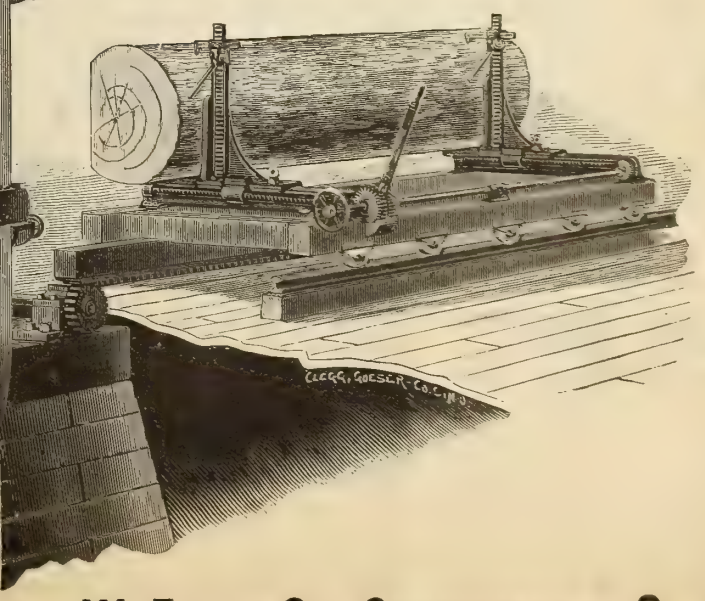
IMPROVED LOG BAND SAW MILL.



WE present to the trade of Canada our New Improved Band Saw Mill, and as we are the pioneer manufacturers of Band Mills, having been building them for the past ten years, and have more Band Mills in active operation throughout the United States than almost any other manufacturer, we present this new mill to the consideration of lumber manufacturers, and know an investigation of its merits and advantages will show us to be still in the lead.

The mill is built in the most perfect manner. The best materials are used throughout, and we test and run the mill in our works before shipping, and will warrant it in every way.

For prices of this, or cuts and prices of any other Improved Wood Working Machinery address us direct.



Correspondents will please mention this paper.

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion, being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

WHILE the timber supply of the Northern States is gradually and surely giving out, dealers are watching for the most contiguous markets for future supplies. From casual observation many would come to the conclusion that Canada, with its boundless forests and excellent water-ways, would prove a tempting field for Northern capitalists, but while quite a number have taken advantage of the forests of this country, by far the greater number have gone into the South. That is not only the nearest field, but the vexatious customs duties which would be experienced by Americans operating in Canada are avoided. For the past three years or more there has been going on a very quiet, but enormous traffic in Southern timber, and this will increase in volume and strength each succeeding year. The South abounds in cheap timber, the choice purchases, it is said, being now already taken up. It is only a question of time before Southern timber will have a stumpage value that will be counted in dollars instead of as now in cents.

IN the *Timber Trades Journal* we find two items of information that should have an interest for the trade on this side of the Atlantic. Our contemporary's Stockholm correspondent says: "There are several orders in the market for Australia from both the Gefli and Soderhamn districts, and good payable rates are being offered." Again in its letter from its correspondent in Christiania we read as follows: "The improved prospects for shipments to Australia (principally of white flooring)—." Now why should this important Australian trade be left to Norway and Sweden when Canada is even better able to supply the market. The Atlantic coast of the Dominion is at least as well situated for the trade as the Scandinavian countries, and the Pacific coast is far better situated especially as regards distance and time of transit. We observe also that the United States secure a large portion of this profitable trade, of which Canada might surely obtain the lion's share if not a virtual monopoly. It should be remembered that there is a large demand for coniferous lumber in Australia, where, though there is abundance of hardwood, there may be said to be no pine, and though New Zealand is better provided in this respect the supply there is not in excess of local requirements. It is a market that Canadians should develop, giving due attention to the kind of goods that suit the Australians. That the chief demand is for goods more highly manufactured than when they come from the saw mills makes care in shipping advisable, but adds to the value of the trade.

QUEBEC, where so much timber has been handled for the last half century, has seen many changes of late years, notably in the rapidly decreasing traffic in square timber, deals and staves. Many of the extensive docks which have done service for so long are now going to ruin, and adding to the many other signs of decay which abound throughout the ancient Capital. A recent visit among the timbermen of Quebec convinced THE LUMBERMAN of the fact that the wood trade was demoralized in the extreme, with little prospect of future revival. It may be said that the trade here depends entirely on the European markets, and partially through the depression in the old country, and also the fact that Norway pitch pine has come into such strong competition with Canadian timber, the outlook is of the gloomiest description. The Norway pine is not only placed on the English market at a lower price than the Canadian, but is also considered a more suitable wood for the purposes for which it is required. In addition to this there are other things militating against the Quebec dealers. A few years ago a very large trade in deals was carried on, but gradually this branch of the timber trade has been transferred to Montreal, the latter city, it is said, affording cheaper dockage and improved facilities. Then again, the Quebec operators have only to look back to find an extensive and prosperous stave trade, now almost, if not quite, *nil*. All these things considered the prospects for the future do not look very encouraging. Still, while such a state of affairs exists, we have not yet heard of any financial embarrassments of a serious nature, and all to whom we conversed, while seriously lamenting the depression, showed, so to speak, a "stiff upper lip" and were waiting, Micawber like, for something better to turn up. Doubtless before very long a different and more profitable branch of the wood trade may assume sufficient proportions to compensate the timbermen of Quebec for the losses sustained in the withdrawal of the trade above enumerated.

OUR Toronto contemporary, the *Mechanical and Milling News*, has evidently not studied the question of Commercial Union from a lumberman's standpoint, as the following paragraph will demonstrate:

> "How often we find the news columns of our daily papers contradicting most effectually the arguments advanced in their editorial columns. As a case in point, the *Mail* gives as one reason for its advocacy of Commercial Union that it would benefit Canadian lumbermen, while the Ottawa correspondent of that journal, who is coming in contact constantly with leading lumbermen, states that 'of late years the demand for Canadian lumber has been very great in the United States, and *as the supply is gradually becoming limited*, the lumbermen at Ottawa know that *they can have a good market for all the lumber they can cut*.' In view of the above satisfactory condition of affairs, it would be interesting to know what use our lumbermen would have for Commercial Union."

In reply to the query contained in the above paragraph, "what use would our lumbermen have for commercial union?" the answer is not hard to find. As our contemporary is doubtless aware there is at the present time a duty of $2 per thousand feet on all lumber entering the United States from Canada. This duty virtually comes out of the pockets of the Canadian manufacturer, for the reason that lumber from this country has to be placed on the American market at the same price as it can be obtained for at Buffalo, Tonawanda or any other point. If the Americans pay the duty in the first instance it is deducted in the price of the lumber and the Canadian shipper finds himself this much short on every thousand feet of lumber exported. Not only would Commercial Union be a great saving to the trade in this way, but it would also open up a greater market for coarse lumber, the production of which is too great for the home market, and cannot be exported owing to the high duty referred to. We are quite aware that the demand across the lines for Canadian lumber is great, but it would be considerably greater were the custom houses along the frontier abolished. Not only this, but a fair margin of profit would then be realized by the manufacturer, instead of allowing this money to go into the exchequer at Washington.

FROM various quarters there come complaints of inadequate railway accommodation to move lumber promptly, but this is by no means general. The lumbermen and dealers of Canada may well be thankful as they compare their position in this respect with that of their neighbors. From one after another of the centres of the trade complaints of lack of cars to move them are heard, till the cry seems universal. Crowded piling grounds, delays in delivery to buyers, and other difficulties affecting business at this important season, are the result. It must of course be admitted in fairness that the railway companies should be allowed some consideration if in a busy season they do not have cars ready at the moment they are wanted at every point on their extensive and complex system. Such a period is the fall when dealers are clearing off their heaviest summer cut, vessels are delivering all they possibly can before navigation closes, and dealers are stocking their yards for the winter, while the great movement of the crops is also taking place. If, however, some consideration and a few days' delay should be accorded, there is no excuse for a shortage of rolling stock causing a serious and prolonged check to business. The evil is so much greater than customary that it is impossible to avoid the conclusion that while there has been a great and rapid extension of railway mileage, undue parsamony has prevented the supply of adequate rolling stock in proportion to the increased work. It is not sufficient for the companies to allege that if they supplied cars and staff sufficient to meet on the instant all the demands of the briskest season much of it would be idle at other periods. By their charters they have been granted almost a monopoly of the carrying business, and this and other privileges have been given on the understanding that they meet the business requirements of the public. They are not at liberty to consider merely what stock and what staff they may most profitably maintain. The Canadian lines as a rule are giving less cause for complaint in this respect than are those of the United States, and hope not only that readiness for the service of the public will be continued but that any present shortcomings may be remedied.

ONE of the most striking features of the lumber industry of this continent is the great and rapidly increasing development of operations in the Southern States. This extraordinary activity in the southern forests is making its mark not only locally but in distant places. The industrial progress on the spot is of course adding greatly to the demand on the spot, but from Chicago and other northern cities of the trade comes the cry that the South is becoming a formidable competitor in neutral markets,—that in States where the white pine was formerly the main timber of commerce, the yellow pine is fast growing in favor and increasing in consumption. Nor is the increased demand for the product of the southern forests confined to this continent; it is more and more gaining a hold in the European market. This is a movement which Canadian lumbermen will naturally watch with interest, but there is another aspect of the question with which they are fully as much concerned. Not only have the forest products of the South been greatly augmented of late, but equally marked has been the demand for their timbered lands by operators at a distance. The lumbermen of the Northwestern States have been and are investing heavily in the yellow pine forests, and the area thus held in the South by northwestern lumbermen must aggregate an enormous average From these facts Canadian lumbermen may draw the conclusion that their brethren of the northwestern pine States, however contradictory may be the reports as to the extirpation of their forests, are looking forward to a scarcity of standing timber as an event of a not far distant future. It tells the same tale as their efforts to obtain timber limits in Ontario. The lesson that our limit holders and mill owners may learn from these indications is that before very long the supply of pine in this country will be in greater demand and of greater value. With such a prospect they will do well to cut cautiously and not be in too great haste to sacrifice valuable property without obtaining adequate remuneration. To force their goods too rashly on the market may be a losing policy in the long run for more reasons than one. It will be wise to consider the future as well as the present, and in this way be guided by the experience of the past in other States of the Union.

FROM more than one locality in the United States there come accounts of the adoption of the practice of baling sawdust. At Manistee the machine used is an ordinary power hay press worked by steam. In Canada there are not such large cities near the mills to afford a good market, but surely a certain quantity could be sold. It would be worth the while of some of our millowners conveniently situated to see if they cannot adopt this process. What is now a source of expense might be made to produce a revenue, and the complaints would be avoided of the effect of the mill refuse in the rivers.

THE Ottawa *Journal* is very much chagrined because THE LUMBERMAN failed last month to give credit for an article which was reproduced from that journal, eminating from an Ottawa lumber manufacturer. We can assure the *Journal* editor that we had no intention of hurting his feelings, as the omission was not intended. Were we to use "cuss words' every time an article was stolen from this journal without due credit, we think our prospects of "climbing up the golden stairs" would be slim indeed. Dear *Journal*, we sympathize with you.

AT length the great Nova Scotian log raft has been successfully launched. This time the ways, which last year yielded to the enormous weight, necessitating the reconstruction of the raft, did their duty and the large mass was floated. Mr. Robertson, the patentee, has so much confidence in the success of the tow to New York, that he has already commenced the construction of another raft on the same ways. If his hopes are verified, a revolution of no slight importance will be effected in the trade, for the example will no doubt be followed with the advantage gained from the experience of the costly preliminary failures. The conveyance of three million feet of timber by means of one tug would certainly be economical, if the risk should be shown not to be too great. Log rafts on this principle may perhaps be used on the great lakes to enable United States mill owners to carry out their desire of supplying their mills from Ontario forests.

THE merchants of St. John and Halifax are making renewed attempts to induce the Dominion authorities to foster trade with the West Indies and South America by granting subsidies to steamship lines. There is every appearance that their efforts are likely to be successful. This matter has a considerable interest for the lumbermen of our Dominion. A deputation from St. John, N. B. while recently addressing the Montreal Board of Trade to obtain its co-operation, pointed out that not only was there at present an export of Canadian lumber and other wooden goods from the Maritime Provinces to the countries in question but that also there was a far larger export from the United States a considerable portion of which was the product of Canada. The deputation urged very reasonably that this trade if carried on direct would be more profitable to Canada. The trade should use its influence to support this movement.

IN addition to the immediate destruction of property caused by the forest fires which have wrought devastation in so many limits this year, an indirect bad effect has been produced. From several quarters we hear of lumbermen making preparations for getting out an unusual quantity of logs, because their limits having been burned over the trees have been killed and must be at once felled to escape the ravages of the "borer." This must have a tendency towards a glutted supply, besides disturbing the calculations of mill owners, who had aimed at sparing their forests so as to reserve a supply of logs for their mills as long as possible. The loss and inconvenience thus caused will be an additional incentive to maintain and even improve the means that have been adopted for guarding against forest fires. The laws on this subject should also be rigorously enforced.

REFERRING to our remarks on the increased mileage and stumpage tax in the province of Quebec, the *Miramichi Advance*, of Chatham, N. B., asks:—"What would the LUMBERMAN say if Quebec operators had to pay $8 per square mile as rental and $1.25 per M. for spruce as the New Brunswick government forces our lumbermen to do?" It certainly appears on the face of it, that these demands upon the lumbermen are excessive, and that our contemporary has reason to say "The Quebec government is moderate and merciful in comparison with ours." To compare the two systems with exactitude it would be necessary, however, to take other circumstances into consideration. One of the worst features of the Quebec increase is that it prejudicially effects property that was acquired, has changed hands and has been accepted as security on the basis of the old dues, the value being suddenly and unexpectedly diminished by the increased tax. Those who now acquire timber limits in the Province of Quebec will not be subject to this wrong, for they will value the limit with reference to the amount of the rental and dues. Not having immediate access to information as to the dues formerly exacted in New Brunswick, we cannot say whether the same injustice has been done there. It would seem so from the language used by the *Advance*, which says:—"Our government knows that its victims cannot at once withdraw their capital, and they seem determined to secure as much as possible of it while it is within their reach." This is where the injustice comes in; it is no valid excuse to say that the leases are only for the year, since relying on the established practice and custom, men have in good faith invested capital for their operations, have bought limits, or have advanced money on them, and now find that their confidenee in receiving fair play has been misplaced. We would be glad to learn from our contemporary what changes, and when, there have been made in the New Brunswick timber dues.

THE market reports and other information have shown that there has been generally an active business in shingles. Though there has certainly been no diminution in the output, values have been fully maintained, sales have been readily effected, and there has been a steady demand. With a few local exceptions such has been the satisfactory condition generally of this branch of the trade. The natural result has followed; from many different qnarters we hear of orders for new machinery, the erection of new mills and enlarged operations among the shingle manufacturers. There is evidently room for expansion and it is well that advantage should be taken of the opportunity. It should, however, be borne in mind that the business may be overdone, and that any exaggerated increase of production must weaken the market even if it does not glut it. The steady demand for shingles that has prevailed seems to speak of increased building operations, more especially in residences of the class for which this kind of roofing is used, and therefore is an indication of progress and industrial prosperity.

BESIDES their general interest as Canadians, the lumbermen of the Dominion have a special interest in the proceedings of the Joint Fishery Commission now in session at Washington. Even if not adopted, it is certain that reciprocity will be considered as a means of settling the long-pending controversy as to the enjoyment of our fisheries. Whatever restrictions may be established, lumber would undoubtedly be included in the articles on the free list as it is already in the standing offer in our statutes. Such a change must necessarily effect the trade materially, though the extent of the benefit is a matter as to which there is some difference of opinion. Then besides the remission of the United States duty on lumber, any reciprocity even in natural products only would largely effect our lumbermen by their being able to import pork, beef, coarse grains and other supplies without paying the present Canadian duties, which with the prices now ruling would be advantageous to them. As the Commission is conducting its deliberations in private some little time must elapse before the results are made public. Our readers will await their publication with very natural interest.

AT this season it is necessarily impossible to form even an approximate estimate of the log cut for the coming winter, and the amount that will be brought to the mills. Much must depend upon the snowfall, which may be either too large or too small, and much also upon the supply of water for driving. Last winter many operators found that the work in the woods did not come up to their expectations, and an unusually large quantity of logs were detained by a deficiency of waters which also, in some water-power mills, diminished their cut of lumber. But though the result cannot be predicted, it is at least certain that preparations have been made for a large cut this season. The reports from different centres show that generally extensive operations are contemplated. Another strong indication to the same effect is the fact that men for the camps are in demand and there is even some difficulty in obtaining the required number, the common notice on the office door, "No more men wanted," having been rarely seen. With a favorable winter in the woods and spring on the streams and rivers, a large supply of logs may be anticipated, the cut being augmented also by the numerous logs "hung up" this year. A fairly prosperous season, with anticipations of a further improvement of general business, have contributed to this activity. Though there was nothing that could be called a boom, prices were well maintained, there was a steady demand, and a healthy, if not very active, business. The official returns for ths Dominion show that the exports of "produce of the forest" amounted in October to a value of $2,534,855. The home consumption also has been considerable. Altogether the results of the season's business have been satisfactory, and there are favorable anticipations for the future.

THERE is shortly to take place an important sale of timber limits by the province of Ontario, including forests in the heart of the Province that have not hitherto been opened to the lumberman, almost the last in a virgin state in that region. There should be a keen competition for these limits, for they are well timbered, well situated, and are almost the last in the settled portion of the province to be obtained at first hand. It is, however, very desirable that before the sale there should be authorative information as to the conditions on which the purchasers are to hold the limits, as to the stumpage and other dues to which they may be liable. It has been extensively rumored that the Mowat administration contemplated following the example of Mr. Mercier in asking increased payments from the lumbermen. It has even been surmised that Mr. Mowat would avail himself of the opportunity of the meeting at Quebec to consider this subject with a view to similar action. If there was any such consultation its results have not transpired. In view, however, of these rumors and of the action of the Governments of Quebec and other Provinces it is only natural that some incertitude and anxiety should prevail among the Ontario lumbermen. Under these circumstances it is very expedient that before the sale, which is to take place on December 15th, full information should be given as to the terms on which the property is to be held, and as to the rentals and royalties reserved by the vendors. These terms should even be embodied in the conditions of sale. This is the only fair course alike to the purchasers and the vendors. The lumbermen acquiring the property would know exactly what they were buying, and could not have their calculations vitiated by demands for increased payments which they did not contemplate. The province would gain by obtaining the full value of the property by competition unrestrained by the belief that the purchase was a lottery. Business nen would not dream of selling property on such loose terms as to make bidders uncertain and therefore timid, and the provincial authorities should adopt the same business-like policy.

WE find that the London, (Eng.) Board of Trade returns for October are more favorable, both as regards imports and exports, which have swollen considerably. The total declared value of the imports is £30,550,307, against £29,054,399 for the corresponding month of last year, or £1,495,908 more. The increase is chiefly in raw materials for textile manufactures, but is also striking in articles of food and drink, dutiable, metals, tobacco, and manufactured articles. The receipts of cereals from the United States have fallen off largely, and those from the British East Indies and North America are also less. On the other hand, consignments from Russia have about doubled, and those from Australasia are rather larger. For the ten months the total imports are valued at £294,953,817, against £285,468,148 last year, showing an increase of £9,485,669. The exports for the month amounted to £18,736,201, as compared with £18,224,823 last year—an increase of £511,378. Nearly all the items are larger, but the growth of business is largely seen in metals and articles manufactured therefrom (except machinery), and in machinery and millwork. The shipments of cotton piece goods to India continue to diminish, and there is also a decline in those to Egypt, Turkey, and Greece, while to China and Japan and to the European continent the quantities are more important. For the ten months the total exports are valued at £181,835,615, against £177,740,793 last year, being an augmentation of £4,094,822. Turning our attention to that department with which we are more directly associated, says *Timber*, we find that the import of hewn timber for October was 164,985 loads, as compared with 149,150 loads for the corresponding month of 1886, an increase of 15,835 loads. For the ten months ending October 31st, the figures give 1,476,460 loads for 1887, as compared with 1,368,275 loads for 1886, an increase of 108,185 loads. Taking sawn timber for October, the figures give 475,177 loads for 1887, as compared with 605,849 loads for 1886, a decrease of 130,672 loads for the present year. For the ten months ending October 31st, the returns give 3,380,038 loads for 1887, as compared with 3,244,657 loads for last year, an increase of 85,381 loads. The falling off in sawn timber is general in all districts from which we draw our supplies; the only exception to the statement being the United States, which gives a slight increase. For October the importation of staves has been smaller than last year at corresponding date, and the returns for the ten months show an importation less than half the quantity imported in 1886 up to the same date. The importation of mahogany shows a much lessened quantity, the return for October giving 2,197 tons less than in the same month of last year, while of the ten months, the statistics are 31,684 tons for 1887 as compared with 41,010 tons for 1886, a decrease of 9,326 tons, or a declared value of £20,000 less this year than there was last. On the whole the returns show a more favorable state of affairs.

Erastus Wyman and the Lumber Trade.

Mr. Erastus Wyman—or Sir Erastus Wyman as some Canadians hope by-and-by to hail him—has been down to the Ancient Capital, in Quebec, giving his views on the question of Commercial Union. From a report of his speech, comprising several columns, THE LUMBERMAN has extracted the following views as expressed by him regarding the timber interests:

"In the matter of lumber no greater boom could happen to Canada than to break down the barrier which shuts her out from fair competition with the neighboring Republic. The lumber question in the United States was rapidly assuming great inportance. It was alleged by some that within twenty-five years almost the entire stock of available lumber would disappear. The protection which had been afforded to the lumber interest in that country had been practically destruction, because they could in no sense replace the rapidly disappearing forests. The charge against Canadian lumbermen of two dollars a thousand had been a serious impediment, and, if for no other thing, unrestricted Reciprocity should be encouraged. The demand for lumber was likely to be very great. The growth of the great cities absorbed yearly more and more, aside from the treeless prairies, and the activity in providing homes and the necessity for enlarged building operations at almost every point in the neighboring republic made it the very best, as it was the nearest, market for the products of the forests of Quebec. There was not a lumber merchant in the city of Quebec, there was not a holder of lumber land throughout the Dominion, but would be benefited by an open market at a point so contiguous, so cheaply reached, as the points of receipt in the United States. If this was true with regard to lumber, what might not be the result in regard to all manufactures of which wood forms the bulk of the raw material. In the article of furniture Canada aught to be the greatest producing region on the Continent. She possesses no less than sixty-nine different varieties of wood, and throughout Quebec there is an infinite supply of the most attractive kinds of wood for interior decoration. The beautiful birdseye maple, the black ash, the oak and basswood, are all in abundant supply. Is there anything in the matter of furniture, the shape or form, taste or color, which the American possesses that the Canadian does not possess? Is there any device in beauty of construction, in strength, in skill, or in excellence, that could not be imitated in Quebec for the supply of the wants of the United States? Plenty of manufactories in the United States employ French Canadians, Germans, and foreign labor, in the production of the most elegant furniture, and it is safe to say to-day that in the large establishments of New York, Boston and Philadelphia, where could be found the most elegant furniture in the world, that seven-tenths of the labor employed is foreign labor, and that twenty-five per cent. of that is French-Canadian labor. The cheapness with which the furniture could be shipped West and distributed throughout the North-Western States and Territories, as compared with the cost of shipment from other Atlantic ports, would give us an enormous advantage at this point, while the cost of labor, of raw material, and the cheapness of power would be an advantage of the greatest possible value. It might not be that in the finest grades of furniture Quebec could compete, although in that it is difficult to see what barrier there is, but for the bulk of the supply of Western needs in furniture Quebec would have a great advantage. If in lumber and in furniture Quebec possessed advantages from her lecation and abundant supplies of wood, what would prevent her from being the greatest ship-building port of the Continent.

A Monster Raft.

The great raft that was launched at Two Rivers, N. S., November 15th, is 585 feet long, 62 feet wide and 37 feet deep, and weighs 9,000 tons. There were four ways 1,200 feet long, and the raft went slowly at first, but gathering speed ran a thousand feet, until she floated. She made the run in thirty-four seconds without the slightest strain, did not part a single chain nor spring the vast structure an inch. She was taken in tow by the tug Neptune, and the cradle removed at once. The raft draws 19½ feet, or six feet less than was expected. It was in 1883 that Hugh R. Robertson, of Two Rivers, conceived the idea of building a raft somewhat in the form of a ship, composed of logs cut in full lengths and firmly secured by chains. In the following year Mr. Robertson drew a plan of the proposed raft and patented it in the United States, Canada, Great Britain, Norway and Sweden. Early in 1885 Mr. Robertson visited New York and contracted with Wilson Godfrey, of 91 Wall street, for the construction of a raft afloat on the shore of the Bay of Fundy. In November of the same year B. B. Barnhill, of Two Rivers, N. S., contracted to furnish the lumber required for the raft and to build it ready for launching, according to plans and specifications prepared by Mr. Robertson. Mr. Barnhill began at once to prepare a place for the raft near the head of the bay—a place called "Finger Board," about six miles down the bay from the Joggins and about three from Shulee. The spot was admirably adapted for the purpose, and soon workmen were engaged in the construction of the raft. The raft was completed in August, 1886, and was almost as large as the Great Eastern, and full a third heavier. It contained over two million feet of lumber, being over 400 feet in length, 50 in width at the centre and 33 in depth, and 25 in diameter at either end. On the 31st of July, 1886, the first attempt was made to launch the raft, but it did not move. A second attempt was made the following day and the large mass ran down the ways nearly two hundred feet. There it remained, owing to the breaking of the ways. Several other attempts were made to launch the raft but without success. Then Mr. Robertson, who felt satisfied of the practicability of the scheme, decided to tear it apart and rebuild it. This was done and the new raft was finished a few days since. It is much larger than the first structure, being over 500 feet in length and containing about three million feet of timber. Its general form resembles that of a fat cigar, somewhat fastened at its upper and lower sides, with the pointed end cut off. It is one solid mass with the exception of movable interstices necessary in the packing of round lumber, in trees cut as long as they grow, from 30 to nearly 100 feet in length. The timber has been stowed with its small ends generally towards the end of the raft, which helps to give the proper taper, and it is so interlapped that great strength is attained to hinder the structure breaking in two. The patentable point in this system of rafting is the adjustment of the chains which bind the whole together. The main or centre chain runs from one end of the raft to the other, and it is that by which the structure is to be towed. The lateral chains are used to prevent the raft from working apart longitudinally by the action of the waves. The encircling chains are attached to the lateral chains, and are to prevent the raft from flattening out while afloat.

The Hon. William Goold, of Portland, the historian, has unearthed some ancient records showing that the timber raft above referred to has had some predecessors, says the *Industrial Journal*, of Bangor, Me. All of them were successfully launched but came to grief before reaching their destination. In 1792 a raft containing about 1,000 tons of timber was built at Swan island, in the Kenebec, by Dr. Tupper, a somewhat noted eccentric character. It was made by treenailing square timber together in the form of a ship's hull, and was ship rigged, the intention being to send her across to England. At that time no manufactured lumber was admitted into Great Britain; hence the timber in the raft was simply squared with the axe, to make it stow well. The ship or raft lay at Bath for some time, it being difficult to get men to go in her. She finally went to sea, however, carrying a small vessel on her deck. But off the Labrador coast her crew got frightened by bad weather and abandoned her. She was afterwards boarded by men from a passing vessel and found to be in good order, and it was suspected that she was deserted without sufficient cause. Two other similar attempts were made from the Kennebec, and both vessels went safely across, but foundered on the English coast, under the same suspicions of fraud as in the case of the Tupper ship. In 1825 the ship Baron of Renfrew was launched at Quebec, having made a previous unsuccessful attempt when she stopped on her ways, owing to the grease being consumed by fire from friction. She was towed down to the island of Orleans and anchored. Her dimensions are given as follows: Length, 309 feet; breadth, 60, feet; depth, 38 feet internally and 57 feet externally; tonnage, 5,888 tons; draft when launched, 24 feet; cargo on board when launched, 4,000 of timber. She was ship rigged, with four masts, and was perfectly flat bottom, and with a keel of about 12 inches; wall sided, sharp forward and rather lean aft, and looked more like a block of buildings than a ship. She sailed in August 1825, in command of a Scotchman, a half pay lieutenant in the British navy. October 27 the Baron of Renfrew drove on shore on the coast of France, near Calais, and went to pieces. And thus closes the record of ocean timber ships up to the Nova Scotia raft.

The Motive Power of the Future.

It is a recognized fact that the steam engine makes use of only a small fraction of the amount of fuel that is burned to run it. The nature of the machine is such that this fact is a necessary one. The fault does not lie in the workmanship, for the actual loss of power from imperfections in this respect is found (by the indicator) to be only about twelve or fifteen per cent. The cause of the low efficiency lies too deep to be overcome by any mechanical device, and it has often been remarked that the motor of the future must work on an entirely different principle.

Mr. Edison has invented a motor which transforms heat into mechanical energy without the intervention of either boilers, pistons or cylinders, and he is very hopeful of improving it so that it may become of practical use. We have examined drawings of it, however, and have become [illegible] The motor is electrical in nature, and [illegible] it is necessary to heat and cool a piece of iron very rapidly We doubt if this can be satisfactorily done

The hot-air engine is very inviting, but men like Ericsson and Siemens, after years of thought, have not brought it into successful competition with steam, although they were well acquainted with the theory of its action, and were vastly better prepared to make experiments than the fathers of the steam engines were.

The wind mill is too uncertain in its action to [illegible] steam, though the fact that it consumes nothing must become a very weighty consideration in its favor when our coal supply gives out.

The tide mill has never been very widely adopted, and has [illegible] anyone thinks of it seriously as a rival of steam; but it is [illegible] theless possible to construct one that can produce power enough for the entire United States. A reservoir forty [illegible] square, at or near the head of the Bay of [illegible] where the tides are very great, would contain sufficient water to [illegible] 700,000 horse power for twelve hours; and this might [illegible] tributed electrically and sold in every State in the [illegible] When coal has become scarce the construction of such reservoirs may be attempted, so that power and light and perhaps heat also, generated in Nova Scotia, may be sold all over the continent.

Power obtained in this way would not come from nothing. If a tide plant like that we have suggested is ever constructed, it will lengthen the time of day. It will slow down the earth's rotation just as certainly as a big gear wheel would, if placed on the earth's axis and made to drive machinery; though the effect would be so slight, owing to the immense size of the earth, that the increase in the length of day would not be measurable for thousands of years.

The gas engine has proven itself very convenient in many places, and oil and powder engines are also in use; but all of these use fuel, so that, equally with the steam engine, they fail to solve the great problem that must face the world sooner or later, when the coal is gone. The engine of the future must draw its energy from some of the forces of nature, and it seems that it must be operated by wind, waves or tides, or by rivers, ocean currents or the direct rays of the sun.—*Power.*

CHIPS AND SAWDUST.

THE art of paper making has reached a point where a tree may be cut down, made into paper, and turned out as a newspaper, in thirty-six hours.

IT is no use to expect shafting (and especially heavy shafting) to run well when it is crooked or the couplings are out of truth. The power used by this alone often amounts to a serious item of expense.

A BRITISH authority on the circular saw says: When having saws hammered, be sure they are placed in competent hands; we have seen saws that have been hammered by so-called experts that might have been better done by a blacksmith's striker.

THERE is a good reason to suppose that there may be, not long hence, a craze for cypress the same as there has been for other woods from time to time. Cypress as a finishing lumber has this advantage over the hardwoods, or even over yellow pine—it is almost as easily worked as white pine.

A REMARKABLE imitation of black walnut has lately been made from poor pine, the quality and appearance of the article being such as almost to defy detection. To accomplish this one part of walnut-peel extract is mixed with six parts of water, and with this solution the wood is coated. When the material is half dry a solution of bichromate of potash with water is rubbed on it, and the made walnut is ready for use.

WOOD decays very rapidly when exposed to the alternate action of air and water, such as in the case of tidal rivers, but this is not the case when it is immersed in deep water or in still water that is not changed. The air contained in such water becomes exhausted of its oxygen, and the process of decay is arrested, or may never take place to any extent. Accordingly, it is found that piles driven in deep water, or in clay or mud, will remain sound for almost an indefinite length of time.

A MAN from Michigan, who was admitted to the Royal palace, at Amsterdam, Holland, passed—if he or the newspapers don't lie—through a door hung on brass hinges and secured by a brass lock, made in a Massachusetts factory, and saw the following further evidences of the spread of United States art and industry in the old world:—A chair from Grand Rapids, Michigan, and a spittoon (he called it a "cuspidor,") from Baltimore, stood near. Over the mantel, which was of American design, hung a landscape by a Philadelphia man, Thos. Moran, and upon it were a Colorado stag vase and a box of Michigan tooth-picks.

THE NEWS.

ONTARIO.

—The box factory at Waubaushene is again in operation.

—The Parry Sound Lumber Co. are building a new shingle mill.

—John Harrison's saw mill, at Owen Sound, has been burned.

—Mr. T. P. Pearce, Marmora, is building an extensive lumber mill at that place.

—Mr. C. H. Harrison, Norwood, is about starting an extensive sash and door factory.

—Beatty's sash and door factory, at Pembroke, recently destroyed by fire, is being re-built.

—Cedar blocks, for paving streets, are being manufactured quite extensively at Norwood.

—The sash and door factory belonging to John Leath, Ridgetown, has been destroyed by fire.

—The Big Mill at Deseronto has closed down for the season, having been running since April 21st.

—A new sash and door factory at Campbellford, built by Mr. Jas. Benor, is nearly ready for work.

—The Midland and North Shore Lumber Company's mill at Parry Sound has been closed for the season.

—Considerable progress is being made towards the organization of a Lumber Board of Exchange in Ottawa.

—The railroad ties cut this season by the Rathbun Company's mill, at Campbellford, are being shipped to the State of New York.

—Work on the new shingle mill, at Deseronto, is being pushed forward. It is a substantial three-storey building with cupola.

—Messrs. Bronson & Weston, the well-known Ottawa lumbermen, are seeking incorporation as the Bronson & Weston Lumber Company.

—It is reported that Mr. Booth, of Pembroke, has sold his limit, known as the old Mackie limit, to Mr. W. R. Thistle, of Renfrew, for $25,000.

—Messrs. Thompson & Ellis, of Fenelon Falls, have sustained a heavy loss by the sinking of two scows loaded with provisions for the shanties.

—Mr. George Brooks, of Barrie, is building a saw mill at Melville Bay, on the Lake Huron shore, about 12 miles above Providence Bay.

—Mr. A. Irwin, Blenheim, during the months of September and October manufactured 100,000 barrels for the flour, apple and bean trade of that town.

—Jacob A. Shaver, of Ancaster, writes us that he is doing a brisk trade, and that the only trouble is short stock. He cuts about 8,000,000 feet per year.

—H. & J. D. Smith, of Stratford, are erecting a new saw mill in that city, which will, it is expected, be in operation about the beginning of the new year.

—On Nov. 6th, 1000 cords of firewood, a lot of lumber and a large barn, owned by Kerr & Davis, near Beamsville, were burned. The saw mill near by was saved.

—John Armstrong, of Chaffey, has secured the contract from the Northern and North-western railway to supply 10,000 ties. This looks as if the Northern was improving.

—Both the Gilmour and Rathbun mills at Campbellford, have closed down for the season. The latter had been running scarcely five months, and every log has been sawn.

—Mr. Harman Mutchenbake, a young man 16 years of age, sawed 42½ M. feet of 16 inch shingles in 11 hours, at the new shingle mills at Rosseau Falls. Can this be beaten?

—Mr. Robert Harrison, Cavan, is adding a sash, blind, door and chair factory to his lumber mill, and is building a 50x30 foot extension to his works to accommodate his enlarged business.

—Mr. E. W. Rathbun, the well-known lumberman of Deseronto, recently delivered an able address in Oswego, strongly opposing Commercial Union between Canada and the United States.

—Owing to the excessive lowness of the water in Chats Lake, Messrs. McLachlin Bros. have been compelled to shut down their steam saw mill which will lessen their cut by at least a quarter.

—The lumber firm of McCraney & McCool, of Toronto, has admitted Mr. Robt. S. Wilson as partner, and opened a branch at Ottawa, where Mr. Wilson will be resident manager. The firm has mills at Oakville, Burlington, Bronte, and Huntsville, and makes a specialty of long bill stuff and dressing and the higher grades of pine. The style of the firm is now McCraney, McCool & Wilson.

—Mr. H. J. Russell, for many years Inspector of Crown Timber agencies and Collector of Timber Dues, died at Ottawa, during November, aged 82 years. He was the father of Mr. Lindsay Russell, Surveyor-General of Canada.

—Scott, Scott & Co. have just completed a very successful season's sawing at their Medonte mills, the output being four millions. Shipping is being proceeded with vigorously, and they have got well into the bush work for next season's stock.

—Messrs. Hurdman Bros., of Pembroke, deny the report, which has in some way gained circulation, that an epidemic exists in their shanties, in the form of typhoid fever, and that the rumor of any death taking place in such, is entirely false.

—Lumbering is going to be carried on extensively in the Lake Megantic district this winter. Dudley's company alone will take out eight million feet. Beatty & Co. bought a whole township on the other side of the boundary line, and they are busy building now.

—Reynolds & Scord's saw mill at Reynoldsville, on the Twelve Creek, three miles south of St. Catherines, together with the adjoining barrel heading factory and lumber piles, were completely destroyed by fire in the early part of November. Loss about $15,000; insurance, $5000.

—Mr. Boyd's lumbering operations in the Haliburton district, back of Peterborough, will be very extensive this year, so much pine having been killed by the fires. He will cut more logs than he can saw, and will have to warehouse them in the woods. The firm will run about eight shanties in this district, says the *Post*, and some of them will employ a hundred men.

—Mr. Norman Barnhart, manager for M. Boyd & Co., of Bobcaygeon, reached Lindsay with a gang of about seventy men from the lower provinces, and at once engaged a special train and was whirled northward to the seat of the firm's lumbering operations in the township of Snowden. It is now probable that the firm will have about six hundred men engaged during the season.

—The last of the mammoth whitewoods growing near Chatham, in Kent county, once famous for big trees, was cut recently on the farm of Mr. C. W. Richardson, measuring sixty-two hundred feet board standard. It was trucked to Blenheim and shipped thence to Chatham *via* Erie and Huron. Old lumbermen tell the *Planet* that it is the largest tree that has come to Chatham in the past fifteen years.

—The lumber firm of Messrs. Bronson & Weston have obtained, according to the *Evening Journal*, a lease of the small island in the Ottawa river below the Chaudiere docks, and opposite Blyth's Point, and will next spring construct extensive docks over the entire island which will be used in future as a lumber piling ground, for which purpose it is admirably suited.

—For some time past Ottawa lumbermen and others have been petitioning Parliament for the construction of a permanent iron bridge to replace the present suspension bridge across the Ottawa river below the Chaudiere Falls. It now seems that steps are being taken towards that end, the cost of the new structure being estimated at $40,000. The new bridge when completed will be of great benefit to the lumber trade in particular.

—At the lumber camp of Mr. George Massey, says the Parry Sound *Star*, a jobber for the Georgian Bay Lumber Co., Jno. Armstrong's team during the space of 49 days skidded 5,436 logs. All the different lumber companies are busily engaged in taking supplies to their lumber camps, most of which are now in full running operation. The cut of logs during the coming winter will in all probability be the largest for some years past, and a busy season and good times generally will be the result; particularly so if the demand for lumber and good prices rule next summer.

—Letters patent under the great seal of the Province of Ontario have been issued incorporating the Lakefield Lumber and Manufacturing Company with a capital stock of $300,000. The first directors are Messrs. Roland C. Strickland, Percy W. Strickland, C. J. Bloomfield, W. H. Casement and F. R. Barlee, all of Lakefield. The objects of the company are to acquire the mills, limits and business of Messrs. R. & G. Strickland, to carry on the business heretofore carried on by them, and to more thoroughly develop the Lakefield water power. The chief place of business will be at Lakefield.

—The following notes regarding lumber operations at Wyevale come to hand: A number of shanties are in full blast here. Mr. C. Varty employs a large gang of men, who under the management of his foreman, Mr. Jas. Crawford, are cutting and delivering logs on the beach. Mr. Alex. Hill has taken the contract of cutting next summer's stock for Messrs. Hogan Bros. It will be the largest since the mill was built. Messrs. A. & R. Flemming have about fifty men employed in cutting and drawing cordwood. They are building a large shanty and intend employing as many men as can be had. Anybody wishing to obtain work should come to Wyevale where they will find a winter's employment and good wages.

NEW BRUNSWICK.

—John F. Carter's saw mill, at Bathurst, has been burned.

—The saw mill belonging to John Carter, Bathurst, was destroyed by fire Nov. 1st. Loss, $5,000; insurance, $2,000.

—The St. John *Telegraph* publishes a long interview with Mr. Alex. Gibson, New Brunswick's lumber king, regarding unrestricted trade with the United States. Mr. Gibson seems to strongly favor such a policy.

—The Fredericton *Gleaner* understands that one of the heaviest lumber operators on the upper St. John is in serious trouble with the American customs' authorities for making alleged false entries at the customs' office, Fort Kent.

—The lumbermen of upper St. John are devising a plan to dam the river a short distance above the falls for the double purpose of holding their lumber in spring till the booms are swung and to assist in driving the lumber in low water. There is talk of a joint stock company for this purpose.

—A great disadvantage under which the lumbermen of the North Shore labor, says the St. John *Sun*, is the distance which vessels carrying lumber to the United States have to pass over before reaching their destination. Were the long and dangerous sail around the coast of Nova Scotia abolished by the construction of the proposed ship railway across the isthmus which connects that province with New Brunswick, all the wood now wasted in the manufacture of deals in the shape of slabs and edgings, could be profitably converted into laths, pickets and other short lumber. As the matter now stands, it does not pay to ship short lumber from the north to the States. On the Restigouche as well as on the Bonaventure there are large quantities of the finest cedars. Hundreds of millions of white cedar of large size on the Bonaventure River.

—The cut of logs at the headwaters of the Kennebec (Maine) this season will be above an average, between 100,000,000 and 125,000,000. Hon. J. Manchester Haynes, of Augusta, will cut about 14,000,000; Bradstreets of Gardiner, 10,000,000; Lawrence Bros., South Gardiner, 8,000,000; Lawrence & Philips, Somerset Mills, 7,000,000; E. Shaw & Sons, Bath, 12,000,000; McPheters, Grenville, 5,000,000; Clark & Milliken, Richmond, 5,000,000; Putnam L. Clason, Randolph, 4,000,000; E. Milliken & Sons, Augusta, 4,000,000; Fogg & Co., Bowdoinham, 4,000,000; N. Totman & Sons, Fairfield, 3,000,000; Omar Clark, Carratunk, 5,000,000. The above does not include all the operators, but nearly all the large ones. Lumbermen are now sending their teams into the woods.

—A contributor to an exchange writing from Blackville discourseth thus on the life of the hardy woodsman: The lumbermen are once more on the alert. Owing to the large exodus, a reason for which your correspondent does not dare to venture, good woodsmen are scarce, and wages consequently higher than for some years past. Every few days sees the departure of a crew for the "Big Hole," or the "North Pole," or some other bear haunt, and to the uninitiated it is indeed an affecting sight to witness the partings which are to consign man to the forest depths (from whence with a sufficiency of pork and beans, he will emerge in the springtime, a veritable baby elephant) and his better half to wood-cutting and stable work, while the snow endureth. And when the balmy days of March breathe an aroma of returning "bush-whackers," the affectionate wife eagerly scans the snow-covered hills until that beloved form, clad in snow-shoes and whiskers, appears, when she rushes to his outstretched arms with the sentimental expression of welcome—"John have you any gum?"

NOVA SCOTIA.

—The excavation for the Halifax dry dock is well nigh completed, and about 150 feet of the concrete walls have been laid. Every appliance known to modern handicraft in the conduct of large contracts is in operation at these works and progress is very rapid. The coffer dam is a complete success and none of the harbor water can find an entrance into the excavation. The dock will be finished and ready for service within two years.

—Dougald Dickey, nineteen years old, had his left arm caught in a circular saw and torn out at Beckman's mill, Halifax, Nov. 16th. The saw also inflicted a bad wound in his side. The young man lived for only half an hour afterwards. An inquest was held by Coroner Ligney, of Waverly, when a verdict of accidental death was rendered. Dickey belonged to Glenmore, Middle Musquoboboit.

—R. A. Gregory's mill, at Carleton, after some repairs, has resumed work, which will be continued about a month longer. Adams & Gregory's mill will run until the first of the year, when it will close down for repairs. Hayford & Stetson's mill will only run about a month longer. The Clark mill, it is expected, will run a few weeks yet. Warner's shingle mill is running night and day, giving employment to 25 men.

QUEBEC.

—J. B. Scott, lumberman, Nicolet, Que., has assigned for the benefit of his creditors.

—Mr. McLean's new steam saw mill at Otter Lake will commence cutting logs shortly.

—Water has been so low in the Missisquoi river that Messrs. Fuller & Hill, of Bolton, were obliged to stop work in their tub mill for some four weeks. They have turned out and sold over 60,000 butter tubs this season.

—It is now reported that the Cookshire Mill Company will put up a steam saw-mill at Sawyerville, to get the lumber on the Newport and Clifton branches of the Eaton River above there. It is supposed that 100,000 cords of lumber can be obtained on the said branches of the Eaton River, above Sawyerville and as the Hereford Branch R. R. runs through that place it will evidently help to build up Sawyerville and much of the adjacent country.

AMERICAN NOTES.

—New York's building will average this year about $1,250,000 per week. Philadelphia's account will run far behind, but may reach $21,000,000 or $22,000,000 for the year.

—Advices from Sault Ste. Marie are to the effect that there will be plenty of men for the woods in that region, and the log crop is estimated at 50,000,000 in excess of last winter.

—The lumber shipments from the Saginaw river for the season show a marked falling off as compared with any previous year since 1876, and the movement in shingles is the smallest since 1874.

—An Oshkosh, Wis., lumber firm has sold two thousand cords of pine slabs to a Chicago concern for $3.50 a cord. Oshkosh also sells her sawdust, bark and edgings to outside parties for good prices.

Although the receipts of lumber in Chicago have been greater by 136,000,000 feet than they were last year, the stock of lumber in pile in that city is about 20,000,000 short of what it was on Nov. 1st, 1886.

—The barge Waubaushene, in tow of the steam barge Isaac May, became waterlogged in Thunder Bay, Wis., October 29, and lost her deck load of lumber. She was bound from Serpent River, Ont., to Buffalo.

—The yellow pine manufacturers along the Atlantic coast are preparing for an increased production next year. The sap pine manufacturers are finding a good market for everything that they properly kiln dry.

—Saginaw capitalists and others are looking up and buying stumpages in the Duluth district, and the hope is created that the place which Proctor Knott made famous will again come to the front as a lumber producing point.

—Buffalo, N. Y., had received during the season to Nov. 1, 235,935,000 feet of lumber and 30,205,000 shingles, an increase of 2,250,000 feet of lumber, and a decrease of 14,000,000 shingles, as compared with 1886 to same date.

—The largest leather belt ever made or used in New England has just been furnished for the Boston Cordage Works. It is 120 feet long and three ply, four feet wide and weight 1,500 pounds. Over 100 hides were used in its construction.

—There is a deep-seated conviction, says *The Timberman*, in the minds of most Chicago dealers that $12.50 is as little as piece stuff can be sold for. It has averaged to cost $10 all the season, and $2 will not let the handler out with a profit.

—A colossal stick of timber from Puget Sound has been contributed to the Mechanics' Exhibition at San Francisco. Its length is 151 feet, and it is 20x29 inches through. It is believed to be the longest piece of timber ever turned out of any saw mill.

—It is reported that Southern lumber is constantly trenching on territory which for a long time was mostly supplied by white pine. The white pine dealers are, however, shipping lumber in great quantities from Chicago and more northern points of supply.

—No one knows, or can form an idea of, the volume and value of the Southern lumber trade, says the *Southern Lumberman*. We all know that it is immense; that it is growing, and we also know that all classes of Southern lumber are selling below their actual value. To use a Southern phrase, "we are fooling away what we already have."

—Everywhere lumber shippers are kicking about the scarcity of cars. Thousands of cars have been added to railway equipment during the year, but the famine has not abated and business is hampered. In the Saginaw valley 2,500 more cars could be used to-day than the railways can supply, and at Buffalo, Tonawanda and other points the lack of cars is a painful reality.

We are promised something wonderful in steam engines [illegible]

into its own boiler; at least, so its inventor claims, and the London *Engineer* and the *Iron Age*, after elaborately explaining the invention, appear to think that there is some foundation for his hopes. The invention is simply to use the steam and then put it back into the boiler again. Take a case in point: The "City of Rome" burns about 400 tons of coal daily. This coal costs from $1700 to $1800. Run under the system at work by this last invention the same steamer could be run at a cost of $200 daily. This item alone is enough to prove the value of the invention. It will cheapen the carrying trade, give more room for coal, do away with one-fourth or fifth of the space required for boilers, and reduce the cost of coaling stations for the navy. When applied to engines on shore, it will be equally revolutionary in its effects, and unless the invention can be applied to engines now in existence, we may, in a short time, see all the engines in the world worth nothing more than what they will bring for old iron.

NEW BRUNSWICK BUDGET.

Special correspondence to the CANADA LUMBERMAN.

Navigation has closed on the St. John river, and with it the work of the Fredericton Boom Company, and St. John River Log Driving Company. Both corporations handled about as much lumber as last year. The returns of the Fredericton Boom Company show: 118,000,000 superficial feet rafted, 97,000,000 feet of which were rafted at the booms, the balance by Tapley Brothers, as agents for the company, who collected and rafted what lumber went by the booms during the freshet of the spring.

In round numbers the quantities rafted for the leading lumbermen are:

W. H. Murray,	St. John,	27,000,000	feet.
Miller & Woodman,	"	15,000,000	"
Hayford & Stetson,	"	15,000,000	"
E. G. Dunn,	"	11,000,000	"
A. Cushing & Co.,	"	6,000,000	"
A. F. Randolph,	Fredericton,	10,000,000	"

The St. John River Log Driving Company handled in all 103,851,580 feet, made up as follows:

From Grand Falls	59,576,642	feet.
" Salmon River	417,187	"
" Aroostock Falls	30,363,631	"
" Tobique River	10,761,827	"

All logs being driven clean within their limits except the jam that formed in the Aroostock Falls last spring of about twelve million.

The statements above give no idea whatever of the total quantity of lumber moved on the St. John river this season, but only represent what was cut above Fredericton and freighted to St. John direct. In addition about 31,000,000 ft. got above Fredericton were what we call bank logs, and rafted at brows and sawn in mills along the river. Alexander Gibson manufactured, say, 22,000,000 feet on the Nashawaak, and about 20,000,000 were got on the tributary below Fredericton, making the total quantity got to market this season on the main river and tributaries in the vicinity of 191,000,000 superficial feet.

* * *

This winter the log cut will be larger than usual, but not nearly so many American logs will be got out, while the quantity of Provincial logs will be greatly increased. The reason of this change is that the U. S. Treasury Department has done away with the regulations which allowed Provincial lumbermen to bond their teams on going into the woods and have them cancelled when returning in the spring. Now duty is demanded of every team. By this move it was supposed that the St. John manufacturers, in order to get their complement of American logs, would be forced to employ American labor and Aroostook county (Maine) reap the benefit of it. The result is as we state, the quantity of American logs is greatly reduced.

* * *

It is almost impossible to give a reliable estimate of what this winter's cut will be. As near as we can get at it St. John manufacturers will get 23 million feet of Provincial logs above Grand Falls, and about 48 millions of American, which includes some seven millions hung up last year, from the Aroostook 30 millions of new logs (American), and fifteen million, from Tobique (Provincial). The largest operation will be that of Robert Connors at Cabano Lake on timber lands held by W. H. Murray and Millar and Woodman from the Quebec government. He will cut ten million feet of Spruce. They will probably be the largest cut this season and will average about 7½ to the thousand. Contract figures for Spruce are somewhat higher than formerly and are from $9.00 to $9.50 for American, and $7.75 to $8.25 for Provincial.

* * *

There will be considerable sawn lumber wintered in St. John. Dry shipping pine boards are very scarce and held at $15 per thousand. Randolph & Baker's and George E. Barnhill's mills [illegible]

CONTEMPORARY COMMENT.

We feel deeply indebted to our contemporaries of the pre[illegible] for the very kind reception tendered THE LUMBERMAN. Space will not permit of our republishing all the flattering notices sent us, and we have therefore simply taken the "marrow from the meat," which will suffice to show the esteem in which this journal is held. Such encomiums make us feel that our labors towards making this journal a cre[illegible] terest in which it is published have not been [illegible]

A very handsome and useful publication.—*Bryson Advance.*

It is a fine specimen of the typographical art, and is highly creditable to the publisher in every way.—*Deseronto Tribune.*

Excellently printed, ably edited.—*Elora Expre[illegible]*

The November number comes out resplendent in a new [illegible] throughout and presents an exceedingly at[illegible] It does one good to turn over its pages and admire the excellence of its typography. It gives a large mass of information. *Pict[illegible] Times.*

It is always prompt in giving full and timely information on all subjects touching the lumber interests, and presents as handsome a typographical effect as any trade journal in the country.—*Canadian Manufacturer.*

It presents a most creditable appearance. Editorially is as ably conducted as usual, and is a welcome exchange.—*Sherbrooke (Que.) Examiner.*

In addition to making a very fine appearance typographically, several new departments have been added, and the scope of the journal enlarged. On the whole it is an exceedingly creditable publication, and reflects great credit on the ability and energy of the proprietor.—*Peterborough Daily Review.*

The handsomest trade journal in Canada. The advertisements are the neatest we have seen except in specimen sheets from [illegible] foundries.—*Peterborough Morning Time*

It is well and carefully written, and as bright and neat as new type can make it.—*St. Catharines Daily News.*

It is one of the handsomest and best publications on the [illegible] tinent.—*Bruce Reporter.*

Its typographical appearance is a delight to a careful printer's eye, and a credit to Canadian journalism in every way.—*Bridgetown (N. S.) Monitor.*

Everything about it appears neat, clean, and in every way a credit to the publisher.—*Meaford Monitor.*

The trade journal of Canada's staple trade ought to commend itself. It bears evidence of being carefully conducted.—*Patent Review.*

It comes out in a beautiful new dress of type, and is worthy of commendation both in an artistic and literary sense.—*Peterborough Daily Examiner.*

Always full of news and looking well.—*Brockville Evening Recorder.*

Beautifully printed on fine paper, and full of information of interest to all engaged in the lumber business.—*Fenelon Falls Gazette.*

It is gotten up with a taste and skill highly creditable to its management. Replete with news and ably written.—*Trenton Advocate.*

Its mechanical appearance is second to that of no paper of the class on the continent, and it is an excellently edited and compiled journal.—*Essex Centre Liberal.*

It has made solid advance in prosperity as well as literary excellence. In typography it is a credit to home craft.—*Kingston Daily Whig.*

It may be said to be typographically faultless, and has reached a point in the art of typography attained by few journals and surpassed by none on the continent. Its editorial matter compares favorably with its typographical appearance.—*Lakefield Chronicle.*

It compares favorably with any trade publication on the continent.—*Nipissing Times.*

Its general appearance, as well as in the range and quality of its contents, is a credit to the special interest in which it is published. *Miramichi Advance.*

It is an excellent journal and should be patronized liberally by the trade generally.—*Parry Sound Star.*

It is well printed and brim full of interesting reading matter, and is a journal which should be in the hands of every manufacturer, contractor and mechanic.—*Cannington Gleaner.*

It looks very handsome.—*Aurora Borealis.*

It is as pretty a journal as can be seen anywhere, and its contents are such as to deserve all the aid which a good typographical appearance can give.—*Dundas Standard.*

Nous accusons reception du dernier numero du CANADA LUMBERMAN, publie a Peterborough, Ont. Ce journal s'occupe exclusivement du commerce de bois. Il contient les prix du bois et donne beaucoup de renseignements sur la qualite du bois dans differentes places. Ce journal annonce qu'il a des correspondants particuliers dans toutes les localites importantes, afin de mettre le lecteur au courant de tout ce qui se passe dans le commerce de bois.—*La Presse.*

The attention it gives to the interests of the class for which it is published deserves the success it is achieving.—*Brockville Daily Times.*

Well printed; ably written.—*Gladstone (Man.) Age.*

Its mechanical make-up is excellent, and altogether it is a worthy representative of an important interest.—*Bobcaygeon Independent.*

It is greatly improved: is a live publication, and carries several carefully edited departments.—*Albert (N. B.) Maple Leaf.*

Nous accusons reception du CANADA LUMBERMAN, journal industriel publie a Peterborough, Ontario. C'est un journal d'une grande importance pour la classe a laquelle il s'adresse et tres bien fait. Nous le recommandons a ceux qui ont des interets dans le commerce de bois, et aussi a ceux qui veulent se tenir au courantdes maahineries nouvelles offertes aux industriels. L'abonnement n'en est que de $1 par annee. Pour plus amples informations s'adresser a M. A. G. Mortimer, editeur, a Peterborough, Ontario.—*L'Union, St. Hyacinthe, Que.*

Notre estimable confrere de Peterborough, le CANADA LUMBERMAN, nous arrive cette semaine avec une toilette tout a fait nouvelle et tres elegante, l'indice d'un excellent etat de prosperite, ce dont nous le felicitons cordialement. Le CANADA LUMBERMAN, est publie dans les interets du commerce des bois et des diverses industries qui en decoulent. Il est le seul journal du pays qui traite exclusivement de cette branche si importante. En souhaitant longue vie au confrere, nous exprimonsl'opinion que tous les commercants de bois du pays devraient etre ses abonnes.—*Le Moniteur du Commerce.*

It is a valuable publication to all who take an interest in lumbering and manufacturing, and is a credit to the publisher.—*Penetanguishene Herald.*

A handsome publication, of which the lumber and kindred trades have every reason to feel proud. May its light ever shine.—*Port [illegible]*

NEWS NOTES.

—The building in Calgary during last season aggregates $270,000, largely in residences.

—The season's cut in McGibbon's mill, Penetanguishene, amounted to 3,000,000 feet. They ran from 15th April to 12th November.

—September showed a fire waste of over $8,000,000 in the United States and Canada. Lumber interests contributed something like $1,000,000 to the total.

—At Tay Creek, N. B., an elm tree was recently blown down which was four feet in diameter, and measured 36 feet to the first limb. The trunk contained 4,000 feet board measure.

—Messrs. Miller & Woodman are building what is said to be the largest shingle mill in New Brunswick. It will be 165 feet long and 80 feet wide, and there will be 20 shingle machines in it.

—Messrs. J. R. Booth & Co. have completed laying the side tracks through their new piling grounds on the line of the extension of the Canada Atlantic Railway and the grounds are now ready for use as soon as the extension is completed.

—Alexander White, aged 19, son of Mrs. A. White, of Alice, while engaged in raising a scoop bearer on a building in Smith's shanty, Pettewawa, was instantly killed. The bearer slipped, striking him on the side of the head. He lived for about half an hour, bleeding to death, and never spoke.

—A saw mill at Rochesterville, a suburb of Ottawa, owned by Mr. A. G. Jones, and many thousand feet of lumber, the property of Mr. J. R. Booth, have been destroyed by fire. The loss on the mills and building, with planed lumber, will amount to $8,000. There is insurance, but only to a third of the amount. The loss on the lumber will be heavy.

—An extensive fire has taken place in the saw mills belonging to Messrs. Hurdman & Co., at Ottawa. Both mills were completely destroyed. Eddy's mill had a narrow escape. No idea can be formed of how the fire originated. The loss is put at $75,000, with an insurance of about $35,000. The burned buildings were not of great value, the chief loss arising from the valuable machinery they contained.

—An occasional correspondent from Madawaska, N. B., writes: The rush for the woods has started in full blast. There will be more extensive operations in long and short lumber this season than usual. Men are scarce. Oats, hay, and beef rule in price about the same as last year. G. V. Hammond is making things lively in his parish just now. Mr. Ward has started his new steam mill and it works like a charm. He is erecting a track above Grand Falls bridge to the mill, in order to better facilitate the moving of lumber.

—In fitting up mills and workshops, one of the most important items to be considered is the belting, and upon this portion of the plant depends, to a great extent, the satisfactory working of the machinery, for if the belting is good all will run smooth and evenly. We hear that Messrs. Robin & Sadler, of Montreal and Toronto, are to supply the entire outfit of leather belting for the immense flour mill at Keewatin, now being completed by the contractors, E. P. Allis & Co. of Milwaukee, who have without doubt, placed their belting order in good hands for execution.

—A large colored map, 6 feet by 9, showing the canals of Canada and the connecting and competing canals of the United States, as well as the Canadian water power, will shortly be issued by the Department of Inland Revenue. The main map is planned on a scale of three miles to the inch, there being shown in addition an enlarged map of each canal. Tables and other smaller maps in the main map also show canals proposed as well as defunct, profiles, lockages, and tables of comparative sizes of locks. The map was designed by Mr. F. K. Blatch, of the Department, who has been engaged on the work for three years.

—The following revised estimate of the amount of lumber cut by different lumber firms at the Chaudiere during the past season, furnished by the *Mail* correspondent, which is about fifteen per cent. less than the cut of 1886, the latter, however, being the largest turned out at the Chaudiere for twenty years previous:—Bronson & Weston, 65,000,000; J. R. Booth, 70,000,000; E. B. Eddy Manufacturing Company, 69,000,000; Perley & Pattee, 70,000,000; Hurdman & Co., 56,000,000; Grier & Co., 35,000,000. Although the cut this season is almost up to the cuts of former seasons, the disadvantages in the shortness of the log cut during last winter have had the effect of leaving most of the firms without a customary reserve fund of logs to begin work next summer, and should the supply of logs secured this winter be not up to the standard there will undoubtedly be a considerable shortness felt next summer. The lumbermen are, however, very confident of the coming season being a prosperous one, and have placed unusually large gangs of men in the woods, with the intention of

European Financial Statistics.

Americans will see in the following financial tables some powerful reasons why European producers emigrate from Europe by hundreds of thousands annually. Enormous governmental expenditures and national debts make the burdens of taxation unendurable and force the citizens of European countries to seek work and homes in other lands where wars are fewer and taxes lighter. Here is the showing from official records:

	Annual Expenditure.	Army and Navy.	Interest on National Debt.	National Debt.
Austro-Hungary	£97,337,071	£13,867,743	£23,066,909	£523,908,381
Belgium	12,652,396	1,964,716	4,146,502	84,677,042
Denmark	2,734,432	914,701	567,431	10,845,755
France	147,417,416	34,201,118	50,697,092	1,435,011,000
German Empire	34,830,775	22,660,123	915,175	28,407,000
German States	94,917,042	.....	14,246,565	352,727,179
Great Britain	92,223,884	39,388,594	23,449,678	748,282,411
Greece	3,521,919	1,282,496	919,915	19,419,092
Holland	10,911,970	2,589,684	2,782,440	88,545,242
Italy	68,009,166	13,704,934	21,213,147	449,262,660

Turkey	12,894,213	5,628,911	1,006,437	104,897,217
Tot. of all Europe	£770,068,447	£186,944,562	£198,072,304	£4,861,042,280

Is Steam the Best for Power?

The conversion of water into steam absorbs such a large amount of latent heat that many persons have endeavored to obtain some substitute which produces a vapor by absorption of less heat. Such attempts, to obtain economy of fuel, are not likely to be successful, not on account of mechanical defect, but because of the inherent physical properities of the vapors produced.

The mechanical value of the expansive force of different vapors, depends upon the bulks produced from equal bulks of different liquids, and although water absorbs in its conversion into steam a greater amount of latent heat than any other liquid, the amount of vapor produced, bulk for bulk, is greater than it is with other liquids. There still might be some gain were it not that for the equal volumes of these vapors, experiments have shown that the latent heat is very nearly equal.

There would, therefore, be no economy in using other liquids in place of water, even if they cost no more. On the contrary, there are reasons to expect that there would be a loss. The engine would take a definite volume, and hence a definite amount of latent heat, to keep it running in either case. In addition there would be to charge up against any other liquid the increased volume necessarily pumped into the boiler, against the boiler pressure, to keep up this definite volume of vapor. Were it not for the fact that this great difference in volume, between water and steam, is of immense importance in the economy of power, then there would be no economy in using steam over pumping cold air into the boiler and using hot air to run the engine. *Journal of Progress.*

THE WESTERN STATES.

Special Correspondence to THE LUMBRMAN:

ST. LOUIS, MO., Dec. 1, 1887.

Under favorable weather conditions the lumber interests of the Middle and Western States was equal in all respects to the anticipations during the month just ended.

Prices all through the section of country I write from have been firmly maintained. No change of importance either way is looked for until spring. Col. Philip Gruner & Bros'. Lumber Co. will increase their rafting business next season to 14,000,000 feet. The total receipts of white pine in raft this season has reached 209,000,000 feet. The hardwood trade is falling off some.

FRANK R. BIGNEY.

TAKE time to do repairs thoroughly. It will pay in the long run, although it will seem almost time wasted now.

London, Eng.

NOV. 19th.—There was a rather full room on Wednesday, at Messrs. Simson & Mason's sale, considering the limited quantity of unreserved goods to be submitted, which certainly seems to indicate more disposition on the merchants' side to acquire stock. The close of the season without any heavy increase to the stocks is evidently having a healthy influence on the trade here. The big rise in freights, coupled with the appearance of an early closing of the shipping ports, makes any heavy consignments now very unlikely.

There has been nothing in the state of the market here to induce speculation, although, if tonnage had been plentiful, season. There is a marked absence of Swedish deals from the sales lately. We do not know whether we may take this as an indication of any scarcity; but it, anyhow, is pretty plain proof that those who are stocked have no occasion to go to the sales to realize. Beyond a few odd lots here and there, the moderate quantity of Gulf red deals was a noticeable feature.

Spruce went low, but the 3rd pine was a bit better treated; 9 to 10 ft. planks at £8 10s. was certainly low, but sellers could hardly complain of some 13 feet that realized 20s. better.

The shipment, per "Jarlen," from Quebec. consisting of 24 lots of pine and spruce of the lower qualities, sold fairly well, being old stock. The four lots of unsorted Miramichi spruce. ex "Finland," offered without reserve, luckily enabled the auctioneer to dispose of five succeeding lots that had a holding price upon them.

The expected re-action which long before this period would in the ordinary fluctuations of trade have supervened on the severe depression from which the wood market has suffered seems as far off as ever. We are not alluding merely to a recovery of the market in respect to certain goods, which may have been only moderately traded in, with a consequent decline in the importation which has sunk below the demand, but in a general uprising in the demand for building timber throughout the country; not some large works here and nothing doing in another direction, but universal activity all over the kingdom. Such a return to prosperity of the building trade as would make itself felt on all and every description of imported timber. Before we can hope for such a happy result we shall have to witness a revival of the staple industries of England.

We do not notice any particular alteration in the dock deliveries except that flooring keeps active.

The importation is gradually thinning off and the cargoes at the tail end of the season are at present far short of the average quantity.—*Timber Trades Journal.*

Liverpool, Eng.

NOV. 17th.—The better feeling still prevails, and the general impression seems to be that there are good times in store for the timber trade. We are not too sanguine, but sincerely hope it may be so; up town and on 'change there is a still stronger tone, and many articles of produce have gone up considerably. Outward freights are better, and homeward freights from many places much improved; there is a good demand for shipping, and some of the large shipbuilders here, on the Clyde, and elsewhere, have recently received good orders. All these things help trade and are encouraging.

The arrivals have been few, there being only eight vessels, three of which are steamers with pine deals and boards from Montreal, two cargoes of spruce deals from Lower ports, one with mining timber to Garston, and two or three parcels of ash, maple, oak, teak, etc.

There have been several transactions in timber during the week. A parcel of common pine, per Narwhal, was sold at 18d., and some of better quality but smaller averaged 19½d.; a parcel of elm, per Abana., at 20d., and the oak, per same vessel, large and of good quality, to the Midland Railway Co. at 3/-. A parcel of Halifax birch has been placed at 16d., and I understand, this price was paid some little time since for the St. John's wood now landing.

The cargoes of spruce deals, per Volkfora and MacLeod, now discharging, are, I believe, still unsold, and the importers are asking high prices for them.

Low-Priced Boilers.

Low-priced boilers are not generally the cheapest that can be bought, although there is an almost universal opinion that they are. On the contrary they are, in the majority of cases, the dearest that can be bought. First-class boilers at the present time do not command an excessive price, no fancy profits are made on them, nor have been made for some years past. What then does it avail a man to buy a boiler for say $500, get an article made of the poorest material that can be worked, put together in the slouchiest possible manner, generally be stopped several times during the first year to have repairs made which never ought to have been needed, and would not have been required had the boiler been made properly, when by paying $200 more in the beginning he would have avoided all trouble, actually have expended less money at the close of the first year and probably have run his business uninterruptedly. It is needless to say that some manufacturers always buy the very best of everything they can get to do their work with. Such men always have the best of boilers and engines, they are cared for in the best possible manner, and it is generally noticed that they are, as a general rule, more prosperous than their slipshod brethren who are always after

EXCHANGE ECHOES.

The Timberman, Chicago.

Whether the log stock that is to be put in this winter will be equal to or exceed that gathered last year, is a question already exciting interest and comment among lumber makers and lumber dealers. Up to this time, all the signs point to the conclusion that there will be no decline in the output, notwithstanding there are in many of the districts in which large operations are carried on, a good many old logs that still await sawing, having, unluckily for their owners, been held back by low water in the streams until past the time for conversion into lumber this season. All over the pine territory, it is reported that extensive preparations are making for the input of logs, the news evidencing the fact that the sum of the loggers' intentions is, as it usually has been, to get in all that he possibly can, with the time, timber and means he has at command.

Mississippi Valley Lumberman.

A despatch from Calais, Me., recounts a curious complication that has arisen at Baring, in that state, over lumbering. The custom house officials there have seized a large amount of hemlock lumber, owned by H. F. Eaton & Sons, for alleged violation of the revenue laws. The lumber was manufactured and planed in mills now situated on the Canadian side of the river, but the owners claim that when the mills were built they were on the American side, and that time, dams and improvements have changed the course of the river. Some sixteen years ago the question of location arose and the authorities decided that the mills were American, and the present move is a great surprise. The mills have been shut down until a treasury decision can be obtained. If the present tactics of the customs officials continue it is the opinion of the best informed citizens that it will ruin the business of the American side of the St. Croix river.

Timber Trades Journal, London, Nov. 19th.

Up to the present we hear of nothing of consequence having been done in the f. o. b. trade in the English market for next open water. We expect London importers, who have been a bit cautious this year, will be encouraged to buy, owing to the moderate consignments which the closing season brings. The opinion seems to be that the first transactions for next year will be in flooring to the outports ; but in the London markets are excessive, and buyers will certainly have no need to hurry into cargo transactions. It is expected that there will be a scarcity of whitewood—though this is an unusual thing at the European ports—which, coupled with the advance in freights, will lead to a corresponding advance in the delivered price of flooring. It is possible that with the opening of the season lower freights may be quoted, notwithstanding the serious loss of Norwegian ships caused by the recent gales ; but the large quantity of goods wintering will stimulate the demand for tonnage as soon as the shipping season begins.

A Cheap Steam Box.

In nearly every shop, some form of apparatus for bending wood would be often used were it available. Where steam is at hand, there is not the slightest excuse for not having a steam box for use in wood bending.

Steam is so scarce in some shops, where the work is too great, and the boiler and engine too small, that the exhaust steam must be utilized. In a number of cases the writer has successfully used the exhaust for this purpose, by building a perpendicular box of plank and making doors for the introduction of the wood to be steamed.

In many shops the exhaust steam is allowed to escape from the end of a horizontal pipe and no notice is taken of what the steam comes in contact with during its absorption into the atmosphere. In all such cases the steam box will be a benefit in the preservation of surrounding buildings alone.

The steam-box in question was built of two-inch white pine planks, each 14 inches wide, two of them rebated upon their edges ¾ by two inches to receive the edges of the remaining two planks. This steam-box was 16 feet long. One foot from the bottom, a head of two-inch plank was cut in and finally nailed. This head was bored three or four times with a ¾-in. bit, to allow the water of condensation to escape. Just above the head, as the box stood on end, a hole was cut to receive the end of the exhaust steam pipe. A cast-iron flange was bolted to the steam-box and the pipe screwed into the flange, but if the exhaust pipe be of cast iron, the threaded flange may be dispensed with, and the cast-iron pipe bolted or lag screwed direct to the wood.

The plank forming one side of the box is not nailed into its rebate. Instead, it is cut into three feet lengths, excepting the top length, which is four feet long, and together with the bottom piece is nailed in place, leaving three loose sections of three feet length each. These sections were hinged on one edge and made fast when closed, by pins of wood, one to each section, which were placed in holes bored through the rebated plank, into the hinged section.

The box in question was fitted with iron hinges—common eight-inch hinges, the end of each hinge being bent around the corner of the rabated plank. If the writer ever constructs another steam box of this kind he will use brass hinges, so they will not rust out, a thing the iron hinges will do in six months unless they are kept well greased or tarred.

Suppose the stop moulding of a big circular window is so be made. This moulding can be got out straight, and bent into place by sawing into one side at regular intervals. With the steam box this moulding can be got out straight, steamed half an hour, and forced upon a form there to remain until cold.

A convenient way to make a form or mould is to cut out of plank, with a band saw, the shape desired. Now, nail pieces of board upon each side of the plank, letting the ends of the boards project six or eight inches, and placing them directly opposite each other. These bits of board must be distributed at the parts of the mould requiring pressure to be applied, and the location of these boards will call for the exercise of considerable judgment. Get a supply of common framing pins, and bore holes through the bits of wood large enough to allow the pins to pass freely. 1⅛-inch holes should be made for one inch pins, which are large enough for any ordinary work. Bore the holes just far enough from the form to allow the pin to go in, after the piece to be bended is in place. For ½-inch stock place the worm of the bit 15-16-inch from the edge of the plank form.

Stock to be bent should be left considerably longer than its finished length to allow plenty of room at the ends for the removal of poorly bent material. It is very hard to bend the extreme ends of the work, especially where the work is placed upon the convex surface of a mould. The convex side is usually used because the work can be easily forced into position thereon. To force work into the concave or hollow side of a mould requires enormous leverage and much time. It can sometimes be profitably done in the case of small, light work, and when the stock *must* be bended close to the ends of the various pieces. When concave moulds are employed, it will pay to make a follower, or convex mould to fit the hollow mould. This is forced against the stock to be bended, and when both molds are in contact with the work, sufficient pins are inserted to hold the moulds firmly together until the work is cold.

A cheap and efficient mould can be quickly made by sketching the desired shape on a plank, then boring holes at certain points and inserting pins therein. The steamed stock can be sprung between three of the pins, then others inserted until the work is brought to the desired shape. This method answers well for thick, heavy pieces, but with thin delicate stock it does not give satisfaction owing to the liability to *kink* or bend abrubtly where the pins engage the stock.

The several doors in the above described steam box, are for putting in different lengths of stock, one or more of them being opened as necessary.

A fine box nearly like the above, was seen by the writer in an eastern shop, but instead of standing vertical it lay upon its side, and the stock was inserted and removed at one end. In this case, the steam entered and was removed through wrought iron pipes five inches in diameter.

Small shops in which steam is not employed, make good use of the above described steam-box and generate steam in a 10 or 12 gallon iron kettle or pot. A wooden top is fitted to the kettle and cemented therein with "elastic cement." A pipe leads to the steam-box, and the kettle is supplied with water through a hole in the wooden top, after which the hole is closed with a plug. Although not as quick as the first box, this one will do good work.—*James Francis, in Woodworker.*

Something About Cordwood.

Ever since the country newspapers began, in a wooden country, to enlighten the hewer of the forest or to tell the agriculturist how to "tickle earth with a hoe that it might blossom into harvest," the subject of cordwood has possessed interest for the weekly writer. Abormally-sized eggs, supernatural pumpkins, luxuriant garden-grass, even over-corpulent hogs, never seemed of so much moment in the sanctum, whatever they might be to the grower, as a good supply of hickory or beech fuel.

> "The graceful elm, the energetic oak,
> The red-leaved maple and the slender pine,"

which a Canadian poet lovingly describes have all served, from time to time, to warm the hearts and toes of Solomon of Streetsville and others of his guild, and to awaken their thanks for such remittance in kind. But it has been reserved for the poet philosopher of the Bobcaygeon *Independent* to evolve, in a reverie, kindled by the flames of ash or elm, such a pœan in praise of cord-wood as we clip from his last issue. Whether regarded from a poetic, economic or even a merely spondulic point of view, this idyl concerning one of our great staple products cannot but be interesting. Before he scans it, let the reader think of the learned and genial writer sitting, meditatively, as a Canadian Ike Marvel, at his back-log fire, pondering, first, the SMOKE, signifying DOUBT (whether his sticks are going to burn) FIRE, signifying CHEER (at his having got even with another [illegible] DESOLATION (of fears whether he is going to have enough of such fuel for the winter.) Now he [illegible]

"The summer is over : the autumn leaves have fallen ; the pulse of Nature beats feebly and slow ; Arcturus is [illegible] in the northern heavens : Aurora has flashed her gleaming rays of violet and of gold from pole to zenith ; the icy breath of the paleocrystal seas has been borne in upon [illegible] about our cordwood? Ay, what about our cordwood? That is a very important matter, and every year it increases in importance, for the sources of our cordwood become fewer and more remote. There is not so much cordwood left in [illegible] commonly supposed. Of the thousand of miles of railway operated by the Grand Trunk Company the Midland is the only division that runs through a cordwood country, and only a portion of that division can supply fuel in considerable quantities. The city of Montreal is [illegible] from a dearth of cordwood. The price of wood in Montreal last week went up 50 cents a cord owing to its scracity. Maple in Montreal is selling at $8 a cord, birch at $7.50 and beech at $7. A large dealer has publicly declared that there is no cordwood to be bought throughout the country. Toronto has for its chief sources of supply the Victoria branch of the Midland, the district around Penetanguishene and the new extension of the Northern Railway. Two or three years will make a great reduction in those sources of supply, and then there will be the same condition of affairs in Toronto that now exist in Montreal. There are several facts connected with the cordwood trade which deserve notice. The wood itself is of no value. It realizes nothing. The man who cuts the cordwood, let us say on the Victoria branch, obtains $2 a cord delivered on the railway. That $2 is merely the value of the labor expended in cutting the wood and hauling it to the line, the wood itself counts for nothing, the man who cuts it giving the wood gratis. When the wood reaches Toronto it sells for $5 a cord, the $3 being consumed in freight and profit to the dealers. This is a subject upon which Toronto citizens would do well to reflect. The wood difficulty is becoming serious. They require a great heap of wood. Let them lay their heads together and the difficulty will be overcome."

But again, if cordwood as the years roll on, is growing scarcer, —and our worthy statistical brother in the neighborhood of Coboconk University, has shown that it is, he should be glad to find it growing more valuable to the farmer, the druggist, the builder, the scientist. The possibilities of cordwood are not yet all grasped. Paper, we know, is made from it ; works of art are modeled from the dust of it ; chemistry has found many recondite qualities in it. But there are more wonderful things still. Talk of dainty butter made from the scrapings of the London sewers, of handkerchief perfumes from crude petroleum ! Something quite as remarkable is going on to-day at Cadosia, in New York State. At that place, hardwood is now distilled in large works erected for this purpose. From the distillation there is produced, 1st alcohol ; 2nd acetic vapors which being mixed with lime, forms acetate of lime ; 3rd, tarry matters and naphtha ; 4th heavy tar used as fuel, and 5th, the refuse, which is fine charcoal. No more let the Northern sage say there is no value in wood—that "it counts for nothing." In the light of what has here been said (and sung) about the hard timber of the forests, surely there is, within the reach of every possessor of a belt of wooded land, to quote the words of another sage "a potentiality of wealth beyond the dreams of avarice."—*Monetary Times.*

Grinding vs. Filing Saws.

The majority of sawyers now grind their saws. It is quicker than filing, is cheaper, and leaves the saw in good shape. Some say "grind square across," and we have tried it, but we think it is better to have the front teeth a little "fleaming," even for hardwood, and more so for soft. According to our principle, as laid down in our cutters, this should be so. Saws that are filed by the average shop hand often look as though they could "gum it" better than they could cut with their teeth. Don't run a saw with the teeth half filed down ; gum your saws and keep them gummed. Some room must be left for the sawdust to fall into as the teeth cut it out. Give the saw a liberal set. If you are afraid of using up too much lumber, get a thin saw. Thin saws are the ones to do the work, but they must be kept out of the hands of cheap men. Many shop-owners have the idea that it is a saving to have one man furnish the brains to run the shop, and hire seventy-five-cent men to run the machines. This works well enough in theory; but in practice cheap hands will run every knotty or poor piece of stock available, and the cost of keeping their machines in order is more than equal to the amount saved from their pay. Put the best men in the shop that you can get. Establish a set of premiums for better work, and better methods of doing it, and your shop will pay.—*Mining and Scientific Press.*

TRADE REVIEW.

Toronto, Ont.

Nov. 29th, 1887.—During the current month correspondence interesting to lumbermen passed between Mr. Wragge of the G. T. R. and Mr. Wilson of the C. P. R. regarding the length of time allowed for the unloading of cars, as also the number of cars that the C. P. R. can place on Esplanade.

The length of time given to consignees to unload cars is from 7 a.m. to 5 p.m., or 9 hours, at the expiration of which the cars loaded, partly loaded or empty, will be withdrawn and replaced with fresh cars. Should any cars remain loaded or partly so a charge of $2.00 per car is made for replacing—all of which means that the city traffic of the G. T. R. has increased beyond the siding accommodation at the Company's disposal.

This arrangement does not commend itself to those lumbermen who have long distances to move their lumber. It is unfair to those in the northern part of the city to expect them to unload cars of lumber in so short a time. The condition in which the back streets are, the difficulty of getting teams at busy seasons and the hundred and one hinderances all go to consume the allotted time. The R. R. Co.'s exact too much and make no allowances in turn.

Trade has been fairly active, almost as good as the last month. Vessel lots are about done for this season. Prices remain firm and are about the same as in your last issue.

Montreal, Que.

Nov. 29th, 1887.—At the beginning of the month operations in lumber were, on the whole, satisfactory, having almost exceeded expectations, particularly for local and country trade. Stocks were low, and prices inclined upwards. Towards the middle of the month we find the market in good condition, although not quite up to previous expectations. The general talk is of an advance, the impression prevailing being that contractors' purchases have been below what their requirements cannot fail to be. At the time of writing business is of fair volume, but the condition of the roads has rather restricted orders from the country. The expected advance has not yet taken place, but cannot be long deferred, though it is true it will only effect those who are compelled to purchase for immediate consumption, most dealers having already laid in their stocks.

The long continued complaints by shippere of lumber and other merchandise, of lack of cars and poor despatch on the railways, have attracted attention from railway men. The Freight Agents Association met in the Windsor hotel, last week, when the subject of delayed cars was discussed. Strangely enough, negligence on the part of the consignees was assigned as the cause of delay in transportation ; and the poor railroad men professed to be much inconvenienced by their delays. It was finally decided to allow consignees a specified time to unload and after its expiry to charge demurrage in all cases.

From the annual circular of the Export Lumber Company, Montreal and New York, we learn that during the season of 1887 40 vessels loaded with 25,879,330 feet of pine, sailed from Montreal for the River Plate, and that 15 vessels loaded with 7,719,058 feet of spruce sailed for the same destination from other ports on the St. Lawrence river. This makes the total output from that river to the River Plate 33,598,388 feet of pine and spruce, a larger quantity than has been shipped during any previous season, with the exception of 1884, when 36,938,548 feet was the output.

Ottawa, Ont.

OTTAWA, Nov. 28.—It is now estimated that the lumber cut at the Chaudiere for this season will be about 360,000,000 feet, a falling off of about 10 per cent. from last year's cut, which was the largest for many years. The short supply of logs, owing to the low water in the Ottawa, has caused the lumbermen to use up most of their reserve logs, and there is a possibility of a very short cut next season unless the winter is a good one and the water keeps high long enough in the spring to get down all the logs now stuck at various points and a good share of the winter's logs. The quantity taken out this year will be considerably above the average, unless the weather is unfavorable, as nearly all the lumbermen have sent larger gangs than usual in the woods. The following is a statement of the movement of forest product from this city for October, being the declared export to the United States, in feet, pieces, cords and value :

Sawed lumber, feet	18,473,443	$255,257.07
Lath, pieces	4,473,700	5,635.65
Railroad ties, pieces	13,239	2,776.00
Hemlock bark, cords	344	1,720.00
Telegraph poles, pieces	450	284.25
Fence posts, pieces	4,000	120.00
Total		$266,784.97

This shows a decrease in values as compared with October, 1886, of $28,000.

The distribution of the lumber was as follows :

For consumption, feet	14,777,974	$185,048.95
In bond for export	3,695,469	69,208.12
	18,473,443	$255,257.07

Of the lumber 10,426,876 feet was shipped by water and 8,046,567 by rail.

Chicago, Ill.

Nov. 29.—The recent hurricane snow storm knocked the lumber fleet flat, so far as getting lumber into port went. The squadron was scattered all over the lake, driven into port wherever harbor could be reached, and on to shore in some instances. Losses were not as numerous or heavy as might have been expected. Steam barges and vessels did not begin to come into port in any considerable number until Wednesday, when there was a flock that made the harbor.

Up to the time of going to press, there had practically been no market this week, on account of a lack of cargoes to make one. Some lumber was sold to arrive. One cargo of White lake lumber, all common inch, with the better picked out, sold for $12.50 a thousand. Lath, to the amount of 1,500,000, went at $1.70 a thousand. Other sales were made Wednesday afternoon, at prices not obtained. The report was, that piece stuff was selling at $9.75 to $10.25 for short, and that prices generally were unchanged.

As near as the commission men can figure, there are about 25 cargoes more to come on the market, and that will wind up the season's bobbin.

Saginaw Valley.

SAGINAW, Nov. 29.—The *Courier* says : The cargo market is at a standstill, no sales having been reported during the week. There is some little inquiry for stocks to hold over of certain grades, and no changes in quotations are reported. Nearly all of the mills have shut down and boats are getting away on the last trip of the season. The proportion of stock on the docks already sold for next season's delivery is believed to be small.

The car trade is active and business seems to be limited only by the ability of shippers to obtain cars. One thousand are wanted where 100 are secured, and the indications all point to an exceptionally large movement during the winter months. During the week 3,000,000 feet was sold by Bliss Bros. for local yards and rail shipment. Of this 500,000 feet goes to Flint and 1,000,000 feet to Detroit.

Shingles continue firm at previous quotations with limited stocks on hand.

Buffala and Tonawanda, N. Y.

TONAWANDA, N. Y., Nov. 25.—Tonawanda is rapidly assuming the air of quietness, that usually characterizes it when barges begin to lay up and canal boats cease to run. On every side can be seen indications pointing to going into winter quarters. There are only a few tows yet to arrive, and shipping via canal is virtually ended.

The yards will all be piled up in good season, and the inventries be taken early. Then the grave subject of the year's profits will absorb the dealer's mind to the exclusion of everything else, and I do not doubt but that, in most instances, the results will be pleasing; for while the season of 1887 has had many drawbacks and plenty to contend with. the result of it all is as favorable as perhaps the most sanguine anticipated.

A visit to the different yards shows lots of lumber on hand. And Tonawanda is in pretty good shape to meet the winter's trade. But in some thicknesses and grades there is not the stock we wish to have.

Duluth.

DULUTH, Nov. 28.—The lumber cut of the season is now about determined, though one mill is yet running and detailed statistics are not yet in. The cut of the various Duluth mills has been about as follows:

R. A. Gray's (for Duncan, Gamble & Co.)	17,000,000
Peyton, Kimball & Barber	10,000,000
Peck & Sons	10,000,000
Hubbard & Vincent	8,000,000
Graff, Murray & Co	7,500,000

Exact figures may make the total somewhat larger than this. The estimate at the beginning of the season was from 55,000,000 to 60,000,000 feet. Duncan, Gamble & Co. have about 8,000,000 feet on hand, and Bradley, Hanford and Co. 3,000,000 feet, and the stock in other yards will probably make the total on hand here about 20,000,000 feet.

J. P. White & Co. have leased the Tower mill of Sellers & Owens, which cuts about 5,000,000 feet a year.

New York City.

NOV. 28.—The date is fast drawing near when the river and canals will be closed to navigation, and for that reason supplies are rushed forward as fast as possible. At many of the yards the piles are high and close together, and one cannot readily see where more stock can be cared for; but distribution is fairly active, and lumber goes nearly as fast as it comes. In a great city like this there are myriads of uses for pine besides house building, and while that industry consumes an immense quantity of lumber, it is only a fraction of the total consumption. The salesmen who do a car trade entirely seem to have been instilled with new life, since it became pretty well understood that freight rates would not advance the usual 5 cents a hundred pounds. It cannot last long, as the dealers have already bought about enough stock to carry them through the winter. From this on, sales will be made in a small way, and consist of such stock as dealers may not care to carry any amount of. The extra inducements may lead to more than an ordinary sale, but taking the market as a whole, it is not reasonable to expect any very active business during the ensuing three months. At near-by points much the same condition of affairs exists, and unless extraordinary good weather prevails, thus extending building operations, that, too, must soon show a decline.

There are no special features concerning prices. The same quotations covering the market for the last three months still exist, and the decline in orders is certainly not conducive to an advance.

Export trade is still quiet, and the condition of affairs is at least annoying to shippers. While a few vessels are loading for ports in various directions, much of the stock is for filling out cargoes, and not on actual order. Shipments to the River Platte are still going on from the St. Lawrence; these shipments will cease before long, and thus throw a certain amount of business into this market. It is probably possible to shade a few of the grades, say 50 cents a thousand, still we do not think it necessary to change quotations.

Minneapolis, Minn.

NOV. 28.—The *Lumberman* of the 25th says: The last saw mill shut down on Saturday as was anticipated, the cold snap of Friday filling most of the mill ponds with ice and prohibiting any further operation. Hall & Ducey would have sawed a few days this week had it been possible, but gave up an attempt which was made in that direction on Monday. The total cut of the different mills very closely approximates the estimate of 225,000,000 made last week. The mills in this city manufactured less lumber during the past season than in any year since 1880 when the cut was 195,452,182.

There are no new features in the local market. Trade is gradually reaching the winter level, and the record from week to week shows a steady decline in the output by rail. This statement applies equally to Minneapolis and to the north Wisconsin points, the movement from which is indicated by the shipments from St. Paul.

Glasgow, Scotland.

NOV. 17.—Nothing of very great importance has transpired during the past week. The import list is a very small one, comprising two small parcels of deals from Montreal, and staves and oak lumber from New York.

I understand, says the correspondent of *Timber*, that, with the exception of one steamer cargo, the import of deals from Quebec is all but closed. This being so, merchants will soon be "comparing notes" with stocks at the wharf and their own in view of requirements for the next six months of close time.

Only one auction sale has been held since last writing, Messrs. Allison, Cousland and Hamilton's at Yorkhill Wharf on Wednesday. There was a fairly good company present, but the business done at auction was moderate, the brokers holding firm for better prices. In some instances this was yielded to on the part of buyers, but in most cases it was not, consequently a large portion of the catalogue was passed over. I understand, however, that a considerable amount of business was put through privately.

Prices on the whole are firm, and although several old lots are reported to have been sold cheap, newly-imported goods are evidently not parted with unless at an advance in prices. This augurs well for business in the beginning of the year.

Note of Messrs. Allison, Cousland and Hamilton's public sale at Yorkhill, November 16th:

—Notwithstanding the fact that it is believed there will be 400,000,000 feet of lumber in pile on the Saginaw river at the close of the season, a prominent manufacturer and shipper expresses the conviction that the rail shipments would be so extensive the coming winter that the docks would be cleaner when the navigation season of 1888 opens than they have been for years.

—Emigration to America of the laborers at the saw mills in the Sundswall district is on the increase, says an English exchange. Last Sunday, for instance, a considerable number of men, mostly married, left Stockvik for Stockholm by steamer in order to reach the other shore of the Atlantic, *via* Gotenberg.

IMPORTANT NOTICE TO THE PUBLIC.

I am patentee and owner of Canada patent, No. 42,357, Improvement in Band Saw Mills, which covers a Band Mill with two columns. I am also patentee and owner of Canada patent, No. 42,377, Improvement in Band Saw Guides, which covers wheel guides for a Band Saw. I am informed that a Band Mill is being offered to mill men in the Dominion, containing two columns that is an infringement of the above patent. The public is hereby warned against purchasing such Band Mill, as I shall hold the purchaser responsible for the infringement of my said patents, and for all damages which I may have, or may hereafter sustain, on account of any unlawful use of said patents.

The Wm. Hamilton Mfg. Co., of Peterborough, Ont., is authorized to build and sell Band Mills under my patents.

FRANK W. WHEELER,
SHIP BUILDER.
Specifications and Estimates Furnished on application.

[A TRUE COPY.]

WEST BAY CITY, Mich., June 26th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

I have been running your Pat. Band Saw Mill in my new ship yard mill for over one month, squaring up large and long hewn oak timber which has been hewn a sufficient time to be dry and hard on the surface and sawing long plank from same kind of timber. The timber or Keelsons squared was laid up in a vessel, one on top of the other, and fitted as well as could be done by hand, it being square, straight and out of wind. I have had a large amount of this plank and timber sawn, and have not yet found a bad cut. I have squared timber where the saw here and there barely cut the thickness of the saw kerf, yet the saw did not deviate the least from a straight line. From the nature of my work I cannot give any idea of the amount cut in a given time, but the speed of cut should be satisfactory to any one. The most difficult part of my work is in sawing tamarac ship knees, yet the machine has given me entire satisfaction in this respect, sawing a root having a cut of from 2 to 4 feet, making in every case a true cut.

I do not believe that a saw has been put on the machine in good order, as I have not a sufficient number of saws to give time to dress them well and keep the mill running, yet there has not been one broken or disabled, in fact, a saw must be in bad order that will not run in a straight line when run over your guide wheels.

Yours, truly, F. W. WHEELER.

[A TRUE COPY.]

F. W. WHEELER'S SHIP YARD.
WEST BAY CITY, Mich., June 25th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

DEAR SIR:—I have been engaged in running band saws for the past five years, and I never before found anything equal to the Band Mill built by you, that I am now filing for. I must say that it is almost impossible to made a bad line if the saw is in any kind of order. We are cutting hardwood, principally long oak, and on account of being scarce of saws we have run our saws for five hours and cut as fast as we could conveniently handle, without making any perceptible variation in the cut. I have run various kinds of mills, but never before saw anything to equal it. There has been quite a number of millmen examining it, and all give it up to be the best and truest cutting mill they ever saw.

Respectfully yours,
JOHN A. GREGG.

[A TRUE COPY.]

BAY CITY, Mich., Nov. 15th, 1887.

Mr. D. K. Allington, Saginaw, Mich.

DEAR SIR:—Having had considerable experience with Band Mills, I consider myself competent to judge the merits of the same. I started and run one of your Band Mills at Victoria Harbor, Ontario, which was manufactured by the Wm. Hamilton Manufacturing Co., of Peterborough, Ont. I also started and run your two Band Mills in William Peters' mill, at Bay City, Mich., and must confess they are superior to any Band Mill I have ever seen, for quality and quantity of lumber produced.

Respectfully, yours,
W. A. McCLENATHAN, Filer.

[A TRUE COPY.]

F. W. WHEELER'S SHIP YARD.
WEST BAY CITY, Mich., June 24th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

DEAR SIR:—I have been sawing on your Band Saw Mill for the last month, making plank from long square oak timber, partially seasoned, and being short of saws, do not have time to have them put in in the best of order, and have to run them five hours without changing, yet I have not broken a saw or made a bad cut, the machine running smoothly, and not having cause to stop for any reason but to change saws, and cutting as fast as other band saws I have run.

Yours truly,
THOMAS GRAHAM.

ENDORSEMENTS

IN ABUNDANCE.

The Following is Only a Sample:

ASHLAND, Wis., Nov. 10th, 1886.

CHAS. ESPLIN, ESQ.,
Minneapolis, Minn., U. S. A.

DEAR SIR,—The band mill placed in our saw mill by you we consider the best and most complete band mill we know of. It has advantageous features which we have not seen in any other mill. The strength of all its parts is ample for every demand upon it. It is massive. The guide arms in their proportions and adjustments seem beyond improvement. The drive wheel by taking up the tension of the saw from below is a great advantage gained. The long distance between the bearings of the upper wheel shaft steadies the motion and the whole machine moves with ease and steadiness.

We have never seen lumber so perfectly manufactured as made by this band mill. The mechanic that planned it and the company that manufactured it deserves the congratulations and thanks of all manufacturers of lumber.

Very respectfully,
SUPERIOR LUMBER CO.
John H. Knight, Secretary-Treas.; D. A. Kennedy, Supt. and General Manager.

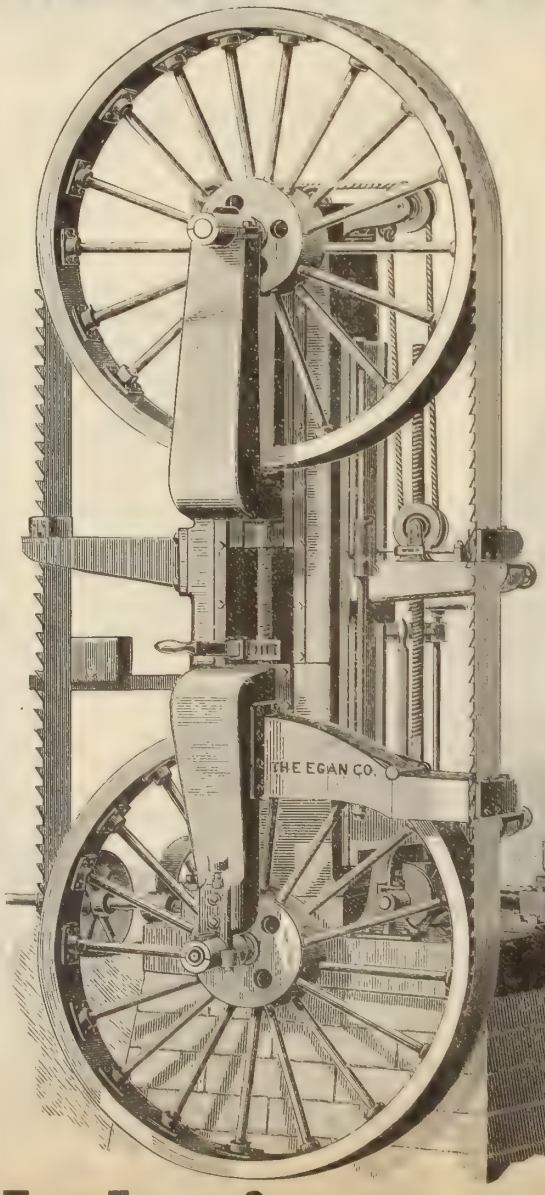
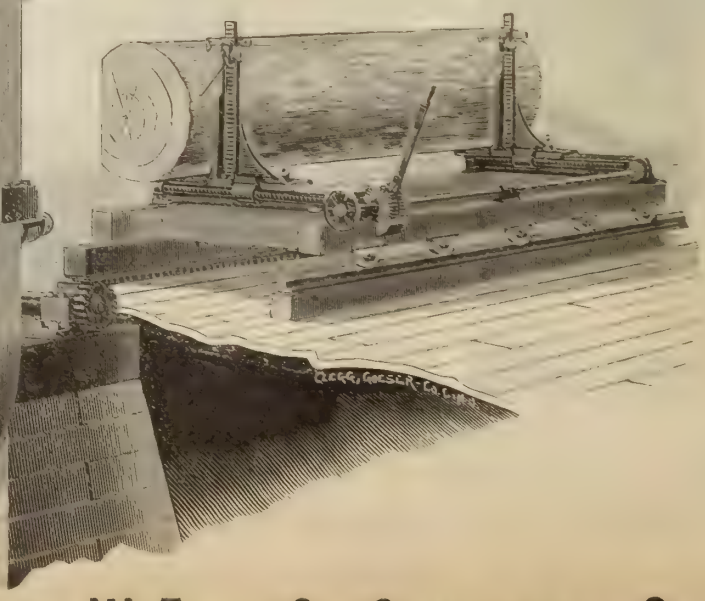
IMPROVED LOG BAND SAW MILL.



WE present to the trade of Canada our New Improved Band Saw Mill, and as we are the pioneer manufacturers of Band Mills, having been building them for the past ten years, and have more Band Mills in active operation throughout the United States than almost any other manufacturer, we present this new mill to the consideration of lumber manufacturers, and know an investigation of its merits and advantages will show us to be still in the lead.

The mill is built in the most perfect manner. The best materials are used throughout, and we test and run the mill in our works before shipping, and will warrant it in every way.

For prices of this, or cuts and prices of any other Improved Wood Working Machinery address us direct.



Correspondents will please mention this paper.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominio being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

JUST before putting the last form of THE LUMBERMAN to press the annual circular from J. Bell Forsyth & Co., of Quebec, was received. The length of this report—giving as it does a detailed statement of the timber trade of Quebec for the past year—precludes its production in this issue, but will prove a valuable addition to our statistical edition of February 1st.

THOUGH several lumbermen from the United States attended the sale of Ontario pine limits, at the Crown Lands office, and no doubt by their bids contributed to raise the purchases to the very satisfactory total, they were not large purchasers, unless, indeed, some of the berths were secured by them in the names of other men. This, however, does not seem likely, as most of the buyers have mills handy to the limits and require them for their own operations.

WITH the present issue we present to our many readers the first number of the eighth volume of the CANADA LUMBERMAN. It is almost needless to add in this connection that it will be our persistent aim to retain it in the high position it now fills—the acknowledged representative journal of the lumber and kindred trades of Canada—and that from month to month new and special features will appear in its columns. Let us hope that the eighth year of THE LUMBERMAN'S existence may be the most successful yet, and that it may shed its light on many who now know it not.

MR. PARDEE may well be content with the result of the sale of timber berths, which as Commissioner of Crown Lands for Ontario, he submitted to auction last month. A million and a-quarter dollars was a very satisfactory total, and the individual lots, almost without exception, sold well. His most sanguine expectations must, we fancy, have been more than realized. This large sum is only a bonus given for a lease at a heavy rental, including the ground rents and stumpage dues now exacted, so it must be conceded that the Province has obtained good value for its property. The fact that the dues have lately been so largely increased, and that there is no guarantee against a further raise, make the heavy bonus that were given still more remarkable. But the fact is that unappropriated timber lands are becoming scarce in Ontario, so there was lively competition for many of the lots. It will probably be some time before there is another sale of similar dimensions, at least in the settled portion of Ontario, where, indeed, little pine forest now remains in the hands of the Government. The purchasers, even though they paid rather largely, may possibly be congratulated with as much reason as the Administration.

ANOTHER year has drawn to a close, and its successor has been duly installed by Father Time. It would be difficult to determine the multiplicity of changes which have taken place among LUMBERMAN readers during the twelve months of the year 1887. Many have forsaken the vocation of years, and stepped down and out of business life; others have transferred their interests to other fields of labor; while not a few have joined the great caravan which is steadily moving to an unknown world. To the old year, and those who have passed away with it, let there be given a lasting memory for the good that has been done, forgetting always the darker side of the life that is past. The year '87 has been a prosperous one to many, and to others it has been a year of reverses. The fortunate we congratulate; the unfortunate receives the sympathy of all true men. Entering as we are on another year of business activity we all do it with more or less trepidition, fearing lest a storm may overtake our bark and throw us against a reef upon which we may lose the cargo which took, perhaps, a lifetime to accumulate. But though the signs of the times do not look the brightest, let us hope that the present stringency in the money market may be of short duration, and that before the logs now being cut are floated, that more confidence may be infused in the commercial world. To the lumbermen the prospects seem by no means discouraging. So far as we can learn work in the woods is making good headway, and every confidence exists among the trade. The hope of THE LUMBERMAN is that this may continue, and that the year 1888 will be second, in point of prosperity, to no year of the past.

FEBRUARY first next the second annual statistical edition of the CANADA LUMBERMAN will make its appearance, and no pains are being spared to make it the most interesting and complete edition yet issued from this office. Arrangements are being made whereby we will be enabled to present reports regarding last season's operations and the probable cut for the present winter from every part of the Dominion, together with all statistics obtainable showing the leading markets of consumption. Some of the best authorities on the lumber trade in the country will contribute to make this special effort a success, and one worthy of the great industry whose interests it is intended to represent. We would like every reader of THE LUMBERMAN to lend a hand in sending items of news or correspondence on relevant topics. There is not one on our list who cannot claim the possession of some knowledge, which, when published, would help his fellow craftsman. No one need be afraid of sending in their ideas in crude shape, as the editor will, in all cases, be pleased to fill in and place the same intelligently before our readers. The statistical edition will comprise six thousand copies, and will be mailed to every man to be found engaged in the lumber, wood-working and kindred industries in the Dominion, as well as a considerable number both in the United States and Europe. Advertisers desiring to take advantage of this large edition can ascertain the cost of different size spaces by referring to the prospectus on another page of this issue.

WE have received from the Forestry branch, Department of Agriculture for Ontario, the forestry report for 1886. It contains a report from 160 townships, giving the amount of wood fit for fuel yet standing in the older settled portions of Ontario. A report of a careful examination of two townships of Ontario, one lying southerly and one northerly, with the view of obtaining an accurate idea of the effects of woods or lines of trees on growing crops, and the climatic differences observed since the clearing up of the country. Notices of the progress of forestry in other countries. Results of experiments in growing evergreens in large quantities in Ontario, and directions as to how similar results may be obtained. Complete directions as to raising all trees from seed and planting them out. Carefully prepared statements as to the lumber districts of Ontario; the value and uses of wood here; planting in school grounds and on Arbor Day; value of woods in preserving humidity in adjacent fields; proposed forest preservations; management of trees in cities; over-clearing in Ontario; [illegible] on Ontario farms; preservation of birds; forest work in Europe; evergreen hedges; and many kindred subjects. [illegible] valuable reports from gentlemen who have of late years started plantations here. The dissemination of these reports has been productive of much benefit in the Province, many thousands of trees having been planted and an interest aroused which will lead to much greater results. Should any LUMBERMAN readers desire a copy of this report it will be cheerfully furnished by the Department.

THERE is a general anticipation, it is said, on the part of lumbermen in the Western States, that the customs duties on lumber imported from Canada will be done away by legislation likely to occur during the present session of Congress. Speculation is rife, says the *N.-W. Lumberman*, as to the probable effect the free importation of Canadian pine will have in the United States. "Men," says that paper, "inclined to a belief in a protective tariff, jump at the conclusion that free importation will depress prices on this side, and overburden the markets with foreign products. But a careful and unprejudiced view of the matter does not so readily lead to that view. In case there were no duties to be paid on lumber from Canada, why should the producer in that country wish to sell his lumber any cheaper than the manufacturer on this side the line? Surely his desire would be to market his product at the highest market price. Furthermore, the supply of pine is not now so great, either in this country or in Canada, that there need be any fear of an over-production that will seriously reduce prices. Men talk as if Canada lumber were a new thing in our markets, when the fact is that it has been pouring into this country for forty years. The duty of $2 a thousand has not been sufficient to keep it out. Europe, the United States and the home demand has already absorbed so much of Canada pine that owners of limits, and the Government, have begun to economize the forest resources of that country. There is not so much to be yet slaughtered that owners of it will be stimulated by the chance of free exportation to the degree of selling it so cheaply that it will depress the markets on this side. Now that the forest supply has been so reduced in the United States that strong men financially have been able to raise the price of stumpage to $5 and $7 a thousand in Michigan, and $3 to $5 in Wisconsin, there is little danger of overloading the markets of this country with Canada pine. The direct effect of an abrogation of customs duties between the two countries would be an enhancement of the value of stumpage in Canada. There would follow an immediate rush of American capital into the British provinces, seeking investment in timber limits and mill property. This would tend to the stiffening in value of such holdings. Pine in Canada, other things being equal, would soon become as valuable as pine in the United States. When competition became active between Canadian and the United States capitalists, as it soon would, pine holdings and the lumber industry of the Dominion would assume the level of that in the States."

A PETITION to the Hon. C. F. Fraser, Ontario Commissioner of Public Works, has recently been extensively signed throughout the Parry Sound district, setting forth the fact that the South or Inside Channel between the ports of Parry Sound, Midland, Penetanguishene, Waubaushene, Muskoka Mills, Indian Harbor, etc., has, of late years, become a well-established route for passenger and freight steamers, tugs and other vessels plying up and down the east shore of the Georgian Bay; that two obstructions to the use of the said channel by boats drawing more than six or seven feet of water exist, known as Two-Mile and Seven-Mile Narrows, but that

a further grant of money is required to be expended there to make the channel sufficiently deep to enable vessels navigating its waters to use it at all times. Therefore the Commissioner is asked to cause a sufficient sum to be placed in the estimates of the next fiscal year to complete the improvements required. The deepening of this channel will be of great benefit to a very large number of the residents of the districts of Muskoka and Parry Sound, as well as to mariners, lumbermen and others.

United States Consul Murray states that the amount of American long lumber shipped to the States from the port of St. John for the year ending September 30, 1887, was 96,385,000 feet, and of short lumber, such as laths, pickets, shooks, staves, shingles, etc. an amount equal to 25,000,000 feet. The amount of lumber manufactured from English logs shipped to the states during the same time was 50,000,000 feet, making 171,385,000 feet of American and English lumber shipped to the United States from this port for the year. Shipments for the same year to all foreign ports, including deals, lumber, ect., was 130,000,000 feet. Total shipment for the year, including American and English lumber, 301,385,000 feet.

THE TIMBER DUES.

On the day before the late sale of Ontario pine limits a very influential deputation of lumbermen waited upon Mr. Pardee, the Commissioner of Crown Lands. Their request was certainly most reasonable, namely, that the Government should give some permanency to the terms on which the limits should be held, and should guarantee the purchasers against another sudden and unexpected raise of the dues and ground rent. It was unfortunate that Mr. Pardee did not see his way to accede to this reasonable request, though he remarked that the recent increase had been the first for twenty years and that there need be no apprehension of a further increase for a considerable period. This assurance may be sufficient for holding purposes, but the misfortune is that it gives no valid, unimpeachable security such as a banker requires when he makes advances. Confidence in timber limits as such security had already been somewhat shaken by the increase of dues in the Provinces of Ontario and Quebec, and the statement of Mr. Pardee is hardly calculated to give stronger assurance in this respect. It is not too late even yet for Mr. Pardee to make the present dues unchangable for some fixed period and thus make timber leases a more staple security.

The following report of the interview between the lumbermen and the premier of Ontario, with regard to the timber dues, appeared in the Toronto *Mail*:

A deputation representing the lumbering interests of Ontario waited upon Hon. Messrs. Mowat and Pardee yesterday afternoon. The subject upon which they wished to ascertain the views of Ministers was the increase in the Crown dues and ground rent made by an Order-in-Council last spring which comes into operation this winter. The former fees were 75c. per thousand feet Crown dues and $2 per square mile ground rent. These fees have been increased to $1 for Crown dues and $3 ground rent.

The lumbermen held a meeting previous to their waiting on the Ministers, at which a statement of their case, drawn up by Mr. A. H. Campbell, was agreed upon, and where it was also determined to form an association to be known as the Ontario Lumbermen's Association. The drift of constitution was adopted and the entrance fee fixed at $10.

The gentlemen then proceeded to Mr. Mowat's office, where the Premier and Hon. Mr. Pardee, Commissioner of Crown Lands, were ready to hear their grievances. Among those present were :—A. H. Campbell, Toronto; Jas. Scott, Waubashene; John Charlton, M.P., Lyndoch; David Gilmour, Trenton; Allan Gilmour, Trenton; M. Burton, Barrie; J. M. Irwin, Peterboro', M. M. Boyd, Bobcaygeon; W. T. C. Boyd, Bobcaygeon; John Macdonald, Albany; C. McLachlin, Arnprior; E. H. Bronson, M. P. P., Geo. H. Perley, M. P., Powell, E. B. Eddy, W. R. Thistle, Ottawa; J. B. Miller, Parry Sound; Jas. McLaren, Buckingham; Robt. Thomson; Hamilton; Alex. Fraser, Westmeath; N. Dyment, Barrie; H. H. Cook, M. P., Toronto; J. S. Hatton, New Lowell; J. M. Dollar, Midland; Thos. Murray, M. P. P., Pembroke; J. R. Booth, Ottawa; E. D. Moore, Ottawa; John Davidson, New Lowell; John McArthur, Toronto; Wm. Christie, Toronto; R. H. Klock, Ottawa.

It would be difficult to conjecture just how many millions this convocation of lumber Kings represented. There were several millionaires amongst them anyway.

Mr. Campbell opened the lumbermen's case by reading the paper that had been approved of at the meeting in the morning. This paper, ably and comprehensively stated the views of the lumbermen concerning the equity of the matter and the proper policy to be pursued by the Government in dealing with its timber lands. He took the ground that the purchases at the sales of timber limits held had been made upon fixed and well-defined conditions. The bids were made on the basis that the Crown dues were 75 cents per thousand and the ground rent $2 per square mile. Full value for the limits had been paid on that basis. To increase the dues and ground rent, therefore, now, was to impose on the purchasers in excess of their value and in excess of the amount they would have paid. He furthermore questioned the legality of such an action and had no doubt whatever of the decided lack of equity in such action. The Government should restore that confidence and put an end to doubt and uncertainty by declaring that the present scale of dues and ground rent should be maintained and unalterable for a fixed term of twenty years.

Mr. James McLaren pointed out that the dues could be so increased as to be tantamount to a concellation of the lumberman's lease. He cited the case of the Province of New Brunswick, where the Government by raising Crown dues to $1.50 and the ground rent to $8 on spruce lands had stopped the cutting of timber in that province altogether except on private lands. He asked that before the sale an announcement fixing the rates and dues for a term of years should be made.

John Charlton, M.P., stated that at the various sales of timber lands held, especially at the last one in 1884, the universal impression was that the charges for dues and ground rent were of a permanent character, and upon this basis bids were made. This view of the case was stated in implied and not in expressed terms by the Crown Lands Commissioner himself, and the bonuses paid amounted to the full value of the limits upon the basis of the charges then levied. Within eighteen months of the date of the last sale the Government advanced the Crown dues 33 per cent. and the ground rent 50 per cent. This action had provoked a considerable degree of indignation on the part of lumbermen, and many felt disposed to characterize it as a piece of sharp practice. It had been urged in justification of the advance that Crown dues in Quebec were considerably higher than in Ontario. To this he answered that the cost of placing lumber in the American markets was from a dollar to two dollars per thousand less from Quebec than the cost of placing lumber in the same markets from Ontario. The difference in dues had also to a large extent been equalized by the higher rate of bonuses paid in Ontario, that government having received as bonuses on its various sales a sum exceeding $1,700,000, which was greatly in excess of the amount received as bonuses in Quebec for a corresponding area. It should be borne in mind that calculations as to establishing a business in lumber must necessarily cover a term of years, as a mill could not be erected and adequate returns obtained for the investment in less than 10 or 15 years at least. This alone should make it apparent to the Government that for a term of years charges should be made of a permanent character, and not subject to arbitrary change. One effect of the Government policy had been loss of confidence and great shrinkage in the market value of limits. Lumbermen in the great majority of cases were dependent upon bank loans for a portion of the capital used in their business, and in this respect any action of the Government impairing the security they had to offer for money advances would be disastrous to them in its effects. The impression generally entertained that lumber was advancing rapidly in value was an erroneous one. Year by year the Canadian lumbermen found the northern limit at which he was driven from the field by the competition of Southern yellow pine coming nearer to him, and for the last two or three years a notable change had taken place in the market for the better grades of lumber through the introduction of yellow poplar from the south which stood high in public favor, and was rapidly supplanting the better grades of white pine for finishing lumber and had actually reduced the value of clear stuff, white pine lumber, from $4 to $6 per thousand in New York and other eastern cities. Owing to the deterioration in the quality of logs from year to year, the average value of our mill cut in Ontario was actually less than seven or eight years ago.

After some further discussion, Mr. Mowat, in reply, said it was the duty of the Government to consider the interests of all parties, the interests of the lumbermen as well as those of other parties, and they had endeavored to do so. They had endeavored to act fairly in this matter. In regard to the suggestion that the power which the Government have of raising the dues may be exercised unfairly, he said he thought the general feeling is that, so far, that power has not been unfairly exercised. The same suggestion might be made in regard to all the powers of parliament. Heretofore the changes had only taken place at long intervals, and under circumstances which had, he thought, received public approbation. The fact that an increase had taken place in the dues recently was an assurance that an increase will not be made again very soon. It might be possible for the Government on further enquiry and consideration to name a period within which no increase shall be made, but up to the present they had found it impossible to do so. They could not, therefore, make any change in regard to the present sales.

It was quite evident that the reply wat not satisfactory to the members of the deputation.

The Government Sale of Timber Limits.

The sale of timber limits by the Ontario government, on December 15th, drew the largest gathering of lumberman ever convened at one time in Toronto. It is stated that the lumbermen representing Canada attending the sale were worth $23,000,000, while the Americans present represented a capital of $20,000,000. The bidding as a rule was fairly brisk, and the result seems to satisfy both the Government and the purchasers. Following is a list of the buyers and the amount paid for each parcel:

Biggar tp.—Berth 1, 20⅜ sq. m. at $3,100, Thos. and Wm. Murray, Pembroke	$ 63,162 50
Biggar tp.—Berth 2, 11⅛ sq. m. at $3,100, T. H. Moffatt, Pembroke	34,487 50
Bishop tp.—Berth 1, 13⅛ sq. m. at $2,100, Wm. Cook, Toronto	28,218 75
Ballantyne tp.—Berth 1, 22⅜ sq. m. at $5,500, Albert Pack, Osceola,	123,062 50
Ballantyne tp.—Berth 2, 14 sq. m. at $2,350, Martin Brennan	32,900 00
Ballantyne tp.—Berth 3, 19⅛ sq. m. at $2,600, Jos. Riopelle, Ottawa	49,725 00
Ballantyne tp.—Berth 4, 12⅛ sq. m. at $850, Thos. Mackay, Pembroke	10,306 25
Butt tp.—Berth 1, 16¼ sq. m. at $900, Alex. Fraser, Westmeath	13,725 00
Chisholm tp.—Berth 1, 22 sq. m. at $3,000, Robt. Thompson	66,000 00
Canisbay tp.—Berth 1 2⅝ sq. m. at $500, Alex. Barnett, Renfrew	1,312 50
Devine tp.—Berth 1, 17 sq. m. at $4,300, Alex. Fraser, Westmeath	73,100 00
Devine tp.—Berth 2, 13½ sq. m. at $2.100, Alex. Fraser, Westmeath	28,350 00
Devine tp.—Berth 3, 11 sq. m at $4,200, Alex. Fraser, Westmeath	46,200 00
Devine tp.—Berth 4, 11⅜ sq. m. at $3,000, Alex. Fraser, Westmeath	34,875 00
Hunter tp.—Berth 1, 16½ sq. m. at $3,500, Alex. Barnett, Renfrew	57,550 00
Hunter tp.—Berth 2 12½ sq. m. at $4,600, Alex. Fraser, Westmeath	55,775 00
Livingstone tp.—Berth 1, 8 sq. m. at $6,350, Callahan & Montrose, Alpena, Mich	50,800 00
Livingstone tp.—Berth 2, 13¼ sq. m. at $4,200 Albert Pack, Osceola, Mich	55,650 00
Livingstone tp.—Berth 3, 11⅛ sq. m. at $3,400 P. H. Spohn	37,825 00
Livingstone tp.—Berth 4, 9 sq. m at $2,100 N. Dyment	18,900 00
Livingstone tp.—Berth 5, 8⅜ sq. m. at $800, W. J. Smith	6,700 00
Livingstone tp.—Berth 6, 9 sq. m. at $800, N. Dyment	7,200 00
Livingstone tp.—Berth 7, 7¾ sq. m. at $1,350, N. Dyment	10,462 50
Lawrence tp.—Berth 1, 15 sq. m. at $ 3,300, Alex. McArthur, Toronto	49,500 00
McLaughlin tp.—Berth 1, 17¼ sq. m. at $3,400 Alex. Barnett, Renfrew	58,650 00
McLaughlin tp.—B 2, 12½ sq. m. at $4,400, Alex. Barnett, Renfrew	55,000 00
McClintock tp.—Berth 1, 14 sq. m. at $2,500, Isaac Cockburn, Gravenhurst	35,000 00
McClintock tp.—Berth 2, 12 sq. m. at $2,500, Longford Lumber Co.	30,000 00
McClintock tp.—Berth 3, 8¾ sq. m. at $2,300, Longford Lumber Co	20,125 00
McClintock tp.—Berth 4, 10¼ sq. m. at $2,000, Isaac Cockburn, Gravenhurst	20,500 00
McClintock tp.—Berth 5, 9¼ sq. m. at $1,600, Isaac Cockburn, Gravenhurst	14,800 00
McClintock tp.—Berth 1, 1⅜ sq. m. at $1,050, Longford Lumber Co	11,550 00
Pentland tp.—Berth 6, 11 sq. m. Wm. Mackie, Ottawa	400 00
Wilkes tp.—Berth 1, 13¾ sq. m. at $900, Wm. Mackie, Ottawa	12,375 00
Wilkes tp.—Berth 2, 15½ sq. m. as $1,700, Wm. Mackie, Ottawa	26,350 00
Wilkes tp.—Berth 3, 17¾ sq. m. at $4,000, T. H. Moffatt, Pembroke	71,000 00
Nightingale tp.—Berth 1, 1⅝ sq. m. at $600, Thos. Murray, Pembroke	975 00
Grand total	$1,312,712 50

—The cabinet and furniture factory of Mr. Philippe Valliere, Quebec. was destroyed by fire Dec. 4th, entailing a loss of over $100,000. The works were well equipped with valuable machinery and tools, and there was a large lot of walnut and mahogany lumber, and some 30,000 chairs, all of which was destroyed. The extensive stores and showrooms adjoining, containing about $200,000 worth of goods, were saved, but considerably damaged. Mr. Valliere' who is one of the wealthiest citizens of Quebec and does probably the largest business in his line there, will commence rebuilding his factory immediately.

The Art of Sorting Lumber.

People unacquainted with the lumber business usually think that it is the handling of a coarse, bulky commodity, that requires little knowledge of details, or skill in management. It is the common notion that any man can be a lumberman after a short experience. Surely the buying and selling of boards, scantling, timbers, shingles and lath must be a simple and easy matter. Such a business, in the common view, has no comparison, in detail and minutiæ, to the dry goods, grocery or hardware trade. This opinion may have some application to the business of a small retail yard, at a railway station in a farming district, in which half a million feet of common lumber would be a large stock, and the list of sorts would not comprise more than a dozen. But when we come to one of the great wholesale yards, such as are to be found in this city, and other leading markets, the common notion is wide of the correct one. A wholesale yard has come to be the depository of a vast list of articles of wood, in which is embraced coarse and manufactured lumber, from a stick of 12x12 to a picket with an ornamental head on it, or a shingle with a hexagonal butt. If a yard price list that lies under the eye of the writer were to be thrust into the visual range of a dry goods merchant, he would be astonished at the multiplicity of articles named therein, and the wide divergence of value attached to them. He would make up his mind that a novice would have to receive a long and painstaking tuition before he could engage successfully in such a business.

Let us take a glance at the list in question. It embraces nearly 60 different classes of rough and dressed "wood goods," as the English say. Included in this classification are fully 900 different grades, sizes or styles of manufacture. In white, or soft pine flooring, there are 41 grades or items, with as many different prices. There are 13 grades of Norway flooring; 71 of hardwood flooring, including maple, red oak, white oak, walnut, cherry, ash and southern pine. Ship lap has a list of 22 items. There are patent sheathing and lath, soft and Norway pine partition, German siding, o. g. drop siding, soft pine ceiling, Norway ceiling, wainscoting, corrugated ceiling and well tubing, each with from one to twenty grades, sizes or descriptions. There are a dozen different makes of "fence rails"—not the kind that Indiana and Ohio farmers use, that are split out of logs, but fancy rails, that are priced at $10 to $40 a thousand, measured in lumber feet. There is a class of lumber denominated "saps," which comprises seven items; a style of lumber that is much esteemed at the east because it is clear and cheap, and just as good as any when inside and covered with paint. Stock boards, 10 and 12-inch, have 36 items on the list. Finishing lumber and thick uppers include nearly a hundred items. Panel stock has 20 grades; rough pine strips, 34; Norway, 12; pickets and palings, 16 sizes and grades; short lumber, rough, 42; car builders' stock, 32. Then, there are common and cull boards, Norway boards, common and cull fencing, and Norway fencing; mill culls, rough maple strips, timber, joists and scantling, each class with a numerous list. There is beveled corn cribbing, bridging and furring which the novice should know is not stuff with which to build bridges, or anything that pertains to beltries taken from the backs of animals, but simply little sticks with which to brace joists in floors, and strips to nail lath on. In plain shingles there are 22 kinds and grades, and there are 14 de-descriptions of dimension and ornamental makes, with geometrical terms—squares, diamond, hexagon, octagon, circle and segment applied to them.

Enough has already been mentioned to bewilder the ordinary merchant; but the list further includes building paper, lath, battens, poplar eave troughs, sidewalk plank, porch post stock, turning timber, turned hitching and stable posts, cedar posts, etc.

All the different kinds of lumber are sold rough or dressed, as desired. Much of it has to be manufactured into stuff ready to be put into place in buildings, articles of use, fences, or what not. It can be easily seen that this involves a large and varied amount of mill work. Hence we find attached to this trade list a schedule of prices for dressing, making, kiln drying, etc. There is also a sash, door and blind list, with the customary discounts.

All the rough, dressed and manufactured material referred to in this list is offered for sale, at specified prices, by one house. The job is undertaken to supply any customer in the United States, with any item on the list, on short notice. It does not require a strong imagination to reach the conclusion that there can be no seeds in the wool, moss on the back, or hair on the teeth of the man or men who devise and maintain such a complex business as this. Though a wooden trade, there can be no wood in the head of the men who keep all these details in proper arrangement, so that there shall not only be no loss in the business, but handsome profit at the year's end.

There are several wholesale yards in this city, the stock of which takes a wide range, but perhaps the one referred to is the most complete. The successful conduct of such a trade is enough to show that the lumber business can be made to employ the ablest and brightest mercantile faculty of the country. As the years pass, raw material diminishes in supply, and forest resources have to be gathered from a widening reach of territory; as the necessities and tastes of community shall require the use of a greater variety of woods, the wholesale collector and distributer of stocks will become more and more a man of extended and minute knowledge pertaining to his vocation.—*Northwestern Lumberman.*

Tension in Saws.

Tension is the principle in hammering a high speeded saw. In the lower speed the tension is not such an item, and many saws are now running that require no tension at all only the natural stiffness of the steel. This term tension is new to many saw hammerers, and a great many so-called experts and instructors in hammering saws do not understand the proper relation of the tension in a high speeded saw. They can make the average saw do good work. In this way many men get up their "rep." and are ready to tackle anything in the shape of a saw, knowing that the saw requires to be opened in the centre to the required speed. This may be done and yet the saw won't go. The unequal tension is corrected, but of no avail. I have seen such men hammer a high speeded saw until the centre would dish back and forth as it should apparently, and he never did make that saw run, hammering it half a dozen times, opening and stiffening it to the extreme both ways, trying to get at the limit and the saw got worse. Remember this man could correct unequal tension fairly. The trouble was the saw was not opened in the proper relation to the action of centrifugal force. This is something that nine-tenths of the saw hammerers do not understand, that a saw can be hammered to be as stiff at any required speed as the metal in the plate will allow. They do not know the extent of the centrifugal strain on the rim. How many know the maximum or "vice versa" line in a circular saw? We often see men hammer a saw in segments from centre to rim, no matter what the condition of the saw is. The first thing is to sledge hammer the saw for a while to "liven up the steel," and then go about to regulate it to the speed. By the time this is done there has been ten times as much work done as was necessary, and the saw will soon be in worse condition than ever, as the tight and loose lines bring about more buckles from rim to center than all his hammering can get out; the rim at regular intervals gradually assumes the shape of the letter S.

Years of experience in average speed does not make a man proficient for a speed of 12,000 feet rim speed. The trouble with such men is this, as above stated, they can make an average saw go very well, have hammered saws that so many have failed on, that the man naturally is led to believe that he is chief. He can talk about the saw makers and what he can learn them, knows it all and don't care to learn any more, but talk to him about a saw running on 12 and 14-inch feed, and you will catch his jack, and he won't believe it then, says it's some newspaper talk, and a trick. As a man of this kind remarked to me, it is "scalping," the saw being allowed to rub the log while gigging, to display the feed marks, etc.

Saw makers are not very old on heavy feeds. The best saw maker in the United States to-day claimed 15 years ago that no saw could be made to stand the strain of a 10-inch feed in a 12-inch cut. At the Centennial in 1876, 10½-inch feed was all that was aimed at. The same saw cut 21½-inch feed at the World's Fair, at New Orleans in 1885. Why could not 21½ inch feed be cut just as well 11 years ago as now? The steel in the saw to-day is undoubtedly the same as then. This shows that there has been a wonderful increase in the capacity of the circular saw, all brought about in the hammering of it, getting the tension in the exact relation to the centrifugal force, and feed strain.

Saws are sometimes bursted on heavy feed, but my experience has been that when a saw was adapted to the work and in a first-class condition, they have never been broken by heavy feeds. There are but very few men who can put a saw in that condition, and it being so far above the calibre of the average saw hammerer, it is folly to attempt to explain here the sensitive and most essential parts of a perfect saw. Perfection has not yet been attained by any man, but the difference between a botch and a good job on a circular saw, comes very near demonstrating perfection.

The adjustment of a saw is more essential than the most vital part of a watch. Two saws may be fixed up and appear so near alike that the average man can not tell which is in the best condition, and yet one saw will cut twice as much lumber as the other and equally as good. My limited experience has taught me that the best results are obtained by not hammering near the center or rim of a saw.—*Foreman, in Woodworker.*

—There is very little doing just now in the Quebec market.

What is Forestry?

What is forestry? It is the same thing as agriculture—a business. The difference is only in the kind of crop and in the manner of treating the crop. It is the production of a wood crop we are after. This is the crop which grows, or can be made to grow, on those parts of the farm which are useless for all other crops. It is a slow growing crop, to be sure, but it grows while you are asleep, and you need put it in the ground but once, where it will thrive without further care for many years; and, if properly started, it needs no hoeing, no cultivating, no worrying about the weather. And when you come to reap it, it will prove to yield a profit from ground that would otherwise have been left not only unproductive, but unsightly in addition.

If only for the looks of it a piece of [illegible] thriftily growing enhances the value of the farm. Therefore plant the unsightly waste places to trees, remove those ugly spots from the farm that spoils its good looks. It costs but little [illegible] than an occasional day of enjoyable work.

Don't figure on the profit of sticks that you are [illegible]; there is profit indirectly accruing from such planting, [illegible] defies all strict financial calculation, besides your [illegible] tion which will surely reflect from such work beyond any direct money gain, though this will not be lacking [illegible] proper time. It has been proved over and over [illegible] wood-lot will sell the farm—if sold it must [illegible] than it would have brought without it.

And you who are the happy owner of a wood-lot treat it as the goose that lays the golden eggs; the eggs will soon be high in price, the goose is worth caring for! If you cut, don't cut the good trees only and leave the bad ones to spoil the looks of the lot and to injure the young growth, that would be better off if the gnarly old fellow over head did not stand in its way with shade and drip. Always give some light and room to the young folks!

Forestry means more than tree planting; it is the art of managing a wood crop so that it will reproduce itself spontaneously by the seed from old trees and afterwards helping the young growth to make the best timber in the shortest time. Nature will reproduce the forest and grow timber without care if allowed by man, but she takes time, and time is money—at least to a careful manager.

Then use your odd moments in improving your crop; the axe, too, is a cultivator—in judicious hands.—*B. F. Fernow, Chief of Forestry Division U. S. Department of Agriculture.*

A Curious Bill-Head.

A correspondant of the *Antiquary* says that recently, in turning over a bundle of London tradesman's accounts of nearly a couple of centuries ago, he came across the following, which is certainly curious, and seems to be a sort of cross between a bill-head and a book-plate. The plate-mark has a margin of half an inch all round, the full size of the sheet itself being 6½ by 4¼ inches.

> WILLIAM GARDNER at the Sign of the one Cane-Chair, on the South Side of St. Pauls-Church, London, maketh and selleth Cane-Chairs, Couches, and Cane-Sashes at reasonable Rates. Of dry Wood.

At the back of this is Mr. Gardner's account, as follows:—

Mr. Duglas bill for cheres Nov. ye 6, 1709.

	£.	s.	d.
8 walnut Cheres, fine moulding, the finest Caine of all, at 12s.	4	16	0
2 Elbow Cheres suttable at 15s.	1	10	0
in all	£6	6	0

Reced Nov. ye 8 1709, of Mr. Duglas the full contents of this bill and all demands, I say Reced by me

WM. GARDNER.

Gardner must have been a celebrated chair-maker, from the fact of the goods having been sent all the way to Newcastle-on-Tyne, where the Mr. Duglas referred to in his bill resided.

They Paid for the Mistake.

Northwestern Lumberman.

A Bangor Me., lumber dealer recovered 10 cents a thousand on 800,000 lath from the Western Union Telegraph Co., because a telegraphic offer to a Philadelphia dealer had been delivered making the price 10 cents less than that written by the sender. The waiving clause in the telegraph blank, releasing the company's liability for error or non-delivery, and the ground that plaintiff was not bound by the erroneous message, furnished the strong points in the company's defense. The supreme judicial court of Maine decided against the company on both grounds, holding that the printed stipulation did not bind the sender, but was void, because the public good demanded the use of care and dilligence by the company, and that the sender of the message was bound by it in the form delivered, but that he had remedy against the company.

THE NEWS.

ONTARIO.

—Mr. Van, of Foxmead, is about starting a new shingle mill.

—Joseph Wheeler has erected his shingle mill in Freetton. It is now in full swing.

—The Macklem saw mill, at Kincardine, will shortly recommence operations.

—Wilson Little and Alex. Morrison, of Donegal, will engage in lumbering at Wiarton.

—The Georgian Bay Lumber Co., are putting in a new engine and other machinery.

—Laurin & Capistrand, planing mill operators, Penetanguishene, have dissolved partnership.

—Hamilton Bros. of Ottawa are sending an unusually large number of men to the woods this winter.

—The sash and door factory belonging to A. J. Jones, Rochesterville, was recently destroyed by fire.

—Robert Harrison, of Cavan, is adding to his saw mill a chair factory and sash, door and blind factory.

—It is stated that McLaughlan Bros., of Arnprior, intend to take out about 400,000 logs this winter.

—A jobber for the Conger Lumber Co. has skidded over 1,000,000 feet of logs since July, with two teams.

—A former resident of Peterborough, Mr. Perchard, is running the mill for Mr. Sills, at Meyersburg.

—Mr. S. Cummer is building a new saw mill at Arranville, on the site of the old mill that stood for thirty years.

—An Ottawa newspaper estimates the output of logs on the Ottawa region alone at about a thousand million of feet.

—Manhard & Co., lumber dealers and brokers, of Brockville, have decided to remove to Cape Vincent, N. Y.

—The loss occasioned by the recent burning of the Gilmour shingle mill, at Trenton, will be $12,000. It was insured.

—Mr. Hadden, of Foxmead, has his planing machinery ready for operation. He also intends erecting a shingle mill during the present winter.

—Perley & Pattee, lumber merchants, are the leading promoters of the new company for supplying Ottawa with natural gas.

—A wood pulp mill is being built at Kingtson, on the Hudson river, to draw on the supply of pine in the Ottawa region.

—The Parry Sound Lumber Co.'s barge, Corisande, met with a mishap recently, which has rendered it unfit for use until repaired.

—The Canada Pacific Railway is now practically finished from Algoma Mills to Ste. Marie. The men on the contract have all returned east.

—The firm of Christie, Kerr & Co. has several camps at Oakley, and in order to feed the men send herds of cattle there. They intend getting out 12,000,000 feet this winter.

—The mills of Messrs. B. Caldwell & Son, at Carleton Place, closed down for the season last week. Their cut this year amounts to 9,000,000 feet, the largest for some years.

—A large quantity of wrecked timber has been shored on Lake Huron, near Kincardine, and the Goverment has instructed the local Costoms collecter, to protect the same.

—About a million feet of lumber has been washed ashore on Lake Huron, between Point Clark and Inverhuron, and it is reported that the farmers in that vicinity have been confiscating it.

—There was an auction sale of lumber and shingles at Young's Point, on Dec. 13th, comprising pine, oak, elm, ash, basswood, maple and hemlock also a large quantity of dimension timber.

—The lumber laden barges Hinckley and Harmon, which were wrecked on Point Albion, Ont., have proved a total loss. The outfits were lately taken to Port Colbourne and all hope of releasing them given up.

—The machinery for the new mills of the Parry Sound lumber Co. and the Midland and North Shore Co. has been received at Parry Sound, and the work of erecting the mills is being pushed forward rapidly.

—It is reported that Mr. Horace Shaver, and Henry Shaver, of Ancaster, have been making extensive purchases in the district of Muskoka. It is their intention to have the lumber and wood shipped to Hamilton station.

—Peter McLean, of Pembroke, has been appointed detective officer to look after the persons who steal logs along the Ottawa. The *Standard* says Peter is the right man for the place, and that he will make matters hot for the harpies.

—Mr. Thos. Greenlaw, of Vasey, Midland district, having rented his farm is going to build on his swamp lot in Tay and commence the manufacture of shingles. He has the lumber on the ground and will commence operations at once. We also hear that some parties from Penetang. have purchased the timber on the Simpson-Mealey lot and are going to build a shingle mill at once.

—The lumber manufacturers interested in the Madawaska river and its tributaries, held a meeting in Ottawa, Dec. 14th, for the purpose of taking into consideration the improving of that stream from Bark Lake to Chain Rapids. It was decided to proceed with the necessary improvements at once, John Harvey, of Arnprior, being appointed as superintendent. This work will give employment to a large number of men during this winter.

—Very considerable transactions in deals are reported. The Gilmour stock on hand and the cutting for 1888 is sold to Messrs. Smith, Wade & Co., of London, Eng., the balance of the Hamilton stock on hand and about half of the production for next year has also been bought by the same firm, the remainder being sold to Messrs. Dobell, Beckett & Co., Messrs. R. M. Cox & Co., of Liverpool, are reported to have purchased Messrs. Perley & Pattee's productions for next year. Prices have not transpired, but are understood to be about the same as ruled for this year's cuttings.

—A company composed of Messrs. E. H. Bronson, E. B. Eddy, H. F. McLaughlin, J. R. Booth, Alex. Fraser, and W. G. Perley, under the name of the Madawaska Improvement Company, have applied for an act of incorporation. The capital of the company is $60,000, and the object of the proposed company will be to construct dams, slides, piers, booms, and other works necessary to facilitate the rapid transmission of logs down the Madawaska river and its tributaries, and also to improve the navigation and telegraphic connections in the district. The head office of the company will be at Ottawa.

—The Emery Lumber Company is composed of the Emery Bros., of East Tawas, and the members of the Saginaw Lumber and Salt Company, of East Saginaw. This concern owns about 100,000,000 feet of pine in the Georgian Bay district. Two years ago they conceived the idea of bringing the timber from that tract to the mills of the company at East Tawas, and Crow Island, on the Saginaw River, for manufacture, the export duty exacted by the Canadian authorities on logs in the rough being only $1 per thousand feet. It was finally decided to construct a barge sufficiently large to carry 500,000 feet of logs at one cargo, with appliances for loading and unloading the logs by steam. Accordingly the contract was let for the construction of a craft at Bay City, and she was completed a year ago last spring and called the *Wahnapitæ*, after a river in the Georgian Bay region. This craft is 275 feet long, and 51 feet breadth of beam. Her cost was $30,000, and she was put into the log carrying business between the points named, the company having cut 13,000 pieces on their Canadian limits. Several trips were made, but during the season the Canadian authorities increased the export duty on logs to $2 per thousand feet, and it was found that they could lumber more profitably by manufacturing the log stock cut on the Canadian side. Last spring the *Wahnapitæ* was put into the lumber carrying trade in which she has proved a bonanza. Her trips have all been made from the Lake Superior country, and had the monster craft been ten inches wider she could not have passed through the Sault canal. She has made six round trips, carrying an average of 2,000,000 feet of lumber at a load, the freight averaging $4. She is now bound down from Ashland to Tonawanda with a cargo of about 2,000,000 feet. Her up freights amounted to $7,800 on ties carried into Duluth. Her largest cargo was was 2,409,800 feet—the largest ever carried by a lake craft—which was loaded at Duluth and carried to Tonawanda. On one trip between the same points she carried 2,181,000 feet. This cargo was piled 22 feet high and she drew only 11 feet of water.—*Saginaw Courier*.

QUEBEC.

—Lake Magentic and vicinity boasts of at least seven saw mills.

—Contractors are getting out about 40,000 sleepers for the C.P.R. in Saguenay County.

—The lumber mill belonging to E. F. Todd & Son, Milltown, has been damaged by fire.

—James Burbank, of Hatley, has put a saw and planing mill in operation in the basement of his grist mill.

—A Quebec despatch says news received from England points to an advance in the timber market on account of the low stock in hand.

—The barque Peerless, reported some time ago as waterlogged and towed into Gaspe Basin, has been pumped out, and her cargo of timber and deals discharged and secured for the winter.

—J. B. Scott, Nicolet, lumber dealer and speculator in logs, ties and bark, has assigned, due, it is said, to the recent failure of Plamonden & Augur, Quebec lumbermen. His liabilities are given at from between $50,000 and $60,000.

—Here is a modicum of interesting news for Canadian saw mill owners and others. The Papineauville, Que., Council has stated that no tax shall be levied for fifteen years on any person or persons who erect saw mills or other manufactories in that locality. An Arnprior firm, Messrs. McLaughlin, and a Braeside firm, Messrs Gillies Bros., it is rumored, intend to take advantage of this promise.

—Ross & Co., of Quebec, have purchased of Hon. Timothy Nester, Hon. H. C. Thurber and Jacob Selegman, 14,000 acres of land in Baraga, Menominee, Delta, Alger and Marguette, Mich., which comprise a vast portion of the vast tract purchased by Mr. Selegman and Mr. Nester from an England syndicate a few months ago. Ross & Co. will cut such lumber as they won't export, and put the rest of the timber on the market.

—Lumber operators on the Lake St. John Railway route during the present winter promise to be very active. Large numbers of men are being sent up to work in the different lumber shantes along the line. Mr. J. S. Murphy will employ about 150 men in his shanties getting out spruce logs to supply his new steam mill which has lately been completed on the Riviere a Pierre, and several other operators will also employ a large number of men. A new spool factory has also been established at Pearl Lake by Messrs Shroder & Son of Three Rivers, and is expected to commence operations shortly.

—A correspondent writing from Springfield to the Sherbrooke *Gazette*, among other items of interest concerning that section, advocates the establishment of a lumber mill in the following words: A mill for the manufacture of lumber to meet the demands of a local, and other markets, and for other purposes, on the stream known as Black River, three miles from Springhill railway station, on the main road leading to the village of Stornaway is much needed. If such saw mill were built and in operation on the stream aforesaid, local residents would have a market for their lumber, and other farm productions. In the vicinity of Black River there is an endless quantity of sound spruce and a variety of other timber within a radius of four miles, which would last a good running saw mill a quarter of a century. Recently the residents have commenced subscribing to a fund to be laid out in building such a saw mill on Black River, and put the same into first class running order, with the intention of forming and establishing a company for the manufacture of all kinds of timber, and this fund is increasing with astonishing rapidity. I should not be surprised to see within two years hence a company incorporated by an act of the Provincial Legislature in Springhill, which will do a profitable business in an honest and industrious pursuit.

NEW BRUNSWICK.

—Shipments for the season are about over at Bangor, Me.

—Smith Bros., of Centreville, have their steam saw mill at work.

—Adams & Gregory's mill, St. John, will, it is said, run most of the winter.

—About fifteen mills have been built in the province during the current year.

—All the mills in the vicinity of St. John were closed for the season before Christmas.

—Carr & Shaw will build a steam mill near Hartland, this winter, and Chase & Sons will rebuild in the same town.

—W. H. Murray, of Indiantown, is building an addition to his mill and will put in several stave and clapboard machines.

—Shipments of deals, etc., to the United Kingdom, from the port of Richmond and output of Buctouche, for the season, amount to 14,751,000.

—The shingle mills throughout New Brunswick have had an extra good season. Nearly all of them are piling cedar so as to be able to run all winter.

—The lumbermen had plenty of snow during the first part of the season, but the woods are now reported bare and operations practically suspended.

—J. W. Clark & Son are making boxes. A member of the firm is now in the United States buying planing and door-bailing machines, which will be placed about the middle of January.

—The shipment of deals, etc., for the year, from the port of Miramichi, amount to 68,121,029 superficial feet. From Richibucto and its outport, Buctouche, the shipment amounted to 14,751,000 superficial feet.

—The Grangers on the Arostook are reported to be holding large meetings and passing strong resolutions against Arostook lumber being driven into New Brunswick, and manufactured there.

—The value of the lumber exports from St. John during November was less than half of that for the same month last year, the amount being $66,772, as against $143,143.

—Fairfield lumbermen will cut about 8,000,000 feet this year. Estimates of cuts in other sections are hard to get at, but it is believed that the coming season will show the largest cut for years.

—At Baring, Dec. 12th, H. F. Eaton & Son lost three gang muleys, two planing machines, lath and shingle machines, and a quantity of lumber by fire. The loss is placed at $15,000; insurance, $8,000.

—Business in St. John and vicinity, so far as lumber is concerned, has kept up well so far, and the prospect for the winter is decidedly encouraging. An advance in certain kinds of lumber is being talked of, although no particulars are yet to hand.

—In an old volume entitled, Sketches of New Brunswick, I find these figures given as the market quotations of New Brunswick lumber, etc., in 1825: Pine and Birch timber, 20s. sterling per ton; lumber and plank, 40s sterling per M; shingles, 12s. 6d. per M; lathwood, 20s. per cord; staves, 60s. per M.

—Lumbermen say there will not be so much lumbering done in the Miramichi region this season as in former years, on account of the stumpage tax. Besides that, lumber is scarcer and more difficult to get at, the hauls are longer and, with the work of building dams and cleaning out streams, the expenses lap over the profits. Reduction of stumpage is now an issue in the local election there.

—The lumber mills of Messrs. H. F. Eaton & Sons, St. Stephen, N. B., known as the "Upper Mills," were destroyed by fire Dec. 5th. Loss about $12,000. These are the mills about which there was a dispute as to which side of the river they were on. A few weeks since the United States customs officers seized some of the lumber manufactured there, contending it was from Canadian mills and liable to duty on going into the United States. The owners claimed that the mills were in Maine. It is probable that the mills will not be rebuilt unless it is decided that their site is on the Baring side of the boundary line.

—Maine dealers say that the past season has been a prosperous one for everybody interested in the lumber business and that the trade, both foreign and domestic, has been limited only by the supply. I gather from lumbermen and correspondence, says a writer in the N. Y. *Lumber Trade Journal*, some interesting notes. The tide mills of the lower Kennebec, which had hard luck from 1884 to 1886, sawed over 5,000,000 feet this season, most of which went to the Boston market at $14 to $14.50 per M. The amount of lumber handled by Portland houses during the year will be about 150,000,000 feet. The South American export trade this year will probably amount to 50,000,000 feet, a large advance over any previous year.

MANITOBA AND THE NORTHWEST.

—Minnedosa saw mills are reaping a profit from the sale of their sawdust.

—Jeffrey Bros., of Laggan, are getting out 20,000 poles and some flat timber for the Galt Mining Company.

—From twelve to fifteen cars of lumber are being sent weekly from Selkirk to Winnipeg and other western parts.

—Fraser & Co. have sawed about eight hundred and fifty thousand feet of lumber this season and have about seventy-five thousand feet of logs up the river yet. They will take out half a million feet this winter.

—Seven thousand railway ties were sold in Brandon recently for timber dues. They only brought $5200, or just about enough to cover the dues and the wages of the men who brought them down the river to Brandon.

—Mr. W. B. Fotheringham is building a saw mill and grist mill on the island at the head of the Sault rapids of the Rainy River. He has already got in his camp and is taking out logs and will have about 600,000 feet by the time the mill is ready. The roads are cut to the mill and everything is in good running order for this time of the year, in fact he has got out these supplies for a year. The mill site selected is exactly midway between Rainy River and Lake of the Woods so that as it is in the middle of the settlement on the banks of the Rainy River it must naturally follow that it will be the headquarters for the settlement on the river. The place has been called Jubilee.

BRITISH COLUMBIA.

—From the *Sentinel* we learn that Wm. Fortune, of Tranquille, has completed the building of his new mill and commenced cutting lumber.

—Knight Bros., Popcum, write THE LUMBERMAN that they have some choice timber in that Province, and that they had the pleasure a short time ago of examining a grove of timber containing about one hundred and sixty acres. There was no underbrush, and the trees did not stand more than ten feet apart on the average, sometimes three or four would be almost touching at the roots.

—The Dominion Government has completed an arrangement for the transportation of mails on the new route between Great Britain and Japan, via the Canadian Pacific railway. Vancouver will be made a postal centre under the new arrangement, and all foreign mails coming east, and destined morf poins in the United States and Canada will be distributed rom there.

AMERICAN NOTES.

—There will be a heavy accumulation of lumber in the Philadelphia market this winter.

—A large number of Michigan lumbermen will operate this winter in California and the south.

—Saginaw lumbermen are making heavy investments in pine timber in the Duluth districts.

—The total cut of lumber for the season of 1887 by the Ashland saw mills has been 69,774,024 feet.

—The Chicago market is virtually at an end for the season. There will be no further sales worthy of note until next spring.

—The forest lands of the United States, excluding Alaska, embrace 500,000,000 acres, or 28 per cent of the entire area.

—The devastation caused by fire on the Saginaw river has been extensive the past season; it is estimated that nearly $200,000 has gone up in smoke.

—An approximate estimate of the amount of lumber hauled by the principal railway lines of eastern Michigan, for the year just closed, is placed at 200,000,000 feet.

—The white cedar movement on the lakes, as well as by rail, have been enormous this year, Chicago dealers have handled the larger portion of this year's products.

—A change in the editorial management of the *Timberman* is announced in its last issue, A. H. Hitchcock retiring from the editorial chair, which is assumed by J. E. Defebaugh.

—The mills at the mouth of Menominee river have closed down for the year 1887. During the past season there has been about 217,000,000 feet of lumber cut by these mills besides a large quantity of lath, shingles and picket.

—The lake receipts at Buffalo for the season amount to 258,000,000 against 285,000,000 feet the previous year, a slight falling off, and the canal shipments amount to only 56,000,000 in round numbers against 83,000,000 the previous year.

—About 100,000,000 feet of lumber was cut at Cheboygan, Mich., the last season, the largest ever recorded. It falls about 25,000,000 feet short of the amount anticipated at the start, but is about 20,000,000 feet in excess of the cut of 1886.

—The Tonawanda and Buffalo dealers have, the past season, labored under the serious difficulty of a short supply of cars. Some dealers in the two markers declare that they could have shipped a third more lumber if they had been furnished a sufficiency of cars.

—From New York we learn that the export demand continues light in all directions. The near future may produce a reaction, as several features of the market are undergoing a change that will benefit us. The River Platte trade is about to begin from this port, and things look brighter in the direction of the West Indies. Trade with Australia and Africa is dull.

—Wages in the Michigan woods, it is believed, will average two or three dollars per month the coming winter better than last. In some portions of Wisconsin, it is reported, there is a larger increase than the above. In the vicinity of Wausau, Wis., men who received $26 last winter are getting from $30 to $33, and teamsters, loaders and choppers are offered $40, and some very desirable men are even offered $45. This rate of wages is about equal to the years 1871 and 1872, previous to the panic.

EUROPEAN NOTES.

—The London timber market is unusually heavily stocked this winter.

—The London mahogany and hardwood market shows signs of increased firmness every week.

—There will likely be an advance in London shipping rates at the opening of navigation next spring.

—Advices from Glasgow go to show that the outlook for the winter's work on the Clyde is pretty good.

—The preparatory works for the commencement of the Manchester Ship Canal are being pushed on vigorously.

—The timber trade throughout England and Scotland is showing very satisfactory signs of improvement, especially as regards hardwoods.

—Private transactions in the lumber world are becoming more numerous than heretofore, and as a result auctions are not as well patronized.

John H. Burrell has retired from the firm of Alfred Dobell & Co., Liverpool, Eng., timber merchants and brokers, but business will be continued under the old [illegible]

There has been a rise in mahogany on this side of the water, and principally owing to this fact cedar has gone up also. The stocks in the latter line are very much reduced, and consumers are showing a better disposition to purchase.

Deals from Quebec and Montreal, to the Glasgow market, imports of which were large in the earlier part of the [illegible] and ran considerably ahead of last year's at corresponding period, are now in total quantity rather behind that of last year.

The vessel *New Brunswick*, bound from Quebec to Liverpool with a cargo of timber, etc., for Messrs. Gilbert Harrison & Brothers, has again been passed derelict in the Atlantic, and from her position is a source of danger t[illegible] transatlantic steamers, as she is in the customary [illegible] by them when bound for New York.

Messrs. Singleton, Dunn & Co.'s circular, dated Glasgow, Dec. 1, says: "The trade i now realising that things [illegible] to have got past the worst, and the moderate imports of Canadian goods and Pitch Pine have begun to exercise a wholesome influence on prices. In addition to this a fair amount of tonnage has been contracted for by our shipbuilders, and [illegible] transactions of more or less importance were arranged [illegible] merchants in consequence. Housebuilding is not better, but still maintains a fair average. It may be remembered that a year ago a like condition of hopefullness prevailed in o[illegible] and in other trades, to be followed by a depression all the more felt that it came so quickly after the buoyant tone. At this time, however, there are many circumstances which point to a continuance of the improvement now felt.'

AMONG THE MANUFACTURERS.

THE William Hamilton Manufacturing Company, Peterboro', Ont., have their establishment full of work. Among some of their recent shipments of machinery are an 18x24 inch slide valve engine and equipment for a saw mill for the Georgian Bay Lumber Company; an 11x24 engine and shingle mill equipment for the Midland North Shore Lumber Company, Parry Harbor, Ont., and a lot of heavy machinery, boiler, etc., for the Haslan Lumber Company, Nanaimo, B. C. They are now building a 13x50 inch 50 horse-power Corliss engine for the new works of the W. F. Cochrane Roller Mills Supply Company now being built at Dundas, Ont.

MESSRS. W. R. THISTLE & CO., of Pembroke and Ottawa, take a place among the lumbermen's notices for the first time this month. They have started their winter saw mill at Chalk River, for supplying dimension timber, in white and red pine, car lumber, spiles, etc. We have pleasure in directing attention to their advertisement on another page.

AMONG the new advertisements contained in this issue is one from the Lake Shore Saw Mill Lumber Co., of Cleveland, Ohio. This firm are in need of about two million feet of white and Norway pine logs, principally the former, long or short lengths, which they wish rafted to their mills in the above city. The announcement will doubtless be of interest to many LUMBERMAN readers.

THE WESTERN STATES.

Special Correspondence to THE LUMBERMAN:

ST. LOUIS, MO., Dec. 28th, 1887.

It is really surprising, yet it is a fact, that the white pine lumber trade of St. Louis was as good the first part of December as it was in the first part of the month preceeding. From now on, however, the merchants do not anticipate more than a local business, and that with regular winter weather will be confined mostly for six weeks at least to urgent orders. Since my letter of December to THE CANADA LUMBERMAN prices have advanced slightly on some scarce grades of white pine. In this stock of lumber there is badly broken stocks at every point from here north on the upper Mississippi to St. Paul. Locally the yards will wind up the season to January with less by 50,000,000 or 60,000,000 feet than there was in stock at this season last year.

Davenport, a thriving city and big saw mill centre on the upper Mississippi, will in all probability get the convention of '88 of the National Retail Lumber Dealers' Association. St. Louis has made a strong bid but the directors of the association are favorably inclined to the city named. The association now numbers one thousand in good standing.

FRANK R. BIGNEY.

—Reports of scarcity of all lengths of bill stuff reach us from all directions. The cause is attributed to the early closing down of the mills through lack of logs. Dimension timber is also hard to obtain. We have not learned, however, of any advance in prices as yet.

TRADE REVIEW.

Montreal, Que.

MONTREAL, Dec. 28th.—The business done in lumber in this city this season shows a falling off. In small lots considerable is doing, but there is but small enquiry for cargo quotations, heavy consumers not being disposed to anticipate the wants of the future, although it is certain that, before long, there must be an augmentation of values. Of some kinds of lumber there is an acknowledged scarcity. Messrs. Bulmer's sale, the beginning of the month, principally of hardwood, was the biggest auction held here for some years, close on 500 lots finding purchasers at fair prices.

Should the weather be as favorable as during the past month it is very probable that extensive building operations will be carried on during the winter, and in that event higher prices in some descriptions are almost sure to rule.

Last months' sales fell off almost fifty per cent. as compared with November, 1886, and at present transactions, both at wholesale and retail, have been very much diminished.

Following are the prices ruling at this date :

Pine, 1st qual'y ℔ M	$38 00	40 00	Basswood, run of log culls out per M...	$18 00	20 00
Pine, 2nd " "	28 00	30 00	Oak, per M.....	40 00	50 00
Pine, shipping culls ℔ M.....	14 00	16 00	Walnut, per M.....	60 00	100 00
Pine, 4th quality deals ℔ M.....	10 00	12 00	Cherry, per M	80 00	100 00
Pine, mill culls, ℔ M	8 00	10 00	Butternut, per M...	35 00	40 00
Spruce, per M.....	10 00	13 00	Birch, per M.....	20 00	25 00
Hemlock, per M....	9 00	10 00	Hard Maple, per M	25 00	30 00
Ash, run of log culls out per M.....	20 00	25 00	Lath, per M.....	1 50	00 00
			Shingles, 1st, per M	2 00	3 00
			Shingles, 2nd, per M	1 00	2 00

Toronto, Ont.

TORONTO, Dec. 29th, 1887.

Heartrending wails of lumber dealers are filling the air. That embodiment of all evil, the speculative builder, by his unholy deeds has lessened very materially the profits of the dealers. Hence the wails, with more to follow.

It is something peculiar, very peculiar, that a lumberman who in the past has had to lament the loss of several shekels is quite ready to supply a bill of lumber to another of these gentlemen. The unlimited cheek displayed by an enterprising builder is amazing. No mortal having the most vivid imagination could possibly conceive of such a being as the one above mentioned. One of them will walk into an office and request figures on a bill of lumber, stating in a careless, off-hand way, as a matter of no importance, that he has purchased a quantity of land and is about to erect a number of houses ; forgetting to add that he has paid the enormous sum of $15 or $20 down, the balance in years to come. The dealer fills the bill, delighted at the prospect of making a good sale. He may receive some money when the first draw is made, with promises of more when next the draw come round. This fairy music is kept up to the last until the dealer finds, too late, that dollars have been abstracted from his coffers.

Our dealers are, par excellence, the largest hearted men in this city. They have contributed more to the building of Toronto than any other class. While the land dealer will gladly dispose of land without the payment of any sum of consequence, the lumber dealer goes one better and supplies lumber to the penniless adventurer with no security of any kind, knowing well that the material supplied will enhance the value of the property, benefiting the land dealer and him alone. It is not to add to their untold millions that our dealers do business—perish the thought. Nothing affords them greater pleasure than to drive through the city and see building after building erected with the lumber supplied gratuitously by them. So long as building is actively carried on and the demand for lumber consequently good, what care our dealers for money,—that they may lose, but the monuments erected throughout the city to the memory of almost every lumberman, afford a solace for any pang a dealer may feel when notes fall due.

The pleasure of benefiting suffering humanity, represented in the person of a speculative builder, must be intense, so much of it is done. It is painful to think of the quantity of lumber required to erect buildings throughout the recent additions made to Toronto. Our authorities did wrong in extending the bounds of this city without consulting our lumbermen. Not one but would have fought against it, as rather overdoing the thing and as taking a mean advantage of their large, extensive public spirit.

Gentlemen dealers in lumber, you are fulfilling what has been said of old—"It is more blessed to give than receive."

Business is quiet, very little lumber being sold, in some instances we have heard of pieces being cut to work off car lots. Our dealers find the stringency of the money market effecting them very much, builders not getting such large advances as formerly.

Quite a number of builders are somewhat straightened in money matters, requiring renewals, some for the whole amount and others for part. From reports circulating we learn that there is a large amount of money tied up in buildings, and that some dealers have met with considerable losses. Two months from the present may in all probability see a few changes in the trade.

Prices on the whole are much about the same, good paper demanding concessions and receiving them.

Fewer builders and concerted action among the dealers would be beneficial to all concerned.

Goderich, Ont.

GODERICH, Dec. 28th.—The market here is very quiet ; the usual holiday calm. Dealers throughout the country are preparing to "take stock," and overhaul the year's business before making a fresh start for the new year. Little will be done before the end of January. The business of 1887 has been fairly good at this point.

The expectation is growing that at no very distant date this will be a terminus of the Canadian Pacific Railway. Should this be realized all industries would be increased and benefited none more so than the lumberman's.

Prices remain as last quoted.

Ottawa, Ont.

DEC. 28th.—Very little change is noticeable in the state of trade here compared with last month. Consequent upon the holidays there has been the usual cessation in trade, but immediately after the opening of the new year we may look for the usual activity.

A large body of our lumbermen attended the sale of timber limits in Toronto the middle of the month, but made few purchases. They seemed to have made up their minds that the sale was going to be rather slow and prices small, but in this they were disappointed. Mr. Alex Fraser, of Westmeath, or Pembroke, was the largest buyer from the Ottawa district, and in fact almost the only buyer among the large capitalists. He purchased the limits in entire township of Divine some 53⅓ square miles for $182,525. The largest price per square mile obtained at the sale was for berth No. 1 of the township of Livingstone, which included eight square miles. This was purchased by J. W. Pack of Alpena, Mich., for $6,350 per square mile.

The Ottawa lumbermen, although much dissatisfied with the obstinacy of the government in reference to the ground rent and crown dues question, are rather resigned to their fate and say they expect nothing from the government.

During the past season 214,000,000 feet of lumber have been shipped by water from Ottawa, and 180,000,000 feet by rail, making a total of 394,000,000 feet, of which it is estimated 296,000,000 was shipped to the United States, while bulk of remaining 98,000,000 went to England.

St. John, N. B.

St. John, N. B., Dec. 27th, 1887.

Business has been fairly good for the month. Four mills, Hilyard's, Adams & Gregory's, Miller & Woodman's and Cushing's are still running and will not shut down until cold weather forces it. The only boom there is to note, however, is with the shingle mills, which have had a prosperous season. Three firms, Gunter, Cowan and Stetson & Jordan, are still running and the last named, having piled cedar, will run all winter. Gunter & Co. will build an addition to their mill, after closing. A further indication of the state of trade is found in the building of Miller & Woodman's new shingle mill, which will have eight machines—not twenty, as reported—and also clapboard and stave machines, with possibly a rotary. This mill, by the way, is about completed. The machines will be placed this winter and it will begin operations in the spring.

A careful estimate places the season's cut of fourteen lumber mills in this vicinity at 155,000,000 sp. ft. Five shingle mills have already sawed 55,000,000 shingles. The lumber cut is below that of last season, owing to the freshets which shut down all the mills above the harbor.

The Annagance mills are still in operation and will run until February.

Reports of the building of new mills, changes and improvements come quick and fast. W. H. Murray, of Indiantown.

is building an addition and will put in several stave and clapboard machines. D. W. Clarke & Son, of Carleton, will add planing and dove-tailing machines. Carr & Shaw and Chase & Sons will build in and near Hartland, this winter, and H. H. Vesey & Son will put up a mill at the Thoroughfare, between North and Grand lakes, in the spring. I see it stated on good authority that fully fifteen mills have been built in the province during the past season.

The value of lumber exports from this port during November was $66,772, as against $143,143 for the same month last year.

The railroad boom in eastern and northern Maine causes a great demand for sleepers and the cedar business on the Miramichi will be a lively one this season. Ten cents are paid for sleepers delivered at the cars at the Northern & Western.

The recent heavy rains will cause severe loss to lumbermen who were operating at the headwaters of the St. John.

Carleton county operators write that they are unable to do much at present besides yarding the logs on account of the lack of snow.

Robert McElroy is to be numbered with the builders of new mills, he having erected a fine one at Kirkland.

There has been no change in prices during the month, though from time to time there has been talk of an advance. Wholesale prices are as follows:

NEWS NOTES.

—Mr. John Readhead is building a new mill at St. Ann's near Lowville, Ont

—McKinney Bros., of Melrose, propose cutting cedar extensively this winter.

—The planing mill belonging to Johnston Bros., Essex Centre, has been destroyed by fire.

—Messrs. Phelps Bros., Welland, Ont., have just completed a raceway from the Welland canal through their lumber mills at a cost of $5,000.

—Mr. W. Welbanks, of South Bay, is going out of the lumber business, and the people of that berg are looking for somebody to take his place.

—The Manitoulin *Expositor* wants the export duty on logs increased from $3 to $5 per thousand. It says, Americans cut the timber, export it to Michigan in large quantities, and in cutting it give employment to a great many Michiganders.

During the past six years the value of the products of the forest shipped to the United States out of Wallaceburg, Ont., was for firewood, $808,698; stave bolts, $520,370; saw logs, $636,633; pine lumber, 205,098; oak lumber, $20,483; railroad ties $63,201, and other products, such as hoops, staves, axe handles, ect., $226,378, aggregating a grand total of exports from the Sydenham Valley of $2,480,824. The local mills there furnish the cooperage stock for nearly the whole Dominion, and at least $100,000 should be added to this, which would make the aggregate sum larger and place the yearly average about half a million dollars, or sufficient to buy 25,000 acres of timbered lands at the going prices of $20 per acre.

THE LUMBER REGIONS OF ONTARIO.

BY R. W. PHIPPS.

In all plans for improving our methods of forest management, which are frequently proposed, such as starting schools of forestry, introducing the scientific methods of Europe, and so on, one point has to be considered, that is, the system of forestry in the Old and the New World are totally distinct. In Europe, generally, lumber is felled or marked to be felled by the forest owners; the lumber merchant buys what is pointed out for sale. Here, he purchases from the government of a state or province the right to take such trees as suit his purpose. There, it is generally the case that the peasant will clear the refuse for fuel, if not, it is used in manufactures, or cared for that it shall be no source of danger. Here, it is left to lie as chance throws it. This is and has ever been the case in all North America, as far as I have known or learned. The consequence has been the destruction of many fine pine forests in the United States, for fire follows the lumberman, who is forced by this method to further wastefulness, for he cuts many young trees which would otherwise grow to large ones lest the fire take them off his hands. In Europe the forests, many of them, have been planted for the purpose, the trees stand as regularly as vegetables in a garden, and are sown, reared, and cut at stated intervals.

Immense damage has been done in Ontario, as elsewhere, by our American system, but in this Province of late years, measures have been taken to check it. A stringent fire act has been passed, demanding great care in the use of fire for camping and clearing purposes, and for the last two years a number of rangers, half paid by the government, half by the lumbermen, have traversed the country during the summer months to enforce it. They are employed on the application of lumbermen, who then become responsible for their share of the expense. These efforts are well spoken of. The plan is as yet not fully in operation, many lumbermen not having as yet applied for men, nevertheless, its success seems to have been considerable, for even through this last dry summer no fires at all so destructive as in former years have been reported.

Ontario has taken the lead in this matter. I do not know in America of such another Fire Act, nor of any body of rangers appointed to enforce one. Both have been favorably commented on in the Washington forestry reports, and their imitation pressed on the various state governments.

Though these steps will save much timber and far overpay their cost, yet we cannot say that they will effectually preserve our forests. Time must tell. The next, if any further step be taken, must be the compulsory destruction of the refuse by the lumbermen. This is a matter for careful experiment, our climate being quite different from that of Europe, and even from that of Maine and Massachusetts. For these reasons I have recommended that this be tried on a Government reservation, where its possibility and cost can both be ascertained.

The next and final step, namely, the management, replanting, and care of Ontario forests on the European system, resolves itself into a question of expense. Such a vast reform—a reform unprecedented in America, could not be expected without the sacrifice of a very considerable portion of yearly revenue, fully, I should say, one-half of what we now draw from the forests. If the people of Ontario are willing to incur this, there is no reason why the object should not be attained. There are many reasons, climatic, as far as the present generation is concerned, economic, as regards their successors, to be urged in favor of such a course.

In this article will be sketched the condition and method adopted for dealing with the lumber regions of Ontario, showing which may be called the American, as differing from the European manner of lumbering and managing the territory where the merchantable timber is found. These lands formerly included the whole Province, but the timber near the frontier being naturally the first exhausted, it may be said that in the Ontario peninsula west of Collingwood and Toronto there is little left, and that in private hands. East of this line the lumber regions extend as far as Ottawa, and passing up the Ottawa, westward, they extend along the north shore of Lake Huron (where are dense pine forests) to the Bruce Mines and Rainy River neighborhood, at the extreme west of the Province, where is still found much valuable timber. In fact, north of Lake Huron, there is much which has never been lumbered over, though a great deal of it has been overrun by fire.

The method of working these is by holding periodical sales of lumber districts, at which the highest bidder obtains the right to cut timber on certain portions, called limits, for a term which is renewable at the pleasure of the Government yearly, and practically is always renewed. On the timber cut the Government afterwards levy dues each year, in proportion to the amount cut. This, it will be seen, often gives the settler, if the land has been taken up for settlement, a joint interest in the lot with the lumberman, whose interest only extends to the timber.

The lumberman camps on the limit (if a large firm he will have many camps, and central farms and depots). He cuts such of the trees as he chooses, takes what portion of the trunk suits him, cuts it into logs, leaves the tops and branches lying in the woods, and draws the logs on sledges to the nearest water, down which they are floated to the mills, if for boards; or if square timber, continue to raft to their chosen sea-port, generally Quebec. What is sent to the mills is generally for Canada or the States, the square timber is for Europe.

What has been commonly the method practiced by lumbermen is to cut as soon as possible, the merchantable timber from all portions of their limit which are nearest to settlement, or, in other words, in most danger from fire. They will often do this, as far as they intend, in two or three cuttings, in successive years. They will then sell the right to cut to a smaller firm or jobber, who will glean what they have left. What portions they have in dense green forest, more distant from settlement, they leave till the last, or cut over it at long intervals. I was shown some which had been gone over but three times in twenty years.

I have procured during the past year, opinions from a great number of gentlemen, long resident in these districts, and intimately acquainted with the lumber traffic, as to the present position of affairs. From various portions of the country the opinion was expressed that in fourteen or fifteen years the merchantable pine would be gone. In other parts, where forests had been, for various reasons, not so accessible, many years' cut still remained. But the same principle governed all, of which I am about to speak.

When a forest is lumbered over on the above plan, vast amounts of resinous tops, branches, and portions of trunks, as well as many young trees cut down to clear the way, are left lying in the forest. Then, the continual passage of campers, hunters, fishermen and lumbermen, causes the lighting of many fires, which in a dry season are likely to set fire to the refuse above mentioned. This being very inflammable, spreads the fire through the forest, and wide-spread conflagrations are often the result. This pine refuse is the great block in the way of good management of our pine forests, and many plans have been proposed for using or getting rid of it. Among the former it has been proposed to make wood oil from it, as is done in Sweden, and wood wool, as made there and in other parts of Europe; also to use them for cattle bedding. But there are reasons against these being the true definitions sought after.

In the first place, the cause of the use of forest refuse in Europe is simple and plain. The user cannot get the forest to use; that is in the hands of some great proprietor who will not have it cut down. Next, labor is cheap and plenty, and the refuse can be gathered without great cost, or, it may be in some places, at no cost, by allowing the peasants a share for firewood of what they collect. In Canada, were an oil factory or a wood fiber factory started, its proprietors would probably find it much cheaper to buy four or five hundred acres with the forest but little touched, and to manufacture them, than they would, at our prices for labor and transport, be able to search over a large extent of forest for refuse.

It would, there is no doubt, be well that these experiments were tried here, since new industries which consume previously worthless products are always valuable. But as to the point in question, they could not solve it. Say the oil produced (it is a product not nearly as well known to the world as is the fiber) competed with our own petroleum to the extent of one-half, would the cost of half our petroleum collect and manufacture our lumber refuse? But a small part of it. Add what the wood fiber might give. Mattress and cushion filling would be its principal use, and for these purposes we now import the southern moss, which serves for the chief part of such work. Of this Canada imports about 200 tons. The wood fiber would scarcely displace more in these days of spring beds. That would take but little of our timber. I have seen as much burnt in one logging field.

The proposal to use pine refuse as litter for animals has been frequently made, but, in the first place, it could not be transported with sufficient cheapness to compete with straw, except, as in the case with our planing mills in the cities, where it is a waste product. In the next it would not be well to use it largely for that purpose, as the pine refuse injures land, and therefore renders the manure on many soils inferior or worthless.

The state of affairs spoken of above is now, as stated, much changed for the better by the action of the Government, which, in combination with the lumbermen, have for the past two summers had a large number of fire rangers engaged in enforcing the Fire Act, long a dead letter, which demands extreme carefullness in setting out and extinguishing fires. I find from the above mentioned correspondence that this has in many parts of the lumbering districts had an excellent effect.

Some letters received mention that the lumbermen in their districts have not yet secured the services of fire rangers, as offered by Government, but that they are expected to do so. A frequent cause of forest fires which should be especially guarded against is mentioned in a letter from Peterboro', concerning people who cut marsh hay. "I do not think the settlers are the cause of many of the bush fires that destroy so much of our valuable forests; in fact they are interested in fires not spreading, as they are in great danger of being burned out themselves. The fires that have done most damage in this section are not from settlers clearing, but fires from camping parties and people who cut marsh hay. When everything becomes dry in summer they will set fire to the old grass in these marshes to clean the bottom and produce a better crop. These marshes being largely in the pine forest, the fire gets into a large tract of timbered land, destroying wealth untold. I know whereof I speak in this matter. During my seventeen years' residence in this section I have frequently seen, at a great distance, large volumes of black smoke rise up. At once I have enquired where the large fire was, and invariably the answer was, 'O, it is in such a marsh; there is a lot of hay that was not cut last year and some one is burning it.' It is true the marsh burns over, and so does the pine adjoining. The settlers get the blame, although in most cases there is not one within miles of where the fire started."

The question having been asked whether persons found it possible to obtain land ostensibly for settlement, but really to take pine, bark, etc., for sale, and abandon the lots. About 30 answers state it impracticable, in their localities, to any extent, owing to the action of the regulations; but letters from Victoria, Renfrew, Hastings, Peterboro', Parry Sound, Muskoka and Algoma, state that it is yet to some extent carried on—sometimes for bark, sometimes for pine—the settler being allowed to sell what he cuts down in the course of clearing. Underbrushing has been interpreted to be the course of clearing, as it no doubt is, but the idea given is that the parties never intend to complete it; but leave when the pine is sold.

The situation throughout the lumber districts may be stated in this manner, so far as the method of cutting previously spoken of is concerned—that is, cutting all merchantable timber in exposed localities lest fire run through it. The fire rangers have been out but two seasons, and not in all localities, or a considerable number of lumberman have not yet availed themselves of the offer of the Government to pay half the cost, if the lumbermen apply for men. The lumbermen therefore, generally, are not in a position to judge whether their claims are now sufficiently secure to warrant them in leaving the small and medium trees to grow to large timber. As soon as this is the case they will undoubtedly do it, for there is little profit in small trees. But there is no doubt, even with the men now out, much good has been done, and the forests are immensely more secure. As soon as the rest of the lumbermen adopt the plan, which will be, I should judge, almost immediately, so ardently did many of them express themselves in its favor to myself, it is highly probable that an entirely different state of affairs will be inaugurated in our forests.

Without some security against fire, the lumberman has no inducement to preserve the forest. In good forest economy, he should leave his medium sized pines till they grow to be large, and then cut them. But if he did, in the intervening years, they were very liable to be swept off by fire, set by careless settlers, hunters, or by even his own men. There were—and are, it is feared—men even unprincipled enough to fire valuable pineries that they might get a little work in saving what pine could be secured from the wreck before the borers got at it. All around him a lumberman's limits are insecure—what was a forest to-day might be a *brule* in a fortnight. It was no wonder he too often took what he could, irrespective of growth. But, with a sufficient number of caretakers during the "fire months," the cost of which is trifling, compared with the property saved, a different state of things will arise. The lumberman will be careful both to leave uncut what will pay him better in future years, and will endeavor so to use what refuse is unsaleable or saleable, so that it shall not constitute a source of danger. Many expedients hitherto impossible will then be tried. There is much to be done, but in the appointment of fire rangers a great step in advance has been taken, and an important experiment attempted.

In forest as in ordinary police matters, it is not because the individual inclined to offend has himself been previously punished for offending, and therefore abstains from repeating the offence, that property remains tolerably secure. It is that some individuals are known to have been punished, and that the officers are known to be on the watch to detect others. It is not too much to say that in past years the Fire Act has been a dead letter. Lumbermen, settlers, hunters, fishers, set fires as they please and extinguished them if they chose, which last was seldom the case. The resultant damage was, as might be expected, immense. Fires smouldered in logs till drought and high winds excited them to action, and there was no one to stay their ravages except the immediately interested lumbermen, who thus are always interested in "cutting clean" and leaving nothing, in which case the fire, when it followed, although it destroyed many thousand fine saplings, the hope of future forests, yet did not injure themselves, they having taken all which was saleable before. But now what may be expected is as follows:

Word will, after a few convictions and punishments, go through all these districts, indeed through some it has already gone. The fisher, the hunter, the geologist (sometimes the worst ofall) will be warned at the taverns where they stop. "Youmust mind your fires; so-and-so left theirs, and were tracked, summoned and fined." For fire is a thing that leaves its plaintraces, and if the rangers follow out the instructions carefully, affords every opportunity of proving the effects of their carelessness against those who misuse it. The effect will be that thosewho set fire at their camps will extinguish them (they are always near water), and that those settlers who burn fallows will notify their neighbors before doing so, and will take far greater pains to prevent the spread of the flames into the forest beyond their clearing.

A suggestion is made in a letter from Nipissing concerning the danger of pine rubbish left in the bush. He thinks that much of the evil is owing to part of the top of the tree containing one, or sometimes more, knotty but still merchantable logs, being left lying, the lower part of the tree being taken. He proposes that all logs so found should be charged dues, and says: "If lumbermen knew that they were to pay a duty on that left, which competent men could easily prove and could not be gainsaid, there would be removed the very thing which causes bush fires; the top logs being resinous or pitch, and which would be considered valuable timber on the second or third cut, but it is useless then as the worm has got into it. Perhaps the lumbermen may say they could not afford to pile the brush tops; I say it will pay them.

As has before been noticed, Ontario is now trying throughout her lumber territories the experiment of stationing during the dry summer months a large number of fire rangers to enforce the Fire Act passed some years ago. This step was advised by many people throughout the Province long acquainted with lumbering operations, and its results are now being observed. There is no doubt whatever that this will save annually a large amount of valuable timber, and prevent many fires. The question now to be anxiously considered is, whether it will prevent them to such an extent as to give practical security to the lumberman in leaving the smaller pines to grow to a large size. It has been the practice hitherto in all outlying forests or those considered in danger of fire, to cut every tree from which a tolerable log could be taken, as there was very little likelihood that, if spared, the fire, which frequently followed the lumberman's operations in consequence of the quantity of refuse he leaves on the ground, would allow it to grow. It is to be hoped that the appointment of fire rangers will effect a total change in this.

This experiment is, as before remarked, in America, unique. The habit of the North American lumberman has ever been to cut the trees, leave the refuse, and risk the fire. Under this system, we may say, the northern States of the American Union have practically destroyed their pine forests. Having been in communication lately with officials of most of the States on the subject, I have not been informed of a single state maintaining any fire rangers whatever; I have therefore great hopes from this experiment here. Without it the chances were that in from twelve to twenty years many of our present limits would be valueless for pine; with its aid the pine will last much longer than otherwise.

OFFERS INVITED.

Present Aspect of the Lumber Trade in Great Britain.

We are glad to note from a persual of the late circulars from Great Britain, that there seems a break in the dark sky, which has so long hung over the lumber trade there, and that the outlook if it does not warrant the expectation of a boom, certainly indicates a much healthier state than has existed for a long time, and the prospects of considerable improvement in price of Canadian woods. This cannot fail to have its reaction here, and must help to improve our markets.

Messrs. Allison, Consland and Hamilton, in their circular of 1st November say :—"The private sales are probably in excess of any other months this year—orders for vessels estimated at 37,000 tons have been contracted for, and there are more to follow ; our shipbuilders have been in the market and bought several lines of yellow pine deckwood, teak and pitch pine, and a continuation of the demand is looked for from this source."

A noticeable and regrettable fact from the same circular, we observe that the imports of Canadian woods to Glasgow have considerably declined, the past years. The number of ships from B. N. America to Glasgow in 1883 was 107, with a tonnage of 97,825 tons. This has since yearly decreased. In 1887 the arrivals were 55 vessels total tonnage 45,172.

We understand, however, the stocks in the Clyde in most lines of goods are moderate, so that an improvement in demand, and prices at this peculiar moment, the end of the import season, is a good augury of considerable improvement during the period which must elapse, from now until opening of navigation here next spring.

Turning to London market we find an even more encouraging state of things. Messrs. Churchhill & Sims, in their circular of 1st November, in referring to tabulated statement of stocks, arrivals, deliveries, &c., say: —"These figures are more favorable than those of the preceding month, owing to an unusually light importation and to a rate of delivery from the docks, which equals that of last year, and with regard to price there has also been some improvement. The quantities sold have been of no great importance, but quite sufficient to test the strength of the market ; they have been taken readily by the trade at figures, which could not have been reached in the summer. It will be seen that there is now a considerable reduction in the stocks." And further on they say: "Canada—the importation has been from the St. Lawrence Pine deals, &c., 1,440,000 pieces, against 1,827,000 pieces in 1886. Spruce deals, 1,018,000 pieces, against 1,370,000 pieces in 1886. And from New Brunswick, Pine deals 17,000 pieces against 75,000 pieces in 1886. A very important reduction throughout. As yet no start has been made in prices and the stock of pine is still too large for the hope of any great or immediate improvement. With spruce the case is different, the stock taken altogether is of small matter, and when the lowness of price is considered, it is scarcely possible that the trade should not see a change for the better."

This is certainly comforting news, especially for our spruce manufacturers, and no one will begrudge them as they have had the hardest row to pull during the depression, and all will rejoice if the tide now turns in their favor, as our readers are no doubt aware the spruce deal trade, outside the Ottawa Valley is the chief one in the lumber trade of this Province, and any improvement therein means improvement in that which specially and directly benefits our Province.

As far as the pine deal trade is concerned, it is of course to be regretted that stocks are still large in London, but they are, we understand, held in strong hands, and are not therefore, likely to be sacrificed. The pine deal manufacturers, however, have it in their own hands to regulate this. The United States markets offer them an outlet, as good or better than the United Kingdom markets for their lumber, and if they cut no deal for simply one season, it would quickly right the demand and value of pine deal in the United Kingdom. And they could do this, and that even to advantage in a pecuniary sense, for we believe the United States markets are capable of absorbing all the lumber they can turn out next season, and at good paying prices.—*Quebec Chronicle.*

WHAT THEY SAY OF US.

In addition to the large number of complimentary references to THE LUMBERMAN published in the December issue, we subjoin the following from the press of Canada and the United States :

Southern Lumberman, Nashville, Tenn.

The CANADA LUMBERMAN, published at Peterborough, Ont., came to hand in November in a bran new dress and greatly impoved in all respects. We tender our congratulations upon its success and our best wishes for its continued prosperity.

Chatham Planet.

The CANADA LUMBERMAN, published at Peterborough, is a monthly, and typographically a very excellent journal. We cannot judge as to its contents, whether it properly subserves the interests of those for whom it is published or not, but it appears to be equal in substance to its appearance. A. G. Mortimer is the editor and proprietor.

Railway Life, Toronto.

The last issue of the CANADA LUMBERMAN presents a great advance in typographical appearance over former ones, good as they were. Not only has an entirely new dress of type been secured, but better paper is used, the size of the journal is increased, and in every way the LUMBERMAN presents the appearance of a thoroughly successful newspaper. At the same time the editorial management is even more vigorous than before, and altogether in this wide-awake journal the milling and wood-working interests of Canada have a representative in the newspaper world of which even so large and important an industry may well be proud.

Sherbrooke (Que.) Gazette.

We are glad to see our old friend the CANADA LUMBERMAN in a new dress, remodelled and with handsome type. We have always found it a most useful and trustworthy authority on everything connected with the lumber business, and in addition it contains a vast amount of interesting matter. It is published at Peterborough, Ont., and all engaged in this industry should subscribe to it.

Lumber World, Buffalo, N. Y.

Our Canadian cotemporary, the CANADA LUMBERMAN, is out in a handsome new winter dress of type. It presents a neat appearance typographically, and it has made notable improvements in the character of its contents. We congratulate Editor Mortimer on the success he is achieving.

Northwest Review, Winnipeg.

We have received the CANADA LUMBERMAN for November. From our perusal of it we judge it to be of much value and interest to the trade. It seems very complete and well edited in all departments. Peterborough has for many years been known as the headquarters of very large lumbering interests.

Petrolia Advertiser.

We have received the new number of that enterprising sheet, the CANADA LUMBERMAN, and have no hesitation in pronouncing it one of the best gotten up periodicals, mechanically, in the Dominion. The LUMBERMAN must be invaluable to those interested in the business, and we wish Bro. Mortimer every success.

8TH YEAR OF PUBLICATION. $1 PER YEAR, IN ADVANCE.

THE CANADA LUMBERMAN

STATISTICAL EDITION.

We have now in course of preparation the SECOND ANNUAL STATISTICAL EDITION *of The Lumberman,*

SIX THOUSAND COPIES

of which will be issued FEBRUARY FIRST, NEXT, *and circulated among the trade throughout Canada, the United States and Great Britain.*

This issue of THE LUMBERMAN *is intended to surpass, both in size and variety of contents, anything heretofore produced from this office. Arrangements are being made whereby every province in the Dominion will furnish a complete budget of news of interest to every man engaged in the lumber, wood-working and kindred branches of trade. The result of the past year's operations and the prospects for the coming season, will be fully set forth, while the list of technical contents will be unusually large and complete.*

No better opportunity has yet been offered Manufacturers of Saw Mill and Woodworking Machinery and Appliances, Wholesale Lumber Dealers, Etc., to introduce their business to the trade in general. The tariff of advertising rates for this edition are sufficiently low to commend the publication to all judicious advertisers.

From the rates specified below, advertisers will note that, if a series of insertions are ordered, they will gain all the benefit of the special issue at contract rates, which will be be furnished on application.

TARIFF OF RATES FOR SPECIAL ISSUE:

TWO PAGES,	$55 00	QUARTER PAGE,	9 00	THREE INCHES,	$2 75
ONE PAGE,	30 00	EIGHTH PAGE,	5 00	TWO INCHES,	2 00
HALF PAGE,	17 50	FIVE INCHES	4 25	ONE INCH,	1 25
THIRD PAGE,	13 00	FOUR INCHES,	3 50	[Size of Page 9x12½ inches.]	

Advertisers contracting for half or whole page advertisements can have descriptions of machinery and illustrations of same inserted among reading matter at the rate of $7 per column. Those not having displayed advertisements will be charged at the rate of $10 per column.

We beg to remind you that during the months of February and March Canadian lumbermen are fitting up their mills for the season's trade ; discarding old machinery and putting in new ; and for this reason, at no other time during the year will an investment in advertising pay as well. As the work is large and time short, intending advertisers will please let us understand their intentions at the earliest possible date.

A. G. MORTIMER, Peterborough, Ont.

The Big Raft Adrift.

A mountain of timber weighing 9,000 tons, or 18,000,000 pounds, is adrift on the ocean in the direct path of navigation, without beacon light or anything to warn passing vessels of its dangerous presence at night, threatening destruction to everything which may come in contact with it. The great raft broke loose from the steamer *Miranda* on Sunday morning, Dec. 11th, about eleven miles off Nantucket.

Captain Leseman, of the steamer *Miranda* said : "We left Two Rivers N. S., on Dec. 9th. No difficulty was experienced with our monster tow until the 11th, Sunday, when there came up a south-easterly gale, with a heavy cross sea. Finally the fifteen-inch hawser parted with a noise like the report of a cannon. The steamer immediately forged ahead and the extra strain on the ten-inch hawser and the bit to which it was attached, pulled the latter clear out of the deck, ripping up the flooring for a space of fifteen feet. There was a heavy fog at the time, and the raft immediately drifted out of sight. We did not spend any time looking for it, but steamed away as rapidly as possible to avoid any chance of collision."

The raft was valued at about $50,000, and was uninsured, no underwriters being willing to accept the risk at this season of the year.

Mr. James D. Deary, the owner of the great raft, was very indignant at the failure of the steamer to bring it safely into the port of New York. He said : "It seems that when the *Miranda* left Port Joggins she was only provisioned for seven days' voyage, and, in consequence, on Thursday last there was but half a barrel of flour on board for thirty men. For three days the men were on half rations and when the hawser broke, instead of waiting in the vicinity of the raft as Captain Leseman was instructed to do in case of such a contingency, he immediately came to New York, as the men were half starved. Another fact which made it necessary to put into port was that the oil on board gave out and the machinery had to go without oiling for some time. There was a scarcity of light on board, which is also attributed to the same cause. I contracted with Bowering & Archibald to bring the raft to this port for a certain sum and they tried to do it too cheaply. I sent the agents a note last night instructing them to dispatch a steamer immediately to search for the raft, which they refused to do. I will charter the first suitable steamer I can lay my hands on and if she fails to find the raft I will bring suit against Bowering & Archibald for the whole cost, $32,000. I am convinced that if proper care and discretion had been exercised the raft would have arrived in safety."

Secretary Whitney has instructed Commodore Gherardi, in command of the New York navy yard, to send a naval vessel on a cruise after the Nova Scotia lumber raft adrift in the path of European vessels, to warn them of its presence.

The *Canadian Gazette*, of London, Eng., urges that the Dominion Executive be invested with the power to prohibit a repetition of the raft enterprise, with a view to the grave danger to navigation so caused.

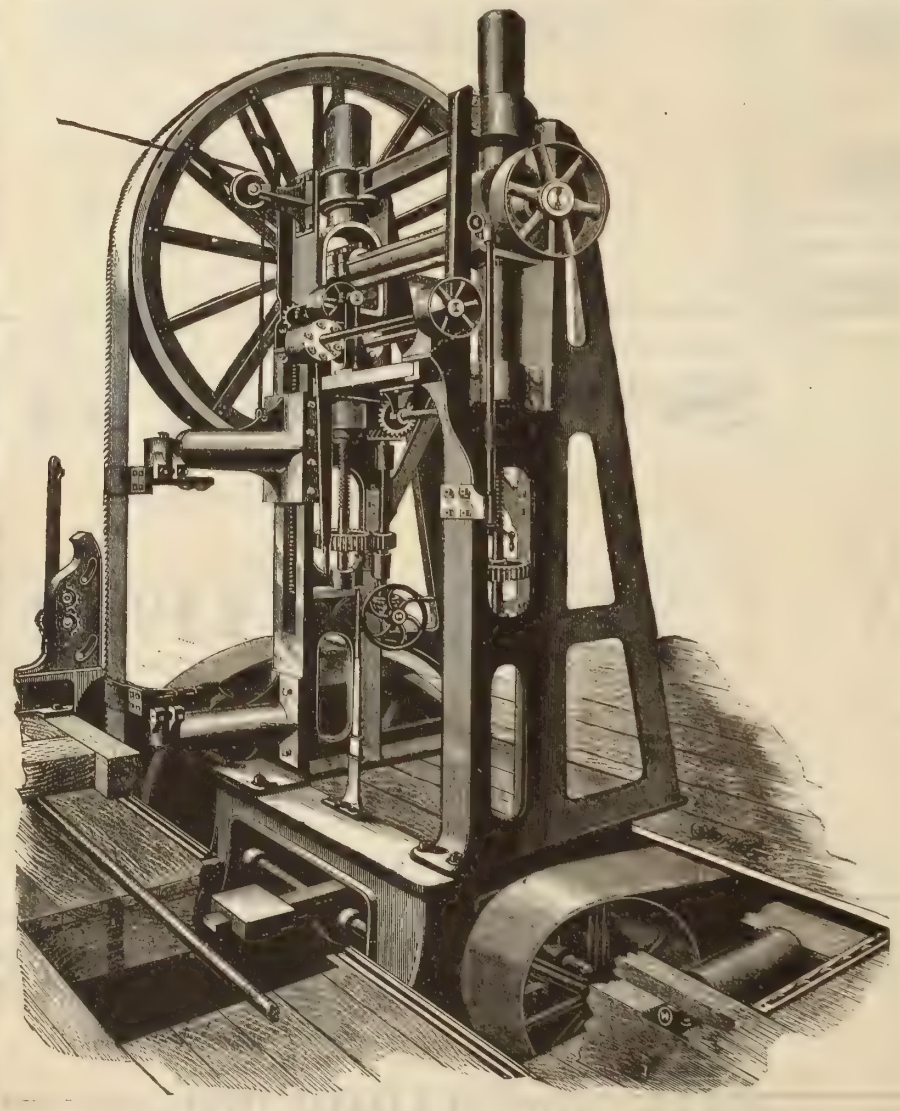
MILLWRIGHT * AND * MECHANICAL * ENGINEER,

Patentee and Builder of the

ESPLIN BAND SAW MILL

The Only Perfect Mill in Use.

THE following statement of Dimensions will give some idea of its proportions: Diameter of Wheels, 8 feet; diameter of lower and top Wheel Shafts, 5⅜ inches; length of Lower Shaft, 8 feet 6 inches; length of Top Wheel Shaft, 8 feet 4 inches; length of Bearings for Wheel Shafts, 18 inches; Weight of Mill alone, 22,000 Pounds.



ENDORSEMENTS

IN ABUNDANCE.

The Following is Only a Sample:

ASHLAND, Wis., Nov. 10th, 1886.

CHAS. ESPLIN, ESQ.,

Minneapolis, Minn., U. S. A.

DEAR SIR,—The band mill placed in our saw mill by you we consider the best and most complete band mill we know of. It has advantageous features which we have not seen in any other mill. The strength of all its parts is ample for every demand upon it. It is massive. The guide arms in their proportions and adjustments seem beyond improvement. The drive wheel by taking up the tension of the saw from below is a great advantage gained. The long distance between the bearings of the upper wheel shaft steadies the motion and the whole machine moves with ease and steadiness.

We have never seen lumber so perfectly manufactured as made by this band mill. The mechanic that planned it and the company that manufactured it deserves the congratulation and thanks of all manufacturers of lumber,

Very respectfully,

SUPERIOR LUMBER CO.

John H. Knight, Secretary-Treas.; D. A. Kennedy, Supt. and General Manager.

Address, CHAS. ESPLIN, care of Wm. Hamilton Mfg. Co., Peterborough, Ont.,

IMPORTANT NOTICE TO THE PUBLIC.

* * *

I am patentee and owner of Canada patent, No. 42,357, Improvement in Band Saw Mills, which covers a Band Mill with two columns. I am also patentee and owner of Canada patent, No. 42,377, Improvement in Band Saw Guides, which covers wheel guides for a Band Saw. I am informed that a Band Mill is being offered to mill men in the Dominion, containing two columns that is an infringement of the above patent. The public is hereby warned against purchasing such Band Mill, as I shall hold the purchaser responsible for the infringement of my said patents, and for all damages which I may have, or may hereafter sustain, on account of any unlawful use of said patents.

The Wm. Hamilton Mfg. Co., of Peterborough, Ont., is authorized to build and sell Band Mills under my patents. * * * * *

FRANK W. WHEELER,
SHIP BUILDER,
Specifications and Estimates Furnished on application.

[A TRUE COPY.]

WEST BAY CITY, Mich., June 26th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

I have been running your Pat. Band Saw Mill in my new ship yard mill for over one month, squaring up large and long hewn oak timber which has been hewn a sufficient time to be dry and hard on the surface and sawing long plank from same kind of timber. The timber or Keelsons squared was laid up in a vessel, one on top of the other, and fitted as well as could be done by hand, it being square, straight and out of wind. I have had a large amount of this plank and timber sawn, and have not yet found a bad cut. I have squared timber where the saw here and there barely cut the thickness of the saw kerf, yet the saw did not deviate the least from a straight line. From the nature of my work I cannot give any idea of the amount cut in a given time, but the speed of cut should be satisfactory to any one. The most difficult part of my work is in sawing tamarac ship knees, yet the machine has given me entire satisfaction in this respect, sawing a root having a cut of from 2 to 4 feet, making in every case a true cut.

I do not believe that a saw has been put on the machine in good order, as I have not a sufficient number of saws to give time to dress them well and keep the mill running, yet there has not been one broken or disabled, in fact, a saw must be in bad order that will not run in a straight line when run over your guide wheels.

Yours, truly,
F. W. WHEELER.

F. W. WHEELER'S SHIP YARD.
WEST BAY CITY, Mich., June 25th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

DEAR SIR:—I have been engaged in running band saws for the past five years, and I never before found anything equal to the Band Mill built by you, that I am now filing for. I must say that it is almost impossible to made a bad line if the saw is in any kind of order. We are cutting hardwood, principally long oak, and on account of being scarce of saws we have run our saws for five hours and cut as fast as we could conveniently handle, without making any perceptible variation in the cut. I have run various kinds of mills, but never before saw anything to equal it. There has been quite a number of millmen examining it, and all give it up to be the best and truest cutting mill they ever saw.

Respectfully yours,
JOHN A. GREGG.

BAY CITY, Mich., Nov. 15th, 1887.

Mr. D. K. Allington, Saginaw, Mich.

DEAR SIR:—Having had considerable experience with Band Mills, I consider myself competent to judge the merits of the same. I started and run one of your Band Mills at Victoria Harbor, Ontario, which was manufactured by the Wm. Hamilton Manufacturing Co., of Peterborough, Ont. I also started and run your two Band Mills in William Peters' mill, at Bay City, Mich., and must confess they are superior to any Band Mill I have ever seen, for quality and quantity of lumber produced.

Respectfully, yours,
W. A. McCLENATHAN, Filer.

WEST BAY CITY, Mich., June 24th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

DEAR SIR:—I have been sawing on your Band Saw Mill for the last month, making plank from long square oak timber, partially seasoned, and being short of saws, do not have time to have them put in in the best of order, and have to run them five hours without changing, yet I have not broken a saw or made a bad cut, the machine running smoothly, and not having cause to stop for any reason but to change saws, and cutting as fast as other band saws I have run.

Yours truly,
THOMAS GRAHAM.

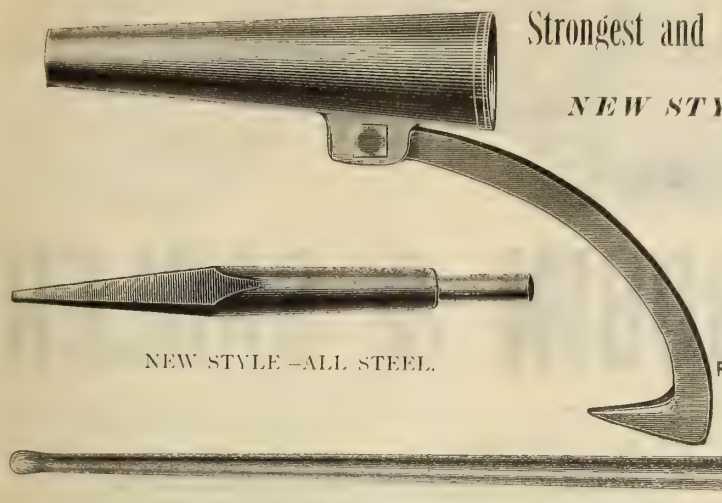
D. K. ALLINGTON,

MANUFACTURER OF IMPROVED BAND SAW MILLS

No. 24 Hoyt Block, East Saginaw, Mich., U. S.

The ORONO CANT DOGS.

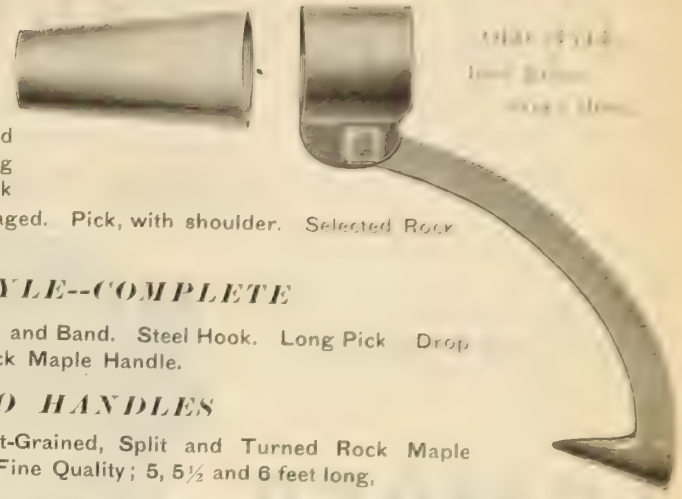
Strongest and Lightest in the Market.



NEW STYLE—ALL STEEL.

NEW STYLE—COMPLETE

Socket is in one piece and extends above hook, adding strength. Drop Forged Hook and Round Bill; easily disengaged. Pick, with shoulder. Selected Rock Maple Handle, specially bored.



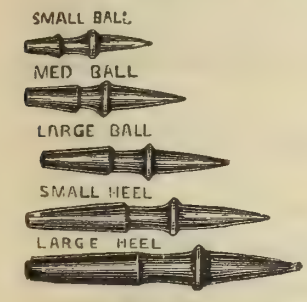
OLD STYLE—COMPLETE

Wrought Norway Iron Socket and Band. Steel Hook. Long Pick Drop Forged Hook, Round Bill. Rock Maple Handle.

TWO HANDLES

Selected Straight-Grained, Split and Turned Rock Maple Handles. Extra Fine Quality; 5, 5½ and 6 feet long.

LUMBER DRIVER'S BOOT CALKS



Made from the best Refined Tool Steel and forged. The method used in tempering leaves every one of the same temper, rendering them stronger and more durable than any other Calks.

JAMES T. MILNE.

Millwright and Draughtsman, and Builder of

Milne's Oscillating Steam Gang

SOLID WHEEL BAND MILLS AND GANG EDGERS.

These Mills in Strong Timber Frames, containing Foundation, Engine and Sawing Movements, built at any point.

LONGFORD MILLS, Ont., May 26th, 1887.

JAMES T. MILNE, ESQ., Peterborough, Ont.

DEAR SIR,—In reply to yours, I wish to say that the Feed Works on our Iron Gang are giving the best of satisfaction. They are running just as you put them in in 1874, not having cost us a cent for repairs. We prefer the wooden pulleys to iron cores. I have examined Models and Drawings of your Oscillating Steam Gang, and Timber Frames. This is just what is wanted: a stronger straight column frame, containing the foundation, engine-power, sawing resistance and oscillating movement. Your sawing movement has been tested, and in doing away with side rods and slides you have overcome a great trouble and expense, at a like gain of power and speed. Placing the engine under the saw frame is also a great advantage, in giving speed and steam-cushion to ends of stroke. The upper valve in the engine giving more steam on the downward or cutting stroke, is also in the right direction. I like your Self-Acting Rolls, taking their power from main column under saw-floor. Your device for cutting crooked logs is also good. It will give us better lumber, more of it, and less slabs and cut-offs. I am glad your Gang is a success, and no one is better pleased to see you still ahead than,

Yours truly,
ROBERT CALDERWOOD, Foreman Longford Mills.

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

MR. Hotchkiss, U. S. Consul at Ottawa, who was engaged for many years in the lumbering business in the United States and Canada, has received a number of letters from publishers of lumber trade newspapers and gentlemen engaged in the lumber business in Michigan and Wisconsin asking him what the probable effect would be if the American duty of $2 per thousand feet on Canadian lumber was removed. He has sent an answer to all such inquiries to the effect that, in his opinion, the price of lumber in the American markets would not be affected by the free admission of the Canadian product, and that the removal of the duty would simply mean $2 a thousand feet in the pockets of the Canadian lumbermen. Mr. Hotchkiss does not believe that the export of lumber from Canada would be sufficient to reduce the price of lumber at any point in the United States. The output from Ottawa, no doubt the greatest lumber centre in Canada, is not probably over 300,000,000 feet annually—not more than enough to supply the wants of one good-sized American city.

IN the last issue of this journal was given particulars of the loss of the noted Joggins timber raft, the whereabouts of which was at that time unknown. It has since transpired that the United States steamer Enterprise found the huge mass broken up about 250 miles south-southwest of Sandy Hook, and about 135 miles from the place where the steamer Miranda left it. Immense quantities of logs were found floating in every direction, and the fact was soon learned that the great raft was an entire wreck. Something more than $50,000 has been expended in this experiment, and the attention of the whole lumber world has been attracted to it. The loss is almost, if not quite, a total one, and the failure is so complete that the probabilities are that no similar attempt will again be made. Even should this prophesy not prove correct there will, in all probability, be steps taken by both Congress and the Dominion Government to prevent another raft becoming a danger to commerce.

MR. FRENCH, M.P.P., for Leeds and Grenville, has introduced a bill into the Ontario Legislature for the appointment of fire guardians for the prevention of bush fires. It is founded on legislation in force in the Western States and Manitoba, which has been found to work beneficially in those localities. It delegates to the township councils the power to appoint fire guardians who may be either pathmasters, fence viewers, or other competent persons. No person is to be allowed to start a bush fire for the purpose of clearing lands without the written permission of the guardian after he has viewed the locality. The guardian will be paid by fees to be collected from those requiring his permission. In bringing actions for damages for loss caused by bush fires it is often difficult to prove negligence. Mr. French's bill makes the omission to procure the fire guardian's consent a *prima facie* evidence of negligence. The measure is another step in a good direction and ought to be adopted. If such a scheme were carried out it would do much to prevent those destructive bush fires which have destroyed so much valuable timber.

SINCE the late Government sale of timber limits there has been a brisk demand on the part of American operators for Canadian limits, chiefly in the Nipissing and Algoma Districts. There have been some sales but holders of limits are disposed to ask high prices, and the tendency is to hold in the expectation of a considerable advance in values, owing to the growing needs of Americans and the rapid exhaustion of their supplies. The possibility of the speedy removal of the American duty which would, of course, result in an enormous expansion of the export trade to the United States has a decided influence in stiffening prices. Many Michigan lumber operators are turning their attention towards the timber resources of Ontario, and negotiating or prospecting with a view to the purchase of limits in the province. A number of estimators in the interest of these wealthy firms have lately gone into the bush to make investigations and important transactions are likely to be reported before long.

THE Provincial Legislature of Ontario was opened on the 25th ult. by Lieut.-Governor Campbell. The speech from the throne, which was of unusual length, contained the following reference to the lumber trade, and the recent increase in timber dues :—

"The value of our timber limits having greatly increased of late years, it was recently thought that the time had come for making such advances in ground rents and timber dues as should bring to the provincial revenue a substantial increase without being unfair or oppressive to persons engaged in the lumber trade. Certain increases were accordingly made ; and that they were not unreasonable or inopportune has been shown by the large prices obtained for limits at the timber sale which was afterwards held."

It is proposed to increase the number of ministers by separating the Department of Agriculture from that of the Provincial Treasurer. Mr. Dryden, of South Ontario, a practical farmer, and one of the old-time members of the Legislature will, in all probability, be the new Minister of Agriculture. Hon. Mr. Pardee, whose health has been very poor for some time, is not expected to be present in the House during the session, as it is understood that he will shortly leave for Florida. Among the bills foreshadowed by the speech is one for the separation of Parry Sound and Muskoka from the adjoining counties for certain purposes.

A CASE of special interest to the holders of timber limits, and which forcibly illustrates the evils of the present uncertainty of jurisdiction as between the Dominion and Ontario Governments is among the subjects now before the Ontario government for action. It affects the title of extensive limits, comprised in townships Nos. 75, 76 and 83 in the Algoma District, which were sold by the Ontario Government in 1872, and since that time have changed hands two or three times. In 1884 the territory was claimed by the Indian Department under the Robinson treaty, for the purpose of an Indian reserve. The timber rights were sold by the Dominion Government for $316, to Honore Robillard, now M.P. for Ottawa, who resold them shortly afterwards for about $55,000, to parties by whom lumbering operations are now being carried on. The holders of timber limits from the Ontario Government include the estate of J. D. Smith, Baldwin & Murphy, Klock & Co. and others who have urged upon the Provincial Crown Lands Department, the necessity of protecting their rights. In consequence an application has been made by the Government, to restrain the cutting of timber by the present holders of limits granted by the Dominion. The results of the suit will be watched with much interest. The doubt as to the validity of the title granted by the respective governments has been a serious drawback to the development of the timber resources of North-western Ontario.

THE name of Congressman Nelson seems to be coming prominently before Congress during the present session, through his introduction of at least two bills effecting the lumber interests. In addition to the one referred to elsewhere in this issue which proposed to abolish the duty on lumber, we find that for the fourth time he intends to introduce his bill to open what is known as the Red Lake reservation. This tract of land is a part of the original Louisiana purchase which the Indians have never ceded to the United States. It is conceded that there is likely to be very strong opposition to the measure. The Michigan delegation in the House is solid against it while the Wisconsin, New York, and Pennsylvania members who have constituencies are ready to work desperately against it. The reason assigned for this strong opposition is the idea of opening up two million acres of pine country to Canadian lumbermen. Half of this lake reservation lies on the northern slope of the Rainy Lake region, and its pine would have to be floated over the international boundary to the saw mills already at work there. All that lumber would come right straight down the lakes and be sold in competition with American. Interested Canadians will watch the result of the movement, and hope to secure their bread with the butter side up.

IF what is being written by our lumber contemporaries across the lines be true, it is quite evident that wholesalers in lumber, at least in some sections, are not accumulating the "root" to an extent consistent with their inclinations. Following the balancing of ledgers for the year 1887 come up from numerious quarters a wail of dissatisfaction, telling the tale of small profits or no profits at all. An experience such as this for a period of two or three years, is not one of the pleasantest things in this life, and accordingly many of the class referred to are asking the question : "Where should I be located?" Various are the reasons assigned for this unsatisfactory state of affairs. New railroads or freight combinations let in a competition which cannot be met, compressing prices down to bare cost ; competitive markets opening up in new quarters, struggling to gain the mastery. These and other reasons seem to be the secret of such disturbing influences in the wholesale trade, and they prove obstacles hard to surmount. To those who have settled down to investigate the different locations for probable successful business enterprises in lumber, we would advise the men of capital and energy, not alone to seek new fields of labor among the forty-two states of the Republic, but also to look to the different provinces of the Dominion where there will be abundance of room for the profitable investment of their capital in supplying their own people with the products of Canadian forests. Many have already come among us, and others are sure to follow.

CERTAINLY the fate of the big raft is not calculated to encourage further attempts to convey logs to the markets of the neighbouring republic in this manner. Under other circumstances more propituous to it, success might have been achieved, but the fates seem to have been against the venture from the beginning. The insufficient strength of the ways preventing the first attempt at launching the huge mass, the compulsory relinquishing by the tug of the reconstucted raft, and its breaking up at sea before it could be recovered, gave one heavy blow after another to the enterprise. Anyone of them might be possibly avoided with suitable precautions, even the whole of them might be escaped, but altogether, they point to an aggregate risk that must have a deterring effect. The loss in material, in labor and other expenses and in time, must have been very heavy, amounting to far more than several successful ventures would recoup. The risk of heavy loss seems dis-

proportionate to the saving that might be made. The exact whereabouts of the remains of the raft seems uncertain. Various vessels report seeing portions of it in different localities and some of the widely scattered logs have already travelled long distances. Fortunately they do not seem to have caused any damage or even serious inconvenience to vessels. There is now some talk of building up timber into roughly constructed vessels, to be broken up on reaching their destination. This, however, is not a new device. It has been tried before and the fact that the experiment was not repeated by those who made it, would go to show that it was not very successful or remunerative. The cost of construction, of navigation and of breaking up and preparing for market with the deterioration of the timber thus treated, probably left little if any saving as compared with the usual means of conveyance.

We have to apologize to our readers for the lateness of the present number. The delay was unavoidable, being occasioned by the refitting of our office with new presses and steam power, in accordance with the increased requirements of our business. There is every prospect that we shall be able to issue the LUMBERMAN on time in the future.

Hon. Benjamin Butterworth, of Ohio, has introduced his Reciprocity bill into the Washington Congress. Its provisions are very simple, and are to the effect that whenever Canada throws off the duty upon "all articles of trade and commerce, of whatever name or nature, whether products of the soil or the waters of the United States, or manufactured articles, live stock of all kinds, and all minerals or products of the United States," the American government will remove the duty on Canadian imports. The stiffest protectionist in the country can support a bill like that unreservedly, the contingency upon which it will become operative being so exceedingly remote.

It is understood that the Dominion and Ontario Governments have agreed upon a bill to be submitted to the Imperial Government, fixing the boundary between Ontario and Manitoba. As regarding the northern boundary of Ontario, it is estimated that propositions have been made which are likely to result in fixing conventional lines, as the boundaries of both Ontario and Quebec, as well as the line between the northern portions of those provinces. The vexed question of provincial boundaries has been the source of much trouble and uncertainty to the holders of timber limits, and its speedy settlement one way or another is much to be desired.

The current issue of THE LUMBERMAN is intended to find every man engaged in the lumber and wood-working branches of trade in the Dominion, and as the time has not yet arrived when all can be classed as regular subscribers, we would respectfully invite each and every one to fill in the blank subscription order herewith enclosed, and remit one dollar, which will secure the paper to them for one year. Every man directly, or indirectly, interested in lumber will find that such a small investment is money well spent. The larger our subscription list the better the paper will become. Let every man show his interest at least to the extent of one dollar.

Mr. Phillips Thompson, for many years connected with the editorial staffs of the Toronto *Globe* and *News*, is now filling the onerous duties of travelling correspondent and general business agent of the CANADA LUMBERMAN, and will shortly visit some of the larger business centres with the view of advancing the interests of the paper, and holding interviews with all with whom he comes in contact. We bespeak for Mr. Thompson a continuance of that courtesy hitherto shown by the trade to previous representatives of this journal, and can assure them that their personal and combined interests will be as closely advocated in the future as in the past. The Toronto branch of THE LUMBERMAN is at No. 37 Yonge street Arcade.

P. O. Byram, of Madawaska, N. B., sends us a letter protesting in strong terms against the fashion in which the country is being stripped of its forests by the present lumber policy of our Dominion and Provincial governments. He urges that much might be done to avert the exhaustion of our timber supply, if the exportation of the raw or half-manufactured material were prohibited, and wood were only allowed to be exported in the shape of the fully manufactured article. "From the Atlantic to the Pacific" he says "we don't want to ship one foot before it is manufactured to meet the domestic wants of all countries. It could be manufactured in the Dominion and put together at the place of destination. There would be no loss in paying freight on waste lumber, and it would employ an army of laborers and boom our industries." Mr. Byram's idea is well worthy of thoughtful consideration.

The United States Secretary of the Treasury recently received a letter requesting that persons engaged in the lumbering business in the Counties of St. Lawrence and Franklin, N. Y. may be permitted to import from Canada for temporary use, and without payment of duty, teams of animals and articles for use in the lumbering camps, which teams and animals are to be brought in by Canadians. The question was submitted to the collector of customs at Ogdensburg, in order to ascertain the necessity for such action, and that officer has reported that during the past year many horses suitable for use in lumbering have been imported from Canada. He has also expressed the opinion that the bringing in of Canadians with their teams for the purpose indicated would be in contravention of the Contract Labor Act. He said further that there was no immediate necessity for granting the request, for the reason that animals needed in the lumbering business can be readily obtained in the United States. Assistant Secretary Maynard has therefore informed the persons interested that as there is no legal authority for granting the request the department declines to interfere in the matter.

The American fire record for 1887 as affecting saw, shingle and planing mills, lumber-yards and other wood-working establishments, according to the *Northwestern Lumberman*, discloses a total of 398 losses. This includes 221 saw mills, of which 25 were in connection with planing mills, and five in connection with shingle mills. There are 78 other planing mills and 13 other shingle mills shown; also 18 dry kiln fires, 13 sash, door and blind factory losses, eight of box factories, 87 cases were lumber losses were reported, and 11 of shingles, the remainder being fires which consumed cooperage works, stave and heading factories, and similar wood-working establishments. The totals of fires shown in previous years were as follows: 1886, 207; 1885, 223; 1884, 310; 1883, 349; that for 1887 being the largest yet reported. In 292 cases where the losses were reported, the aggregate for 1887 is $7,021,100, as compared with $5,913,600 in '86, $4,079,950 in '85, $6,742,500 in '84, and $5,913,600 in '83. The aggregate insurance reported is $1,998,650, as against $1,574,675 in '86, and $1,780,975 in '85. Making allowance for 105 cases the losses in which amounted to $2,105,000, where no information was obtained as to the insurance, the total reported insurance amounted to over 40 per cent. of the losses.

The press of the United States is at the present time devoting a great deal of attention to the proposed removal of duty on lumber. In most instances we find that there is a strong opposition to the measure now before Congress. The opinion is freely expressed that the lumber industry has never received sufficient protection to pamper its growth. It is pointed out that there is now annually imported about 500,000,000 feet of lumber, chiefly of the better grades, because the specific duty of $2 per. thousand can be better borne by lumber of a hign valne than the course grades. Because this is so, and that there is an annual increase in the shipments of good grade lumber from Menomivll and other points to the eastern market, free lumber would mean a loss of this trade which would otherwise find its way to the Canadian mill men. There are various other reasons assigned for the United States lumbermen opposing the scheme. Ot course these objections only hold good throughout a certain section of the Union, other sections being equally enthustastic in pronouncing in favor of the bill, believing that the indirect advantages which might accrue from direct competition from Canadian lumber, would redound to the commerce of the United States.

At Washington the great question of the day seems to be tariff reform. Public interest is awake on the subject and not only the journals but the politicians and legislators are moving. Not only is the protectionist and free trade controversy revived again with considerable energy, but many thorough advocates of protection, in view of the surplus that is growing to an inconvenient extent, are in favor of a repeal or reduction of the duties on raw materials and natural products so as to diminish this excessive revenue. Lumber is among the articles generally named in this connection, and indeed it already figures in some of the propositions made in Congress to extend the free list. Then there is always a chance of some reciprocal arrangement, growing out of the fishery negotiations and if so lumber would almost certainly be included. So closely, however, have the Commissioners hitherto kept the secret of their proceedings that so far nothing authoritative is known of their progress, and the rumors that are circulated appear to be merely more or less happy guesses by ingenious newspaper correspondents and politicians who have to appear to be in the secret whether they are or not. Whether by international diplomacy or tariff legislation lumber is placed on the United States free list, the same treatment would result in Canada, for in the one case there would be a bargain for reciprocity and in the other case the standing offer in our statute book would come into operation. This, however, would not materially effect Canadian lumbermen, as little lumber from the States is likely to come in, excépt perhaps in Manitoba and the Northwest which take a comparatively small amount at present from Ontario and British Columbia. The effect on prices is not so certain. Some talk of a consequent reduction of prices in the United States, but the general opinion is that little, if any, fall would be caused. If so the Canadian lumbermen would benefit almost to the extent of the duty on their exports to the States. At present there is uncertainty on all these points, but a few weeks more will probably tell the tale and give the guessers a rest.

Congressman Nelson, a gentleman considerably interested in lumber, and well known among the fraternity, has introduced a bill in Congress which proposes to abolish the duty on that very necessary commodity. Whether or not he will succeed in convincing his fellow Congressmen that his ideas regarding the tariff on lumber are in accord with the best interests of the trade and country, will be determined in due time. So far as we can learn of American public sentiment as depicted in the press of that country, there are some grounds on which to base the opinion that the measure will at least receive the closest consideration, and perhaps be found to merit adoption. There seems to be, however, a still wider measure affecting the tariff of the country also before Congress at the present time. It is a bill introduced by Mr. Townsend, of Illinois, to promote the establishment of free commercial intercourse among the nations of America and the Dominion of Canada by the creation of an American Customs Union or Zollverein. This bill seeks to secure free commerce on this continent and the increase of the American merchant marine, a common system of weights and measures, a common system of silver coins in all American countries, and a plan of arbitration of all questions, disputes and differences among those countries that now exists or may arise. Both of these measures will receive bitter opposition from many States of the Union. Leaving out the question of Commercial Union altogether —and we doubt if it will be seriously considered by Congress —there is no question but that if the United States government did sanction the bill of Mr. Nelson that it would be done with the proviso that the Canadian government also abolish the present export duty on Canadian logs entering United States ports. We venture the statement that our home government would readily accede to such a reasonable demand. The same offer would, we think, hold good not only in the free interchange of the products of the forest, but also in all other raw materials, fish, etc. The Reciprocity treaty existing from 1854 to 1867 was supported almost unanimously by the electorate of this country, and as the law still remains on our statute books, our American cousins have only to say the word and in a sense both countries will have all the free commercial intercourse that circumstances would justify,

The mill saw and other files made by Messrs. Thos. Turton & Sons, (Limited), of Sheffield, England, have a well deserved reputation for excellence combined with cheapness. The attention of those requiring these articles is called to their advertisement.

The demand for tents for camping-out purposes has greatly increased of late years. Mr. J.J. Turner, of the Peterborough Tent and Awning Factory, Brock street, has a great variety of goods in this line which lumbermen and others going into the bush for business or pleasure would do well to examine.

Chas. Esplin, of Minneapolis, whose advertisement appears regularly in THE LUMBERMAN, has invented another band mill. The latest device does away entirely with the central columns which is the main feature of all the existing band saw mills. He hangs the upper wheel from a frame work large enough to admit of the steam carriage and all passing through between the upright supports and leaves the entire space clear. The device is so simple as almost to suggest the enquiry why the same thing has not been attempted before. The chief impediment has been in the direction of getting rid of the guide which is so imported a feature of all the successful band mills, and the mechanism of which is more or less connected with the upright column. Mr. Esplin has not dispensed with the guide but he has, by an ingenious device, applied it without the use of the column. This is the third band mill Mr. Esplin has invented and the last of the series was undoubtedly suggested by necessity for such a change in the general device as to make it possible to saw big logs without "breaking down" with the circular. Col. F. A. Boyle, who was in the north searching for the best band mill, suggested these features as essential to the best results in any band saw designed to be used in cypress timber in which he is operating. Mr. Esplin went to work on the suggestion with the result as stated.

CANADIAN IMPORTS AND EXPORTS.

Customs valuations upon goods imported subject to *ad valorem* duties are made at the fair market value thereof when sold for home consumption in the principal markets of the country whence they were exported. The value of good subject to export duty are to be their actual cost or the value which they truly bear at the port and time of exportation.

The following table is a comparative statement of the value or articles imported in the years 1885 and 1886 :—

IMPORTS.

Articles.	Value of Imports. 1885. $	1886. $
Bricks and tiles	150,807	134,650
Carriages, wagons, sleighs, &c	150,724	137,560

The proportion of exports from British Possessions to the United Kingdom to the total exports was, in 1885, not so large as that of imports, it having been 42·78 per cent., and the amount per head was only $1.81 as compared with $2.43 per head of exports to other countries. The proportion of imports from British Possessions to the total imports into the United Kingdom has remained much about the same for a number of years, as shown by the following figures :—

Proportion of Imports from British Possessions to Total Imports into the United Kingdom.

1871	22·03 per cent.
1875	22·57 "
1880	22·50 "
1884	24·56 "
1885	22·75 "

But the proportion of exports to Great Britain to the total Colonial exports has decreased during the same period :—

Proportion of Exports to the United Kingdom to the Total Exports from British Possessions.

1871	50·45 per cent.
1875	49·47 "
1880	46·46 "
1884	42·33 "
1885	42·84 "

The total foreign trade of British Possessions has increased very largely since 1871, but, as will be seen from the following figures, the trade with foreign countries has increased in a greater ratio than that with the United Kingdom :—

Proportion of the Trade with the United Kingdom to the Total Foreign Trade of British Possessions.

1871	51·41 per cent.
1875	52·33 "
1880	49·36 "
1884	46·72 "
1885	48·44 "

It has been shown that the Colonies buy considerably more from England that England buys from them, and that the quantity is steadily increasing. This fact, which is probably at present more particularly the consequence of the numerous financial transactions that take place between them, shows that the greater portion of the wants of the Colonies can be supplied by the United Kingdom. It has also been shown that, in proportion to their total exports, the exports to Great Britain are not keeping place with those of foreign countries.

The Permanent Exhibition.

Every visitor to Toronto should spend an hour or two at the Permanent Exhibition of Manufactures, open free to the public. It occupies a spacous building specially constructed for the purpose on Front Street West, opposite the Queen's hotel. All who have seen it are surprised and delighted with the comprehensiveness of the display and the system and elegance of the arrangement. The benefits of such a scheme to the manufacturer, the merchant and the retailer are obvious at a glance. It saves a vast amount of expense and trouble by bringing sellers and customers into closer relations. The Permanent Exhibition offers to firms ontside the large centres of distribution the advantages of a branch office at a much less cost. Their goods are seen by thousands who might not otherwise take the trouble to make special enquiry after them. To a public familiarized with the benefits of yearly exhibitions the idea of a permanent exhibition where the advantages, instead of being temporary, will be continuous, need only be stated to be appreciated. Messrs. Nicholls & Howland deserve great credit for the enterprise they have shown in successfully carrying out this useful project.

New Brunswick Matters.

The New Brunswick correspondent of *The Empire* has the following to say regarding the trade of that province :—The feeling in business circles in New Brunswick is astonishingly cheerful in view of the commercial disasters which befell the province during the first six months of the past year. During that holy year the failures aggregated $5,000,000 liabilities. The returns for the past six months indicate a return to normal conditions, the total liabilities being $300,000. Nearly all the later disasters are the heritage of the Maritime Bank collapse. To get back to the beginning of things, every failure of any consequence was caused directly or indirectly by lumber. Lumber brought down the firms which the Maritime Bank with foolhardy recklessness had been trying to carry, had thus swamped the bank, which in its turn caused the suspension of McLellan and Blair's private bank, and swept away other business houses. The private banking firm did not deserve its fate and but for the terror that prevailed at the time, might have pulled through. The St. John agent [illegible] leading bank was strongly in favor of helping Mr. Blair out, and the facts that the creditors have now eighty per cent. from the liquidators, and that Mr. Blair has resumed business with the confidence of the public, goes to prove that the banker was right.

The bottom did not suddenly drop out of lumber. Some of those firms which breathed their last in the disastrous days of last winter and spring had been long in *articulo mortis*. The end of two, if not three, was only delayed so long [illegible] Mr. McLellan, [illegible] of his depositors. The weeding out process has on the whole increased public confidence, and it is safe to say that the community is better off than it was this [illegible] year.

But the lumber business has not improved. The sales last year to transatlantic points were smaller by about ten per cent. than in 1886. It is believed that the export to the United States has also declined, but complete returns are not yet available. The greater part of the New Brunswick export of lumber to the Republic is of United States produce. It is sawn from logs cut on the St. John River in the State of Maine, the mills being situated at St. John [illegible] United States subjects residing here. By [illegible] this lumber is admitted into the United States duty free, a privilege which has not as yet been accorded to Minnesota logs manufactured in Ontario. The exports of "non-produce" from the port of St. John is altogether comprised in this item. Returns received from the Custom House show that the value in 1886 was $1,874,000 and in 1887 $1,403,000. At a recent commercial union debate in the board of trade the great advance and prosperity of this Aroostook free lumber business was cited as evidence in favor of the scheme. But these figures do not appear to point to much increase.

New Timber Limits.

The Winnipeg *Free Press* is authority for the statement that the present surveyors are engaged in examining the timber limits to the north of the Riding mountains, along the rivers that flow into Lake Dauphin and Lake Winnipegosis, in the interest of Mr. P. McLaren, of Perth, Ont., who having disposed of his Ontario timber limits, is now turning his attention towards the Northwest. Hitherto the timber limits in that district have been regarded inaccessible, but McLaren, with long experience in the lumbering regions in the Ottawa valley, evidently considers himself capable to wrestle with the difficulty.

The Birtle *Observer* observes : There may be two or three ways of getting at those great northern forests. Any course will be difficult and expensive. One plan is to float the logs down the rivers to Lake Winnipegosis and Lake Manitoba and then follow the connecting rivers to Lake Winnipeg. In this way all the timber on the various streams could be secured, steam tugs being used to convey the rafts of logs through the lakes. There is also fine and extensive groves of spruce on the islands and shores of Lake Winnipegosis that could be cut and removed in the same manner. Judging from maps there seems to be a roundabout and difficult connection between Lake Winnipegosis and Lake Manitoba, from which Water Hen river issues, but there is some way to overcome this obstacle. A railway from Portage la Prairie to Lake Manitoba, eighteen miles distance, would secure the great lumber trade which will be developed in the near future. There is still another way of getting at considerable of the spruce timber of the north. Some of the most extensive and valuable forests are on the Swan river ; this large stream approaches the Assiniboine to within a distance of eight miles in the neighborhood of Fort Pelly. The land between the rivers is level and is mostly covered by scrub. In some places the creeks that flow north to Swan river and others that flow south into the Assiniboine nearly join and with a little cutting to form a connection, a dam on Swan river would send a flow of water through to the Assiniboine. Should Mr. McLaren connect Swan river with the Assiniboine near Fort Pelly a vast timber trade would find its way down the Assiniboine river, and would most likely leave the water at the crossing of the M. & N. W. Railway at Millwood, where there are already extensive saw mills which could no doubt be secured.

—It is said that Mr. Hugh Robertson, projector of the big timber raft, which recently came to grief, is about commencing the construction of a timber ship, with spars and steering apparatus. It is not the intention to sail the ship to her destination unless circumstances compel them to do so. The ship will be erected at the Finger Board, Joggins

CANADIAN CHEAP LUMBER.

DES MOINES, IOWA, Dec. 20, 1887.

EDITOR LUMBER TRADE JOURNAL :—The question raised in the President's message so far as it effects the lumber interest is naturally exciting considerable attention among those interested in the trade. We hear arguments both in favor of and adverse to a removal of the tariff of lumber, and in the multitude of assertions we find confusion rather than wisdom. Those who are in favor of free lumber assert that a removal of the duty would have little or no effect upon lumber values in this country; but the volume of manufacture in Canada is insignificant as compared with that of the United States, and that if the whole of that volume was turned into this country its effects would be hardly noticed. Some assert that the original cost in Canada is greater that the United States, and that this alone would prevent such a reduction in price as would seriously effect American manufacturers. The advocates of a tariff assert that lumber is cheaper in Canada than in the States, that it can be produced cheaper, and would flood the country to the injury of American lumbermen if the duty were removed. They assert that the injury to manufacturers would more than offset the advantages to the many million of consumers, while arguing that the country would be flooded with cheap lumber. Can you throw any light upon the subject that will enable your readers to form a reasonable correct opinion as to which is right, and as what would be the effect upon the lumber trade if the duties were to be taken off, and oblige an

INTERESTED READER.

Replying to the above the Chicago *Lumber Trade Journal* submits the following statistics which it claims should throw considerable light on the subject. Regarding the "cheap" labor theory, it reproduces the particulars of the sale of Ontario timber berths, which appeared in the last issue of THE LUMBERMAN, with the object of comparing the cost of timber lands in Canada with that of the United States. It says :—

This shows an average cost to the purchaser of $4.62 per acre, *for the privilege of cutting the timber and of paying a further stumpage duty to the government of $1.00 per thousand feet for all that he may cut*, and in addition a yearly direct tax of $2 per square mile. If we average the cut at 10,000 feet per acre, we shall find the cost of the stumpage to be

License cost $4.62 per acre is per thousand	46.2
Duty on cut logs per thousand	1.00
Yearly taxes allowing but one year	.20
Total paid to government	$1.66 2-10

With a proposition under consideration to increase the stumpage duty on logs to $2, which would bring the stumpage cost up to $2.66 2-10 per thousand feet, with no fee in the land. The United States government sold its pine lands at $2.50 per acre giving a title in fee simple. Averaging these at 10,000 feet to the acre which is as near the mark as the estimate on Canada lands, the stumpage cost to the purchaser was 25 cents per thousand as compared with say $1.66 paid by the purchaser of Canada timber. We will not insult the intelligence of our readers by asking which government furnishes the cheapest stumpage.

But while the government values are the only ones on which a proper computation of stumpage cost should be estimated, we are not unmindful of the fact that the United States has parted with nearly, if not quite, all of its valuable pine lands, and that stumpage in the hands of present holders is a different thing from that which is offered by the government; nor of the still further fact that Canadian limit holders know how, and have just as selfish an interest to hold stumpage at all it will bring, as holders of United States timber, and American buyers of Canadian logs to be towed to American mills do not find themselves able to buy these logs in Canada at a cost delivered in mill boom enough below what they would pay for the same grade of American logs, to get very rich from the difference. But if the customs duty of $2 be removed, would not the lumber be sold that much cheaper? Yes, *provided* the limit holders in Canada exhibit a trait in human nature so vastly at variance with all our experience to show that they don't know a good thing when they see it, and are so unselfish as to be willing that the American operator shall take all the persimmons, and the principal Canadian lumbermen are American born. A ten years' lumbering experience in Canada taught us that down east Yankees were not the only people in the world who were entitled to credit for shrewdness, but that a Canadian could often double discount and then beat him at his own game. When you set the Canadian lumberman down as a fool, you have need to look after your own laurels. But will they not overstock the market? Let us again appeal to the government for some information as to what they have been doing in the past. In the statistical abstract of the United States for the year ending June 30, 1886, the last official data obtainable, we find that the "quantities of dutiable wood and manufactures of wood, boards, blank deals, and other sawed lumber" imported from *all Countries*, Canada being the principal source of supply, were as follows for the years named :

	1886.	1885.	1884.	1883.
Lumber etc.	517,832,000	555,582,000	600,762,000	571,009,000
Shingles	79,150,000	69,511,000	86,219,000	104,657,000

Value of the Same.

1886.	1885.	1884.	1883.
$8,704,836	$9,103,041	$10,332,590	$10,295,631

Taking a period of ten years, 1877 to 1886 inclusive, the imports of lumber from all countries into the United States aggregated 4,978,175,000 feet and of shingles 715,770,000, the total value being placed at $76,505,232, an average of less than 500,000,000 feet of lumber and 70,577,000 shingles valued at $7,650,523 for each of the ten years. About one-quarter as much as the receipts of Chicago for one year in lumber and one-tenth of her receipts for shingles. The receipts of lumber at Chicago this year are three and a half times greater than the average yearly importation into the United States for the period of ten years. At an estimated yearly consumption in the United States of 500 feet per individual, Canada's average shows a supply of one foot in sixty feet. The wildest controversialist would not dare to assert that figures would be doubled in case of free trade with Canada, but if they were, it would only raise her quota to one foot in each thirty feet of the nation's supply. How deeply this would affect American producers we leave it for our correspondent to figure out. We have aimed only to state facts, and shall have something further to say in the future.

* * * * * * * *

Since the above was in type, Government reports for the year ending June 30, 1887, are at hand, from which we gather still further valuable information on this subject. The value of "wood imports" for the year is stated as follows :

	Value.	Duty Collected.	Average Ad-valorem Rate of Duty.
Unmanufactured	$ 15,087.39	$ 2,977.26	19.73
Manufacturers of	8,208,416.67	1,500,206.83	18.28
Total	$8,223,504.06	$1,503,184.09	18.28

In a table of "*total values of imported merchandise*" our imports from *British North American Provinces* is shown as follows : 1860, $23,570,000 ; 1880, $33,220,000 ; 1882, $51,113,000 ; 1883, $44,740,000 ; 1884, $39,020,000 ; 1885, $36,960,000 ; 1886, $37,500,000 ; 1887, $38,020,000, and the percentage of total imports 6.66 in 1860, and 5.49 in 1887. Our export trade *with the Provinces* was as follows ; 1860, $18,660,000 ; 1880, $28,060,000 ; 1882, $35,290,000 ; 1883, $42,831,000 ; 1884, $42,510,000 ; 1885, $35,980,000 ; 1886, $31,960,000 ; 1887, $33,495,000, and the precentage of total exports 5.90 in 1860, and 4.76 per cent. in 1887. The exports of the United States for 1887 are set down at $703,022,923 and are classified as follows :

	Value.	Per Cent.
Products of Agriculture	$523,073,798	74.41
Products of Manufacture	136,735,105	19.45
Products of mining including mineral oil	11,758,662	1.67
Products of the Forest	21,126,273	3.01
Products of Fisheries	5,133,775	.73
Other products	5,173,310	.73
Total	$703,022,923	100.00

The figures given above apply only to the general imports and exports from and to all countries. The Canadian "blue book" for 1886 will reach the Canadian Parliament Jan. 31, and from it we shall be able to gather more definite information regarding our trade with Canada.

We have a very warm friend now residing in Canada, one whom we have known *as a lumberman* since 1845, competent therefore to speak intelligently upon the question propounded by us "Who will get the benefit if the $2 tariff is removed from Canada lumber?" We append his answer :

"From many years observation, and with intimate knowledge of the Canadian lumber trade, as well as that of our own country, I am certainly of opinion that if the entire lumber cut of Canada was dumped into the United States, it would not effect the price of Southern lumber, and I doubt if it would have the slightest effect upon values in Northern lumber. You ask, 'who will get the benefit of the $2 off duty?' I say, *the Canadian*. It will simply enable him to advance prices that much, or approximately, and not a rap of good to the American purchaser. Is it at all reasonable to suppose that the American lumbermen will reduce their prices? Not a bit of it. The working of free lumber will be $2 *out* of the United States and $2 *into* Canada. No surplus of pine lumber will ever again be seen. Combine the abilities of both the United States and Canada (and they represent the total of white pine growth) and *they can never again overstock the market*. Pine is not being reproduced, it is simply sliding away, and in ten years more, as in the last ten, a big difference in quality and quantity will be seen. The sliding scale is so evident that all must admit it.

"The English trade in lumber is increasing, while that in timber is decreasing. The entire output of deals as low as 4ths (sound common) to be made in 1888 is already sold for the English market, leaving only the very coarsest logs and the siding for the American market, of which the sidings form good deal logs are already heavily sold for the English market. The Canadian lumber as a rule is very coarse and very shaky. The "Grove" timber makes a very good "piece board" (13 feet) and does not make deal. Stock will not be plenty here the coming season, for advance sales will not leave much for the open market."

THE news that ship building is looking up in Great Britain, and the yards on the Clyde, the Tyne and elsewhere have received extensive orders, is evidence of reviving trade. These iron vessels are fast ousting wooden ships from the carrying trade of the world, and this is the reason why shipbuilding in our Maritime Provinces does not progress as do our other industries.

EXCHANGE ECHOES.

Mississippi Valley Lumberman.

The lumber dealers in the Twin cities, and the northwest generally, are watching with interest the attempt now being made by the Chicago yard men to crush out the scalper, and to annihilate him as an element in trade. The agreement signed by a majority of the lumber merchants of Chicago is apparently sweeping enough to accomplish its results, but it is still to be demonstrated whether all the parties thereto are impregnable to the assaults of the scalper who may have tempting bills of lumber for which he has a market. The scalper in any trade is an incubus, draining the profits which should legitimately go into the pocket of the producer, the man furnishing the capital and sustaining all the risks of the credit system and the consumer.

Northwestern Lumberman.

It really looks as though the turning point in the poplar market had been reached. We dare not anticipate too much; but the horizon looks brighter, and it may be an omen of future prosperity. The demand for choice poplar is active. The supply, which in a measure regulates the price, is already curtailed, appearances point to a further scarcity of stock in the season to come. Whether this will have a decided or slight effect upon selling price remains to be seen. Certain mills have already contracted for next season, while others have so far declined what during the last year would have been considered good offers. The scarcity of stock, and a refusal of producers to longer accept the beggerly selling price of the last three years, should have a marked effect on prices, particularly for the better grades of poplar.

Dominion Mechanical and Milling News.

The statement will soon be published that a couple of well-known gentlemen are trying to obtain a lease of a tract of timber land, comprising no less than 26,000 acres, in British Columbia. In view of the rapid depletion of the United States pine forests, and the fact that the supplies of that country must in future be largly drawn from Canada, the wisdom of giving individuals control of such large areas is open to question. The wonderful advance which is taking place in the value of such lands was clearly shown at the Government sale in Toronto the other day. Seeing, therefore, that our timber lands are certain to double and treble in value within a few years, the Dominion and Provincial Governments should manage things so that the profits resulting from increased values shall go into the public exchequor instead of into the pockets of private individuals.

Southern Lumberman.

THE CANADA LUMBERMAN has figured out the conclusion that the Southern lumbermen are opposed to the repeal of the duty on Canadian lumber. Correct. It may also make up its mind that the South don't want unrestricted free trade with the Dominion because that would simply mean free trade with England and all her colonies who choose to do business through Canadian agents.

Chicago Timberman.

An experiment is about to be tried by New York parties, which will result in lowering the rate of transportation on spruce and pine by water from the Province, if it proves to be successful and practical. The fact that enormous rafts of logs have been towed hundreds of miles successfully has given rise to the idea that manufactured lumber might be marketed in the same manner, and at a much less rate per thousand, than it was possible to transport it by vessel. A huge raft containing over 20,000,000 feet has lately been launched in the Bay of Fundy, which it is proposed to tow to New York. The trip of this pecular raft, if it may be so called, will be watched with much interest by the owners of coasting schooners; for, should it prove a success, their source of income will be very materially curtailed. The probable success or non-success of this method of transporting lumber is being discussed very generally by eastern operators, but it is not generally believed that the scheme will be at all practicable. Should the raft chance to encounter a stiff easterly gale, it is quite probable that there would be large quantities of driftwood afloat to offset any saving in freight.

Timber Trades Journal, London, Eng.

Rumors are again current as to extensive contracts that have been closed for next season, but on careful inquiry in various usually well-informed quarters we cannot find that these reports have any solid basis. As we have already mentioned, a few sales of some magnitude have been made to continental buyers, but in England the business transacted is confined to staves, firewood, and sundry extras, but can have little effect upon the future of the market. There is unquestionably, however, a stronger demand on the spot, while the reports that reach us from the outports tend to show that importers are at last enabled to conduct their business on fairly remunerative principles. In London, again, the tone of the market appears healthy, and we notice, as a favorable sign, the absence of disquieting rumors which tended to disorganize trade last autumn.

THE NEWS.

ONTARIO.

—Mr. Henry Powley's saw mill at Trecastle is in full swing.

—A new saw mill is being erected by Mr. Wm. Whalley at Mersea.

—Mr. John Zoeger's saw mill at Newton will be running shortly.

—A young man in Hamilton was severely injured by being caught in a steam saw.

—A large brick planing factory is being erected on Northcote Avenue, Toronto.

—Mr. Wm. Asselstine, Roblin, near Napanee, Ont., is building a new shingle mill.

—Mr. Thomas Whaley, late of Milverton, is now lumbering on an extensive scale in Muskoka.

—Gas lamps have been erected all through the Rathbun Co.'s yards and docks, at Deseronto.

—Mr. Neibergall has closed his mill at Dunlop, and transferred his employees to Sheppardton.

—The celebrated Gilmour-Paradis case is to come up for decision before the Privy Council next spring.

—Daniel Hayes, lumber merchant, Toronto, has assigned with $15,000 liabilities, and showing a surplus of $5,000.

—Fred. Richardson and Wm. Baird, of Trimble's Corners, have gone to northern Michigan to purchase a timber limit.

—The village of St. Arns, near Lowville, will shortly be able to boast a sawmill. Mr. John Readhead is the builder.

—The Jerseyville planing mill, now belonging to Messrs. Weaver & Howell, has been overhauled and placed in thorough working order.

—Mr. Gildersleeve's saw mill which was the chief support of the village of Lake Opincon has shut down and will shortly be removed.

—About 25,000 railway ties from the Rathbun mills, Campbellford, have been landed at Port Covington, Maine, and 45,000 more to follow.

—A number of jobbers are getting out railroad ties up the river near Buckingham. They expect to have a large quantity down for shipment in the spring.

—The Owen Sound Dry Dock Company, Owen Sound, will build during the present winter another 150-foot barge for the Spanish River Lumber Co.

—Mr. David Wallace, of Brantford, has built a saw mill on his farm, Talbot St., Scotland. He intends to do business extensively in this line during the winter.

—Mr. Walter Beatty, Pembroke, whose sash and door factory was recently destroyed by fire, has refused the offer of a $3,000 bonus to assist him in rebuilding the same.

—It is estimated that the cut of white pine square timber in the Ottawa district this winter will reach one and one-half million feet; waney or board six hundred and fifty thousand, and square red pine half a million.

—The failure is announced of Messrs. Joseph Kidd & Sons, of Dublin, who in addition to other extensive business enterprises, operated lumber mills on the North Shore. The firm's liabilites is estimated at $150,000.

—The Rathbun Co., through their Kingston agency alone, have handled off the K. & P. railway 1061 car loads cedar posts, shingles, lumber and railway ties. This would make a train, with engines enough attached to move them, over eight miles long. This material, together with what has arrived from Ottawa and other points, makes 121 vessel loads shipped by this firm from Kingston during 1887.

—Mr. T. F. Hawthorn, of Oshawa recently waited upon the Minister of Customs on behalf of the manufacturers of axes, forks, etc., and argued the necessity of placing white ash lumber, out of which axe handles are made, upon the free list. The ground urged was that a sufficient quantity of this material cannot be procured in Canada. Mr. Bowell promised to lay Mr. Hawthorn's representation before the Minister of Finance on his return from Washington

—In a report just issued by the department of agriculture, Ottawa, regarding the experimental farm, on which all kinds of seeds are put to practical tests, the following statement is made concerning the forestry branch: "Eighty-eight thousand young forest trees and ornamental shrubs have been procured and planted, comprising both evergreen and deciduous sorts, including many native and foreign species. The total number of species and varieties exceeds 500, among which are many never before introduced into Canada. This collection will be largely augmented by the products of the seed beds. It is intended that such sorts as prove hardy shall be propagated for testing in other parts of the Dominion."

—A Montreal dispatch says: Judge Dean, of Victoria, Ont., is here sitting on the commission to take evidence in the action of Michael Babcock against the lumber firm of Smith & Co. Testimony was taken to-day in the case which arises out of the trouble as to the consequences of certain mortgages. Messrs, Seth Smith, of Port Hope; Cassels, Q. C., of Toronto, and Dugal, of Belleville, are counsel in the case.

—John O'Connor, pine land agent, of Chippawa Falls, Wis., agent for T. W. Dobie, of Tilsonberg, Ont., sold to Charles Barker, of Chippawa Falls, a tract of pine land, estimated at from 40,000,000 to 50,000,000 feet, lying in Douglas and Bayfield counties, for $40,000. Eau Claire parties were anxious to obtain the land, and when the sale was nearly completed they served an injunction to prevent it. Mr. O'Connor closed the bargin at once, and Barker paid $20,000 down.

—The Manufacturers Life Insurance Company is called upon to chronicle the first death among its members, in the person of one of its trusted and valued agents, Mr. Andrew Wilson, of the firm of Wilson & Morrison, Peterboro', general agents for Eastern Ontario. Mr. Wilson was the pioneer agent of the Company, his name being on the first contract issued from the office. He carried an insurance of $7,000 in the above, which amount was promptly paid over to his widow a few days after his death.

Among the many commendatory letters which THE LUMBERMAN has received of late, the following extract from a letter received from a well-known Toronto lumberman speaks for itself: "At different times I started to write you regarding the great change you have made in the paper, but being inclined to laziness I, like the Roman of old, put of doing so until a more convenient season. You must surely deserve all the possible patronage which lumbermen can bestow. Your paper is one of which you and all interested in lumber may well be proud. You have raised it to the front rank of trade journals and have placed it high among the ones pertaining to the lumber industry."

—Mr. T. H. Hawthorn, of Oshawa, has been in Ottawa urging the Government to place white ash on the free list. He is representing the A. S. Whiting Manufacturing Co., of Oshawa; the Severn Wheel Manufacturing Company and the Welland Vale Manufacturing Co., of St. Catharines. He says white ash is used for all kinds of handles, shafts and poles, and he considers the companies referred to are making only a reasonable request, on account ot disastrous fires of late years having made white ash very scarce. They do not propose, however, that black and rim ash should be placed on the free list. Mr. Hawthorn, it may be remembered, was in Ottawa last session agitating for an increase duty on axes, and created diversion by depositing a number of Canadian axes on the clerk's table. Messrs. Charlton, Casey, and other members, opposed the increased duty, but when it was demonstrated to them that the Canadian axe was better than the American made article they withdrew their opposition. In doing so Mr. Casey observed to Mr. Hawthorn, "You will not forget us when the proper time comes." Accordingly a fortnight ago, at Christmas time, with the intimation that as they now had axes to grind he hoped they would make good use of them, and sell their chips as Mr. Gladstone does.

NEW BRUNSWICK.

—Provincial lumbermen are yarding logs.

—The Annagenee mills are still running and will not shut down before February.

—About fifteen mills have been built in the province of New Brunswick during the past season.

—On the upper St. John, in New Brunswick, the lumbermen have had sufficient snow for skidding.

—Ramke Bros., of St. Martins, will cut 1,500,000 feet of board timber on the Salmon river this season.

—Citizens who are connected with the coasting trade are jubilant over the loss of the big Joggins raft.

—W. H. Veysey & Son intend building a sawmill at the thoroughfare, between North and Grand lakes, N. B. in the spring.

—The upper St. John, in New Brunswick, is to be dammed above the falls for the purpose of holding lumber till the swinging of the booms in the spring and assisting in driving logs in low water.

—Frank Stetson, of Bangor, Me., has three saw mills on the St. John river, which cut yearly from 35,000,000 to 40,000,000 feet of long lumber, 52,000,000 shingles, and 25,000,000 lath, besides clapboards and box shooks.

—There is at the present time an unusual demand for sleepers in this province, principally owing to extensive railway building in northern and eastern Maine. The Short line contractors are now booming things in the line of cedar posts, 75,000 of which have been called for by one firm.

The fine shingle mill for Miller & Woodman is nearing completion. It is 165 feet long and 80 feet wide. Eight shingles, with clapboard and stave machines and probably a rotary, will form its equipment. The machinery will be placed in position this winter and work will begin in the spring.

The cedar business on the Miramichi promises to be a lively one this winter. Two large contracts are already reported signed, one at Freder[illegible] at Boiestown, by Douglas, of [illegible] paid for sleepers on the Western railroad.

There is great rejoicing in [illegible] cision that the Duren & Hill mills, owned by H. F. [illegible] Sons, are American. [illegible] up the Messrs. Eat[illegible] that the people are indebted for the continuance of an industry the suspension of [illegible] to the town.

MANITOBA AND THE NORTHWEST

-Lumber is being shipped from the Chemaninus saw mill, Vancouver Island, for Austr[illegible]

-Several of the lumber dealers at S[illegible] the supply of lumber received last summer [illegible]

—S. J. Hogg, of S. J. Hogg & Co., lumber dealers, Calgary, a well known business man of the western territor[illegible]

—A large force of men are now in the spruce timber belt of the Riding Mountains, Northern Manitoba. There is sufficient snow for hauling logs.

—Hugh Law, manager for the Selkirk Lumber Co. at Selkirk during the past summer, has taken up his abode in Winnipeg.

—In the far northwest, Moore & McDonald [illegible] mill on the Saskatchewan river, forty miles above [illegible] where they have purchased a timber limit.

—Messrs. Fraser & Co., Edmonton, Man. have sawed 850,000 feet of lumber this season and have about seventy five thousand feet of logs up the river at the present time. They will take out half a million feet this witner.

—W. H. Cushing's planing mill and sash and door factory at Calgary, has been exempted from taxation for the current year, by action of town council. A largely signed petition was presented in favor of a five years exemption.

—The library of the Hastings Sawmill Institute, Vancouver, consisting of 400 volumns of standard works, has been turned over to the Vancouver Reading Rooms. The conditions are that all the members of the former in good standing on the 1st of June last are to become life members of the latter.

—The Assessippi Milling company, owners of a flour mill at Assessippi, Man., have built a saw mill this season, which is now about completed. The mills are located on the Shell river, and are run by water power. The logs come from Duck mountain country, southwestern slope.

—Owing to the death of S. J. Hogg, the lumber business of the firm of S. J. Hogg & Co., of Calgary, will be closed out. The lumber handled was principally from the Royal City mills, of Westminster, B. C., and the Pallieer mills, situated in the mountains.

—A new saw mill will probably be erected where the Manitoba & Northwestern crosses Rirt Tail creek, four miles from Birtle. There is a mill at present at Birtle, but owing to the fact that the lumber has to be hauled a mile up a steep grade to the railway station, the balance is in favor of a new mill at the crossing. The Birtle *Observer* is anxious that some effort should be made to keep the mill inside the corporation.

—It is said that there is every probability of an early advance being made in the price of lumber in the Winnipeg markets, as an outcome of the agreement among the Lake of the Woods lumbermen to form an association. It has already been intimated that an advance has been agreed upon, and an authoritative announcement may be expected soon. It is understood the advance will be $2 per M.

—The Winnipeg *Free Press*, in accordance with its custom, reviews the season's lumber operations in that locality and says: "The past season has been a very good one as regards quantities. Prices, however, have been low, principally because banks and others holding stocks of defunct companies have slaughtered them and thus kept rates down. However, these stocks are pretty nearly exhausted. A large inroad has also been made on the regular dealers' stocks of cut lumber. About the same time last year there were about forty-two million feet of lumber in the country. Now the amount is estimated at twenty-six million feet. The normal aggregate stock is about thirty-six million feet. Under ordinary circumstances the result of this reduction of stocks would be an increased cut of logs, but lumbermen are still somewhat timorous owing to their

losses in the last few years and their present preparations only contemplates a cut about equal to that of last year which was short. In the district about Lake Winnipeg, Brown & Rutherford will take out about 2,000,000 feet; Mather & Co., have a large number of logs which were cut last year and which will now be taken out; Captain Robinson will take out 2,000,000 feet; Jonasson, Frederickson & Walkley, 2,000,000 feet; H. Crowe & Co., and the Selkirk Lumber Co. together 3,000,000 feet; Mr. Meegan has bought about 3,000,000 feet of old logs belonging to the defunct Northwestern Timber Company, which he will get out and saw; Woods & Co. have about 500,000 feet of logs at their mill on the Winnipeg river which they will saw but they have not yet decided whether they will take out any more logs or not this year; D. E. Sprague & Co. have men out prospecting and will not decide upon their operation till these return which will be in about a week's time. In the Lake of the Woods district the cut of logs will be about as follows: Rainy Lake Co., Rat Portage, 10,000,000 feet; Ontario Lumber Co., Norman, 8,000,000; Cameron & Kennedy, Norman, 8,000,000; Dick Banning & Co., Keewatin, 8,000,000; Keewatin, Lumber Co., Keewatin 10,000,000; total 44,000,000 feet. The Ontario & Minnesota Co., get their entire cut from Minnesota; the Keewatin Lumber Co., get 8,000,000 feet in Minnesota and the balance on their own lands on the Lake of the Woods; the other mills are supplied entirely in Canada.

BRITISH COLUMBIA.

—The saw mill at Griffin Lake, Kamloops district, B. C., was sold by the sheriff recently, and purchased by James McIntosh.

—A large quantity of lumber is being shipped by the Moodyville Saw Mill Co., Burrard Inlet, to China, South America and Australia.

—Mr. Chase, of Chicago, has lately been through the mountain district of British Columbia. He owns timber limits east of the Selkirk range of mountains, and contemplates erecting a mill in that region.

—Ottawa valley lumbermen are commencing to look to British Columbia as a field of operations. It has just been announced that Jas. G. Ross and Jas. McLaren, two well known Ottawa lumbermen, are about securing a very extensive timber limit in the Pacific Province. The lands are situated west of Duncan Bay, Sayward district, and comprise over 25,000 acres. This is said to be the largest limit in the province, and would indicate that another large mill will shortly be established on the Pacific coast, thus increasing the already thriving industry in that district. A survey of the property has been made, and that country is described as level and heavily timbered with the famous Douglas fir, or Oregon pine as it is often called. There is also a sprinkling of white pine and cedar, the former a somewhat harder wood than the pine of the east.

QUEBEC.

—Quebec timber merchants are commencing to leave for Europe to push sales in the European markets.

—Mr. T. Selby, East Dunham, is putting machinery into his steam saw mill to make cheese boxes.

—Messrs. Chapman & Drysdale, Lachute, manufacturers of sashes, doors, etc., who recently increased the capacity of their factory, report that they have all the businesss they can handle.

AMERICAN NOTES.

—Reports by the local papers in the Saginaw valley district announce the erection of a vast number of shingle mills and the prospects are good for the largest cut which has been made for years.

—Shingles are so scarce that the prices have stiffened considerable on the Saginaw river. Sales are reported within a short time at $3.65 and $3.75 for XXX, and $2.65 and $2.75 for clear butts.

A telegram from Washington announces that Representative Nelson is to introduce a short tariff bill proposing to put lumber on the free list. Coal, salt and other staples are also included in the list. The same telegram announces that Mr. Nelson will introduce a bill authorizing the Duluth, Rainy Lake & Southwestern railway to build a bridge across the Red river of the North on the boundary line between Marshall and Kittson counties and Dakota. This is the road to be built from Rainy Lake river on the boundary line southwest, and it is not at all improbable that the two propositions are more or less connected. With lumber admited free and the railroad built, the mill men at Rat Portage would have a satisfactory outlet. Mr. Nelson has been the champion of the proposition to throw open the Red Lake reservation, so that the pine on that extensive tract would be brought into competition with Mr. Walker's holdings outside, but thus far this plan has failed. The fate of the bill will be watched by Minnesota lumbermen with interest.

Bring Out Your Money Bags.

Northwestern Lumbermen.

If, at the present session of congress, there is to be any lobbying in favor of free lumber, Canadian timber owners are the men who should be on hand at the capital with their money bags. These timber owners could afford to pay millions of dollars to have our import duty on lumber removed. Canada will be the gainer. Nothing is plainer than that lumber will not go on the free list if the will of the lumber manufacturers be respected. It will be arwued that the lumbermen is selfish in this respect; not more selfish, however, than the polition whose vote will help to decide whether lumber shall, or shall not, be admitted into the states from Canada, free. This week our Puget sound correspondent describes the feeling that exists in Washington territory on the subject. The verdict is against free lumber. The same verdict will be rendered in the south. Not one saw mill man in fifty in the southern states wants free lumber. It is not a party issue—repudlicants and democrats are of the one opinion. They have in view the protection of an industry that is just getting out of its swaddling clothes. Thoroughout the northwest and in the east there are a few lumbermen who are in favor of removing the duty, for the simple season that it will be money in their pockets to have it removed. There are others, and in large number, who insist that free lumber would be of no benefit to the United States, but beyond this they take no stand. Our law makers should understand, before they decide the question, that to remove the duty on lumber would not be helping the "dear people" of their own country one cent's worth, but that it would be a direct contribution, and a heavy one, too, to the Canadian government principally.

QUEBEC TIMBER TRADE.

J. Bell Forsyth & Co.'s Annual Trade Circular.

We have again the pleasure of publishing our annual statements of supply, exports, and stocks wintering, together with prices current, etc., etc.

The increase in arrivals of Ocean Steamships referred to in previous circulars still continues, also the tonnage from the Lower Ports, while in the number of sailing vessels from sea there is a marked falling, off and each year the business of the Port from one cause or another seems to be steadily on the decline. Owing to the very limited production last winter the supply has been unusually small especially of White Pine, and the Cove returns now laid before you show greatly diminished stocks wintering, notwithstanding that the export has fallen far below the average of past years. The accounts from Great Britain are on the whole more encouraging than they have been for a long period; still it must be borne in mind that the consumption of Canadian Woods has been greatly curtailed of late years, owing to the rates at which Pitch Pine and other cheap woods are imported and sold at there.

WHITE PINE.—The supply of both Square and Waney has been exceptionally short, the shipment slightly over that of last year and the quantity wintering exceedingly light. The market opened weak and without buyers last spring, and continued in a very unsatisfactory state during the summer months, the few sales then effected being at low and unremunerative rates. Towards the middle of September an increased demand set in, and from that time to the present higher prices ave been obtained. The greater portion of the stock wintering is in the hands of shippers, a few lots only remaining on manufacturers account. The greatest difficulty is now experienced in obtaining first class wood which is becoming more scarce every year, and the very high prices paid at the Government sale in Ontario last week for Timber Limits must enhance the value of White Pine, especially of choice quality.

WANEY—Has been in better request than square all season, and with a light supply and a shipment below the average the quantity wintering is less by 817,691 feet than it was twelve months ago. The present stock contains a portion of old wood which has been some years in the Coves, a good deal of this quality remaining unsold. Owing to a decidedly better feeling in the market as well as to the certainty of a small production this winter, large sales have recently taken place at our quotations; no fresh timber wintering now remains in first hands.

SQUARE.—The supply this year is perhaps the lowest on record and the stock in the Coves very light. The demand in the United Kingdom is not by any means as great as formerly and with the exception of choice grades for deck-plank and other purposes the consumption of Square Pine has considerably fallen off. The stock on hand is less by 2,277,813 feet than last year and continues about the usual proportion of old and inferior wood quite unsuitable for export. From latest accounts the production this winter will be confined to a few operators only, and a very limited manufacture is looked for. There has been a fair local demand all season, the consumption being equal to former years.

		Supply.	Export.	Stock.
1887	Square	1,168,547	5,127,080	4,294,851 Square.
	Waney	2,060,083		2,449,403 Waney.
1886	Square	3,032,738	4,524,760	6,572,664 Square.
	Waney	3,077,331		3,267,094 Waney.

RED PINE.—There has been rather a better demand for this wood than during the past few years. The supply has been ample, the shipment under the average, and the quantity now on hand very light, though slightly in excess of last season. With the recovery of trade in Ireland we may look for a better demand and heavier export.

	Supply.	Export.	Stock.
1887	591,646	405,720	404,124
1886	273,767	405,520	256,904

OAK—Has also been in much better request during the past three months and commanded higher rates in the early part of the season, when it was very dull of sale. The supply has been a very moderate one, the export close on that of 1886, while the Cove returns show 248,040 feet less than when we last issued our Circular. The quantity at Garden Island and Collins' Bay is unusually small. This winter's production promises to be light, and our highest quotations are now asked.

	Supply.	Export.	Stock.
1887	746,243	1,012,160	748,637
1886	1,039,632	1,051,360	996,713

ELM—The receipts have been trifling, most of this timber in the Supervisor of Cullers' returns having wintered in drams, was estimated in last year's stock. The shipment though light is equal to the previous year, and the wintering stock 404,028 feet less. The enhanced cost of standing timber and the difficulty in procuring it militates against its manufacture, and the production this winter will be on a very limited basis.

	Supply.	Export.	Stock.
1887	221,358	405,040	502,773
1886	399,698	407,120	906,791

ASH.—This wood in supply and export is under the average, but does not receive as much attention as formerly. The stock wintering comprises some old timber, and is slightly under that of last season. The production will be light.

	Supply.	Export.	Stock.
1887	114,282	191,840	287,174
1886	138,485	174,360	321,211

BIRCH—The quantity wintering is almost *nil*, but if prices advance and with a favorable winter, no doubt ample for all requirements will be made.

	Supply.	Export.	Stock.
1887	112,990	192,680	12,935
1886	221,291	236,680	67,336

STAVES.—This branch of our trade, at one time so important, has dwindled down to the shipment of a few thousands—exceedingly low rates of freight from the States having been the chief cause in bringing this about. The stock is a diminutive one.

		Supply.	Export.	Stock.
1887	Pipe	44	220	41
	Puncheon	156	306	33
1886	Pipe	65	151	254
	Puncheon	129	308	159

DEALS—PINE—Our comparative statement shows a considerable decline in the supply and export. We fear this branch of our lumber trade is finding its way through other channels where greater facilities of shipment and cheaper rates of stowage prevail than in our port. The demand during the early months was rather slow, but with the autumn prices stiffened and large transactions have taken place at about our quotations. Most of the "large cuts" have already been disposed of for next season's delivery. The Supply from Michigan will be trifling owing to the improved rates current there for sawn lumber.

	Supply.	Export.	Stock.
1887	1,487,138	1,365,510	670,341
1886	2,578,004	2,271,069	798,713

Do —SPRUCE.—The business done in this article has been considerable, the demand though very slack during the spring and summer months improved towards the autumn, prices have advanced and some large sales are reported at our quotations. At the same time Mill-Owners will do well not to increase on last year's production.

	Supply.	Export.	Stock.
1887	2,301,996	2,399,489	990,591
1886	2,102,883	2,318,335	1,288,084

SAWN LUMBER—Has been in good request, more especially for the higher grades. We quote Pine at $10 to $15 per 1,000 feet b. m. and Spruce at $5.50 to $10.50, according to quality and specification.

Freights have ruled low all season,—Opening at 16s. to 20s. for Timber, and 45s. to 47s. 6d. Deals, closing at 19s. to 20s. Timber, and 40s. Deals.

STOCK OF LUMBER IN THE PORT OF QUEBEC—INCLUDING MERCHANTABLE AND CULLS—ON THE 1st OF DECEMBER, 1887.

N. B. Parties in England will bear in mind, that the measurement in the Raft requires the pine to undergo great expense in dressing, butting, and at times heavy loss for culls. If sold in shipping order, the expense of shipping only to be added.

NEW BRUNSWICK.

The Lumber and Timber Export Trade of the Province for 1887.

There has been a very considerable falling off in the lumber and timber export trade of New Brunswick for 1887 as compared with previous years. A comparison of last year's shipment of deals from St. John to the trans-Atlantic ports with that of 1886 shows a decrease of ten million feet. As compared with the export of 1885 the falling off amounts to twenty-eight million feet. According to J. B. Snowball's Miramichi Wood Trade circular the lumber exports for the province have decreased about 26,000,000 sup. feet as against those of last year. The season's shipments of square timber were about one-half those of 1886. The circular also notes the circumstance that for the first time the United States has taken the larger portion of the wood product shipped from St. John. Of a total of 300,000,000 superficial feet in round numbers for the year ending September 30th, 1887, 170,000,000 went over the lines and only 130,000,000 to Europe and elsewhere. The same feature is noticeable with regard to wood products from other parts of the province. Prices have ruled low in the European market and the trade has declined owing to its being unremunerative. There are indications of a better feeling in the near future. The stock of woods, manufactured and unmanufactured, being wintered is estimated at 25,000,000 sup. feet. The season's production is on a very restricted scale, and while it cannot possibly exceed that of last year may possibly be much less should the remainder of the season prove unfavorable. Many operators have retired from the business. The extent of the total lumber shipments of New Brunswick in 1886 as compared with 1887, were as follows:

NOVA SCOTIA.

Owing to the same causes which have so seriously affected the lumber and timber export trade in New Brunswick the shipments of forest products from Nova Scotia for 1887 as compared with those of 1886 manifest a falling off of about four million and a quarter superficial feet. The outlook cannot be regarded as satisfactory unless on the principle of the old adage that when things are at the worst they begin to mend. There is feeling that prices abroad are likely to look up shortly and that the export trade may be expected to improve in consequence.

—Mr. J. B. Charleson of Quebec, appointed overseer of lumbering operations on the Upper and Lower Ottawa by the Quebec Government has commenced his duties. His division includes the Montreal and Ottawa agencies. The necessity for his appointment arose from assimilation of the Quebec to the Ontario system under which instead of collecting dues on two sizes of logs stumpage will be charged by board measure at the rate of $1.30 per 1,000 feet. Mr. Charleson expects that the provincial revenue from lumber will now reach $500,000 annually, an increase of about $150,000.

AMONG THE MANUFACTURERS.

MESSRS. GEO. F. HAWORTH & CO., Toronto, in addition to their manufacturing business, have been appointed exclusive agents in Canada for the sale of Hoyt's pure American oak tanned leather belting, known the world over for its superior quality, and which has been used by some of the largest mill owners in Canada for the past thirty years.

MESSRS. J. P. WAGNER & CO., of Toronto, the old established sash and door manufacturing firm, are retiring from business after a successful career of nearly 33 years. They commenced in a very small way and have seen their business increase with the growth of the city until at one time they had in their employ about 100 men. The jobbing business of the firm will be continued by Mr. William Munro.

The Canada Lumber Cutting Machine Co., of Toronto, which was recently organized with a capital stock of $350,000, are erecting a mill at Belleville, Ont., in which will be placed the lumber cutting machinery the operation of which, in Toronto, was described in these pages in September last. The works will probably be in operation this month, and the products will consist of box veneers, barrel staves, etc. It is the intention of the company to add several other machines when their Belleville works are fairly in operation.

MR. W. W. PARSONS of McLaren's Depot, claims to have had an economical run in saw sharpening since he has been using the Rogers' Saw Filer. He did all the filing for a circular mill and changed saws every four hours (no pointing up between shifts) cutting 2,500,000 feet of lumber, nearly all inch boards, and 9,000 railroad ties, without the use of a file and with the consumption of just fifty cents worth of emery wheel. The machine used was a No. 3 Rogers' saw filer, manufactured by the Hart Emery Wheel Co., Hamilton, and the emery wheel was one of the celebrated Hart's Patent made by the same firm. The average daily output was 25,000 feet.

AMONG the new firms whose advertisement appears in the current issue of THE LUMBERMAN will be found The Polson Iron Works Co., of Toronto, a name already quite familiar to the majority of our readers. The manufactures of this company comprise the "Brown" and "Allan" automatic engines, vertical, hoisting and marine engines, steam yachts and launches, iron tools and boilers of all descriptions, etc. They are also extensive dealers in nearly every kind of second-hand machinery, and extend a welcome to all intending buyers to call either at their works, Esplanade street, or at their show rooms, 38 Yonge street, Toronto, and inspect their stock on hand.

WE have pleasure in directing the attention of our lumbermen readers to the advertisement on another page of this issue of Taper Pike Poles, Peevie Stocks and Cant-Hook Handles, manufactured by Mr. Wm. Forsyth, Peterborough, Ont. This gentleman has for the past two or three years been turning out a pike pole which is generally considered by all who have used them superior in every way to anything heretofore introduced to the trade. They are made of the best straight rock maple, turned in a machine specially constructed for the purpose, and measure twelve and thirteen feet long. Anyone doubting the superiority of these poles over others are invited to correspond with the gentlemen whose names are furnished in Mr. Forsyth's advertising space.

AMONG the callers at THE LUMBERMAN office during the past month was Mr. Alonzo W. Spooner, patentee and manufacturer of Spooner's Copperine, a purely non-fibrous, anti-friction metal, for use by engineers in fitting axle boxes. This gentleman has recently issued a handy pocket catalogue fully setting forth the merits of his invention. He informs us that this new metal is being rapidly introduced into all the leading manufacturing establishments both in Canada and the United States, and from the host of testimonials published it is evident that Copperine is becoming a positive favorite. Saw and planing mill owners, who are not already using this metal, can obtain samples and full particulars by addressing A. W. Spooner, Port Hope, Ont.

MESSRS. F. E. Dixon & Co., Toronto, manufacturers of patent lap-joint star rivet leather belting, address themselves through these pages to mill owners, manufacturers, and all who use leather belting, proclaiming the excellence of their products and the great variety in which they are made. They speak of their belting as that which will run straight on the pulleys, thoroughly well stretched, will not tear at the lace holes, and which will give entire satisfaction. They manufacture their leather belting from the very best Canadian and American genuine oak-tanned leather, and they are also large dealers in rubber and cotton belting, lace leather and Phenix oil, which they say is the only perfect belt dressing made. They ask that any interested will write to them for their price lists and discounts, and for their pamphlet on belting, which they will take great pleasure in sending. The pamphlet alluded to, in addition to other valuable matter relating to the subject, contains some useful hints to users of belting, in which is shown the per cent. of resistance on different pulleys, etc.; value of rubber and canvas belts as compared with leather; strength of belts; care of belts; directions for calculating the width of belts required for transmitting different amounts of power under different circumstances, and for calculating the amount of power which a belt will transmit; general maxims in regard to belts, etc.

The Sturtevant Patent Progressive Lumber Dry-Kiln, which appears for the first time among our advertisements in this issue, has been extensively introduced throughout the United States. The designer and builder has had an experience of twenty five years in this line, has sold over 5,000 of his Hot Blast Steam Heating Apparatus, and over 40,000 of his blowers for various uses. The ultimate object in all dry-kilns has been to secure a circulation of the heated air. By making the system positive by causing such a circulation by means of a fan, Mr. Sturtevant has made a great stride in the matter of drying lumber. The entire apparatus is so entirely under control that any temperature, humidity or quantity of air may be had at a minutes notice. The apparatus is conveniently placed in a building adjacent to the kiln. No steam pipes are to be found in the latter and the risk from fire is avoided with a consequent reduction in insurance. The same apparatus is employed for the ventilation and heating of buildings. The Houses of Parliament at Ottawa and many public buildings in the United States are furnished with it. By its use a comfortable healthy atmosphere is maintained, and the employes in manufacturing establishments to which it is applied do 15 to 20 per cent. more work. The same party also manufactures exhausting fans for removing chips and shavings from wood working machinery, smoke from forges, fumes and bad air from rooms, and dust from polishing furnaces, for ventilation and the like; forges, lumber trucks, lumber dry-kiln apparatus, steam heating apparatus, etc. It is a constant surprise to many to learn of the thousand and one uses to which a blower is put in every day practice. Catalogues descriptive of the various styles of apparatuses and their applications can be obtained by writing to B. F. Sturtevant, Boston, Mass. U. S.

NEW BRUNSWICK BUDGET.

ST. JOHN, N. B. Feb. 1st, 1888.

To summarize the operations of New Brunswick lumbermen is no easy task. The nearest estimate that can be made is to say that the North Shore operators cut, last season, about 140,000,000 sp. ft., and operators in all other parts of the province about the same quantity. This covers the logs obtained in New Brunswick only. Take in those cut in Quebec and Maine, the total quantity handled in New Brunswick sums up about 430,000,000 sp. ft. The cut this season will not exceed this, if it comes up to it, for while the American millmen hope to increase their output, most of those who are engaged in the trans-Atlantic trade are limiting their productions and several heavy shippers have gone out of the business altogether.

The lumber shipments of New Brunswick in 1887 as compared with 1886 are as follows:—

TRANS-ATLANTIC.

Port	S.ft.deals, etc. 1887	Tons tim'r. 1887	S.ft.deals,etc. 1886	Tons timber. 1886
St. John	124,361,389	6,384	134,123,207	10,625
Miramichi	68,121,629	157	72,276,391	1,784
Dalhousie	18,059,828	928	18,615,319	1,154
Bathurst	13,589,769		16,392,183	
Richibucto	14,751,000		13,117,800	
Sackville	8,555,000		9,421,000	
Shediac	8,322,882		7,209,370	
Cocaque	635,580			
Caraquet			1,004,377	
	246,397,077		272,159,647	

The trans-Atlantic exports in 1885 amounted to 291,081,759 feet; 1884, 331,000,000 feet; 1883, 404,287,676 feet.

TO THE UNITED STATES.
(FROM THE PORT OF ST. JOHN.)

	1887	1886
Long lumber	$ 185,224.33	$ 107,877.02
Short "	123,755.54	107,416.29
Round timber	22,357.81	18,932.53
Piling	1,909.00	
American long lumber	1,011,987.85	1,186,593.29
" short "	252,726.38	247,692.94
	$1,577,960.91	$1,668,512.07

It will be seen that, while the export of American lumber has lessened, the export of our own product increased about $100,000. It may be noted here that last year, for the first time, the volume of our exports to the United States exceeded the amount of the trans-Atlantic trade. The export from other portions of the Province to the United States, has also shown a marked increase, whilst the export to Europe is diminishing.

The operations of our 15 local mills supply a fair criterion for judging of the business of the province. They have sawed about 155,000,000 sp. ft. of lumber. Our six shingle mills have manufactured about 65,000,000 shingles. These figures fall below those of last year, for the reason that the heavy spring freshets shut down all the mills about the harbor. The business in most lines has been only fair, but the shingle business has boomed. Improvements and additions which are now going on, indicate that our millmen expect great things from the coming season. Miller & Woodman's new shingle mill—165 feet long and 80 feet wide—will run eight shingler, with clapboard and stave machines, and probably a rotary. W. H. Murray will put several stave and clapboard machines into his new edition. D. W. Clark & Son will add planing and dovetailing machines. Edward Gewett & Co. are putting in new boilers, and shingle, stave, clapboard and heading machines. Moses Cowan will add shingle, stave and clapboard machines. As nearly as I can judge, about 15 new mills have been built in the province during the year, or are now building.

G. B. Snowball estimates the stock of woods manufactured and unmanufactured, being wintered, at 25,000,000 sp. ft—the same as last year.

The wages of men in the woods are higher than they were last season, and the contract figures have correspondingly advanced.

MONEY LOST BY WASTE OF POWER.

Below are some figures by a New England Cotton Mill Engineer of high reputation, and large experience, showing the power it takes to average modern mills with first class shafting, to drive the shafting alone.

Mill No.	Whole Load, H. P.	Shafting alone, H. P.	Per Cent. of Whole.
1	190	51	25.6
2	472	111.5	23.6
3	486	134	27.5
4	677	190	28.1
5	750	174.6	22.7
6	235	84.8	36.1
7	670	262.9	39.2
8	677	182	26.8

These may be taken as a fair showing of the power that is required in many of our best (not worst) mills and factories to drive shafting. It will be seen that the percentage is large—from 22 per cent upwards.

It is unreasonable to think that all that power is consumed by a *legitimate* amount of friction of bearings and belts. It is out of all reason, and we know of no cause for such a loss of power but *tight belts and heavy slippery iron pulleys.*

According to the best scientific authority it costs one-horse power to keep in motion one ton of metal or weight; thus every unnecessary 2000 pounds weight on your line shaft, cost you one-horse power. To maintain a horse power costs from $25 to $125 per year. Any manufacturer who will take the pains to investigate the unnecessary weight by heavy iron pulleys, too tight belts, etc., will be surprised to find the enormous waste of power caused in this manner—to say nothing about the loss resulting from the shortened life of the entire equipment. In order to avoid this great loss of power use the Dodge Wood Separable Pulleys, they are 70 per cent. lighter than iron and are in more perfect balance than is possible for any iron pulley to be made. As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the results of two tests made and published by two of the most eminent mechanical authorities:—

Portion of Circumference embraced by Belt.	Rel. value of leather belt: On Wooden Pulleys.	On Iron Pulleys.	Portion of Circumference embraced by Belt.	Rel. value of leather belt: On Wooden Pulleys.	On Iron Pulleys.
.20	1.80	1.42	.20	1.90	1.40
.30	2.43	1.69	.30	2.40	1 70
.40	3.26	2.02	.40	3.30	2.00
.50	4.38	2.41	.50	4.40	2.40
.60	5.88	2.87	.60	5.90	2.90
.70	7.90	3.43	.70	7.90	3.40
	Morin.—Appleton's Encyclopedia of Mechanical Arts.			Haswell.—Engineers' and Mechanics' Pocket Book.	

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed.

or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft, and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the center, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are: It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft; also a key, unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pullys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus: The ratis of friction to pressure for leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

While on the subject of transmitting power effectually and economically we would respectfully draw the attention of all interested to the system of grooved hardwood pulleys manilla rope as advertised by the Dodge Wood Split Pully Cot on another page of this paper. The transmission of power by ropes is not new but the Dodge patent system of adjusting the pulleys applying the ropes, taking care of the slack and stretch is new and most effectual, and is giving the best of satisfaction, as certified by the testimonials of numerous well known manufacturers who are using this method of transmission.

Illustrated cataloges of belt pulleys and the rope transmission system will be furnished on application to the Dodge Wood Split Pulley Co., 81 to 89 Adelaid Street West, Toronto.

FIREWOOD IN ONTARIO.

To the Editor of the Canada Lumberman.

SIR.—Perhaps you can afford me room for a reflection on the above subject, which the following paragraph has suggested:—

SCARCITY OF FUEL IN KANSAS.

There was last week great suffering in Kansas for want of fuel. Much of that state is treeless, and wood is not to be had. Corn is sometimes used there for fuel, but the corn was a failure this year, and the unfortunate settlers were deprived of that resource against the inclemency of the winter weather. In some counties the inhabitants had nothing to depend upon but a scanty and uncertain supply of coal. Some of them had to travel thirty, forty and fifty miles to a railway station for coal, only to find that there was none to be had. The roads were working to their utmost capacity, yet they could not supply all who needed fuel. In one place the cars were stopped by the citizens, who were ready to perish, and they helped themselves to what they wanted. Many persons have been frozen to death, and many who have not actually perished with cold have endured great suffering.—*Motnreal Star.*

This was two weeks before the late windstorms in the west. Returns from a great number of Ontario townships have brought out the fact that, throughout settled Ontario, the average amount of firewood standing is but fifteen years' consumption, at the present rate of using, when most of our best farming sections will be in the same position, as far as fuel is concerned, as Kansas, which has great forests near her, as Ontario would still have, but in both cases they are so distant that carriage costs more than would purchase coal. When in Kansas last year, I found people doing as they do here. The wise were planting groves of maple, hickory, and ash, the others were not—they were even cutting down, dragging long distances and burning the few great trees which fringe the river banks.

The moral to Ontario is obvious. Why should not the coming spring witness a great tree-planting movement?

Yours truly,

R. W. PHIPPS.

Toronto, January 27, 1888.

—Mr. W. P. Sayward, Victoria, B.C., proprietor of the Rock Bay Saw Mill, has the only saw mill in that place. It has the capacity to cut 6,000,000 feet of lumber per annum.

—Toronto dealers report a large demand for big bill stuff and red pine for car building purposes. J. B. Smith & Co. have had an enquiry from Montreal for 200,000 feet 16x8 inches, and 16 feet in length, for the construction of a Howe Truss bridge. The same firm last year filled an unusually large contract of this character, supplying 300,000 feet 3x14, and averaging 40 feet in length, for the building of the Christian Brothers College, Montreal. The stuff was cut on Lake Nipissing.

LETTERS FROM CORRESPONDENTS.

What the Millmen are Doing, Here, There and Everywhere--Prospects for Next Season's Operations.

BRYSON, QUE.—The shipments of lumber from Canada past Rouse's Point last year, the great bulk of which went from this section of the country, were as follows:—Pine lumber, 138,017,880 feet; spruce, 24,007,168; hemlock, 9,502,757; basswood, 553,662; ash, 1,348,294; birch, 76,445; elm, 63,749; maple, 240,006; lath, 45,103,530 pcs.; shingles, 4,389,500; pickets, 2,630,177 feet; match blocks, 745½ cords; hemlock bark, 6,415; wood (fine), 1,360; R. R. ties, 243,750; telegraph poles, 9,550; cedar posts, 13,987; wooden doors, 10,458; reel stock, 396,000 feet; shooks, 4,314,000; match splints, 140,220 gross. The above does not include the exports by Burlington in barges, say 60,000,000 feet. The approximate value of the exports is as follows:—Lumber, pine, spruce and hardwood, $3,644,000; shingles, $15,000; pickets, $32,000; match blocks, $4,500; hemlock bark, 36,000; firewood, $3,000; R. R. ties. $75,000; telegraph poles, $15,000; cedar posts, $1,100; wooden doors, $13,072; shooks, $50,200; match splints, say $5,000, or say in round figures, $4,000,000.

MCKELLAR.—Lumbering operations are brisk in this neighborhood this winter, and the weather has favored the work so far. The snow is now only about 22 inches deep and comparatively loose, so that operations go on in the woods without the need of shovelling roads. S. & J. Armstrong will get out three million feet of saw logs for The Georgian Bay Consolidated Lumber Company on Maganetawan river, and two million feet for Mr. Richard Power, of Barrie, on Parry Island. They are also taking out some saw logs in McKeller for C. Beck & Co., of Penetanguishene, and have some three thousand pieces of cedar out for telegraph poles. These last are the result of a new venture and they expect to get market for them next summer at Parry Sound or Midland. Cedar in some parts of this district is very good, and if a market can be got there will likely be large quantities of it got out hereafter. The Parry Sound Lumber Company, Midland, and North Shore Lumber Company, and Conger Lumber Company, of Parry Sound, are all stocking up heavy for next summer's cut. The Georgian Bay Consolidated Lumber Company, of Waubaushene, will stock their Byng Inlet mills by way of the Maganetawan river. They are also taking out some board pine in Croft. Chew Brothers, of Midland, are getting out stock in Burpes, and there are numerous lumber concerns operating heavily in the northern portion of the district toward French river. Oats are in good demand at 40 cents; hay plentiful at $8 to $10; teams are in demand at $1.50 to $1.75 per day, and men's wages are very good, $20 to $22.

NIPISSING DISTRICT.—A correspondent writes from Wahnapitae as follows:—I am much surprised to find such a centre of business among the mountains of Nipissing as I find here. At Wahnapitae there are quite a number of new buildings—a hotel or boarding house, a post office, a general store, kept by Messrs. Simard & Roy. The Emery Lumber Company's buildings make quite a show in the embryotic town. The Georgian Bay Lumber Company has also built a magnificent storehouse and office alongside the C. P. R. track, and in close proximity to the Emery buildings. These two companies are lumbering extensively on the Wahnapitae river, principally saw logs. I took a trip up through the lumber woods, and I was very much pleased to see how these Americans conducted their work. To see their teams moving away from the skidways with their loads of logs was a grand sight. But they spare no expense in grading their roads and using sprinklers, making a solid ice road in a very short time. Mr. Robert Gorman, of the firm of Timmins & Gorman, is also logging in this locality. His camp is only two miles from the railway. All these firms have now got pretty well into the hauling, and their logs are all of a superior quality. As a rule they cut and take out smaller logs than we do on the Ottawa river.

BRUSSELS, ONT.—There is a large falling off in the cut of logs from year to year, in this section. Timber is about exhausted and in a very short time saw mills can be dispensed with. Local demand uses the greater part of lumber manufactured here, except perhaps a little hardwood. We do not saw much till spring opens up, generally.

CHIPPAWA, ONT.—There will probably be about three millions of oak and as much of elm, ash and basswood banked on the Chippawa creek canal feeder and Grand river. No pine to speak of.

PARRY SOUND LUMBER CO., Parry Sound, Ont.—We are getting out about 9,000 feet to saw, which, with 4,000 ft wintered over, will give us 13,000 feet to cut next summer. We are building a shingle mill of about ten million capacity, and are taking out a full stock for it. We expect to start the mill early in April, and expect to see business good this coming season.

OTTAWA, ONT.—The lumber cut in this section was much smaller than usual, owing to the lowness of the water, but we expect the cut for 1888 will be of normal proportions. The winter has thus far been favorable for logging operations, and we look for an advance in all the lower grades of lumber, and possibly a decline in the better grades.

GOODEVE & BRIGHAM, ALLEN PARK—Logs are coming in freely. We expect to get this winter about 1,000,000, feet, principally hardwood, such as maple, rock and soft elm, basswood and a quantity of cedar and hemlock. The demand is better this season so far than last, but prices are not much better. We keep our mills running all the time.

ALLAN'S MILLS, ONT.—The local demand for lumber is dull, owing to a scarcity of money amongst the farming community, on account of slight grain crops. During the last season J. & R. Ritchie fitted their mill with a set of new machinery throughout, of modern design, made by the Waterous Engine Works Company, of Brantford. The principal lumber exported from here is ash and basswood. Very little pine goes across the lines now.

JOSEPH P. WALLIS, Port Carling, Ont.—The lumber business in this vicinity is fairly active, and the prospects for the coming season are good. Next season, all being well, I will have a small steam tug on the water, and my shingle mill, which I sold some time ago, but have re-purchased, will be in operation, as well as the saw mill and planer which I have been running for some years.

FENELON FALLS, Ont.—There are only two lumber firms operating here at present. Their combined cut for the coming season will be about 10,000,000 feet, made up as follows: Thomson & Co., 5 to 5½ million, Green & Ellis, 4½ to 5 million. Report says Mr. Mossom Boyd is negotiating for the purchase of the large gang saw mill belonging to the R.C. Smith estate. If he succeeds in buying he will cut a large stock here this season.

KINGSBURY, Que.—Lumberers are busy getting out logs in this vicinity. The Pierreville Mills Co. are getting out 45,000 logs on Salmon Creek. Williamson & Crombie are having 30,000 logs put in same stream. The latter are also getting a quantity of cedar out, and propose going into the manufacture of shingles. This firm also do a large business in butter tubs and spruce clapboards. The New Rockland Slate Company, who have a saw mill for cutting their own lumber, are also getting out a supply of logs. Spruce and hemlock are the kind of logs made here, pine is exhausted. The Quebec Government are supplying blank books, to be filled in by the lumbermen, with the quantity of logs cut by them. The cut of logs in this vicinity will be nearly as follows:—Pierreville Mills Co., 45,000 logs; Williamson and Crombie, 30,000; New Rockland Slate Co., 3,000. The above will be nearly all spruce logs, no pine of any amount down here.

H. L. LOVERING & Co., Coldwater, Ont.—Lumbering operations in this section are unusually brisk this season. Owing to the extensive bush fires last summer large quantities of timber has to be taken out to keep it from spoiling. Our output this season in lumber and shingles will be between three and four million feet. Our shingle mill will start about the first of February and will continue running until the opening of navigation, at which time the lumber mill will be started. Most of the mills here will start as soon as the lakes open in the spring and all anticipate a busy season. Our mill is especially adapted for cutting bill stuff, and we have overhauled it this winter, putting it in first-class shape. We expect to do a good trade in that line next season.

TORONTO.—Were it not for various causes, some remote and others near, trade might be better. Of course the truth of the above is apparent. To state as briefly as possible the condition of the lumber trade, it may be said to be non-existent. No sales of any censequence. Dealers are engaged in the pleasant pastime of taking stock, closing their books and looking for profits or losses. Prices about as usual.

J. E. MURPHY, Hepworth, Ont.—I am operating two mills this winter, and will cut from two to two and a-half millions of mixed stock: hemlock, maple, beech, bass, cedar and pine, principally hemlock. The hemlock and hardwood shipped from this station during the season will probably amount to six millions.

PONTYPOOL, Ont.—The following is a rough estimate of the proposed output of lumber in this neighborhood during the coming sawing season: John Kennedy, saw and shingle mill, 1,500,000 feet; W. C. Irvin, saw and shingle mill, 2,000,000 feet; Charles Ashby, saw mill, 800,000 feet; H. Staples, in his new saw mill, about 2,000,000 feet; George Lapp, saw mill, 400,000; John Barnick, saw mill, 1,500,000 feet. Logs for these mills are secured entirely from local forests. Mr. W. C. Irvin, is about the only one who is doing any considerable stocking.

PERLEY & PATTEE, Ottawa.—We are doing about the same quantity of work as usual. We look for a prosperous year in 1888, and think prices of all pine lumber, except the very best, will be stiffer than in 1887.

A. & P. WHITE, Pembroke, Ont.—We are cutting about 40,000 pieces of logs and dimension timber, half of which will be sawed at Pembroke and the balance at Deux Riviere. Shipments to all points *via* C. P. R.

J. P. BALDWIN & SON, Baldwin's Mills, Que.—We are doing the usual amount of lumbering, and the prospects are fair for good prices. There would, however, be better protection for lumbermen in this vicinity if logs were not allowed to be taken across the border to be sawed free of duty, and returned, and also if the export duty was always paid. It ought to be $2 per M. feet.

GEORGE GALE & SONS, Waterville, Que.—We have got out about 1,000,000 feet per year for the past three years, but are not operating at this point this season. We are just starting a steam mill at De Roches, but do not expect to get in more than 500,000 feet.

EASTMAN SPRINGS, Ont.—John N. Stewart is running his mill at full blast and turning out 10,000 feet per day. Between Messrs. Stewart, Hager, Flat & Bradley and others, there will be about 30,000 logs taken out in this section this winter, besides a quantity that will be got out by Messrs. Sterns & Rainbow, and driven to their mills at Duncanville. Mr. George Perley has a large force of men taking out logs to be cut into bill lumber next season at Stewart's mill.

MEAFORD, Ont.—The prospects for the season's trade are good. It is anticipated that business will be about equal to that of last year. T. E. Butters expects to cut about 250,000 feet of maple, bass and elm, and 350,000 feet of hemlock.

WICKHAM, Que.—Some of the mills here are stocking lighter than usual owing to the scarcity of logs. Mr. T. Barrie expects to cut 15,000 logs this season. He manufactures dimension timber to supply the home trade, also stock boards planed or rough.

JAMES COCKBURN, Edgar Ont.—The season is fairly good in this locality, and I will cut about 1,200,000 feet of pine and bass, principally the former.

HAMILTON, Ont.—At this season of the year the lumber trade in this city as in all other places, is, comparatively, at a standstill. Building, from which source the principal revenue is derived, being now almost, if not quite, *nil*. During the season of 1887 there was considerable building done in Hamilton, with good expectations for the coming season's trade. We receive the lumber which is used here principally by the N. & N. W. and the G. T. railways, they being the only lines running into this city. Very little lumber now comes by boat. There is a large quantity of logs being cut in the Parry Sound and Muskoka districts which will find its way to this market in its finished state.

WEST LORNE, ONT.—In all respects this season, thus far, has been one of unprecedented activity in the timber business in and throughout these parts. The township of Aldborough has for 30 years been the home of the lumberman and has each winter since their first entrance into its stately woods, yielded a bountiful tribute to their courage and energy, but though a large portion of the valuable timber lands have been bereft, still we venture to say that in its palmiest days in the log season it has never seen a buisier one than at present. The village of West Lorne is crowded with teams bringing in the logs that are destined to supply the trade for the summer of J. C. Schleihauf, J. H. Greer and McKillop & Sons mills. Though barely two weeks of sleighing have passed since they began freely to move, the yards are nearly full, and there is some talk already of a fall in prices consequent on the large amount of timber offered over and above amount necessary to supply the mills which have already begun cutting. The prospects for the year just opening are good and prices will remain about the same as last year, with a slightly increased demand, but the quality will in some of the softer kinds be a little inferior to last season's cut.

A. CALDWELL & SON, ALMONTE.—As we only drive logs to this mill every alternate season, we will have no drive during the coming season, but will cut about 1,500,000 feet of lumber. There has been some good sales made recently in the Ottawa Valley and the prospects encouraging. We expect to commence sawing about the beginning of April.

THE GEORGIAN BAY CONSOLIDATED LUMBER CO.—Our cut of sawlogs this winter will be about 60,000,000 feet in addition to about 350,000,000 feet board pine. Our probable cut in our five mills will be about from 55,000,000 to 60,000,000 feet, as the nature of the season permits. It is very hard to say at what time the mills will begin sawing, as their beginning depends to some extent on the time of the ice going away. The 1st of May is about as soon as may be expected.

J. HADDEN & SONS, Foxmead.—Trade has been fairly good in our estimation. Lumber has been all sold, and also one-half of next season's cut at $1 advance of last year's prices. Our motto is, never refuse a fair offer. We will cut during the coming season 2,000,000 feet, one-third long lengths to forty feet, which is promptly taken up. We are anxious to know how the railway companies propose treating us this year; may it be more liberal than in the past.

QUEBEC.—No transactions in timber or deals have transpired since the commencement of the new year, business being at a standstill. Reports from England foreshadow a good business in the shipping and export line next season. The Quebec mercnants are now on their way over and in a short time several contracts are likely to be placed for spring shipments, stocks now being very low on the other side of the water.

SAWYERVILLE, QUE.—The prospect of a railroad is giving an impetus to the lumber trade here. A considerable amount has been brought into requisition for local building purposes. The mill yards are crowded and the streams filled with lumber. Many teams are employed in hauling lumber, ties and posts and taking supplies to the camps in the neighborhood.

PENETANGUISHENE, ONT.—Messrs. Marchildon & Lalonde are engaged on Mr. Brady's contract in getting out logs in the Vent settlement for Mr. McGibbon. They will take out half a million feet. Mr. Davidson has eight jobbers at work taking out timber for him this winter besides the camp under his own supervision. Messrs. Belyea & Robertson are engaged getting out wood for the railway as well as buying large quantities, paying as high as $800 weekly.

PARRY SOUND, ONT.—Lumbering operations are very brisk throughout the District at present. Drawing is being rapidly pushed forward and the season's cut promises to be very large. The Parry Sound Lumber Company are getting out a large quantity of shingle bolts for their new mill, which will be ready to commence cutting when the spring opens.

CARLETON PLACE, ONT.—Much speculation has been indulged in as to where the Canada Lumber Co., otherwise Messrs. McLaren, Edwards & Co., would establish their mills. It was feared that Carleton Place, in which the leading man of the concern, Mr. Peter McLaren, had his mill, would be abandoned in favor of Ottawa or some other point, but the question was settled by the company buying out the Carleton Place site. They are now enlarging and refitting the mill, which, when completed, will be one of the finest in the country with all the latest improvements.

VANCOUVER, B. C.—The lumber trade at this point is very active and prospects bright. The Hastings saw mill, one of the largest in the country, underwent considerable repairs last summer. During last season the company loaded 13 ships. They employ about 100 men, besides 70 who work in the camps, and devote themselves entirely to supplying the foreign trade especially that of South America. Three large barges, each of which will carry 1,000,000 feet of lumber, are loading and will shortly sail, one to Chili and two to Australia. A vessel capable of carrying 1,500,000 will shortly arrive for a cargo, when the mill will run night and day, turning out 50,000 a day on this contract besides other work. The Royal City Mills have largely increased their business during the past year. They have 95 men in their employ, and saw about 35,000 ft. of lumber per day. They have built a large sash and door factory which gives employment to twenty men. The pay roll of this establishment amounts to $4,500 per month. The mills of McKay & Co. and the Brunette Saw Mill Co. are also doing a rushing trade. These mills and that of the Moodyville Co., who have the largest lumber business in the province, give employment to a large number of men not directly connected with them, as the greater part of the logs come from different parts of the coast and rivers, and much of the lumber is transported in lighters, to do which tugboats must be employed.

H. CARGILL, Cargill, Ont.—The lumber trade the past season has been the best in my experience, but is, as usual, at this time of the year, a little slack. I intend getting out my usual stock of logs this winter, provided the snow holds out.

BURK'S FALLS, ONT.—Train & Son are taking out 3,000,000 feet of pine this season and have contracted with Messrs. Flatt & Bradley, of Hamilton, to saw and ship their cut of about 2,500,000 feet. Train & Sons expect to put electric light in their mill and run night and day which will enable them to cut about 60,000 feet per day, including shingles. Mr. W. W. Belding is taking something like 5,000,000 feet out of the Thompson limit which he will cut at his new saw mill now in course of erection at Katrine.

HOBSON & WILSON, Huntsville, Ont.—We do a small business, our stock of logs this season is 10,000 feet, and we have our last years cut of 800 feet on hand. Our mill is on Fairy Lake three miles from Huntsville, to which point we ship by barge.

THE TORONTO OUTLOOK.

The failure of the large lumber firm of S. C. Kanady & Co. has been the principal subject of interest in lumber circles lately. It is understood that a compromise is likely to be arrived at by which on paying 40 cents on the dollar the firm will be able to resume business. The affair has directed attention to the great evil of over-trading, and extensive credits, and some of the dealers are very outspoken in their denunciation of the system.

"Why should there be any failures in the lumber business," said one operator, "It is not subject to the disabilities of many other trades. We have no losses from dead stock or shop worn goods. The article in which we deal is not liable to become unsaleable by reason of a change in fashions, or be superseded by newer styles. We are not forced to sell at any price the goods will fetch for the fear of their becoming a drug in the market. There need be no lumber failures if men were not anxious to do too much business and launch out beyond their resources. Too much credit causes all the trouble. There is plenty of money to be made for all of us by doing a steady quiet trade in accordance with the legitimate demands of the market. Why we could all live on one-quarter of the present trade if it were done on sound business principles.

"Trade is quiet" said Mr. Kerr of the firm of Christie Kerr & Co., "very quiet, I have no important transactions to report. I may say that there is considerable enquiry from the United States for good lumber for cutting up. Yes, I think trade prospects promise fairly when the season opens up, but it is not anticipated that there will be the same amount of speculative building that there was last year. The wholesale men are not disposed to grant credit as easily as they have been doing."

Mr. Tennant of the firm of Tennant & Co., expressed similar views. "The prospects" he said, "are good if money gets somewhat easier. At present there are more enquiries for good lumber for factory purposes than in any other department. There is some demand from the Western section of the province. As to speculative building I may say that the demand for lumber for building purposes has dropped off more than 50 per cent., on account of the loan companies closing down on speculators."

"The outlook is good" said Mr. John Waldie of the Victoria Harbor Lumber Co. "The enhanced value of stumpage seems to have stiffened the prices of manufacturers and a better feeling prevails. There is some American demand for good lumber."

Mr. F. Hammet, of the Ontario Lumber Co., said that the great difficulty in the way of a good season's business was the recent failures, but he nevertheless regarded the prospects hopefully. Operations in the woods had so far been favorable. Not so much board pine was being taken out for Quebec as usual. In other respects the output was about the same as last year. The United States' demand for the upper grades of lumber was about an average one.

ENGLISH TIMBER CIRCULARS.

The circular of Farnworth & Jardine notes only a moderate demand for Canadian forest products, though the deliveries have been in excess of the usual business at this season. Both waney and square yellow pine timber have maintained their value. Market is almost bare, but there is little enquiry and only for large sized wood. Oak in the log has been more in demand but there are few transactions to report, and no change in value. The arrivals of both pine and spruce deals have been in excess of the average. There is no change in value, and the present stock is much too heavy.

Denny Mott & Dickson in their circular state that the market is cleared of first class waney pine. The wintering stocks in Quebec of both square and waney board pine, fall far short of the previous years' light stocks, and lighter prices are confidently anticipated for next season's imports. In the meantime there will be great difficulty in buying this timber on the English market. Prices for oak have advanced and are firm. For pitch pine timber better prices are predicted, as a steady demand has dimiminished the slender stocks on hand.

Simson & Mason's circulars note that stocks in deals and battens are heavy, but looks for an improvement in the trade consequent upon a general business revival. Dock stocks of timber are lower than for some years past. The supply of pitch pine planks and board, though moderate, have been ample to meet the lessened requirements.

Churchill & Sims point out that the principal difficulty in the Canadian export trade is due to the want of attention on the part of shippers to the state of the English market, "shippers in Canada" they say, "pay no great attention to what takes place here, and their market seldom acts in sympathy with ours. As they transfer their stocks to this side prices will rise with them, while here the market staggers under the weight of a supply which will not pass into consumption unless sold below its cost. It is of great importance that only small shipments should be made from this port during the forthcoming season; even the reduction of 500,000 pieces in the years importation has failed to prevent a further growth of the stocks.

IMPORTANT NOTICE.

Large Sale of J. P. WAGNER & CO.'S First-class Wood-working Machinery.

As we are retiring from the manufacturing business on the first day of March next, we wish to express our hearty thanks to all our numerous customers for the kind patronage with which they have favored us for the past thirty-three years, and we wish them all a happy and prosperous and successful future.

All our machinery and plant, which is first-class, will be sold cheap after the first day of March next by private sale up to the 15th of March, after that date what is not sold privately will be sold on the 16th and 17th of March by Public Auction. Any one wishing to buy can inspect the same at any time.

P. S.—Our Mr. Wm. Munro, who has been with us for the last thirty-two years, will attend to any of our customers' work, if they apply to him, after the first day of March next.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—*Civil Service Gazette.*

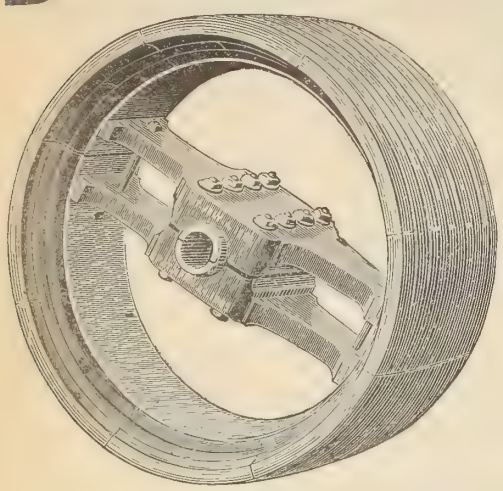
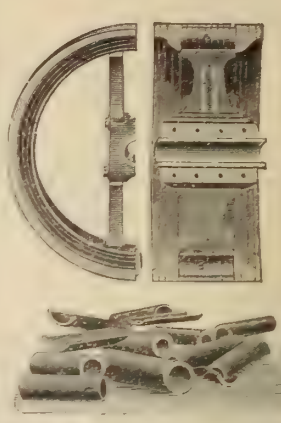
DODGE ⁜ PATENT ⁜ WOOD ⁜ SEPARABLE ⁜ OR ⁜ SPLIT ⁜ PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



⁜ WITH OUR PATENT BUSHING SYSTEM ⁜

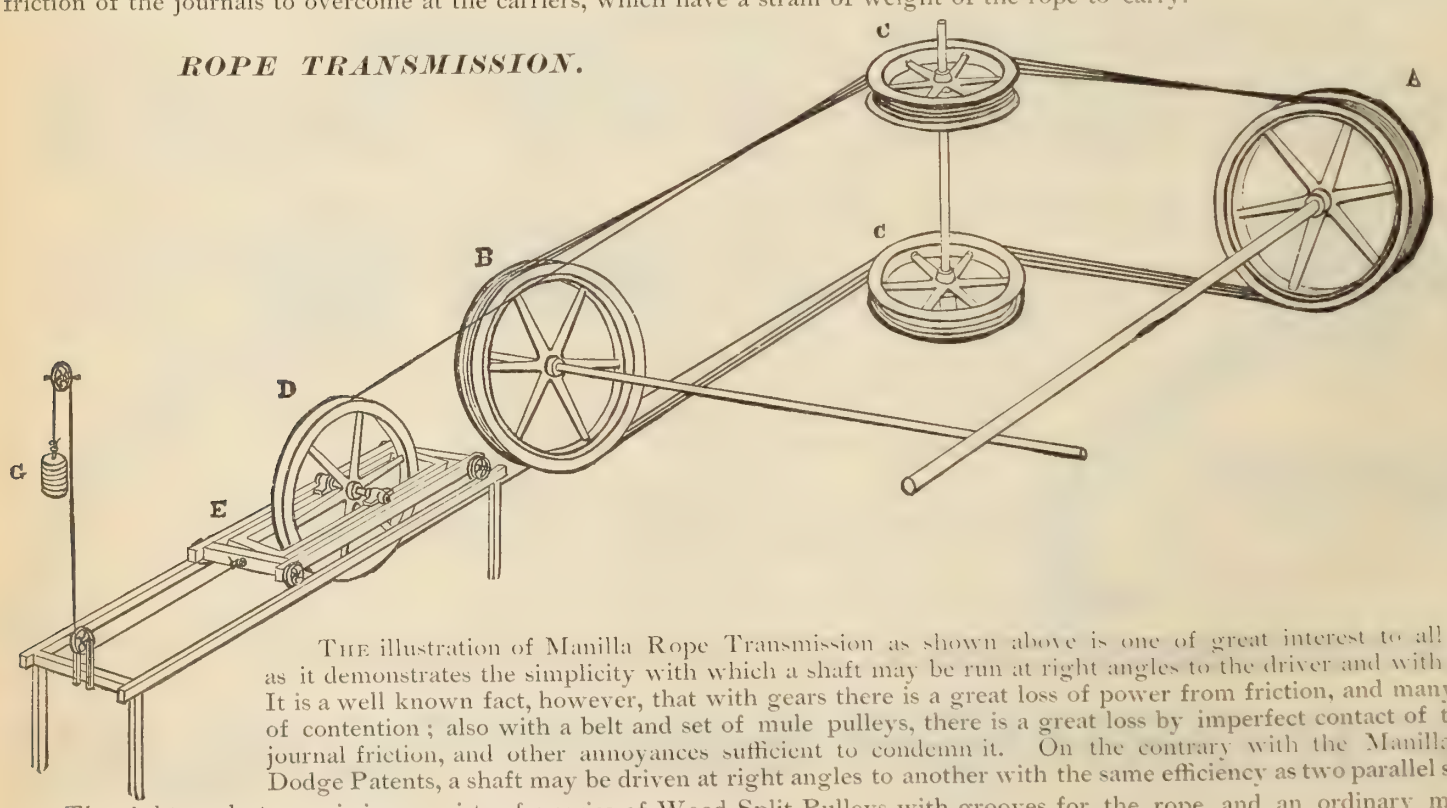
Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron, and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

⁜THE TRANSMISSION OF POWER BY ROPES AND THE DODGE PATENT WOOD PULLEYS⁜

THE great advantage of Wood over Iron as a material for belt pulleys (or drums) to transmit power economically, has induced the DODGE WOOD SPLIT PULLEY CO., of Toronto, to introduce grooved hardwood pulleys for the special purpose of transmitting power by ropes (manilla tallow laid) and in this connection Mr. Dodge has taken out Canadian Letters Patent for a system of applying the ropes, adjusting the pulleys, and taking up slack, that is giving the most unqualified satisfaction. This system of transmitting power by ropes is cheaper and superior to belts in many cases, such as where the driven shaft is at right angles with the driver, also where the drive is perpendicular, particularly when it is quarter twist and perpendicular; also where the driver and driven are close together; also for long drives, such as across a street, or a stream, etc. For transmitting power from an engine to the line shaft this system is unequalled; steady all the time, not like a heavy belt, which is always more or less flapping, jerking and stretching, then slipping and losing power. It is safe to say that an engine hitched up by the Dodge Rope System will do 25 per cent. more work on the same consumption of fuel than the same engine would do with a belt. We have put up a number of the Dodge Patent Rope transmissions during the past year, all of which are in most successful and satisfactory operation, as certified by the testimonials published in our catalogue of well-known manufacturers who have them in use.

WITH OUR SYSTEM OF MANILLA ROPE TRANSMISSION is overcome the objection to Wire Rope (because of crystallizing) and gearing, (because of loss of friction) and shafting (because of the liability to get out of alignment, hence loss of power by friction), and a separate engine plant (because of its great expense); on the contrary, with the Manilla Rope System, under the Dodge patents, the power is transmitted with the same efficiency as though the shafts were close together, there being no loss of power by excessive tension, or bad alignment, but simply the friction of the journals to overcome at the carriers, which have a strain of weight of the rope to carry.

ROPE TRANSMISSION.



A—Main Driving on Line Shaft.
B—Main Driven on R. A. Line Shaft.
C C—Carriers for carrying Rope around corner.
D—Carriage Pulley for Slack.
E—Travelling Carriage on Wheels
G—Impelling or Tension Weight, 60 pounds.
Rope Travel, 3,140 FPM.
Power Transmitted, 30-h.p.

THE illustration of Manilla Rope Transmission as shown above is one of great interest to all Manufacturers, insomuch as it demonstrates the simplicity with which a shaft may be run at right angles to the driver and with little or no loss of power. It is a well known fact, however, that with gears there is a great loss of power from friction, and many other disagreeable points of contention; also with a belt and set of mule pulleys, there is a great loss by imperfect contact of the belt with the pulleys, journal friction, and other annoyances sufficient to condemn it. On the contrary with the Manilla Rope System, under the Dodge Patents, a shaft may be driven at right angles to another with the same efficiency as two parallel shafts are ordinarily driven. The right angle transmission consists of a series of Wood Split Pulleys with grooves for the rope, and an ordinary manilla rope, [tallow laid.] The power is taken from the main line which makes 250 RPM. and transmits about 20 HP.

The driver A and driven B, and mule pulleys CC each have four grooves, and the carriage pulley D has one groove. It will be noticed that the driver A and driven B act as winders, and the rope is wound from one to the other to get surface in contact; the mule pulleys CC are simply carriers, carrying the rope around the corner, and are so placed that the travelling carriage always keeps the rope at an even tension, so that the ropes will always follow the grooves, and the rope is thus guided to and from the driven, always keeping its alignment.

We have lately put in a great variety of rope transmissions for the following well known Manufacturers, viz:—The Granby Rubber Company, Granby Quebec, one drive of 250 H.P.; A. R. Clark & Co., Leather and Glove Manufacturers, 50 H.P.; T. Tushingham & Son, Builders, 35 H.P.; J. R. Black, Carriage Works, 50 H.P.; Barber & Ellis Co., Stationers, 8 drives, 87 H.P.; Jas. Lochrie, Rope Manufacturer, 60 H.P.; J. P. Wagner & Co. Show Case and Keyboard Manufacturers, 50 H.P.; J. Taylor, Morse Soap Works, 60 H.P.; Joseph Simpson, Knitting Mills, 80 H.P.; and numerous others whose testimonials can be seen in our catalogue. Parties who are in want of anything in this line, or who are interested in the efficient and economical transmission of power, are cordially invited to call at our works and see the ropes and wood pulleys in operation, as we are driving our whole factory by this system. Send for Price List, Catalogue and Cypher Code, for ordering by telegraph, to

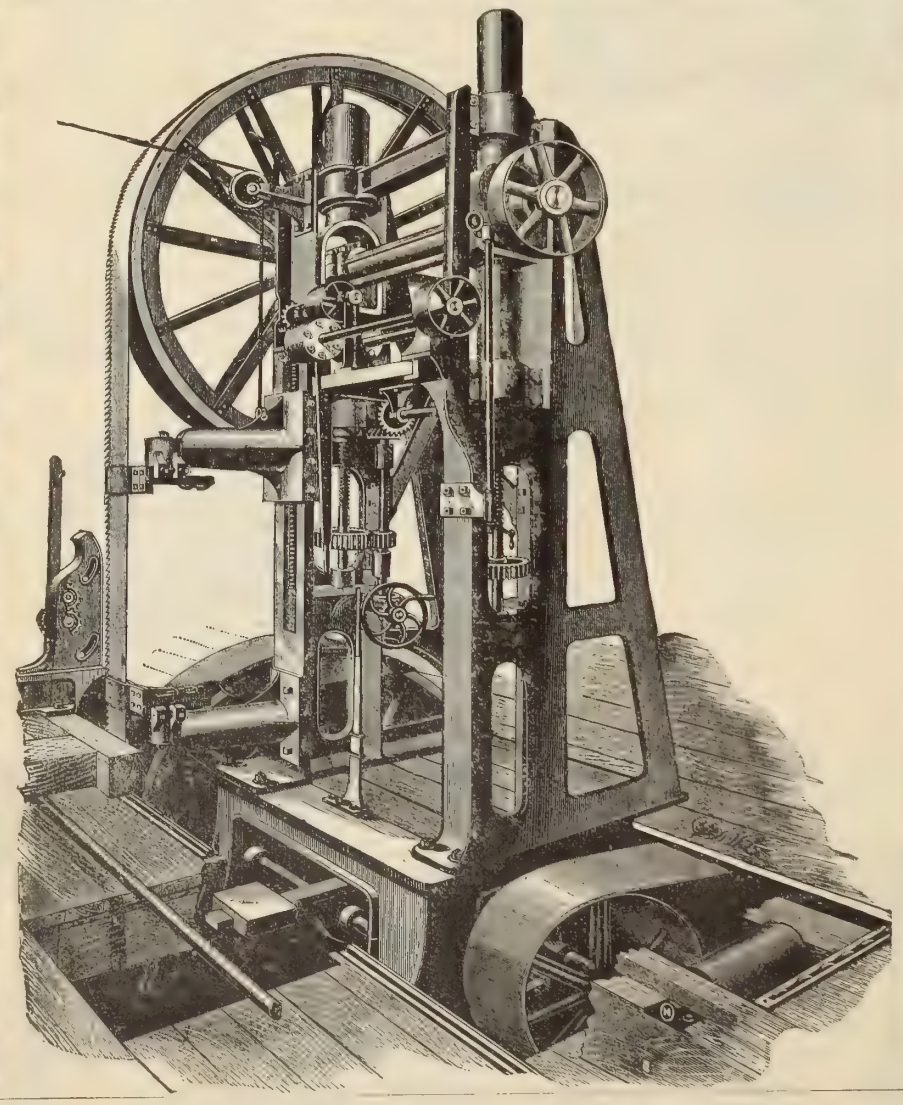
THE following statement of Dimensions will give some idea of its proportions: Diameter of Wheels, 8 feet; diameter of lower and top Wheel Shafts, 5⅜ inches; length of Lower Shaft, 8 feet 6 inches; length of Top Wheel Shaft, 8 feet 4 inches; length of Bearings for Wheel Shafts, 18 inches; Weight of Mill alone, 22,000 Pounds.



ENDORSEMENTS

IN ABUNDANCE.

The Following is Only a Sample:

ASHLAND, Wis., Nov. 10th, 1886.

CHAS. ESPLIN, ESQ.,
Minneapolis, Minn., U. S. A.

DEAR SIR,—The band mill placed in our saw mill by you we consider the best and most complete band mill we know of. It has advantageous features which we have not seen in any other mill. The strength of all its parts is ample for every demand upon it. It is massive. The guide arms in their proportions and adjustments seem beyond improvement. The drive wheel by taking up the tension of the saw from below is a great advantage gained. The long distance between the bearings of the upper wheel shaft steadies the motion and the whole machine moves with ease and steadiness.

We have never seen lumber so perfectly manufactured as made by this band mill. The mechanic that planned it and the company that manufactured it deserves the congratulation and thanks of all manufacturers of lumber,

Very respectfully,
SUPERIOR LUMBER CO.

John H. Knight, Secretary-Treas.; D. A. Kennedy, Supt. and General Manager.

R. H. SMITH & CO., St. Catharines, Ont.

Sole Manufacturers for Dominion of Canada.

OUR Circular Saws, manufactured by the above patent process, having been in use by a large number of Millmen and Manufacturers for the past ten years, have won a reputation never attained by any other make in the Dominion.

WE ATTRIBUTE THIS SUCCESS

First—To the superior quality of the STEEL, which is of a finer texture than is or can be used by any other process, and for which we pay a far higher price, being manufactured expressly for us.

Second—Our patented process of TREATING the steel, producing a uniformity and quality of temper never before attained.

Third—To our patented method of ADJUSTING, which insures a perfect running saw when correct cutting speed is given.

IF YOU WANT THE BEST CIRCULAR SAW MADE,

One that will stand up to its work better, and run longer without hammering than any other make, buy the

SIMONDS

OUR NEW CROSS-CUT SAW—"THE LEADER,"

Four gauges thinner on the back than teeth, ahead of all others, will be on the market shortly. Ask your Hardware men for them.

☞ **All Communications or Orders will receive prompt attention.**

Incorporated by Special Act of the Dominion Parliament.

AUTHORIZED CAPITAL & OTHER ASSETS

OVER $2,000,000.

Full Deposit with the Dominion Government.

The following is taken from the *Monetary Times*, of Jan. 20th. "When the announcement was made that a life assurance company was being formed under the above title, with the Premier of the Dominion as its president, and influential manufacturers and capitalists as its vice-presidents and directors, it was natural that considering the *esprit de corps* of our manufacturers and the bonds which hold them together; considering, too, the prestige of the names at its head, a liberal support would be accorded the new company and a large business would be done.

"The result of some five months' business of this company shows even greater success in securing business than the most sanguine of its friends deemed likely. In that period no less than $2,564,000 of insurance has been written, the premiums on which amount to $82,000. The amount of stock subscribed reaches $621,000, and of this $126,000 has been paid up. It is clear that extraordinary energy has been put into the work of securing business, and the result justifies the effort. The agencies of the company are spread over all Canada and the volume of business secured surpasses anything done, to our knowledge, by a Canadian company under like conditions. The low ratio of cost of which the Manufacturers can point is in part accounted for by the large proportion—one-fifth—done at the head office, which either came unsolicited or was secured under circumstances which lessened its cost to the Company. Offered such a volume of risks for approval, it is of the gravest importance that the actuarial and medical departments of a new company shall be adequate to their task. It was made evident at the annual meeting that care and discrimination have been shown by the medical men and it is testimony to the reasonableness of the company's plans that they are approved by Mr. Standen, a New York actuary. The Manufacturers' has what is known in the States as "a good send off," it does not lack for enthusiastic workers and able directors, and it has great reason to look for continued success.

THE CANADA LUMBERMAN.

VOLUME VIII. NUMBER 3. PETERBOROUGH, ONT., MARCH, 1888. TERMS, $1.00 PER YEAR SINGLE COPIES, 10 CENT

THE CANADA LUMBERMAN

PUBLISHED MONTHLY BY

ARTHUR G. MORTIMER,

OFFICE: SIMCOE STREET, PETERBOROUGH, ONTARIO.

TERMS OF SUBSCRIPTION:

One Copy one Year, in Advance, - - - - - $1.00
One Copy six months, in Advance, - - - - - 50

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THAT phase of the complex Paradis *embroglio* relating to his charges against the late Quebec Administration of acting corruptly and unfairly against the settlers in favor of Messrs. Gilmour, has resulted in the removal of the reverend father to the United States by his ecclesiastic superiors. The Provincial journals are making an ecclesiastical and political squabble of the matter, some upholding the changes and some maintaining that the Ross Administration was falsely accused; some defending the priest and others supporting the authority of his superiors. The action of the ecclesiastical authorities in removing Father Paradis is a strong indication of the opinion formed by independent judges.

THE provisions of the new tariff bill as presented to Congress, by which it is proposed to place timber on the free list, are gladly welcomed by Canadian lumber operators, but we fear it will never pass its third reading. Should this bill pass the House Canada will be benefitted by the free admission of the following products:—Timber, hewn and sawed and timber used for spars and in building wharves; timber, squared or sided; wood, unmanufactured, not specially enumerated or provided for; sawed boards, planks, deals and all other articles of sawed lumber; hubs, for wheels, posts, last blocks, wagon blocks, oar blocks, heading blocks and all like blocks or sticks rough hewn or sawed only; staves of wood, pickets and palings, laths, shingles, clapboards, pine or spruce logs, provided that if any export duty is laid upon the above mentioned articles, or either of them, by any coutnry whence imported, all said articles imported from this country shall be subject to duty as now provided by law.

THE Ontario Government may thank the lumbermen for the good showing that Mr. Ross, their Provincial Treasurer, was able to make in his budget speech. The great success of the sale of timber limits which Mr. Pardee, the Commissioner of Crown lands, offered for competition in December, must have been highly satisfactory to him and his collegues, especially in view of the fact that there were circumstances, to which we need not now recur, that might have been expected to operate prejudicially to a certain extent. The receipts from the lumbermen were so large as to meet not only the liabilities for the year for aid to railways but also a large portion of the contemplated expenditure on the proposed new Parliamentary building. Not only is the capital account thus kept down through the large purchases by the lumbermen of provincial property, but their extended operations will continue to add largely for rental and stumpage dues to the current revenue for some years to come. It will therefore be seen that Ontario is largely indebted to the lumbermen for her prosperity.

AT Washington there is still much talk of reducing the excessive revenue receipts by a modification, if not a total abrogation, of the customs duties on raw materials. Lumber is one of the articles that has been generally mentioned as coming within this category. Indeed several projects looking in this direction have been submitted to Congress, but their fate is altogether uncertain. Just now the two great political parties in the United States are looking to the approaching Presidental election, and every movement is considered chiefly with reference to its probable effect upon that event. The fact that they are thus watching each other tends to neutralize all their efforts and to make any action less likely through the fear of its affording a chance of its being used prejudicially to those making the movement. However, though Presidental elections occur very often they do not happen every year, and next year a mutual arrangement may be more feasible. It is useless to talk business while men are thinking more of elections than of the ordinary affairs of the country.

FROM the fact that the Fishery Commissioners at Washington declined to enter upon any arrangements for reciprocal trade between Canada and the United States, the prospect of any remission through that means of the duty on lumber can be considered at an end. There is evidently to be no reciprocity by treaty at least, whatever other means there may be of attaining the same end. Those who looked to diplomacy to secure the desired result will therefore be disappointed, but few have supposed of late that the Commissioners would seriously entertain the project. It was generally understood that the representative of Canada would not consent to a more extensive exchange of free goods, and that the representatives of the United States were not willing to renew the Reciprocity Treaty, which, rightly or wrongly, they deemed not to have been advantageous to their country. The difference of opinion was too great to be easily adjusted, and they did not deal with this branch of the matters in discussion between the two countries. The publication of the text has put an end to all conjectures on this subject, showing that it provides for no reciprocity, except conditionally as regards fish. Any such free exchange or reduction of duties is left at present to the sphere of legislative action in the two countries.

THE Montreal *Journal of Commerce* attributes the decadence of Quebec, as a lumber port, to the arbitrary interference of the Ship Laborer's Union, since its exorbitant demands forced the shipping trade to ports where these obstacles were not met. On the other hand, Montreal has been built up, it is asserted, by a freedom in stevedorage, in spite of the superior national advantages of Quebec, where the policy pursued has had the effect of turning business over to Montreal. A comparative statement is made in the lumber shipments by sailing vessels from Quebec, from 1877 to 1887, inclusive, showing a decrease of from 796 vessels, with a total of 670,627 tons in 1877, to 721, and 206,172 tons in 1887. The year 1880, with 634 vessels and 555,451 tons, was the second largest, with a continued drop since then, excepting a spurt in 1883, when 487 vessels cleared, with 416,169 tons. One reason for the decrease has been that many mills which formerly sent deals to Quebec now deliver them direct to the ships and steamers. This most marked falling off is seen in the amounts exported from Quebec in 1886 and 1887,—2,271,069 feet, and 1,365,510 feet respectively. Montreal's lumber shipments were 3,500,000 in 1877, and 98,250,000 feet in 1886, with a probable increase for 1887. The competition of Baltic timber in the English markets has affected the export trade, and the outlook is not altogether bright, though a limited production of lumber has left light stocks. Mill concerns are said to be turning their attention more to the United States trade and less to the Quebec buyers. The late half prices realized on timber limits suggests a general advan[illegible] age, induced by the decrea[illegible] and the most difficulty is said to be experienced in getting first class white pine. The supply of red [illegible] is ample. Oak is of stronger feeling, [illegible] been moderate and the export demand fairly large. Other hardwoods show fairly. This winter's log production promises to be small, and prices are now good.

A GENTLEMAN writing form St. John, N. B., to THE LUMBERMAN, calls attention to the following special [illegible] of the New Brunswick lumber trade. He says:

"The trade here is totally different from that of Upper Canada for many reasons. (1) Our stock is nine-tenths spruce, cut full length of tree, and manufactured as far as possible into three and four inch lumber; (2) Such a thing as stock boards is unknown, because we have very little pine and it would not pay to cut it in even lengths, either in the woods or mill; (3) Our stumpage dues are collected on a different principle (Quebec has now adopted our style, but not our log scale); (4) Our lumber is classed differently; (5) On account of the St. John being an international river there are two distinct classes of lumbermen and mill owners here. The American who has the right (by the treaty of Washington and resolution of Congress) to manufacture lumber here cut in the State of Maine, and ship the same to the American market free of duty, and the provincial millman who, no matter where his lumber is cut, would have to pay duty if exported to the United States, and therefore is forced to make England his market. The manufacture for the two markets, too, is very different."

We will at some future time dwell on this matter at further length, and shall be pleased in the meantime to receive any "points" which any of our readers may be able to furnish.

NOW that the Government of Ontario is forming a new Ministry of Agriculture and is consequently making minor rearrangements in other departments, advantage might be taken of these changes to make certain improvements in our system which would be very beneficial both to the country and the lumber trade. If a sub. department, or bureau of Forestry, were formed, the Crown Lands might be divided, after proper examination and survey, into forest lands and land open for agricultural settlement. This would avoid much friction, waste and even destruction of property. On the one hand the settlers would not be grumbling at the lumbermen taking the pine from their farms, for settlement need not be allowed on the limits when there is elsewhere plenty of better land for agriculture. Nor would there be any encouragement for bogus settlers having no object but to secure the pine under pretence of homesteading. On the other hand the lumbermen would not be hurried to cut the timber from those portions of their limits that are settled or about to be settled, such haste often leading to want of economy in their operations or to premature cutting when delay would be expedient. Again the lumbermen would not be exposed to the increased risk of fire which much follow partial settlement with its burnings to prepare the land for the plow; nor would they have their property destroyed by actual forest fires, involving much complete or partial destruction and the necessity for the immediate felling of burnt timber to save it from destruction. With the Crown Lands properly classified much of these evils might be obviated or greatly lessened. And there need be no restriction upon agricultural settlement, for as more farm land was required, former forests where the soil is suitable to agriculture, might be transferred and opened to settlers. Such a system would also have the incidental advantage of determining the extent of the remaining forests of Ontario, thus affording valuable information to the lumber trade, economising our forests resources, and improving the revenue of the Province from the source which even now contributes to it so largely. Sometimes the lumbermen are blamed for the too rapid destruction of our forests, but in many cases haste is forced upon them by the present system. There is now a good chance for its modification.

THE SAFETY OF STATIONARY BOILERS.

A measure very closely affecting the interests of saw-mill proprietors, as well as other manufacturers, has been introduced into the Provincial Legislature by Mr. Garson, M.P.P. It provides for a yearly examination of boilers in connection with stationary engines by a duly appointed government inspector, and also that all engineers and firemen shall be obliged to pass examination as to their competency. The bill establishes four grades of ability and defines the class of engine which the holders of certificates of these respective grades shall be qualified to take charge of as follows :

A first-class engineer shall require a thorough knowledge of steam and its uses, of the use of the steam engine indicator, the principles of combustion, the details of the construction of boilers and engines, the strength of materials used in such construction, general mechanics, the principles of steam heating and the working of condensers and feed pumps, and such certificate shall entitle the holder to operate any steam plant.

A second-class engineer shall require a thorough knowledge of steam and its uses, general mechanics, the principles of steam heating and the working of condensers and feed pumps, and such certificate shall entitle the holder to take charge of and operate any steam plant of one hundred horse-power or less.

A third-class engineer or fireman shall have a fair knowledge of steam and its uses and the principles of steam heating and the working of feed pumps, and such certificate shall entitle the holder to take charge of and operate any steam plant of fifty horse-power or under.

A fourth or special class engineer shall require a fair knowledge of the working of feed pumps and be thoroughly capable of taking care of any boiler under his charge, and such certificate shall entitle the holder to take charge of any steam plant or portable engine of fifteen horse-power or under.

Those at present in charge of engines or boilers are allowed to operate them for one year on payment of $2 for a permit, after which they must pass the examination and apply for a certificate. Certificates will run for one year, and the fee of $5 will be charged to all applying for the first examination, renewals costing $1. Owners of boilers are required to pay $5 for each annual inspection. Owners or managers of boilers who entrust them to persons not duly qualified under the Act are subject to a fine of not less than $10 or more then $250. Licensed engineers who discover that the boilers they are operating are unsafe are to notify the manager and demand that they be repaired. In case of refusal or neglect the responsible party is liable to a fine of not less than $100 or more than $500. The bill came up for a second reading on the 24th ult., and was referred to a special committee. There is a fear on the part of some engaged in manufacturing industries that the passage of the measure will entail undue trouble and expense upon them. Considering the large number of those employed to manage stationary engines, the fee, $5, seems unduly large. The same remark applies to the charge for inspecting boilers. As the object of the measure is to provide for the safety of the general public as well as of those employed about engines, it would only be reasonable that the burden of the necessary expense involved should be partly borne by the public. The startling statistics quoted by the introducer of the bill leave no room for doubt that the present system of allowing boilers to be operated by persons who may be entirely ignorant of engineering is a glaring abuse and causes an appalling loss of life every year. There is just as much need for regulations with a view to secure the safety of steam boilers and the competency of engineers in connection with stationary engines as in regard to marine boilers. The statement that according to the reports of insurance companies 700 of the 6,000 stationary engine boilers in Ontario are unsafe shows the urgent need for government supervision. The principle of the measure is sound and just, but in working out its details we trust that every care will be taken to render it as little oppressive as possible in its bearing upon the important interests with which it deals.

NEW TIMBER REGULATIONS.

An extra of the *Quebec Official Gazette* contains the new regulations recently adopted in respect to the management of Crown and timber lands. They provide that newly acquired licenses and renewals of licenses to cut timber shall be subject to a yearly ground rent charged at the rate of three dollars for each square mile or fraction thereof, and establish the following scale of dues to be levied on all timber cut : Oak and walnut, per cubic foot, 4 cents ; pine, birch, basswood, cedar, spruce, elm, ash, tamarac and all other square timber, per cubic foot, 2 cents ; pine saw logs, boom and dimension timber and all other logs or woods intended for sawing, except spruce, hemlock, cypress and balsam, per standard of 200 feet board measure, (equivalent to $1.30 per thousand feet,) 26 cents ; spruce, hemlock, cypress and balsam saw logs, per standard of 200 feet, board measure, (equivalent to 65 cents per thousand feet), 13 cents ; cordwood, hard, per cord of 128 cubic feet, 20 cents ; cordwood, soft, per cord of 128 cubic feet, 10 cents ; cedar rails, not exceeding 12 feet long, per 100, 30 cents ; cedar pickets, per 100, 15 cents ; rails of other wood than cedar and not exceeding 12 feet long, per 100, 10cts. ; cedar and pine shingles, short, per 1,000, 10 cents ; cedar and pine shingles, long, per 1,000, 15 cents ; cedar or other telegraph, telephone or electric light poles, not exceeding 10in diameter at the butt or large end, per lineal foot, ¼ cent ; ditto, exceeding 10 inches at the butt, per lineal foot, ½ cent ; railroad ties of all kinds of wood, each, 2 cents ; hemlock lathwood, per cord of 128 cubic feet, 20 cents ; hemlock bark, ditto, 32 cents ; pine, cedar, spruce, birch or other small logs, not exceeding 10 feet in length, nor 10 inches in diameter at the smaller end, for shingles, spools, small board stuff, or paper pulp, per cord, 128 cubic feet, 25 cents ; futtocks, knees, floors of birch and other shipbuilding material, and all wood goods not enumerated in the forthgoing list, an *ad valorem* duty on the invoice or bill of 10 per cent.

PERSONAL NOTES.

Mr. A. Lech, secretary-treasurer of the Wm. Hamilton Manufacturing Co., Peterborough, who has been confined to his home through sickness for some months, has, we are pleased to know, fully recovered, and is again attending to his onerous duties.

We are pleased to learn that Mr. T. G. Hazlett, one of Peterborough's most extensive lumbermen, who has been ill for some time is now convalescent.

The Lumberman had the pleasure of a call a short time ago from Mr. John A. McAvity, of the well-known firm of T. McAvity & Sons, St, John, N. B. He was pushing business for the firm in this section of the country and meeting with good success. The Orono Cant Dogs and Boot Calks manufactured by the company are meeting with ready sale wherever introduced.

Mr. Elbridge G. Merrick, for many years engaged at shipping square timber to England from Canada, at which business he grew very wealthy, and of late years engaged in the vessel and lumber business at Detroit, Mich, died Feb. 11th.

Geo. McWilliams, late of the firm of Kincaid & McWilliams, Peterboro', has accepted the position of mechanical supertendant of the Ontario Canoe Co., of the same place.

Martin A. Ryerson, aged 33, heir of the millionaire, lumberman Martin Ryerson, of Chicago, who died recently, has given in trust property worth $250,000 to eight charitable institutions, four Protestant and four Catholic. The gift was a free one on the part of young Ryerson, though in line with his father's oft-expressed wishes.

PUBLICATIONS.

Lumber, a very neat 16-page weekly, under the able editorship of A. H. Hitchcock, late of the *Timberman*, has made its appearance in Chicago. A paper of the same name was previously published in New York, but it was far from being a credit to the influential industry it aspired to represent. Under Mr. Hitchcock's management, however, it ought to command at least a fair share of trade, notwithstanding the fact that Chicago already has three other papers of a similar nature. *Lumber* has our best wishes.

The Toronto *Saturday Night*, edited by Mr. E. E. Sheppard, is one of the best gotten up and most entertaining literary publications on the continent. The latest issue always seems to be the best, and if it keeps this up much longer *Saturday Night* will be a necessity in every home. Those of our readers who have any desire to see a all-round Canadian literary paper should address the Sheppard Publishing Co. Toronto, for a copy of the above.

"Scientific Diary Practice ; or Profitable Diary Agriculture for Canadian Farmers" is the title of a new work just completed by W. H. Lynch and issued by the Dominion Government. Its contents are such as to be of incalculable benefit to every Canadian farmer and owner of cattle. It treats scientifically on the methods necessary for the successful carrying on of a diary, and will prove an invaluable help to all such engaged. The book is well gotten up and contains several illustrations.

TORONTO CORRESPONDENCE.

Toronto, Feb 29.—Business still continues dull. There are some enquiries for bill stuff and the commoner grades of lumber, and prices continue steady with the prospect of an advance. There is some demand from the United States for cutting up lumber. With the opening of spring it is probable that there will be considerable activity in the building trade in Toronto, and at several points in Western Ontario. The demand for house accommodation, consequent upon the continued influx into the city, and the fact that owing to the labor troubles, many building enterprises contemplated last year were postponed, encourages the expectation of a particularly busy season.

Lath is moving at good figures and is in quite a demand. Credit will not be so easily obtained this year as was the case in the past. This is a good thing, the less of that the better for all. There is no necessity that any dealer should sell to parties about whom there is the slightest doubt. It is not very difficult to obtain information respecting any individual builder, and to any one at all doubtful a positive refusal should be given.

The recent bank suspensions and the unsatisfactory state of financial investments, have turned the attention of investors in the direction of real estate. Making every allowance for too sanguine anticipations, the outlook for the building trade is favorable, provided strikes and labor troubles can be avoided. Much, however, depends on the money market and the action of the loan companies. It is regarded as probable that some of the larger loan companies will shorty have to look for re-investments in the direction of loans on city real estate, though more caution and discrimination is likely to be exercised than has hitherto been the case.

The amalgamation of the Northern Railway with the Grand Trunk, is viewed approvingly by some of the lumber dealers, on the ground that it is likely to be helpful to the trade. There have been frequent complaints as to the difficulty of obtaining adequate shipping accommodation at points along the Northern. It is hoped that the change will result in the removal of this grievance.

Can any of your Toronto readers give any information regarding what has been done by the inspection committee of the lumber branch of the Board of Trade ?

NOTES.

—Messrs. Train & Son of Burk's Falls, Ont., are about to introduce the Electric light and run their mills night and day.

—John Forsyth, Pakenham, Ont., will commence to cut about the middle of April, and expects to cut about 400,000 or 500,000 feet.

—W. S. Ramsay & Co., of Sutton, Ont., write that their saw mill and sash and door factory are in full swing and have been so all winter, they having large orders on hand.

—A fire took place on the morning of Feb. 26th in James Shearer's lumber yard. The saw-mill was burned and loss to the amount of $14,000 was sustained ; covered by insurance.

—Messrs. J. S. Ainslie & Bros., Comber, Ont., manufactured 2,000,000 staves in their works last summer, nearly all of which were shipped to English markets. They employed about 60 hands.

—It is understood that G. A. Grier & Co., the big lumber firm of Ottawa, have sold their concern, limits, mills, etc., to Pierce & Co., of London, England, the price named being in the vicinity of a million and a quarter of dollars.

—The Chatham Wagon Company, of Chatham, Ont., have acquired a large tract of heavily timbered land near Thamesville, Ont., the timber upon which will be utilized for the purposes of their business.

—Reports from the vicinity of Doaktown, N. B., state that the weather has been cold and the winter a very favorable one for all kinds of work. The output of logs will be very good as the shoal snow enables lumbermen to gather up scattering logs which could not be got in deeper snow.

Many fatal and destructive accidents would be prevented if those employing steam power in manufacturing took adequate precautions to see that their machinery was always in good order. The Boiler Inspection and Insurance Company of Canada, the card of which appears in another column, is an institution which should commend itself to all manufacturers.

—It is expected that a post office will be opened at the station at Hepworth, Ont. It will be a great accommodation to lumbermen. Lumbering operations were never so brisk before as they are at this point this year. It is estimated that the output of lumber will total 7,000,000 feet, and this will be supplemented by the usual immense quantities of timber, poles, ties and tan bark. Hepworth is said to down any inland station in Ontario in its output of forest products.

—It is estimated that Michigan railways used last year three and three-quarters millions of ties, amounting to 131,250,000 feet, and that they used lumber for piling, bridges, etc., to the extent of one-third the forgoing amount ; and further, that at least one and one-half millions ties were sent out from the State. This heavy lumber consumption by the railroads should incline the railroad ear to the suggestion of the forestry convention held at Grand Rapids recently.

North Onslow, Ont.—Mr. John O'Donnell has a gang of men at work cutting logs at Wilson's Lake. The timber is being hauled to Mr. P. Madden's mills.

Martinville, Que.—Messrs. Cass Bros. are getting in a lot of saw logs. They are doing a large lumbering business this season.

THE WILLIAM HAMILTON MFG. COMPANY OF PETERBOROUGH.

In this issue of THE CANADA LUMBERNAN we would call special attention to the establishment of The Wm. Hamilton Manufacturing Co., of Peterboro', Ont. This company are entirely engaged in the manufacture of the highest class of saw mill machinery, also engines and boilers for saw mills. They have now been established in the above line over 30 years and their main study has been and is to have, besides their own improvements and patents, all the latest improved machinery in the market that will be profitable to the manufacturer of lumber.

They were the first to introduce the manufacture of band mills in Canada and have spared neither time nor expense to have the best machine of the kind. Their first Band Mill has one column and as a proof of its merits we are shown a letter from J. M. Dollar, Esq., of the Ontario Lumber Company, Toronto, Ont. who has one of these mills, from which we quote an extract as follows :

Wm. Hamilton Mfg. Co.

Gentlemen :—The band saw still continues to run well, there is no mistake about it. We have no trouble with it in any way. The make of the lumber is perfect, and it will cut large or small, sound, rotten, rough or any kind of logs. It is a pleasure to look at it. I don't know that we have the best band saw in the world, but none of the Americans that come around ever saw any better, so they say. Yours truly,

J. M. DOLLAR.
Manager Ontario Lumber Co.

They are also building a double column Band Saw Mill, patented by D. K. Allington, of East Saginaw, Mich., a cut of which can be seen on page 16 of this issue. Some of the specialties of this mill is the Double Column. By this device it gives a long shaft for the top wheel which takes away all side vibration. This top shaft is also bolted to the lower wheel shaft which keeps the top wheel from overrunning the lower wheel in entering the cut and preventing the breaking of the saw. Another very important feature is the roller guides. These are placed for the saw to run over at about ¾" past the line of the top and bottom wheel when cutting ; when gigging back these rollers move back and let the saw back from the log in place of throwing the log back on the carriage to clear the saw, also leaving the saw slack when not working and tightening it up when entering the cut. The top roller guide is moved up and down by a rack and pinion to suit the different sized logs to be cut, and the saw running over the rollers requires nothing in front of the roller between it and the log on carriage, thus avoiding all friction as on the other guides. This mill, all well fitted with heavy steel shafts and heavy iron lower wheel, weighs 24,000 lbs.

We would recommend any who are in want of band saw mills to give this Company a call. They have also a full assortment of patterns and have built a great many of the most improved heavy iron frame oscillating gang mills. We give a cut of the latest design of a small compensating balance gang which is patented by Wm. M. Wilkins, of the Stearns Mfg. Co., of Erie, Pa., for which they are the sole agents and manufacturers in Canada. It is taking the lead in the United States and Canada, requiring no heavy foundation but can be placed in themill as easily as a circular.

LETTERS FROM CORRESPONDENTS.

What the Millmen are Doing Throughout the Country. Outlook for the Season's Operations.

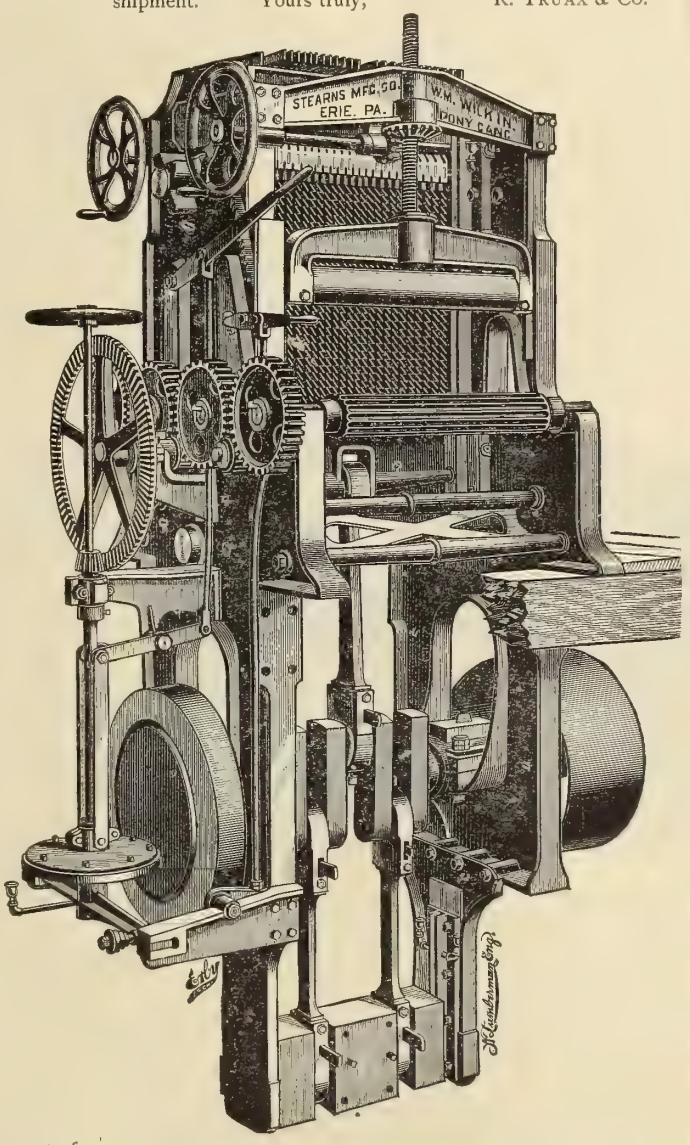
EASTMAN, Que., Feb. 27th.—Our cut of logs this winter will be about 4,000,000 ft., spruce and hemlock. Will commence sawing about April 1st. Prospects for coming season are good for fair prices on account of light log cut last winter. There is likely to be a shortage of logs in this vicinity this winter on account of heavy fall of snow. We will get out this winter 350 ft. of birch logs for clothes pins.

Yours truly, ELDRIDGE, PHELPS & Co.

WIARTON, Ont,. Feb. 18.—As this section of the country depends largely upon its timber, your correspondent being anxious to ascertain the probable output, interviewed the sawmill owners and timber dealers who make their headquarters here and secured the following figures as the result of their operations last year. Square timber, cedar, 2,100,000 feet valued at $178,500 ; ties, 775,000 feet valued at $175,000 ; paving, 400,000 pieces valued at $32,000 ; telegraph poles, 30,000 valued at $30,000 ; tanbark, 4,000 cords, $16,000 ; shingles, 3,000,000 valued at $5,400. As this comprises a comparatively small area, it will be seen that the timber industry is a very important one on the peninsula. This winter has been a very favorable one for shanting, and it is almost certain that the cut for the present year will be greater than last. Yours truly, LUMBER.

GORDON, Ont., Feb. 20.—The probable output of logs in the counties of Essex and Kent for the present season's cut is as follows :—In hardwood, to be manufactured into lumber at the different mills, I think between 25 and 30 million feet, including oak, ash, maple, sycamore, cottonwood and hickory. There is probably 45 to 50 million feet of elm logs put out in these two counties, being for export and home manufacture. I think there is a larger stock of logs put out this year than at any one time during the past ten years. Prices are fair, in some instances inclining downwards, while in others, a little higher, but of about same average as last year's prices. Business is good with a fair demand ; seemingly a good many orders are already placed. THOMAS OUELLETTE.

WALKERTON, Ont., Feb. 24.—In this locality a very large amount of timber is being got out this season. This is caused, to some extent, by the shortage in last year's crops. So far, our stock of logs, consisting principally of maple, beech, birch, basswood, ash, hemlock, cedar, rock and soft elm, is very much larger than any previous year. We have also a large stock of logs, posts, ties and telegraph poles on the bank of the river Saugeen, fifty miles from our mill. When this is brought down we will have one of the largest stocks ever cut in this locality. We are at present running our mill night and day, having disposed of a large amount of hardwood for early shipment. Yours truly, R. TRUAX & Co.



FENELON FALLS, Ont, Feb. 20.—We cannot give you a detailed statement of cut till about the 15th of March. At present we have about two million feet of bill timber fit for bridges and all other capacity of bill timber ; also four million feet of merchantable lumber. We will also have a quantity of spruce and hemlock timber. Our timber mill will commence operations on the opening of navigation. We will also be manufacturing a large quantity of shingles and lath.

JOHN THOMSON & Co.

MONTREAL, Feb. 22.—I am getting out the present winter (which is a very favorable one for logging) say from five to six million feet of pine logs, with a little spruce. Our operations are confined to the River Rouge, a tributary of the Ottawa on the Quebec side, where good pine, as in many other places, is getting scarce. We make all the deals we can for the English or Quebec market, where most of our manufacturers have sold their next season's cut at good prices. The local market for common and cull lumber is good.

Yours truly, J. K. WARD.

ALGOMA MILLS, Feb. 18.—We are getting loaded cars for the C.P.R. Company. At Sudbury, we expect to run till the 1st of April, H. F. Coburn supplying logs for us. Will probably take out about [illegible] for this season. We have five or six camps on C. P. R. limits at Algoma, taking out logs for the Company's mill there. Will probably take out seven or eight million feet at that point. The former operations here are confined to us this winter. A few miles down the Algoma Branch, Perrin is taking out logs and board pine. Further down the Spanish River Co. and the Boswell Co. are operating ; Messrs. Cook Bros. are working on the French River ; the Blind River Co. have another near Algoma Mills and on the Mississaga River. Messrs. Kloks have a big gang in Wells township, up on the Soo extension at Wahnipitae on the main line. The Lumby Co. and the Georgian Bay Co. are carrying on extensive operations. Cannot of course give you any idea of what each of these shanties are doing, but give you their names that you may get reports from them. Yours truly, H. P. McLAREN.

OTTAWA, Feb. 8.—With reference to last season's cut I may say on the whole the season's output of lumber for my mill was very satisfactory—about 5,000,000 feet—the greater part of which was sold for about the price of lumber of the same description the previous year. Shingles, of which I cut about 3,000,000, were slow of sale, the market being overstocked in this locality, our stock now being about 2,000,000 still on hand. I am now engaged putting on to the ice about 7,000,000 feet of logs and long timber for dimension purposes, and should the snow not inconvenience operations, expect to put out about 9,000,000 feet. This is more than I can cut in one season with the mill in its present shape, but am obliged to cut as much as possible owing to the fires of last September having killed the timber on portions of my limits, all of which burnt timber I expect will be cut this winter. My limits are in the County of Hastings, on the York branch of the Madawaska River. Yours truly, WM. MASON.

GODERICH, Ont., Feb. 17.—I enclose one dollar in payment of the LUMBERMAN for 1888. Please change the address to Joseph Williams. There is a wonderful improvement in the LUMBERMAN of late. It is a real lumberman's paper now, and I consider very little, if anything, behind the best of the American publications. Yours truly, JOS. WILLIAMS.

TORONTO Feb., 25th.—During my absence last week in western Ontario selling lumber your valuable journal was received. I enclose my cheque for $1 ; kindly place my name on your list of subscription for one year. The stocks in the western retail yards are very light. Dealers are more cheerful than a month ago. They anticipate a good trade for the coming season, and are placing their orders quite liberal. During my trip of five days I sold 40 cars. This is not bad for the time of year. The G. T. R. have reduced the freight from Sarnia to Petrolia to 3½ cents per 100 pounds. The old rate was 5 cents. This will have the effect of reducing shipments from Gravenhurst to Petrolia unless better rates can be had than now exist, viz., 15 cents per 100 pounds. The stocks at Sarnia are not large. If the spring opens early very little lumber will be there at the opening of navigation. The mills on the line of the M. C. R. R. are well stocked with hardwood logs, and I learn the cut is mostly sold at fair prices to go to the States. There are several new mils building on this line, and if the duty is removed off lumber there would be a perfect "boom" among the hardwood men. There is very little of last season's cut remaining at the mills. Manufacturers handling seasoned lumber experience difficulty in supplying their wants, and have to resort to artificial drying.

Yours truly, DRUMMER.

EAU CLAIRE, Ont., Feb. 28th.—There are three rafts of square and waney timber being taken out on the Amable Du Fond River this year, viz : Wm. Mackey, Booth & Hale and John Mackay, all fine rafts, Booth & Hale being of No. 3 (Wilkes township) sold at Ontario Government limit sale on 15th Dec. last. There is one saw mill at Eau Claire, a two-circular mill with fine water power, owned by Wm. Mackey, which was not run last season, although he had 3 to 4 million feet of logs at his mill ; and it is not known whether it will be run this summer or not. There is a one circular mill a little east of Eau Claire on the line of the C. P. R., owned by John Mackay. He is taking his supply of logs (3 to 4 million feet) from a township down the Amable du Fond, and he intends to cut them at his mills this coming season. The drawing is well on in these parts ; the winter has been very favorable, the snow being about three feet deep. It is expected that Eau Claire will be a busy station next year as the parties who bought limits in Petewawa at the late Government sale are putting in supplies from Mattawa this year, and it is thought they will use Eau Claire next year on account of its being the nearest point to their operations.

Yours truly, OPERATOR.

THE STURTEVANT PATENT PROGRESSIVE LUMBER DRY-KILN.

The accompanying cuts very clearly represent the construction and method of operation of the kiln and the apparatus required for it. The designer and builder of the apparatus has been before the public for over a quarter of a century as a manufacturer of blowers and heating apparatus. His extended experience, and a careful consideration of the wants of his customers, has enabled him to present to them, not only an apparatus which is unequalled, but in connection with it the complete drawings for a first class dry-kiln of any given capacity.

The principle which he has adopted is undeniably the best and only one that can secure satisfactory results. Every one is perfectly well aware of the necessity of the circulation of the heated air coming in contact with the lumber in the process of drying. The great question always is how to secure such circulation most cheaply and satisfactorily. Of all methods of generating currents of air, the most expensive is that of causing a movement by heating the air and thereby changing its density.

Changes in the condition of the atmosphere produce reversed currents, or worse still, sometimes prevent currents altogether, rendering for days such an apparatus ineffectual.

The action must be positive and this condition can only be secured by the use of a Fan for impelling the air. The objection has often been raised that it costs too much to run a Fan, but in connection with a heater it in reality costs nothing, for a heater must necessarily be used in connection with a kiln, and the exhaust from the engine can be entirely utilized in the heat. It is well known that exhaust steam has only three per cent. less heat in it than live steam at 70 lbs. Hence the exhaust from the engine can be utilized in the heater in place of three per cent. less live steam. Actually the engine cylinder is but an enlargement of the steam pipe on its way to the heater.

The first patent on B. F. Sturtevant's Steam Hot Blast Apparatus was issued about twenty years ago. Since that time the apparatus has been greatly improved both in efficiency and construction. The fact that over 5000 of the Sturtevant apparatus have been sold is sufficient evidence that he knows what the trade requires, and that he has succeeded in supplying it.

The apparatus here represented consists of a fan and heater placed side by side, making a very compact arrangement and occupying but little floor space.

The fan is known as the steel plate, and is the latest and most approved pattern, designed especially for handling large volumes of air with the expenditure of a minimum amount of power. Fans above fifteen feet in height are usually constructed with half brick and half steel housings and provided with horizontal steam engines. The advantage of a direct connected engine are evident ; it does away with bolts and pulleys, is independent of any other source of power, and can be run at any speed desired day and night.

The engines are directly connected to the Fans and are built in a superior manner and will show the best attainable economy. They are especially designed for this work. It must not be supposed that blowing engines are not, when properly adapted to their work, superior to the ordinary run of mill engines in point of strength and workmanship. They must be the heaviest, strongest and fastest engines that can be made. They must be made to stand twenty-four hours' work, six days in the week, frequently in the midst of dirt, and neglected by the engineer. They must be made to run without getting out of order at any speed, and, if possible, live longer and on harder fare than any other engines. Direct connected, or independent engines, either upright or horizontal, are furnished as the requirements of the case demand. The sizes vary from three to one hundred-horse power.

The heaters are made of the heaviest lap-welded wrought iron pipe on improved patent sectional bases. These sectional bases vary in length, and the height and floor space of the heaters can be proportioned to any situation. The heaters are arranged for perfect circulation and drainage, and every square foot of heating surface is utilized. They are designed with special reference to the use of exhaust as well as of live steam. Each heater section is tested with 150 pounds hydraulic pressure and one hundred pounds steam pressure. The heaters are furnished with substantial wrought iron foundation, and are encased in a jacket of steel plate.

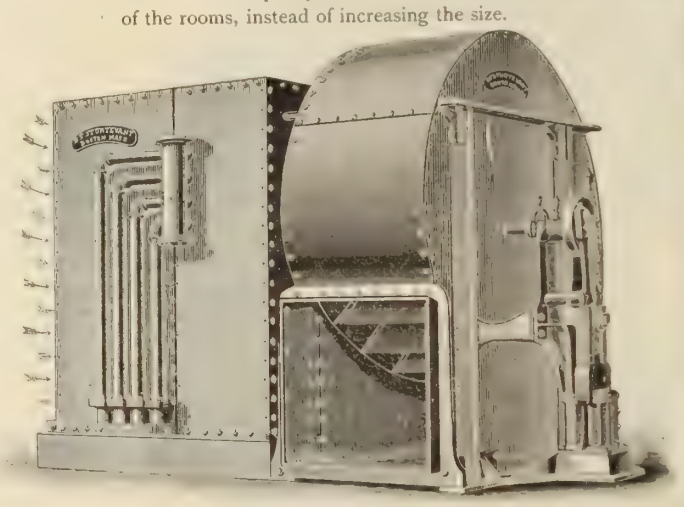
From careful experiment it has been demonstrated that a given quantity of pipe in one of the Sturtevant heaters will impart four to six times more heat units to a given quantity of air than will an equal amount of pipe arranged in the ordinary form. Single heaters vary in size from 300 to 20,000 lineal feet, and in design and style are proportioned to the situation and work to be performed.

The Sturtevant kilns are arranged on either of two plans, the apartment or the full length kiln. In the former rooms of any desired number are constructed to suit some particular size of lumber to be dried. Whether the lumber is piled lengthwise or crosswise of the apartment, the apparatus is so arranged that the air passes through the lumber lengthwise of the piling sticks, and dries it uniformly throughout. By this arrangement the lumber in any apartment may be seasoned to any extent, independently of that contained in another apartment, or the heat may be tempered to different degrees in the different rooms by the manipulation of dampers in the ducts and ventilators. The apartment plan offers advantages where limited quantities of different kinds and thicknessess of lumber are to be seasoned.

The "Sturtevant Progressive Lumber Dry-kiln" which is illustrated herewith is, however, the most popular form where large quantities are to be dried. This style may of course be constructed of various sizes, but the "Sturtevant Standard" is designed to meet the average conditions.

The Sturtevant Standard Kiln of this type is 85 feet long, 17 feet wide and 9 feet high, and will contain twelve cars, each car holding about 4000 feet of lumber. Two additional cars are required for each kiln for the loading and unloading platforms. The holding capacity of a Standard kiln is about 50,000 feet, and the daily drying capacity is about 8,000 to 12,000 feet, depending upon the nature and condition of the lumber. The lumber loaded upon cars, is run into the kiln on trucks, two or more cars each day, then slowly passes through against a constant current of air. In this manner the lumber is subjected to an even hot air draught, gradually increasing in intensity as the cars gradually advance to the hot end of the kiln. The difference in temperature between the two ends of the kiln varies from 70 to 100 degrees. The kiln should be provided with curtains at the top, bottom and sides, so that the hot air shall be forced through the lumber. The piling sticks for 1-inch lumber should be ⅞-inch thick, and the lumber carefully piled on the car. In the kiln 17 feet wide, three rows of tracks are used, thus giving the lumber three independent supports.

Additional capacity is best secured by increasing the number of the rooms, instead of increasing the size.



The cuts show the apparatus located in a small room adjacent to the kiln, and it is advisable to locate the fan as near the dry room as possible. Where it is necessary, the hot air can be carried through several hundred feet of pipe when it is well protected. It is immeterial whether the hot blast is admitted at the top or bottom of the dry-kiln, although it is usually admitted at the bottom. The vantilation is always at the bottom.

Green and air dried lumber, dense and porous lumber, lumber of different thicknesses, all require different treatment ; for instance, Southern Yellow Pine, when cut green from the log, will stand a very high temperature—say 200 degrees F.—and, in fact, this high temperature is necessary, together with the rapid circulation of a large volume of air, in order to neutralize the asidity of the pitch, which causes the lumber to blue and discolor. The treatment of oak, walnut and hickory, and dense lumber of this nature, calls for a large amount of air at a lower temperature ; otherwise the lumber would dry too rapidly upon the outside, the pores close, and the lumber becomes honeycombed and checked. Again, air dried oak and walnut calls for the use of the return duct or its equivalent, the sweating process, in order to open the pores and soften he outside of the timber, so that the moisture can work its way out to the surface. The Sturtevant process meets the requirements of every case ; as by the use of the steam Fan, a greater or less quantity of air can be admitted into the dry room, and the temperature can be perfectly regulated.

The apparatus may be applied with advantage to ordinary dry-kilns where steam pipes are used in the bottom, in which case smaller heaters are required. In dry-kilns thus heated without forced circulation, the application of a fan has increased the capacity 50 per cent. It is even more important to have perfect circulation, which only a fan can give, than a faultless heating apparatus ; for the best heating apparatus, without such circulation, may give the poorest results. The want of circulation in ordinary dry-kilns causes the lumber to blue and discolor.

Attention has already been called to the fact that the fans can be driven either by a belt or by a direct connected engine. Important advantages are gained by the use of the steam fan, enabling the temperature and volume of air to be controlled at all times, and causing the drying operation to be continuous. By the use of a steam fan, the temperature can be raised gradually and maintained at a uniform safe degree, until the process of seasoning is complete. Sudden and marked changes of temperature in the kiln are fruitful sources of warping, checking, case-hardening, etc. If the drying apparatus is operated but twelve hours in the twenty-four, and the kiln is allowed to cool down in the night, then the time of drying will be more than doubled, as several hours are lost in the morning in heating the kiln up to the temperature of the night before. The Sturtevant heaters are designed with special reference to using exhaust steam in the day time from the engine and live steam at night.

Experiment shows that the air does not become saturated with moisture and rendered incapable of further use in passing through the lumber once ; but that it may be passed over the lumber many times before becoming saturated. The effect of the return duct is not only to increase the temperature of the air ; but its relative humidity is changed so continuously and gradually, that warping, checking and case-hardening are entirely prevented, a result which is practically impossible with other systems of drying. This is a result which other processes have endeavored to effect by means of a steam jet which is introduced into the dry room in the early stages of drying. In rare instances, where the lumber to be seasoned is air dried and does not contain a great amount of moisture to effect the sweating and opening of pores, the steaming room is recommended.

The apparatus is especially designed for utilizing the exhaust steam from the main engine, and where it may be desirable, live steam can be used in the heater at night. The exhaust steam from the engine which drives the fan is also utilized in the heater. Of course it is well understood that there is no cheaper artificial medium for drying lumber than exhaust steam.

All kinds and thicknesses of lumber cannot be dried at the same time ; but as each require different treatment, it follows that different periods of time are required. One inch air dried lumber (by air dried is meant lumber that has stood out from three to six months) can be seasoned in from 36 to 60 hours, while perfectly green inch lumber calls for from three to six days and lumber of different thickness in like proportion.

One of the greatest advantages which the Sturtevant system offers is freedom from fire risk. The steam pipes are encased in a steel jacket, and placed in an apartment distinct from the dry room, and do not come in contact with any wood work whatever. No pipe whatever is used in the dry room. Parties who are using this kiln are getting a less rate of insurance upon the kiln than upon the mill itself. The ordinary dry-kilns with steam pipe in the bottom are fire traps ; and, where it is possible to insure them at all, they are considered a very hazardous risk. Annoyance from steam pipes leaking and freezing is also obviated.

This process offers, not only the most efficient lumber dryer, but the most essential feature of combining cheapness of first cost with low running expense. It also affords the still further advantage of being portable ; and, like any other machine in the mill, can be moved from point to point with no other expense than the erection of a new building.

This house is prepared to fit our complete dry-kilns of all descriptions, furnishing the engines, boilers, entire heating apparatus, rails, trucks, complete working drawing for building the kiln, in fact everything pertaining to the perfect drying of lumber. Parties are envited to send to B. F. Sturtevant, Boston, Mass., for the "Illustrated Catalogue of B. F. Sturtevant's Steam Hot Blast Drying and Heating Apparatus," which contains full descriptions of the apparatus and method of application.

—Baltic timber is likely to be scarce this season, and sellers are reluctant to quote prices until the maket has become somewhat more settled, while, on the other hand, buyers eagerly contract for all parcels offered them at a slight increase on last springs prices.

—The lumber firm of Allison, Cousland & Hamilton of Glasgow has ceased to exist, Mr. Robert Hamilton having retired from it for the purpose of carrying on business under the style of Robert Hamilton & Co., while Messrs Allison and Cousland contines in business togather under the name of Allison, Cousland & Co.

LUMBERMEN IN THE LEGISLATURE.

How the Industry is Represented in the Ontario House.

Ever since the organization of the Ontario Legislature, the lumber interest has been well and ably represented in its membership, as is only reasonable in the case of so important an industry and one from which so large a share of the public revenue is derived. Latterly questions affecting the trade have not been so prominent as during the earlier years of Confederation, and the more recent struggle over the Rivers and Streams bill, but though the lumbermen of the present House may be less conspicuously brought under the public attention than formerly, they are none the less an important and useful factor in legislation.

The member most extensively engaged in the lumber trade is Mr. Erskine H. Bronson, of the firm of Bronson & Weston. Mr. Bronson is a new member of the House, having been first returned for Ottawa at the general election of 1886. He is an American by birth but has been a resident in Ottawa for many years. His father H. T. Bronson in the year 1853 manufactured the first lumber cut in Ottawa for the American market, and since that period the Bronsons have been continuously engaged in the business. Mr. E. H. Bronson has been actively identified with the industry for about twenty years. The firm own extensive mills at the Chaudiere, and are among the largest limit-holders in the country. They operate on about half a dozen of the tributaries of the Ottawa River, and their total output amounts to about 55,000,000 feet per year. Mr. Bronson has always taken an active part in public affairs, having been a member of the Ottawa city council for seven years and occupied a seat at the School Board for twice that period. He contested Carleton for the Commons in 1882, but was unsuccessful. His return as a supporter of the Mowat government for Ottawa, a constituency previously supposed to be a forlorn hope, was one of the most remarkable features of the contest of '86. Mr. Bronsons long municipal and business experience make him a valuable acquisition to the House. He expresses himself satisfied with the present timber policy of the administration. He is in favor of unrestricted free trade as between Canada and the United States, but opposed to Commercial Union, that is any arrangement which would give the Americans power to regulate our tariff as against other nations. Mr. Bronson is a member of the special committee asked for by Mr. Meredith's motion respecting timber preservation and mineral development. He occupies a seat at the end of the first row of government benches.

Immediately next to Mr. Bronson sits Mr. Thomas Murray, of North Renfrew. Mr. Murray is a veteran politician on the Liberal side, and a representative Irish-Canadian. He was first returned to the Provincial legislature in 1869, since which he has fought several hard contests with varying success in both Dominion and local elections. He has represented North Renfrew almost constantly since '79. Mr. Murray is a member of the firm of T. & W. Murray, whose headquarters are at Pembroke. In addition to mercantile business they are largely interested in lumbering, owning and operating limits on Black River, on the Northern side of the Ottawa. They purchased at the late government timber sale berth No. 1, in Biggar township, one of the most valuable sold, and intend to operate there next season. Mr. Murray has been engaged in lumbering more or less during the last twenty years, and has a thorough practical acquaintance with the industry in all its phases. Last session he introduced the bill for the better regulation of mixed drives, which became law and has proved a useful measure.

Another legislator and lumberman of long standing on the government side of the House is Mr. Robert Adam Lyon, of East Algoma, a Scotchman by birth but a resident in Canada since boyhood. Mr. Lyon resides at Michael's Bay, on the south side of Manitoulin Island. He is manager of the Michael's Bay Lumber Co., which has from $100,000 to $150,000 invested in lumbering on Manitoulin. They ship a large amount of cedar to Chicago in addition to manufacturing pine lumber for the Canadian market. The annual output of lumber is from 2,000,000 to 3,000,000 feet of sawn pine, 200,000 ties, 200,000 block paving posts and 10,000 telegraph poles. Mr. Lyon was first returned for Algoma in '78, and since the constituency was divided he has represented the Eastern riding. Before the extension of the railway system Mr. Lyon was obliged annually to make a journey of 300 miles on snow-shoes, in order to reach the nearest point of railroad connection which would bring him to Toronto, and regularly undertook his long tramp every winter for eight years. Mr. Lyon states that the supply of timber at Michael's Bay is nearly exhausted, owing more, however, to the ravages of fire than any other cause. His view is that the soundest economy which could be pursued by the government would be to sell the timber as rapidly as possible, invest the money and let the lumbermen take measures to protect their property from fire. In case this is not done he favors stricter means for protecting the forests from destruction by bush fires.

Mr. James Clancy, of West Kent, occupies a seat about midway down the front row of the opposite benches. He has been operating in Kent since 1879, in getting out hardwood timber for the American and Quebec markets, but the supply in that section is now practically exhausted. Oak and walnut were lately shipped in large quantities from Kent, but little hardwood timber of a merchantable character remains except elm and hickory. Mr. Clancy's other interests now occupy most of his attention.

Mr. James Rayside who represents Glengarry, and, as it is almost superfluous to add, is a Scotch-Canadian, is an extensive sawmill proprietor and lumber operator. He was until lately a member of the firm of McArthur & Rayside, who owned a mill at Lancaster, in addition one at Coteau Station, at the junction of the Canada Atlantic and Grand Trunk. On the dissolution of the company one year ago, Mr. Rayside retained the Coteau mill. The output is from 2,000,000 to 3,000,000 feet, principally basswood and ash. Mr. Rayside also supplies the mills up the line of Canada Atlantic.

There are few if any members of the Provincial Legislature who have had a wider or more varied knowledge of public and commercial affairs than Col. Alpheus F. Wood, of North Hastings. He sits well up in the second row on the Conservative side. Col. Wood was for many years engaged in lumbering, and owned a saw mill in Elzevir, Hastings county. He was reeve of Madoc for 19 years, and warden of the county of Hastings for a term of ten years, in addition to holding other responsible positions. Col. Wood is a brotner of Hon. S. Casey Wood, formerly provincial treasurer. He is president of the recently organized Hastings Lumber Manufacturing Co., the headquarters of which is at Madoc. In addition to purchasing logs and manufacturing lumber, the company buys lumber manufactured by portable engines, which reach many localities that are not served by stationary sawmills. They will operate extensively in the Northern portion of the County of Hastings. Col. Wood regards the policy of the administration in regard to the timber as a mistaken one in some respects. He thinks that the House should be consulted before timber limits are disposed of, and regards the increased prices received at the recent timber sales as an evidence that greater caution in disposing of so valuable a source of revenue should be exercised. Even were the government in want of money, he considers that it might be good economy to borrow rather than to part with timber-cutting privileges likely to increase enormously in value before many years. Apart from this the most important change in the system, he thinks, would be the adoption of some system whereby the timber upon many thousands of acres which have been burned over might be saved. The lumber injured by fire in this manner is not sufficiently valuable to make it worth while for the lumbermen to pay full due upon it and float it to market. Col. Wood's opinion is that there should be some provision by which this partly damaged timber, not valuable to the licensee, should pass into the hands of the settler at a low figure, otherwise it will soon become absolutely worthless. Local saw mills should have greater facilities than at present. Col. Wood is a member of the Committee proposed by Mr. Meredith, to enquire into forest preservation and mineral development, and should the resolution carry his practical experience in lumbering operations will prove of invaluable service. Though not a brilliant speaker, he is undoubtedly one of the most useful members of the House, and whenever he speaks it is directly to the point and he is consequently always listened to attentively.

Orson J. Phelps, of Centre Simcoe, is the oldest lumberman in the Legislature, having been engaged in the industry for 35 years. Mr. Phelps is an American but came to Canada while quite young. He served as a volunteer in the rebellion of 1837. Mr. Phelps has filled numerous municipal offices, and in 1881 was warden of the County of Simcoe. He was first returned for the Legislature for West Simcoe in 1883, and was chosen for his present constituency at the last general election. He is a member of the lumbering firm of N. & O. J. Phelps, who some eighteen years ago purchased extensive timber limits and real estate in Simcoe county, and have since that time carried on an extensive business in lumber manufacturing. They have two mills, one at Phelptson, in the township of Flos, Simcoe county, and the other at Merritton, on the Welland Canal. Their output of lumber amounts to between 5,000,000 and 6,000,000 feet per year. In politics Mr. Phelps is a Liberal. He approves of the government's timber policy. He does not think it is possible to preserve the timber effectively from fire, holding that with the advance of settlement the danger must be an ever-increasing one, and that the best thing to be done is to realize on the timber as quickly as possible and let limit-holders take their chances. He is disposed, however, to favor a stringent law imposing a fine upon all campers who do not extinguish their fires. Mr. Phelps does not favor Commercial Union, regarding the scheme now advocated by Erastus Wiman as an impossible one. He would like to see reciprocity in natural products, but regards the prospect as visionary, because the Americans would never be disposed to grant it. Mr. Phelps expects shortly to retire from active lumbering operations, as the supply in the neighborhood of his Simcoe mill is about exha[illegible]

Mr. James Conmee, of West Algoma, who has been a member of the House since 1885, is extensively engaged in lumbering operations in that territory. He is an ardent Liberal and a ready, fluent speaker. Among others who are or have been lumbermen, though also engaged in other pursuits, are Mr. William Lees, of South Lanark, a farmer and mill-owner; Mr. Isaac James Gould, of North Ontario, who is also engaged in agriculture and milling; and Mr. John Fell, of East Victoria, who was for about sixteen years operating at Fenelon Falls, but gave up the business some two years since.

The Wood Trade in Germany.

According to a Berlin report an enormous trade was done during the year 1886 in wood for building purposes and in building material. Very large quantities of wood had been imported in 1885, before the raised customs duties came into force, and large additional importations of foreign wood added to the stock on hand. At the beginning of 1886 the prices were consequently low, but very soon all this changed, for never before has there been a year in which so many new buildings were constructed. An unexampled activity prevailed at Berlin, Hamburg, Kiel, Cologne, Munich, and numerous towns in Baden, &c., and the almost innumerable saw mills of Germany were so fully occupied that they could hardly supply the demand. Kiel alone imported no less than 104,000 cubic metres of wood, worth four million marks. At the close of the third quarter of the year nearly the whole of the immense stock had been used up. But wood was not only in demand for building purposes, a great deal was required for railway sleepers, and more particular for cask staves, on account of the exceptionally large production of spirits: the wood for these cask staves is imported from Hungary. In consequence of the unusual demand the sales of wood from the State forests yielded handsome results, the prices realised having exceeded the limits of the sale prices by 5 to 10 per cent. At the close of 1886 there was still the greatest activity prevailing, the saw mills being fully and uninterruptedly occupied. Many forests in the interior, hitherto inaccessible to trade, have been utilized by the making of good roads and by laying down temporary rails; saw mills have been constructed in the midst of forests, where the boards are now being prepared ready for use, all of which naturally saves time and money. It is quite expected that it will be found at the end of the year 1887 that it rivals its predecessors in the way of building operations, which, if piece only continues to reign, will subsequently take still grander proportions. The tile and cement factories of Germany display, of course, an equal amount of activity, and prices become gradually very remunerative. Of cement, Germany exported very considerable quantities in 1886, which, in consequence of the low sea freights, rose to no less than 3,659,915 double centners. America and the Indies are vast consumers of German cement. The lime and mortar works likewise did a very good business.—*The Chamber of Commerce Journal.*

Canadian Shipments.

The Ottawa district of Canada is by far the largest and most important shipping point for the lumber of the Dominion, and the following figures corroborate the statistics heretofore published as to the extent of Canadian shipments, and show that the exports to the United States for 1887 did not exceed the average for the past ten years, viz., 500,000,000 feet. The average value of the lumber shipped in 1887 was $13.17 at the ports of shipment, so far as the Ottawa district was concerned.

We are under obligations to the United States Consul at Ottawa for the following figures:

Total exports of sawed pine lumber to the United States from the Ottawa Valley district for the calander year of 1887 as declared through the following consulates:

	Feet.	Value.	All other wood products value.
Ottawa	183,847,633	$2,628,444.45	$155.45
Greenville	30,695,339	263,393.21	30,490
Prescott	9,497,863	116,513.23	4,192
Brockville	36,747,472	429,679.64	33,152
	260,788,307	$3,438,030.53	$223,299

Of the above 33,648,348 feet, value, $610,796, was exported in bond for re-exportation.

—Negotiations are said to be in progress by which the creditors of R. J. Stewart propose to buy out the lumber mills, limits, etc., of Grier & Co., of Ottawa, which are said to be worth in the neighborhood of one million dollars.

THE NEWS.

—J. R. Warrens has started a new shingle mill at Colden, Ont.

—Chattanooga Tenn. saw mills, cut 42,000,000 feet of lumber last year.

—In the district about Kinmount there are 3,000 men at work in the woods.

—About 170,000,000 feet of logs remain in the Menominee above the lower dam.

—Richard Nagle has 720 square miles of timber limits on the Kippewa in the market.

—Thirty inches of snow on the Kippewa interferes greatly with lumbering operations.

—Richard Bell, of Glenwilliams, Ont., fractured his leg when teaming logs in the bush lately.

—At the annual sale at the Nassau mills, Peterboro, over 1,000,000 feet of lumber was sold.

—Messrs. Gilmour & Co. are building a large sash, door and blind factory, at Trenton, Ont.

—Messrs. Mason & Morgan, Springbrook, Ont., have put in operation their new shingle mill.

—John Smith, of Marmoria, had his leg broken by a falling tree while chopping in a cedar swamp.

—Edward Beuoit, of Wallaceburg, Ont., has been killed by a falling branch when sawing down a tree.

—H. F. McLaughlin, of Arnprior, Ont., has bought a timber limit near Papineauville, Que., on which he will build a saw mill.

—Mr. J. C. Bedard, Hardwood Hill, near Sherbrooke, Que., has finished his new steam saw mill and put it in operation.

—Over 60,000,000 feet of lumber, 35,000,000 shingles, and 25,000,000 lath, were handled at St. Joseph, Mo., during 1887.

—Col. Talbot, the pioneer who cut the first tree where London, Canada, now stands, is 90 years of age, but still hale and hearty.

—Mr. Stearns' steam mill at Lake Megantic, where he had about 40 men employed taking out pulp wood, was recently burned.

—Mr. Raymond, Mitchell's Bay, Ont., will rebuild his lumber mill and also add machinery for the manufacture of staves.

—Messrs. Hamilton Bros., lumber merchants of Ottawa, are operating near Desert and have to send supplies by team 100 miles from Ottawa.

—Messrs. Wait & Spear have completed their siding on the C. P. R. near Wood Station, Ont. and are getting out ties, cedar posts and cordwood.

—Mr. James Drake, Selkirk, Man., is moving his saw mills from that town to Broken Head River, on Lake Winnipeg, and will manufacture oak lumber principally.

—Mr. W. H. Murray, Indiantown, N.B., is building an addition to his lumber mill, in which he will place machinery for the manufacture of staves and clapboards.

—The cut in the woods this winter on the upper Ottawa, will be large. In the camp of Louis Carisse alone 32,500 logs and 425 pieces of square timber were cut this winter.

—Messrs. N. L. Todd & Co., St. Margaret's Bay, N.B., have one of the largest and finest saw mills in the Province, having capacity to cut 8,000,000 feet of lumber a year.

—There are in California, Washington and Oregon 190 sawmills, employing over 3,000 men, without counting the crews of the many vessels engaged in freighting lumber.

—Mr. R. White, lumber merchant of Ottawa, has recently sold, on bank account, some $100,000 worth of timber, held by the Bank Nationale. It is understood that good prices were obtained.

—Last year, 1887, the Flint and Pere Marguette hauled 215,291,134 feet of logs, the Detroit, Bay City and Alpena an amount nearly as great, and the Mackinac Division of the Michigan Central hauled 148,000,000 feet.

—Messrs Bronson, Weston & Co., lumber merchants of Ottawa, have disposed of 5,000,000 feet of lumber to the Export Lumber Co., of Montreal, for shipment to South America, for which upwards of $75,000 was realized.

—During 1887 there was received at the Port of New York the enormous quantity of 220,599,289 feet of Southern Yellow Pine. This is an increase of nearly thirty per cent. over 1886, or, to be exact, 66,060,469 feet and an increase over 1885 of 91,409,854 feet. The greater part of this lumber went into consumption in this city and its immediate vicinity.

—The largest cut on the Saginaw River was in 1882, when the mills cut 1,012,000,000 feet. The estimated cut for 1887 is 700,000,000, which is the smallest cut since 1878, and the probabillities are that it will never be increased.

—The tariff of rates to be charged by the Rouge Boom Co. for 1888 has been fixed by the Privy Council as follows:—Pine logs, 5 cents per piece; spruce logs, 2 cents; round timber, 5 cents; square timber, 10 cents; railway ties, 1 cent.

—Mr. Wm. Sutton, of Walkerton, Ont., is the owner of an extensive saw mill plant located at Cowichan, Vancouver Island, B.C., which has a capacity to cut from 15,000,000 to 20,000,000 feet of lumber a year, and which has been idle for about two years.

Some heavy transactions have recently taken place in the Quebec timber market, Messrs. McArthur Bros., W. & J. Sharples & Dobell, Beckett & Co., being the principal purchasers to the extent of about $7,000,000. Very little spruce remains in the hands of manufacturers.

—The Americans are waking up to the necessity of preserving what is left of their forests. Congressman White, of New York, has introduced a bill containing stringent provisions for the protection of the public forests, and also for setting aside timber land to be reserved as perpetual forests.

—Mr Yates Ferguson, of Almonte, has a curiosity in the shape of a limb of an ironwood tree, on which two twigs, on opposite sides, having grown out and upward a distance of about twenty inches when they decided to enter the tree at points directly opposite to each other, forming a loop on either sides.

—While two men named Narcisse Fournier and Joseph Leclaire were engaged falling trees in Gilmour & Co.'s limits, in the township of Bethune, the tree they were felling struck a dry one close by which caused part of it to fall in an opposite direction, instantly killing Fournier and badly injuring Leclaire.

—The repairs and improvements to the Saginaw river mills which are in progress or in contemplation at this time, presages activity in the manufacture of the pine product in the season of 1888. Besides improvements, very material additional capacity is announced as being introduced to some of the mills.

—The Ottawa Government has received valuable information from the director of a government survey on the Spellumchern River, B. C., concerning this new district. The soil is rich, game and fish plenty and the timber is reported as very large, much of it too large to handle, one hundred feet being the ordinary length of logs.

—A chestnut at the foot of Mount Ætna is believed to be the largest and the oldest tree in Europe. It is hollow and large enough to admit two carriages driving abreast to pass through it. The main trunk has a circumference of 212 feet. This grizzly giant is said to measure 92 feet in height. That certainly is a "regular old chestnut."

—Quite extensive lumber operations are being carried no for Messrs. A. L. Wright and A. J. Babang of Moncton, N. B., whose mill is at Little River. Charles McAnulty, who has leased the mill at Albert from Jardine & Co. of St. John, has already contracted with parties to put in about 1,000,000 of lumber for sawing next season.

—Reports from the Lake Superior region in the U.S., state that the depth of snow is proving a serious drawback to lumbering operations. Most of the camps near Bayfield, Wis., have been abandoned. Logging is very slow and expensive in the neighborhood of Marquette, Mich. Four feet of snow is reported at Ashland, Mich.

—The proportion of water held by different woods varies greatly. According to Scheubler and Hartig, freshly-cut horn-beam contains 18.6 per cent. of water; willow, 26 per cent; ash, 28.7 per cent; birch, 30.8 per cent; oak, 34.7 per cent; pine, 39.7 per cent; red beech, 39.7 per cent; larch, 48.6 per cent; and white poplar, 50.6 per cent.

—The finest collection of maple logs ever brought to Lucknow, Ont., may now be seen at Mitchell Bros. saw mill, and which are being manufactured into "rollers" 27 inches in length for shipment to the Old Country. Messrs. McDonald have also received a large consignment of very fine logs, both hard and soft wood, for the manufacture of lumber.

—As an evidence of the prosperous condition of Southern mill men and wood-workers generally, it is stated that 90 per cent. of the sales of saw mill and wood-working machinery in that section during the past year, have be on a cash basis. Five or six years ago nearly all such sales were made on credit. This state of affairs is taken as conclusive evidence that the Southern states are making profitable progress in the lumber and wood-working business, and at the same time as a result of purchasing improved machinery turning out a better class of lumber products than ever before.

—Messrs Jas. R. Donnel and H. C. Stabler have purchased the planing mill business formerly conducted by Messrs. Kincaid & McWilliams, Peterborough, and have taken possession. The new proprietors are both practical men of long experience in the business; they are also pushing, and we have no doubt that they will secure a fair share of the trade in their line.

—The consumption of lumber in Chicago is estimated to reach 600,000,000 per annum. The receipts of lumber in Chicago the past year reached 2,493,050,592 feet, which allowing for the local consumption would make the shipments exceed 1,800,000,000 feet. The receipts of lumber in Chicago the past year exceeded those of the preceding year by 137,744,210.

—Cypress lumber has entered more largely into consumption during the last five years than ever known before. This fact is partly owing to the advance in the prices of Northern timber and lumber, but more especially to the facts that the merits of cypress lumber are just beginning to be found out. A considerable advance in the price of this material is predicted.

—The cut of the Saginaw river mills in 1887 aggregating 779,661,265 feet pine and hardwood, considerably exceeds early estimates, and shows that while the capacity of the river has been reduced 100,000,000 feet in two years, there has been but a slight decrease in production. It was only 19,000,000 feet less than 1886, and exceeds the cut of 1885 about 51,000,000 feet.

—An appropriation of $200,000, made by the state of Minnesota for the payment of forestry improvements, has been exhausted, and a portion of the accounts will have to remain over unpaid for a year. The bounty is $3 for every acre of cultivated forest, the tax to meet it being one-tenth mill. During the past two years, over 13,000 acres of forest trees have been planted in Minnesota.

—A resolution was recently adopted by the United States senate, directing the Secretary of the Interior to report a plan of legislation for the disposition of the public timber lands so as to secure the preservation of the national forest lands at the headwaters of navigable rivers, and so make it a right of settlers, attainable by legal means, that they shall provide themselves with timber for building their homes.

—The contracts for clearing lands at Vancouver, which was the cause of so much trouble early last year on the account of the employment of Chinese, is only about one-third finished. There are altogether 400 acres to be cleared, and the cost of the same will total about $80,000. Contracter McDougall states that during the past month, owing to the cold and disagreeable weather, only nine days were put in by his force.

—Hon. M. Engelmaun, of Manistee Mich., president of the Manistee salt and lumber company, is dead. He was a self-made man and a prominent and public-spirited citizen. He began life by working in the woods, and after his first start in business met with serious reverses but finally overcome his adverse circumstances by his energy and determination, and realized a large fortune. He leaves a widow and seven children.

—Mr. Samuel Gray, Victoria, B.C., is the proprietor of a large establishment employed in the manufacture of sash, doors, mantels, mouldings, hand rails, newel posts, etc. He is the patentee and manufacturer of an improved self-supporting stairs, in which is embraced a stair, elevator, light shaft and ventilator, a unique contrivance for economizing room, and in the sale of which he is doing a prosperous business in Oregon and California.

—The Ottawa Auxiliary Bible Society are prosecuting mission work among the lumber shanties. Four colporteurs were appointed for the Ottawa district, J. L. McCullough to the Gatineau, A. Toshack to Desmoines and Black River, J. B. Terrnant to the Bonnechere and Petewawa, and A. Stewart to Madawaska and Mississippi. Four missionaries Messrs. McKechney, Somerville, Hewitt and Ellis were appointed to work in the Nipissing District.

—A continued improvement in the demand for American walnut is reported at London, Eng. The stock of logs is said to be somewhat light, but lumber is in good supply, and recent arrivals are said to have shown an improvement in manufacture, indicating that shippers are reaching a better understanding of the requirements of the trade. Choice planks and boards have gone off freely, and it is believed good stuff will find ready sale at full prices.

—Prospects for a good output of lumber on the Gatineau are not as good as was anticipated at the beginning of the season. There was too little snow in the early part of the winter and considerably too much latterly, so much so that work was much impeded. The lumbermen as it happened put unusally heavy gangs into the bush and by dint of large numbers will be able to make the cut sufficient to keep them sawing most of the summer, but they will not have any surplus logs.

—John Barclay, lumber dealer, Springfield, has assigned.

—G. A. Grier & Co., lumbermen of Ottawa, have sold out.

—Scrimgeour & Rennock, who have been operating a planing mill at Stratford, Ont., have assigned.

—The Ontario Lumbermen's Association lately raised the price of bill stuff on Georgian Bay from $9 to $10.

—American lumbermen are invading the leading lumber centres in Canada, purchasing stock for the American markets.

—Wm. Attig has disposed of his property near Milverton, Ont., and purchased the Pasmore & Whaley saw mill at that place. He will commence sawing about the 1st inst.

—Jos. Kidd & Sons, of Dublin, Ont., have failed to make a compromise with their creditors, and the stock was sold by the sherriff some days ago. Geo. Kidd talks of going to British Columbia.

—The firm of Humphries, Richardson & Humphries, who have run a planing mill at St. Marys, Ont., for a number of years, have decided to go out of the business on account of lack of patronage.

—The Young's Point, Ont, saw mills are running full time. Mr. C. Young has received the contract for supplying the material for the lock gates coffer dam and bulk-head.

—It is said that the cut of logs in the Kippawa district this winter will be unusually large, and that it is nearly all of the best class of timber. A great deal now depends on the water supply. If the thaw is gradual the logs may be expected to reach the mills in good shape.

—The lumber stock at Albany aggregated 90,602,000 feet, about 6,000,000 feet less than the quantity on hand a year ago.

—Messrs Kearns & Marshall, of Brockville, Ont., have disposed of their lumber business at that place to the Rathbun Co. Mr. Calquhoun, late of Gananoque, has been placed in charge.

—Messrs. Gilmour & Co. have a large force of men at work building an extensive wharf on the Gatineau river near Alonzo Wright's residence. Mr. Gilmour has invented a slide by which he can run his lumber from his mills to the new wharf and the river has been made navigable for steamers up to the wharf so that the new construction will very materially improve his shipping facilities.

—A general survey of lumbering operations in the Bonnechere Valley clearly indicates a very large cut—especially by the McLachlin Bros., the kings of the Bonnechere—and this amid the serious drawbacks of a scarcity of oats in the districts naturally supplying this valley; but the North-West has been drawn upon, and farmers who have not sold will find themselves considerably out.

—A sale has been made of five million feet of lumber by a Montreal firm at about $15 per thousand. The lumber is intended for shipment to South America. The price of lumber shows an upward tendency and a good export demand is expected in the spring. The cut this winter in the woods will probably be much larger than last year, and if the drive is successful there will be no scarcity of logs next summer and fall.

—Mr. J. Lambert, of Ottawa, has contracted with the following gentlemen for a supply of ash timber for a Montreal firm, its destination being Liverpool, England. Messrs. James Mulligan, Aylmer, 300 pieces; W. & R. Allen, 150 pieces; J. Fulford, Aylmer road, 70 pieces; Wm. McConnell, Aylmer road, 100 pieces; D. Irwin, Eardly, 100. This timber is to be all of A1 quality, and will be delivered at the nearest station along the line of the C. P. R. and P. P. J. railway.

—Michigan lumberers have been working this season under difficulties owing to the unfrozen condition of the swamps. In some cases they set to work and built corduroy roads along the swamps, and then "snowed" them by a free use of shovels and baskets, thus enabling them to transport their logs from the skidways to the banking grounds, and thereby relieving the skidways from their immense loads, under which they were pressed excessively, and then the work of skidding was proceeded with.

—Representative Rice of Minnesota, has introduced a bill amending the statue so as to admit into the United States free of duty the produce of the forests on the Rainy Lake River and the Lake of the Woods and their tributaries, owned by American citizens, and sawed in the province of Ontario and Manitoba by American citizens, the same being in part manufactured. He also introduced a bill constituting three collection districts in Minnesota, and providing for the appointment of a collector at St. Paul.

—The total shipments of lumber from Portland, Oregon, to the Argentine Republic and Uruguay for the year 1887, were 43,587,630 feet. Of this, 37,108,493 feet were spruce, 5,980,947 feet pine, and 498,190 feet of various kinds, mostly hardwood. The great bulk of this lumbdr, 40,740,552 feet, went to ports in Argentine Republic, mainly to Buenos Ayers, while to ports in Uruguay only 2,847,078 feet were exported. This lumber trade gives employment to 65 vessels, the largest single cargo being that of the ship Euphemia, 1,118,254 feet, in July last. The value of these shipments was about $700,000.

—A big lumber deal is pending at the Chaudiere. The creditors of Mr. R. J. Stewart, the well-known lumberman, with a view to hastening a settlement have made Mr. G. A. Grier, of the firm of Stewart & Grier, an offer for the purchase of Mr. Grier's interests. No arrangement has yet been reached. Mr. Grier, it is understood, offered to sell his interest for an advance of $100,000 on the market value of his interest. The market value of the former's mills and limits is understood to be nearly a million dollars.

—Messrs. J. C. Kidd and Duncan McLaren recently felled a giant oak on the farm of the late G. McLaren, lot No. 20, Beckwith, the extreme length of which was 103 ft.; from ground to first limb, 51 ft.; girth, two feet from ground, 11 ft.; girth, fifty feet from ground, 9 ft. It was purchased by the Canada Lumber Company, of Carleton Place, and will be used in repairs in their mills there. The company despatched their foreman with four men and two teams to cut and convey it into town. It is said that the tree cost the firm $50.

—The immense consumption of wood for railway ties and the growing scarcity of material has set inventors thinking as to the possibility of finding more durable substitute. The average length of service of a wooden cross tie is about six years. Some do not last even for one year. This requires a constant renewal and much work in changing, and it is estimated the railroads of the country spend at least $35,000,000 annually on wooden cross-ties. A Philadelphia mechanic of some ingenuity has invented a hollow iron tie, and if his claims prove correct there will be a revolution in the railroad cross-tie business, with a great saving to the companies.

—The annual meeting of the shareholders of the Midland and North Shore Lumber Company was held at Peterborough during the past month. There were present, Messrs. Geo. A. Cox, D. Ullyott, J. W. Fitzgerald and John Bertram. After reports of a satisfactory nature were read and approved, the following officers were elected:—President, Mr. Ullyott; Vice-President, Mr. Bertram; Sec.-Treas., Mr. Cox. The Company's mills are situated at Parry Harbor and do one of the largest lumbering business in Ontario. It is expected a line of the C. P. R. will be run to the mills form Claremont this summer, when the shipping facilities will be greatly increased.

—The record of casualties during 1887 compiled by the *Northwestern Lumberman*, comprises 341 deaths, and serious injuries, including the loss of one or more limbs, fractures of various kinds, and maiming in a variety of frightful ways, involving 215 persons—all in connection with operations in the woods, and the running of saw, shingle, planing and stave mills, and other wood-working establishments engaged in manufacturing raw material direct from the stump; also box and sash, door and blind factories. The aggregate—556 persons killed or maimed—is an appalling testimonial to the great danger incident to the various processes through which wood passes from the tree to its introduction as a finished commodity.

—The high hills of San Domingo are vast forests of mahogany. Some of the hills are 3,000 feet high, but there being no snow, owing to the tropical location, and not a railroad in the republic, they cannot get the mahogany down. So there it is, untold quantities of it, worth big money, but bringing nothing. From other islands of the West Indies a great deal of mahogany is exported at a big profit. Three-fourths of it goes to Europe, principally London, while the other fourth goes to New York. It is largely shipped in the log in sailing vessels. There isn't a single saw mill in all San Domingo. The lumber they do manage to get out is manufactured by hand, by the slow whip saw process.

—Logging operations are unusually brisk at Hepworth, Ont. this winter, and men and teams are very plentiful. The output here of lumber next season will amount to about seven million feet, composed principally of hemlock, also maple, beech, black ash, elm, cedar and pine. There is also a very large quantity of cedar ties, telegraph poles and cordwood coming out. In fact we know of no other little place in Ontario where there is as much business being done and so much money in circulation as there is here at present. The mills are running every day, and shipping of lumber is actively carried on during the whole winter. The quality shipped is principally hemlock, dimension stuff for builders' use in the early spring. There are three good saw mills in the village, and several more in the outlying neighborhood, as well as three or four shingle mills, all of which will be fully stocked this winter. The shingle mills manufacture a good brand of cedar shingles and some pine.

—There is increased interest in the timber districts of the Puget sound region, and Wisconsin and Michigan manufacturers are rapidly adding to their investments in fir and cedar timber. In a report to the Olympia board of trade with reference to building a log railroad from Budd's Inlet to Chehalis river, Mr. F. W. Brown, a civil engineer, states that the largest part of the country along the line, and tributary to it, is a dense forest of very valuable fir and cedar timber, the quantity of which it would be impossible to estimate, but it is safe to say that there is enough lumber within two miles of a line extending in the vicinity of the one proposed to equal 50,000,000 feet per mile for the whole road. Twenty trees per acre and 10,000 feet to the tree are not uncommon or hard to find in this immense forest; 200,000 feet per acre, or 1,536,000,000 in a distance of one mile along the road, and a tract twelve miles wide. This amount is, perhaps, the highest extreme, and not the average; but a safe average at 150,000,000 feet is not too high.

—The lumber committee of the [illegible] Buffalo, N. Y., have reported that the busi[illegible] while large, was not as much so a[illegible] of high lake freights. Building [illegible] efforts made to advance prices on lu[illegible] on lake freights had the effect of checking building enterprises, and while the business done compared favorably with that of the years previous, the margins were smaller and the profits correspondingly less. There was a slight decrease in the receipts of lumber as compared with 1886, but they would have been 25,000,000 feet more had there been ample carrying capacity and lower freights. The estimated amount on hand January 1st, 1888, was about 140,000,000 of stock, 20,000,000 feet less than was estimated on [illegible] In addition the amount of business done by r[illegible] was large and is constantly increasing in volume, and it is estimated that 125,000,000 feet of lumber was r[illegible]d at Buffalo by rail alone, and that 1,700 cars of lumber were shipped during the past year.

—The lumbering operations of M. Boyd & Co., says the Bobcaygeon *Independent*, are something astonishing this season, and the woods for miles around are moving with life, like a colony of ants. Over six hundred men are engaged in the ten shanties, each shanty having a cob-web of roads around it, and the cob-webs over lapping each other. So confusing was the labyrinth of roads to new comers, and so much time was wasted in teams getting lost that finger boards have been placed. So far, the weather has been all that could be wished and the work has gone on merrily. Drawing has been boss, and let me tell you that the drawing that is done nowadays, is nothing like the drawing that was done in the old days. With their cat teams, narrow sledges and narrow runners, three logs were a load. Now, they have powerful teams, broad sleighs and broad runners and the way they pile up the logs is a marvel. Why to give you an idea of a load, Chas. Reynolds boss of a shanty over the way here, has a team that walked away with 32 logs, that would make an average of 12 inches, and make fully ten standards. And the team were not feeling anyway extra well that day, or was it to say any such a banged fine day for drawing, either. Still the boys were satisfied with the draw, and are waiting to see it beaten, before they really show their oats.

—While passing through Trenton, Ontario, recently, a *Timberman* representative had his attention called to the Gilmour sawmilll located at the month of the Trent River, near the head of the Bay of Quinte. Being in company with one of the McLean Bros., of French river mills, with office at Owen Sound, a question in regard to the "big mill" referred to, elicited the information from that gentleman that the mill was a monster in size nad capacity. "You think," said Mr. McLean, "that you have big mills in the United States, but the best of them dwindle into comparative insignificance alongside of the Gilmour mill which has a capacity of 900,000 feet per day, with sixteen engines that furnish the motive power for the circulars, gangs and other paraphernalia of the establishment." He added, however, that "the mill, for some time past has not been run to anything near its full capacity, and that several mills at Ottawa turned out more lumber last season than the one alluded to. The Trent River, away back in ye olden time, thirty years ago, had several water power mills along its banks, most of which have gone tnto decay; and at the time referred to the mouth of the river, adjacent to where the Gilmour mill is now located, was the scene each spring of lively and exciting times, with the small army of French Canadians rafting the timber which was harvested on the Trent; and when the rafts were completed, with the requisite buildings on them for the accommodation of the men, they were floated past Belleville and Kingston enroute to their destination at Quebec. A large proportion of the timber, however, harvested on the Trent in the form of sawlogs in these latter days is converted into lumber at the "big mill."—*Chicago Timberman.*

—Waterloo, Que., complains of a short supply of cordwood.

—Lumbermen in the Eastern townships are beginning to complain of too much snow in the woods.

—The various lumber firms at Fishers river, in the Northwest, are getting out logs in large quantities.

—Lumbermen in the vicinity of Nickesport, Ont., are very busy, and expect to do a large amount of work this winter.

—Joseph Gagnon, from Piopolis, is getting out two million feet for the Nantais Mill. Archibald is getting out a million feet for Major McAuley.

—The Minister of Customs has decided that teams when going from Canada to work in the lumber woods in Maine or Michigan cannot be remitted into Canada free of duty.

—Hess Bros., of Listowel, Ont., the well-known furniture manufacturers, are about erecting a new factory, 110x60 feet, four stories high, in order to keep pace with their largely increasing trade.

—The firm of G. A. Dougherty & Sons, planing mill, etc., Leamington, Ont., has dissolved, Mr. G. A. Dougherty retiring. Mr. Sam Fuller enters the firm and the style is now Dougherty & Fuller.

—Reports from Lake Megantic states that lumbering is going on briskly, but notwithstanding a good demand, no more is paid in log than last year, although men get from three to four dollars a month more, and are scarce at that.

—Wyle's new saw mill at Midland was destroyed by fire on the 23rd Feb. There is little doubt but that it is a case of incendiarism. The loss will amount to something over $8,000. He was insured in the British American to the extent of $4,000.

Messrs. Bryant, Powis & Bryant, the well known and reliable firm of timber dealers of London, England, are now represented in the Dominion by Messrs. Chas. G. Davies & Co., of Quebec.

—A project is on foot at St. John, N. B., to construct a canal around the Grand Falls for the passage of logs down the river, thereby preventing the heavy loss to lumbermen resulting from the hanging up annually of large quantities of logs at the falls.

—Parry Sound lumber operators report five camps in full blast this winter to every one in operation during the past two winters; although a large number of men were hired in Toronto for the camp, the demand was not satisfied. Good wages were offered.

—The workmen at Messrs J. R. Booth & Co's saw mill have finished the work of blasting out the roadway underneath the large saw mill as well as the foundation for the new lath mill. Several thousand toise of splendid building stone have been taken out, and will be used in the construction of the new mill and the repairing of the old ones.

The manufacture of Terra Cotta Lumber is an industry that can be worked to great advantage in connection with lumber mills. It is composed of a mixture of clay and sawdust and burned in kilns after the manner of brick, the sawdust furnishing the fuel in the process, burns out leaving a porous ware that can be worked with tools, retains nails equal to wood, is light in weight, and fireproof; cheap as pine and eminently adapted for even ordinary house building, and can be used advantageously both in new construction and in repairing, not only as an economical building material but as a safeguard against fire. The Dominion Terra Cotta Co., whose headquarters are at Deseronto control the patents for Canada and have arranged witn the Rathbun Co. who have erected pioneer works which are now in active operation.

The international meeting of commissioners to suggest methods of adjustment of our trade relations with Canada has called forth some protests from some parties, as they are opposed to making any concessions whatever. Why there should be any objections is something approaching a mystery. If we had nothing to sell Canada, that might be a fair foundation upon which to ground an objection, but we have as much to sell Canada as that country has to sell us. Every nation that has had an exchange of commerce with other nations has profited thereby, and largely, too. Advantages are generally mutual. Germany and France possess many ships and are doing a large shipping trade. Their citizens, it may be noted, have been permitted to buy their ships in England, or where they pleased. Both the sellers and purchasers of vessels are gainers. An interchange of commodities between the United States and Canada can but result favorably to both countries. The competition they give in pine is more than balanced by what they want in some of our products. We do not propose to enter upon the discussion of free trade and the removal of the revenue tax on lumber, but while it might cause a temporary loss to a few lumber dealers in the North and Northwest, there is a probability that it would be an advantage to some of our people.—*American Exchange.*

Judicious Advertising.

A lumber dealer at Marshalltown, Iowa, says the *N. W. Lumberman*, strikes a key-note, when he mildly upbraids the manufacturers for failing to advertise in representative trade journals in a consistent and persistent manner. There is method in advertising just as there is in selling lumber. The most persistent advertisers in various lines of business adopt a plan of presenting their business that is unique, catchy and profitable. Effective advertising is an intelligent way of informing the buying public that such and such articles are for sale at such a location. Applying this to the lumber business, we find a firm in upper Michigan making a specialty of thick uppers, another in Wisconsin devoting especial attention to wide pine, common and selects, and another, say at Manistee, doing a heavy business in strips. All these firms may be willing advertisers, all representing themselves merely as "manufacturers and wholesale lumber dealers." The yard dealers, who up to this time, is always on the alert for bargains or specialties, and in looking over advertising pages he finds plenty of firms represented, but not one in a dozen indicate by the make-up of the advertisement that any attention has been paid to it since its initial issue. Yard dealers, and buyers generally, desire to know exactly what manufacturers have to offer and the latter can inform thousands of such in an inexpensive and intelligent manner, by a judicious use of printer's ink and a few direct statements. Such a course would make advertising even more valuable than at present. The middle man now secures a profit that might go elsewhere if manufacturers advertised judiciously. It is the business of the middle man to hunt up stocks at the mills and orders of the yard dealers, and by an acquaintance at both ends of the route, the shipper loses a profit, and the dealer pays more for his lumber than he need to. Scientific advertising would make a vast difference in the lumber trade, and lead to better results to all concerned.

Timber Measurement In Quebec.

Mr. J. B. Charleson, recently appointed overseer of the timber operations on the Upper and Lower Ottawa by the Mercier Government, has, in conjunction with Mr. J. McKay, of the Crown Lands Department, recently returned from Toronto where they were collecting information from the Ontario Government as to the method of collecting timber dues. Up to a month ago the Dominion Government collected timber dues in the Ottawa valley, and Mr. Charleson thus explains his new duties: "The Quebec Government," he said, "formerly collected stumpage dues upon two sizes of logs. Those seventeen inches and upwards were taxed twenty-two cents. Logs under maximum were rated ateleven cents. In future the stumpage will be collected by board measure. The new rate being $1.30 per thousand feet. The Quebec Government is simply assimilating their system with that of Ontario. In each shanty the logs will be measured, the lumbermen being obliged to submit sworn statements regarding the quantity, size and length of logs. On this basis the average size of the logs will be estimated and thus also the amount of dues determined by reducing it to board measure."

Meeting of Ontario Lumbermen's Association.

The first annual meeting of the lumbermen's association of Ontario, which was held in the council chamber of the Board of Trade, Toronto, the early part of February, was attended by a fairly large number of members from different parts of Ontario. The chair was occupied by Mr. A. H. Campbell, of Toronto, and the press were not admitted.

After the regular business of the meeting, which was not given to the press, had been transacted, the following resolution was moved by Mr. John Charlton, M. P., and seconded by Mr. Charles Beck and carried:

"That the Lumbermen's Association of Ontario appreciates the great importance to the lumbering interests as well as to the agricultural, mining, fishing and other interests of the Dominion, of obtaining free access to our natural market, the United States, for the products of Canada and that we cordially endorse and sustain the movement for obtaining free commercial intercourse between the United States and Canada by means of Commercial Union or unrestricted reciprocity to be secured by treaty arrangement that will duly guard and protect the interests of the great producing class of the country."

It was also decided to raise the price of common bill stuff on the Georgian Bay to $10 per thousand feet at the mills.

The following gentlemen were appointed on Executive Board:

M. M. Boyd, Bobcaygeon; J. M. Irwin, Peterboro'; D. Gilmour, Trenton; A. H. Campbell, Toronto; James McLaren, Buckingham; John Waldie, Toronto; John Charlton, M. P., Lyndoch; J. L. Burton, Barrie; E. H. Bronson, M. P. P., Ottawa; W. C. Caldwell, Lanark; H. H. Cook, Toronto; N. Dyment, Barrie.

A. H. Campbell was re-elected president, and Mr. J. B. Millar, of Parry Sound, was re-elected secretary-treasurer.

Material Wasted.

There are many industries for which we have abundant material, which cannot flourish, or perhaps be established at all, in our limited market. One of these is the cutting of veneers for furniture. We do not know that there is a veneering factory in all Canada and are pretty certain that there is not one in this district. At all events most of our veneers are imported—some even from Europe.

Now the Western Peninsula is full of the best material for this purpose. Black walnut stumps, for example, in the Lake Erie counties will neither rot nor burn, but would be worth many times the present cost of destroying them if there was anyone ready to slice them into veneers. Stumps, roots and knots of cherry, butternut, oak, black birch, chestnut and many other woods—the very portions that are good for nothing else—make the best of veneering.

Across the border there are many large furniture shops which we could supply more cheaply than anyone else, while making handsome profits out of what is now waste material. Free trade in veneering would put hundreds of thousands of dollars in the pockets of our farmers and manufacturers.—*London Advertiser.*

Albany Favors Free Lumber.

It is apparently the opinion of the Albany dealers that to abolish the duty on lumber would not have any marked effect either on wages or on the price of lumber. The *Argus* of that city interviewed twenty out of twenty-six dealers in the District. Of the number ten were in favor of the repeal of the tariff on lumber. Four dealers opposed the abolition of the tax but only one of the number expressed the opinion that a low rate of wages would result from the introduction of free lumber.

EXCHANGE ECHOES.

Chicago Timberman.

Senator Wilson, of Iowa, seems to have made a "fist" of it by attacking the railroads running through Canada into the United States, by suggesting the closing of our roads from delivering to or receiving freight from them. What will Minnesota and Wisconsin say to this, after laboring many years to secure an outlet via the "Soo" for their lumber and flour on rates equal to those from Chicago and Saginaw, to New York and New England, and then have such an outrageous proposition passed as has been made to the Senate Inter-State Commerce Committee, and thus wipe out the untold benefit the "Soo" route will give to the northwest. Every shipper of lumber can be thankful that such a road as the Grand Trunk is in existence. It has done more to develop and cheapen lumber transportation than all the other trunk lines combined. There is but one conclusion to be drawn from the Senator's remarks, and that is that the gentleman is not posted as to the wants of the northwest and the American people in general, or is lending his influence to the roads in opposition to the "Soo" route.

Southern Lumberman.

The Canadian lumbermen who accidently get into conversation with reporters, or even with people interested in lumber in the United States, claim that the removal of the export duty would be of very little advantage to them, and still it is well known that they are greatly in favor of this reduction. There is undoubtedly some truth in the statement which they make, that every year it is more expensive to deliver the product, as the sources of supply are receding from the present lines of transportation. But two dollars per thousand is something of a bonus, and a well conducted lumbering force can remove logs and lumber some distance for this sum. Where there are large tracts, a logging railroad can be built and worked to excellent advantage. All this, of course, is on the assumption that the removal of the duty will not depreciate the price of lumber. The lumbermen of the United States naturally fear that the prices will go down. The Canadians just as naturally hope that the removal of the duty will accrue so much to his advantage. While both sides are ventilating their ideas, it yet remains to be seen whether the tariff-tinkers at Washington will bring lumber into the question. Of course a lot of articles will be put on the free list, but it seems as though some might be selected that would be more reasonable and beneficial to this country than to invite a general free competition in the manufacture of lumber. If other things can be made equal, so that our manufacturers here can produce as cheaply as our Canadian friends, it would give a different color to the matter. At present lumbermen can be fed and clothed at a less cost in Canada than here. The luxuries—which even lumbermen claim they must have—are much cheaper there, especially for chewers, smokers and drinkers. Lumber is a commodity of little consideration, however, among congressmen. From lack of thought and interest it may not receive the consideration to which it is entitled. The question simply is: Who will be benefitted by a removal of the duty? Legislation should be in favor of ourselves every time. If it were a question of annexation it might be different, but while the Canadian lumberman has the benefit of cheaper living than our own people, why should we give him more at a great risk of hurting ourselves?

The need of insurance against death and accident especially on the part of those whose occupation is of a hazardous character is now generally recognized. There are no better companies in the field than the Manufacturers' Life and the Manufacturers' Accident. They have done an enormous business and gained the confidence of the public. A special feature of the Manufacturers' Accident Insurance Co. is that it issues policies covering the employer's liability for accidents sustained by their workmen.

WROUGHT IRON SHANTY COOK STOVES

The BEST ARTICLE Ever Offered to the Trade.

I have much pleasure in drawing attention to my Wrought Iron Cooking Stove, for Shanty, Hotel and Boarding House use. These stoves are made of heavy sheet iron, the top and lining of the fire box being of heavy cast metal, and all the connecting parts of heavy wrought iron work. The dimensions of these Stoves are as follows :—Top surface contains six 10-inch holes, fire-box 28 inches long, and one oven 28x24x16.

EVERY STOVE GUARANTEED.

All the necessary TINWARE and CUTLERY for Shanties supplied at the Lowest Prices.

Adam Hall, Peterboro'.

TAPER PIKE POLES

Peevey Stocks and Cant Hook Handles.

The Pike Pole handles are twelve and thirteen feet long ; made of the best Straight Rock Maple ; are turned in a machine made expressly for the purpose, and are 1⅜ inches in diameter for one-half their length, being then tapered to one inch at small end, and chucked to fit furrel. We are the only manufacturers in the world who have the system and machinery for turning out Taper Pike Poles successfully.

THEY SELL ON SIGHT AND GIVE THE BEST OF SATISFACTION.

Price of Pike Poles, Peevey Stocks and Cant Hook Handles, $25.00 per Hundred. Sample Pole sent for 25 cts.

The following are a few of the firms who have used these Poles for several seasons : D. Ullyott, Esq., J. M. Irwin, Esq., Geo. Hilliard, Esq., Peterborough ; Gilmour & Co., Trenton ; M. Brennan & Sons, Hamilton ; Gilmour & Co., Chelsea, Que.; M. Boyd & Co., Bobcaygeon ; Muskoka Mill & Lumber Co., Muskoka Mills ; The Rathbun Co., Deseronto ; Heath, Tait & Turnbull, Huntsville ; Cookshire Mill Co., Cookshire, Que.

Wm. Forsyth, Peterboro', Ont.

IMPORTANT NOTICE TO THE PUBLIC.

I am patentee and owner of Canada patent, No. 42,357—Improvement in Band Saw Mills—which covers a Band Mill with two columns. I am also patentee and owner of Canada patent, No. 42,377—Improvement in Band Saw Guides—which covers wheel guides for a Band Saw. I am informed that a Band Mill is being offered to mill men in the Dominion, containing two columns which is an infringement of the above patent. The public is hereby warned against purchasing such Band Mill, as I shall hold the purchaser responsible for the infringement of my said patents, and for all damages which I may have, or may hereafter sustain, on account of any unlawful use of said patents.

The WM. HAMILTON MANUFACTURING CO., Peterborough, Ont., is authorized to build and sell Band Mills under my patents.

[A TRUE COPY.]
FRANK W. WHEELER,
SHIP BUILDER,
Specifications and Estimates Furnished on application.

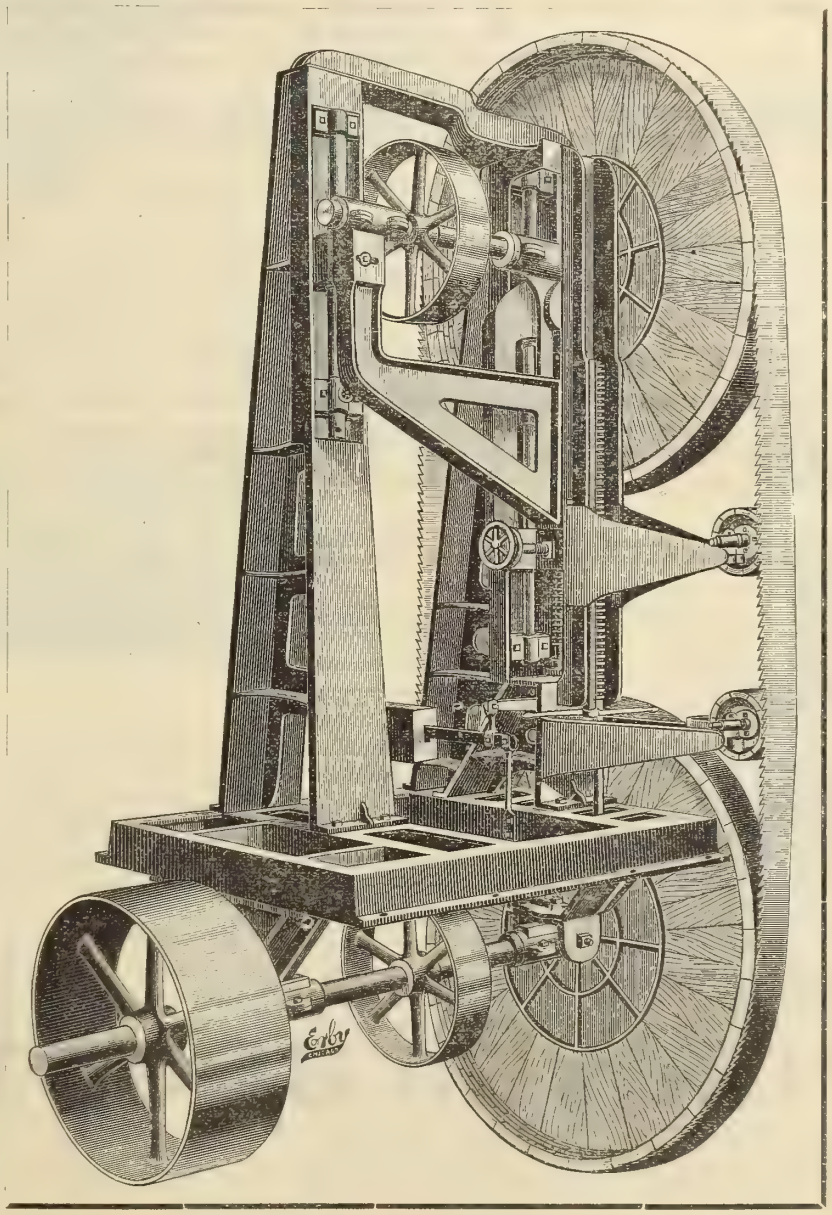
WEST BAY CITY, Mich., June 26th 1886.

Mr. D. K. Allington, East Saginaw, Mich.

I have been running your Pat. Band Saw Mill in my new ship yard mill for over one month, squaring up large and long hewn oak timber which has been hewn a sufficient time to be dry and hard on the surface, and sawing long plank from same kind of timber. The timber, or Keelson's squared, was laid up in a vessel, one on top of the other, and fitted as well as could be done by hand, it being square straight and out of wind. I have had a large amount of this plank and timber sawn, and have not yet found a bad cut. I have squared timber where the saw here and there barely cut the thickness of the saw kerf, yet the saw did not deviate the least from a straight line. From the nature of my work I cannot give any idea of the amount cut in a given time, but the speed of cut should be satistactory to any one. The most difficult part of my work is in sawing tamarac ship knees, yet the machine has given me entire satisfaction in this respect, sawing a root having a cut of from 2 to 4 feet, making in every case a true cut.

I do not believe that a saw has been put on the machine in good order, as I have not a sufficient number of saws to give time to dress them well and keep the mill running, yet there has not been one broken or disabled, in fact, a saw must be in bad order that will not run in a straight line when run over your guide wheels.

Yours, truly,
F. W. WHEELER.



[A TRUE COPY.]
F. W. WHEELER'S SHIP YARD.
WEST BAY CITY, Mich., June 25th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

DEAR SIR:—I have been engaged in running band saws for the past five years, and I never before found anything equal to the Band Mill built by you, that I am now filing for. I must say that it is almost impossible to make a bad line if the saw is in any kind of order. We are cutting hardwood, principally long oak, and on account of being short of saws we have run our saws for five hours and cut as fast as we could conveniently handle, without making any perceptible variation in the cut. I have run various kinds of mills, but never before saw anything to equal it. There has been quite a number of millmen examining it, and all give it up to be the best and truest cutting mill they ever saw.

Respectfully yours,
JOHN A. GREGG.

[A TRUE COPY.]
BAY CITY, Mich., Nov. 15th, 1887.

Mr. D. K. Allington, Saginaw, Mich.

DEAR SIR:—Having had considerable experience with Band Mills, I consider myself competent to judge the merits of the same. I started and run one of your Band Mills at Victoria Harbor, Ontario, which was manufactured by the Wm. Hamilton Manufacturing Co., of Peterborough, Ont. I also started and run your two Band Mills in William Peters' mill, at Bay City, Mich., and must confess they are superior to any Band Mill I ever seen, for quality and quantity of lumber produced.

Respectfully yours,
W. A. McCLENATHAN, Filer.

F. W. WHEELER'S SHIP YARD.
WEST BAY CITY, Mich., June 24th, 1886.

Mr. D. K. Allington, East Saginaw, Mich.

DEAR SIR:—I have been sawing on your Band Saw Mill for the last month, making plank from long square oak timber, partially seasoned, and being short of saws, do not have time to have them put in in the best of order, and have to run them five hours without changing, yet I have not broken a saw or made a bad cut, the machine running smoothly, and not having cause to stop for any reason but to change saws, and cutting as fast as other band saws I have run.

Yours truly,
THOMAS GRAHAM.

THE WANZER LAMP!

PATENTED AT HOME AND ABROAD, 1886.

NO CHIMNEY — 50 CANDLE POWER — NO SMOKE!

Positively Non-Explosive! EVERY LAMP GUARANTEED. ***No Heat around the Oil Well.***

OUR LAMP is all we claim for it, being **positively non-explosive,** the oil being kept continually cool, consuming only half a pint of ordinary coal oil during six hours burning; using only an inch wick, and producing a fine clear **Fifty Candle Power Light.** No chimneys are required, but ordinary globes or shades may be adjusted to it. No smoke or offensive odor. Water can be heated in a few minutes. Tea or Coffee made, and Oysters cooked, etc., without obstructing the light. Reflectors of entirely new designs for both out-door and in-door use are furnished at low figures. Made in all styles—Table, Hanging, Library, attach to Chandeliers, Gas Fixtures, etc.

Agents Wanted where Territory has not Already been Taken.

The Following is Only a Sample:

ASHLAND, Wis., Nov. 10th, 1886.

CHAS. ESPLIN, ESQ.,
Minneapolis, Minn., U. S. A.

DEAR SIR,—The band mill placed in our saw mill by you we consider the best and most complete band mill we know of. It has advantageous features which we have not seen in any other mill. The strength of all its parts is ample for every demand upon it. It is massive. The guide arms in their proportions and adjustments seem beyond improvement. The drive wheel by taking up the tension of the saw from below is a great advantage gained. The long distance between the bearings of the upper wheel shaft steadies the motion and the whole machine moves with ease and steadiness.

We have never seen lumber so perfectly manufactured as made by this band mill. The mechanic that planned it and the company that manufactured it deserves the congratulation and thanks of all manufacturers of lumber,

Very respectfully,
SUPERIOR LUMBER CO.

John H. Knight, Secretary-Treas.; D. A. Kennedy, Supt. and General Manager.

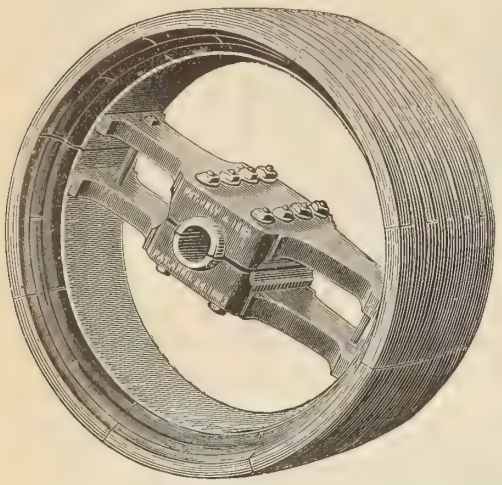
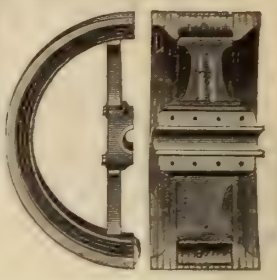
DODGE * PATENT * WOOD * SEPARABLE * OR * SPLIT * PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities :—

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.80	1.42
.30	2.43	1.69
.40	3.26	2.02
.50	4.38	2.41
.60	5.88	2.87
.70	7.90	3.43

Morin.—Appleton's Encylopedia of Mechanical Arts.

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.90	1.40
.30	2.40	1.70
.40	3.30	2.00
.50	4.40	2.40
.60	5.90	2.90
.70	7.90	3.40

Haswell.—Engineers' and Mechanics' Pocket Book.

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are : It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft ; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus : The ratio is friction to pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to

The Dodge Wood Split Pulley Co., 89 Adelaide St. W., Toronto.

Notice to Contractors.

SEALED TENDERS, addressed to the undersigned, and endorsed "Tender for Post Office etc., Prescott, Ont.," will be received at this office until Thursday, 8th March, 1888, for the several works required in the erection of Post Office at Napanee, Ont.

Specifications and drawings can be seen at the Department of Public Works, Ottawa, and at the office of E. Jessup, Esq., Collector of Customs, Prescott, on and after Tuesday, 14th February, and tenders will not be considered unless made on form supplied and signed with the actual signatures of tenderers.

An accepted bank cheque payable to the order of the Minister of Public Works, equal to *five per cent. of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL,
Secretary.

Department of Public Works, Ottawa, 8th Feb., 1888.

SEALED TENDERS, addressed to the undersigned, and endorsed, "Tender for Cobourg Work," will be received at this office until Thursday, the 13th March, for rebuilding a portion of the Western Pier at Cobourg, Ont., in accordance with a plan and specification to be seen at the Department of Public Works, Ottawa, and at the Office of the Town Trust, Cobourg.

Tenders will not be considered unless made on the form supplied and signed with the actual signatures of tenderers.

An accepted bank cheque payable to the order of the Minister of Public Works, equal to *five per cent. of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL
Secretary.

NEW WATER JACKETED CUPOLA FURNACE.

B. W. KEIM'S New Water Jacketed Cupola produces superior castings with a saving of a labourer and ten per cent. of a saving in metal and fuel. It is especially adapted for the use of stove, brass and iron founders, also for the treatment of phosphor-bronze, copper and bell metal. It is so constructed that by the addition of 1½ per cent. of aluminum a steel casting can be produced. It requires little, if any, repairs, and the bottom need not be dropped for months. Estimates furnished for portable reduction works for the smelting of gold, silver, lead or copper ore. Assaying and analyzing promptly attended to by the best of chemists. Your correspondence is solicited. Send for illustrated catalogue.

WANTED.—Reliable parties to introduce the Hartsfeld Automatic continuous and improved economical Coke and Charcoal Ovens of any capacity.

Also, lately improved portable reduction works and prospecting hand-power diamond bit rock drill that will bring up a solid core 500 feet. Extraordinary inducements.

THE SCIENTIFIC AMERICAN.

The Most Popular Scientific Paper in the World. Established 1845.

WEEKLY, $3.00 A YEAR, $1.50 FOR 6 MOS.

This unrivaled periodical, which has been published by Munn & Co. for more than thirty years, continues to maintain its high reputation for excellence, and enjoys the largest circulation ever attained by any scientific publication. Every number contains sixteen large pages, beautifully printed, elegantly illustrated; it presents in popular style a descriptive record of the most novel, interesting and important advances in Science, Arts and Manufacturers. It shows the progress of the World in respect to New Discoveries and Improvements, embracing Machinery, Mechanical Works, Engineering in all branches, Chemistry, Metallurgy, Electricity, Light, Heat, Architecture, Domestic Economy, Agriculture, Natural History, etc.

The Scientific American should have a place in every Dwelling, Shop, Office, School or Library. Workmen, Foremen, Engineers, Superintendents, Directors, Presidents, Officials, Merchants, Farmers, Teachers, Lawyers, Physicians, Clergymen—People in every walk and profession in life, will derive satisfaction and benefit from a regular reading of *The Scientific American*.

TRY IT.—It will bring you valuable ideas; subscribe for your sons—it will make them manly and self-reliant; subscribe for your workmen—it will please and assist their labor; subscribe for your friends it will be likely to give them a practical lift in life. Terms, **$3.00** a year; **$1.50** six months. Remit by Postal Order or Check.

MUNN & CO., Publishers,
361 BROADWAY, N. Y.

Notice to Contractors.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Iron Staircases at the New Departmental Building, Wellington street, Ottawa. Ont.," will be received at this office until Thursday, the 15th March, for the several works required in providing and erecting Iron Staircases at New Departmental Building, Wellington street, Ottawa.

Specifications and drawings can be seen at the Department of Public Works, Ottawa, on and after Thursday, 16th February, and tenders will not be considered unless made on the form supplied and signed with the actual signatures of the tenderers.

An accepted bank cheque payable to the order of the Minister of Public Works, equal to *five per cent. of amount of tender*, must accompany each tender. This cheque will be forfeited if the party decline the contract or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL.
Secretary.

Department of Public Works, Ottawa, 8th Feb., 1888.

WANTED AND FOR SALE.

Announcements in this department will be inserted at the uniform rate of ten cents per line, each insertion, payable in advance. For three or more consecutive insertions of the same advertisement a discount of 25 per cent. will be allowed. Eight words should be counted as one line.

TIMBER LIMITS FOR SALE.

TIMBER LIMITS FOR SALE IN ONTARIO, Quebec and Manitoba. W. J. FENTON & Co., 50 Adelaide Street, East, Toronto.

FOR SALE CHEAP.

A WATERPOWER CIRCULAR SAW AND Shingle Mill with ten acres of cleared land, log house and stable situated on South river, about 4½ miles from Trout Creek Station on the Northern Pacific Junction R. R., convenient to School, Churce and Post Office and s large settlement in Hainsworth. Also about 30,000 feet of dry Hardwood lumber, cut and piled about two years, and about 50,000 feet of Hardwond sawlogs, principally Birch. If not sold sooner, will cut to order this coming summer. For information apply to
THOMAS CORKERY,
Barrett, Ont.

SAW MILL FOR SALE.

FOR SALE, IN THE VILLAGE OF BELmorn, Sawmill in first-class running order, Will be sold with or without stock. For terms, apply to
H. R. PERKINS,
Belmore, Ont.

PINE TIMBER LIMITS FOR SALE.

Two choice Timber Limits in Northwest Territory, Canada, 100 square miles each; great bargain. Also, limits in Georgian Bay, Algoma and Muskoka districts for sale. JOHN SCULLY, Toronto, dealer in Pine Lands and Lumbermen's plant and supplies. Light iron and steel rails in stock.

FOR SALE.

CANADIAN PATENT NO. 45,597, DATED November 22nd, 1887, for improvement in SAW SWAGES. It is the best Swage made for band saws, and will do work equal to any other for circular saws, it being very simple and cheap, and easy to operate. Send for copy of specifications and drawings to

GRATEFUL—COMFORTING.

EPPS'S COCOA.
BREAKFAST,

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

Made simply with boiling water or milk. Sold only in packets, by Grocers, labelled thus:

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE measure introduced into the Ontario Legislature by Mr. Garson, M.P.P., a synopsis of which appeared in the last issue of THE LUMBERMAN, has, contrary to general expectation, become law. Owners of stationary boilers will not accept the new situation with very good grace, as it is calculated to entail not only aditional expense but in its details no little amount of trouble. As has already been stated in these columns the principle of the measure is sound and just, but in working out its details we trust that every care will be taken to render it as little oppressive as possible in its bearing upon the important interests with which it deals.

THE resolutions at present before Congress touching upon the question of Commercial Union are so numerous that an additional one or two would evidently have no perceptible effect. The latest on record eminated from the brain of Congressman Hill, who has introduced a joint resolution which provides that when it shall be duly certified to the President that the Government of the Dominion of Canada has declared a desire to establish Commercial Union with the United States, having a uniform revenue system, the like internal taxes to be collected, and the like import duties to be imposed on articles brought into either country from other nations, and no duties upon trade between the United States and Canada, he shall appoint three commissioners to meet those who may be likewise designated to represent the Government of Canada to prepare a plan for the assimilation of the import duties and internal revenue taxes of the two countries, and an equitable division of receipts in a commercial union, and that the said commissioners shall report to the President, who shall lay the report before Congress. From the present feeling, both in Congress and the Dominion Parliament, it does not require much foresight to predict utter defeat to one and all measures of this nature. Nothing, we think, would benefit the lumber trade or Canada so much as the passage of a C. U. measure, but to look for such a thing under the existing state of affairs, will prove a forlorn hope indeed.

CONGRESS seems to be in no hurry to make any decision on the tariff of the United States. It looks indeed almost probable that no action will be taken this year. The fact is that both parties, and the various loose fish, are so busy watching each other, endeavouring to trip each other, and guarding against any advantage being gained over them in regard to the coming Presidental contest, that they are afraid to move and remain almost at a dead-lock. If, however, the matter stands over till next year, it is at least certain that some means will then be adopted for cutting down the public revenue now so large as to be embarrassing. There is every indication that one change for this purpose will be the removal of the duties on lumber.

THE weather, as usual, has a great deal to answer for so far as the success or failure of the log crop is concerned. Last year there was altogether too much snow in the winter but abundance of water in the spring to float the logs. This year the supply of snow has been moderate, with the result that an enormous cut has been made; but now comes reports from every direction of insufficient water for floating. This state of affairs is calculated to cause disaster, especially to the large operators. It is said that the lumbermen of the Ottawa district are beginning to feel very uneasy with regard to the log supply, as it is feared that there will not be sufficient water in the tributaries to float them onto the Ottawa River. There is said to be over 400,000,000 feet of logs now cut.

WE have already given particulars as to the trade of the British West Indian Islands. The French dependencies Guadaloupe and Martinique import among other goods from the United States, boards to the value of $74,835, scantling $3,273, shingles $2,495, shooks $164,519, staves and headings $30,840, hogsheads and barrels $2,404, furniture $4,160, and other articles of wood $1,081. It will be seen that there is a trade with these islands, which, if not very extensive, is worth looking after by our friends in the lower Provinces. Very possibly a portion of it is the produce of our own forests, and at least it is facilitated by the United States importing from Canada, while the export to more remunerative markets. Why should not Canadian lumbermen deal directly with these customers and obtain the consequent advantage?

ONE of the suggestions made several times in the recent debate on the forests of Ontario is worthy of further consideration, for it is calculated to obviate much friction and save much property from destruction. It is that forest and agricultural lands should be defined and set apart. By this means settlers would not be lured into establishing themselves on land which is seldom well adapted for agriculture, and at the same time the danger of forest conflagrations by the spread of their clearing fires would be removed. This is no new idea, indeed we have several times advocated in these columns its adoption as a general policy, and have shown that it has other important advantages in addition to those we have now mentioned. Now that it has been so fully discussed in the Legislature, it may receive the practical attention of the Department.

THE forests of Ontario, and indeed of all Canada, have had considerable attention attracted to them by the debate in the Ontario Legislature on Mr. Meredith's motion for a special committee. One question of which the various speakers differed very widely was the extension of the pine forests remaining in the Dominion as especially in Ontario. Some talked as if our timber were almost exhausted. No doubt the truth lies somewhere between these widely divergent points; but apart from the exaggerations of party orators, good judges interested in the question and anxious to arrive at the truth are almost as far apart in their calculations. It would obviously be useful to all parties concerned that the extent of our available forests, especially of pine, should be ascertained with approximate accuracy. The Ontario Administration, having defeated the proposal of the opposition for a roving commission over the whole range of the subject, might gracefully and usefully of its own initiative adopt some plan of what was termed "taking stock" of our forests.

THE LUMBERMAN is particularly pleased to reproduce the following article from the *Timber Trades Journal*, of London, Eng., which refers to another extension of that important and well-known Canadian firm, The Rathbun Co., of Deseronto.

"The well-known business of Messrs. Holland, McConnell & C[illegible] has been taken over by the Rathbun Company, of C[illegible] agents Messrs. Bryce, Junor & White, will in future [illegible] behalf at the old premises in Wharf Road. The Rathbun Company are well known throughout Canada and the United States for the extensive and successful nature of the lumber operations they carry on. Their mills and factories are [illegible] Ontario, a town of about 3,[illegible] engaged in or connected with the [illegible] pany. The Rathbun Company, repres[illegible] Messrs. Bryce, Junor & White, purp[illegible] doors, mouldings, &c., of the same cha[illegible] enjoyed the support of the English trade [illegible] Messrs. Holland, McConnell & Co. That [illegible] be fully maintained there can be no quest[illegible] Rathbun are proprietors of one of the largest [illegible] embracing, in addition to their saw-mills and [illegible] mill, flour mills, shipbuilding yards, &c., [illegible] control of two branch railways, one of wh[illegible] the Grand Trunk Railway of Canada. In additi[illegible] own, we understand, a considerable fleet of [illegible] sailing ships. We wish the new management of the Wharf Road business every success."

We feel sure that our readers will join us in wishing the Messrs. Rathbun as great a measure of success in England as they have enjoyed in Canada.

IN view of the existence of a movement to bring Newfoundland into the Canadian confederation, the following facts, gleaned from the "Stateman's Year Book," will be of interest:—The area of the island is 40,200 square miles; population in 1884, 193,623. The religions of the populations were in that year stated to be as follows: Roman Catholics, 75,254; Church of England, 69,000; Methodists, 18,787; Presbyterians, 1,495; other denominations, 1,470. The public schools aided by the government numbered in 1884, 402, with an attendance of 27,322 pupils. The revenue of the island in 1886 amounted to $1,078,775, and the expenditure to $1,736,105. Of the revenue $948,680 were derived from customs duties. In the same year the value of the exports was $4,833,735, and the imports, $6,020,035. The principal exports were fish, value, $3,763,336; cod and seal oil, value, $524,000; sealskins, value, $272,658; copper ore, $246,100. The principal imports: Flour, $1,495,976; woollens, cottons, etc., $824,246; salt pork, $321,692; butter, $245,667; molasses, $306,568; salt, $175,010; tea, $154,049; coal, $188,494; leather and leather goods, $504,087; spirits, $112,996. Of the exports of 1886 the value of those sent to Great Britian was $1,205,303; British West Indies, $234,150, Canada, $189,484; Portugal, $1,221,872; Brazil, $129,935; Spain, $381,667; the United States, $284,107. Of the imports, $1,911,000 in value was reccived from Great Britain; from Canada, $1,937,605; from the United States $1,672,810. The Government of the island is administrated by an Executive council of seven members; the Legislative council consists of fifteen members, and the Legislative assembly of thirty-six members.

THE serious drawback to the lumber trade in Toronto last summer, caused by the long strike of the carpenters and others, seems likely to be repeated in Hamilton this spring. The only difference is that in Toronto the building mechanics struck work of their own accord, in the hope that the master builders would accede to their demands for more pay. In Hamilton, on the other hand, it is a fight between the Builders' Exchange and union men, the former having published an ukase discharging all of the latter class. The edict of the builders does not, it seems, apply to buildings in course of construction, which have to be completed in a given time, contractors for which will be permitted to keep union men at work until their work is completed. The trouble seems to have arisen through the bricklayers and others raising the cry against the employment of non-union men in certain quarries. The carpenters and joiners seem to have come in for a share of the blame, but claim they had nothing whatever to do with it. On the whole it looks as if the present trouble had arisen out of nothing, and some of the builders are not in favor of the line of action adopted, and think there was no necessity for so

much ill-feeling being stirred up, to say nothing of the serious results which might follow from a protracted conflict between the employers and the men. Next to those actively engaged in building operations, none feel the effects of a disturbance such as this more than the lumber trade. The lumber dealers of Hamilton depend almost entirely on the local demand, and should building operations cease they will be seriously effected thereby.

[Since the above was in type we learn that the prospects are favorable for a speedy termination of the lock-out referred to, and that in all probability work will proceed as usual.]

To successfully conduct a trade journal such as THE LUMBERMAN, one of the most urgent needs is the hearty co-operation of its readers. We have received so many flattering letters of appreciation from our subscribers of late that we would appear, indeed, ungrateful if we did not make proper acknowledgement of the same. In this regard a publisher is placed in much the same position as a public servant, feeling grateful at all times for any word of encouragement which he may receive from those to whom he looks for support. The steady strides of advancement made by this journal during the past year will be continued indefinitely, and we hope that not only will we receive an equal consideration from the trade as in the past, but that each individual reader will lend a hand in furnishing information on all important subjects affecting the lumber interests. There is no reason why this paper should not be placed in the hands of every man interested in Canada's greatest natural product, and in order to accomplish this we have a request to make to all our present readers. It is that every man receiving this paper send to this office the names of friends and acquaintances in their section who are in any way interested in lumber, in order that we may address them sample copies, with a view to secure them as regular subscribers. When this is being done we would also ask that a few words at least be added regarding the season's operations. Those who are unacquainted with the paper are always invited to send for specimen copies, free, and in other respects we are ready to extend to every one the opportunity of becoming acquainted with the paper before investing in it. We hope that before our next issue our friends will demonstrate, as above, their appreciation and interest in the CANADA LUMBERMAN.

RECENT LEGISLATION.

The session of 1888 of the Ontario Legislature has been drawn to a close, and among the Bills which passed the House, of interest to the lumber trade, not previously referred to in these columns we find the following :

"An Act to authorize the appointment of Fire Guardians, and for the better prevention of bush fires."

The provisions of the Act empower the council of a township municipality at its first meeting in each and every year, to appoint by by-law a sufficent number of resident householders to carry out the provisions of the Act, the person so appointed to be known as "fire guardians," their term of office being for one year. It is stipulated that no person shall hereafter set out or set fire to any brush heap or combustible material in any field, clearance or place where the same would be likely to spread, between the first of June and the first of October, without having obtained leave in writing from the fire guardian appointed by the council resident to the place where the brush heap or other combustible material is situated. It shall be the duty of the fire guardian on being requested to grant leave to set out fire, to examine the place at which it is intended to set out the fire, and the adjoining lands, timber and other property thereon, and to consider the state of the wind and weather at the time of such request, with power to refuse any such request if the time and location are not favorable.

The council of any township municipality may in and by the by-law make provision (1) for the payment to the fire guardians for his service ; (2) for supplying the appliances necessary for extinguishing a fire ; (3) as to the duties of the fire guardians appointed and all other residents in case a bush fire calculated to cause damage or loss of property has been started in or is approaching the municipality ; (4) as to the rules and regulations (not contrary to law) which shall guide the guardians and residents, the distance from which parties may be required to attend any fire, the means, appliances and material to be used in extinguishing or preventing the spread of a fire, and as to all the matters within the scope of their authority which the council may think advisable, and their experience and the position of the municipality may suggest, as being conducive to the carrying out of the intention of the Act and the by-laws passed thereunder ; (5) the penalty to be imposed upon fire guardians and others refusing to perform or neglecting their duties under this Act or the by-law or contravening any provision thereof.

Any person setting out fire without leave and permission shall be subject to a penalty of not exceeding $100 for each offence, which penalty may be sued for and recovered on information of any resident ratepayer in the municipality before a police magistrate or two justices of the peace sitting together, or by action in the Division Court held in the division in which the fire was set out.

The plaintiff or complainant shall be entitled to one moiety of the penalty, and the other moiety shall be paid over to the treasurer of the municipality, except costs, all of which shall go to the plaintiff, if ordered to be paid by the judge ; and in case the defendant be ordered to pay the plaintiff's cost, and the same cannot on execution be recovered by the plaintiff, the treasurer of the municipality shall pay the plaintiff's costs, unless the judge who tries the case otherwise orders.

LONDON BOARD OF TRADE.

The February Board of Trade returns are still better reading than those of January, for though the imports have not increased so much, the exports show particularly well. January's imports were 3¾ millions better than in the same month of 1887, and February's were £1,018,782 in advance of those twelve months ago. The only decreases are in duty-free articles of food and drink, and in oils. The decrease in January in "raw material for sundry industries" was turned in February into a gain of £345,000, and for the two months the growth in the two categories into which raw materials are divided is £1,393,132. Metals show an increase in the two months of 1¾ millions, and the total increase in all departments for the first two months is the gratifying one of £4,774,348. The exports for February have increased, as compared with last year, £1,737,290, as against an improvement in January of £774,936, the two months thus showing £2,512,226 better than the indentical period of 1887. The only falling off is in chemicals—not an acceptable sign in view of Baron Liebig's dictum, quoted by Lord Beaconsfield, that the chemical industry is the best barometer of the state of trade. Still, over the two months there is a gain of £72,000. In January there was a falling off in the exports of textiles ; but that was more than made good last month, and the two months together show a growth under the head of £115,636. The re-exports of foreign and colonial produce show a shrinkage in February as in January. The returns on the whole are most welcome and satisfactory.

Turning to our particular line of business, the statistics show that the importation of hewn timber was larger during February, 1888, by 12,071 loads than in the corresponding month last year, or an additional official computed value of about £31,000. This increase must be mainly credited to Sweden, Norway and Germany. The increase for the two months amounts to 21,330 loads. Sawn wood also shows an increase for the month of February of about 5,000 loads, the figures being 40,281 loads as compared with 35,248 loads for last year, or an increase in value of about £9,000. The increase also in this item is in goods from Sweden and Norway, which have supplied about 8,000 loads more than last year at a similar date. Taking the total for the two months, however, there is a decrease of about 2,000 loads against the present year. The most prominent feature in the returns is the large increase in both hewn and sawn goods from Sweden and Norway, the supplies from which have been largely in excess of those of each of the previous years, as will be seen by the figures which we print in another column.

Staves and mahogany are not included in the figures given above, but are separately treated in the returns. The importation of the former for the past month almost doubles that of 1887 for the same period ; and the official value is reckoned at £34,339. For the two months the income for the present year is 2,336 loads. In mahogany the quantities are for the year 1,651 tons, as compared with 4,239 tons for February, 1887, a decrease of 2,588 tons. This stands in the return of estimated value at £14,018, as contrasted with £33,233. For the two months the quantities are 4,826 tons, as compared with 9,149 tons for 1887 for the same period, a decrease of 4,323 tons.—*Timber.*

THE LUMBERMAN'S PERILS.

The most exciting and dangerous period of the lumberman's always perilous life in the woods is now approaching—that is, the "breaking in" of log piles heaped or ranked at the summits and on the faces of the long rollways that border the streams in the lumber woods. These rollways extend from the tops of high and abrupt banks to the water's edge. There are two ways of piling the logs at the rollways—one by laying them in regular ranks or tiers, and the other by throwing or dropping them in jumbled heaps on the ground. In the regular piles, tier on tier, the logs are started in a body down the rollway, and they usually go down in one great heap clear into the water. In the other way the logs are dumped from the trails and lie in a ragged, promiscuous jumble from top to bottom of the rollway. The key log or logs may be at the bottom of the pile, in the water, or half way up the hill. There are always such configurations of the pile that there are many openings like great pitfalls here and there. At some of these piles the rollways are selected at places in the creek where the banks are high on either side. Then high dams are thrown across below with flood-gates. By these dams the water can be thrown back, manipulation of the gates raised and lowered among the tightly massed logs so that it lifts them and generally releases the jam.

But even where these dams are in use there are frequently piles so obstinate that nothing but the skillful work of the lumberman on the key logs will break them down. It seems utterly incredible that men could be found so daring as to make their way out along these icy, jagged and twisted piles, with 2,000 waiting logs above them, held, probably by the obstinate keying of a single log, and ready to thunder down upon them the instant that that log is moved a half-inch from its position. But the occasion is only needed to produce such men by the score, no matter how great the danger may be.

The woodsman makes his way nimbly but with caution over the protruding logs and across the treacherous pitfalls, frequently disappearing entirely beneath some lifted group of immense timbers, as he tries to locate the log or logs that prevents the great pile from breaking or completing its lightning-like plunge into the stream below. The log that makes all the trouble may be near the bottom, which, of course, increases the peril. The woodsman's quick eye is not long in demonstrating how the key may be most advantageously removed, and he at once proceeds to accomplish his task. One or two blows of his axe may be sufficient to remove an obstruction that has defied the many tons of pressure from above. It may require an hour's chopping and prying, and it may take a day's hard work to break the jam.

When the key is broken, however, is the time that the driver must use all of his nimbleness, nerve and skill to escape from the rush of pitching, tossing and thundering logs that he has started. He leaps here and there, and jumps from log to log in his flight, with the avalanche of timber pressing close behind him. In releasing one jam, last season, five men were caught in the break and killed. The fatality that accompanies the "breaking in" of log piles in different regions would startle the public if made a special item in reports of vital statistics. The rush of a pile of logs down a steep rollway, unobstructed, is as exciting a scene, in itself, as any one could wish to see. A hundred logs, rolling, tumbling and roaring into a stream will dash the water 50 feet in the air, and leave the bottom of the stream as bare as the shore until the water falls back again in foam and spray.

PERSONAL.

We regret to hear that Mr. Robt. Hurdman, of the lumbering firm of Hurdman & Co., Ottawa, while driving to his office about a fortnight ago, was run into by a runaway horse and badly injured. His many friends will regret to learn of his misfortune and wish him a speedy recovery.

Mr. Thos. Ouellette, of Gordon, Ont., a large manufacturer in hardwood lumber, was among the callers at THE LUMBERMAN office during the past month. He reports business good and an unusual large output of logs in his vicinity.

Mr. James McLaren, of the Canada Lumber Company, of Carleton Place, has left for Oregon to close a two million dollar timber deal in which he and other lumbermen are interested.

It is rumored that Mr. W. G. Perley, M. P., of Ottawa, may be called to the Senate. Mr. Perley is well known as not only a very successful and shrewd business man and one of the largest lumberers in the country, but has of late shown himself to be a very valuable addition to the parliament of the country. Should the administration see fit to bestow upon him the honor above referred to, his many friends and admirers—THE LUMBERMAN included—will not be sparing in their congratulations.

Mr. H. H. Cook, M.P., president of the Ontario Lumber Co., who was recently unseated as member for East Simcoe on the grounds of bribery by one individual purporting to be his agent, has again taken his seat in the House. He will appeal the decision in the supreme Court which will open after the present session of parliament. This is another instance where one man suffers for another man's wrong doing. There is a screw loose in the act respecting bribery and corruption in parliament which should receive more serious consideration.

Mr. Nathaniel Shaw, an old and highly respected citizen of Peterborough passed to his last account during the past month. Deceased was seventy years of age, and was one of the oldest millwrights and saw millers in the country. It is said that as a millright he had no superior in this section of the province and among the buildings, the elevators at Midland and Port Hope, as well as nearly all the large saw mills in this vicinity, bear testimony to his skill. He has a son and a daughter living. *Requiescat in pace.*

The Opening Season.

Our advices indicate that at most lumber centres in the West the Spring trade has already begun, although of course, business has nowhere been very active. The stormy weather which has prevailed during the past week will necessarily have an unfavorable effect on all kinds of business, but the people need lumber and if the present conditions are unfavorable to distribution, the delay resulting can be of short duration, and will serve to make the reopening of the spring season more marked.

But while the output is generally cheerful it must be admitted that at some points, especially in the Eastern and Middle States, business is somewhat duller than it was in the preceding year and there are besides doubts in some quarters as to the extent of the demand for lumber in building, some members of the trade being inclined to believe that in many places building will not be done on so extensive a scale as it was last spring in the same localities.

The strike of the locomotive engineers and the pending agitation of the tariff question, are two other unfavorable features of the times. But it seems clear that the settlement of the strike will not be long delayed, and it is well known that no material revision of the tariff can possibly be effected in the present year.

It is besides obvious that the business of the country is in a sound condition, and that all the signs of the times, excepting those referred to in the preceding paragraphs, are distinctly favorable. We, therefore, feel no hesitation in predicting a good if not an exceptionally busy spring season.—*Saw Mill Gazette.*

How to Use Glue.

For glue to be properly effective, it requires to penetrate the pores of the wood; and the more a body of glue penetrates the wood the more substantial the joints will remain. Glues that takes the longest to dry are preferred to those that dry quickly, the slow-drying being always the strongest, other things being equal. For general use, no method gives such good result as the following: Break the glue up small, put it in an iron kettle, cover the glue with water, and allow it to soak twelve hours; after soaking, boil until done. Then pour it into an air-tight box, leave the cover off until cold, then cover up tight. As glue is required, cut out a portion and melt in the usual way. Expose no more of the made glue to the atmosphere for any length than is necessary, as the atmosphere is very destructive to made glue. Never heat made glue in a pot that is subject to the direct heat of the fire or of a lamp. All such methods of heating glue can not be condemned in terms too severe. Do not use thick glue for joints or veneering. In all cases work it well into the wood, in a similar manner to what painters do with paint. Glue both surfaces to your work, except in case of veneering. Never glue upon hot wood as the hot wood will absorb all the water in the glue too suddenly, and leave only a very little residue.

Another New Lumber Company.

A party of American lumbermen are heavily interested in timber lands in the vicinity of Alberta, in the northwest territory. The company includes well known lumbermen of Eau Claire, Minneapolis, and other cities in Wisconsin and Minnesota, the corporation with which they are identified being known as the Eau Claire and Bow River Lumber company. It is understood to be part of the present plan of these gentlemen to make their lumber available by building a line of railroad from some point on the Canadian Pacific to Alaska. How it would have made the eyes of some of our forefathers stick out to think of traveling by rail from Alaska to the City of Mexico. The prospect of this being possible is not so remote as it might seem to be, thanks largely to the enterprise of citizens of the United States, who find their own land all too small for their ceaseless enterprise. In the case of the railroad line to Alaska the primary object is to open up the timber which has been acquired by the great lumbering company. Contrary too, to the commonly accepted supposition there are no climatic barriers to the enterprise. Mr. P. A. Prince, the general manager of the Eau Claire and Bow River Lumber conpany, in writing to friends in Eau Claire, Wis., from Calgary says: We are having splendid weather. During February the thermometer in the shade registered 46 and 50 degrees below zero. No snow at all. Calves and colts are roaming about on the long ranches feeding themselves from the long grass which reaches up to their knees." And while men in the northwestern states are planning to push a railroad into Alaska men in the south are planning to extend the line from the City of Mexico into South America. With the prospect that some day railroad communication will be established from Alaska to Cape Horn even the brilliant fiction of Jules Verne loses some of its luster.—*Mississippi Valley Lumberman.*

Lumbermen to Take Action.

The Chicago *Evening News* says:—One of the most important moves that has yet been taken in connection with the railway strike at present paralysing trade in Chicago was decided upon the secret session by the Lumberman's Association to-day. This is nothing less than to take legal proceedings against every railroad connecting with the Burlington to compel them to have out their lumber and transmit it over their respective lines.

Toronto Letter.

TORONTO, March 28.—The stormy weather of this stormy month has retarded building operations greatly. In the western part of the city numerous cellars have been started only to be stopped after a few day's work had been spent. The demand for lumber in this quarter is good, any amount can be sold but not much cash forthcoming. A large quantity of land is being disposed of to parties upon easy terms of payment with little or no money down. Almost every one of these so-called purchasers proceed to interview the dealers, asking for terms the most unreasonable. If the dealers are not careful the history of supplying lumber to such a class over the Don a few years ago will be repeated.

If the land owners would undertake, when advancing money, to retain an amount to cover material and labor it would make the average lumber dealer's life worth living.

Prices are slowly but surely advancing and likely to do so during the early part of the season. Hemlock is in good demand for scantling and joists.

Getting it in Free of Duty.

It is claimed that certain lumbermen doing business along the line dividing Maine and New Brunswick have fraudulently evaded the duty on the manufactured product shipped into the United States, the revelations having been made by operators in the Kennebec valley and other parts of Maine. A meeting was held by the Kennebec Log Driving Company, at which decided measures were urged for preventing fraud. As explained by a prominent Maine lumberman, the scheme which has been successfully operated is substantially as follows: The lumbermen will cut about one-tenth of their logs in Maine, to take advantage of the law which permits driving Maine logs into New Brunswick waters, and returning the lumber to the United States, free of duty after being sawed in New Brunswick; but the other nine-tenths of the output is lumber sawed in Canada, from Canadian logs, and the small operations in Maine furnish a cloak by which the irregularity is concealed, for all the lumber is represented as sawed from Maine logs. Thus the Kennebec lumbermen claim to have had a taste of free lumber effects, in advance, and they do not like it. They say the fraudulent competition has seriously injured them, especially in the New York and Boston markets.—*Northwestern Lumberman.*

Cleaning Greasy Machinery.

For cleaning greasy machinery, says the *Milling Engineer*, nothing can be found that is more useful than steam. A steam hose attached to the boiler can be made to do better work in a few minutes than any one is able to do in hours of close application. The principal advantages of steam are, that it will penetrate where an instrument will not enter, and where anything else would be ineffectual to accomplish the desired result. Journal boxes with oil cellars will get filthy in time, and are difficult to clean in the ordinary way; but if they can be removed, or are in a favorable place, so that steam can be used, it is veritable play-work to rid them of any adhering substance. What is especially satisfactory in the use of steam, is that it does not add to the filth. Water and oil spread the foul matter, and thus make more work. It matters not how journal boxes are kept clean, everybody will admit that they should not be allowed to get dirty. They are sure to heat and give trouble, if not cleaned and cared for. Often the oil tanks are never emptied and the residuum removed, and as the pumps draw the oil from the bottom, the machinery is being daily lubricated with impure oil. The oil tank should have a thorough cleaning before new oil is again pumped into it. This is easy enough if the oil is removed, the tank inverted and the steam nozzle applied to the mouth of the tank. This method of cleaning beats dipping the filth out with waste. So many opportunities will present themselves when steam will be a valued help in cleaning machinery, if one happens to think of it.

WE are in receipt of a very neat and instructive circular relating to B. F. Sturtevants "Monogram" Blowers and Exhausting Fans. The Blowers are made expressly for blowing forge and boiler fires, puddling furnaces, &c., for which business they have been extensively introduced. The Exhausting Fans on the other hand are employed for removing dust from polishing and buffing wheels of all descriptions, smoke from forges, gasses from rooms, &c. We are informed that copies may be obtained of B. F. Sturtevant, Boston, Mass., by asking for circular number 34.

(*Continued On Page Nine.*)

George Henry Corliss, the inventor of the Corliss engine, died rather suddenly at his residence in Providence, R. I., on the 21st of February. He was born at Easton, Washington county, N. Y., on June 2nd, 1817.

NOTES.

—Men are being picked up for the drives in all directions.

—Halm's planing and saw mill, New Hamburg, Ont., has been burned; loss, $15,000; insurance $5,000.

—Messrs. Leishman & Son, of Bracebridge, have taken out 2,000,000 feet of logs during the season, being 800,000 more than last year.

—At Mr Tait's lumber shanties up the Bird Tail (Man.) there are now 45,000 logs on the ice and 5,000 logs on the skids ready to be drawn to the river.

—A young man named A. Charlton, while working in Jones' mill, Wiarton, had both his legs cut off and was otherwise mangled by a circular saw. He died in a few minutes.

—Mr. James McKinnon, of Arnprior, who is jobbing for Mr. Alex. Fraser of Westmeath, is said to have, with eight teams, put 18,000 logs on the ice in seven weeks, drawing them two and a-half miles from the place they were cut.

—It is predicted that work will be brisk in Arnprior, Ont., this coming season in consequence of the immense extension now building to Messrs. McLachlin's mill. The mills are to be run to their fullest capacity night and day throughout the season.

—The sash door and blind factory operated by Richard Woodland, Ottawa, Ont., was totally destroyed by fire last month. The loss is estimated at between $3,000 and $3,500, with an insurance on the building of $4,000 and on the stock $2,000.

—A new saw mill will probably be erected where the Manitoba and Northwestern crosses Shirt Tail creek, four miles from Birtle, Man. There is a mill at present at Birtle, but the lumber has to be hauled a mile up a steep grade to the railway station.

—James McBride, who has been lumbering in McLean, has cleared out leaving his workmen without their wages and the storekeepers in great grief. Jammy drew $900 a few days ago from Mr. Mickle, which he has taken with him as a nest egg for some other locality.

—John Shaw, of Forest, is having put in his Brigden planing mill, under the supervision of his son, R. G. Shaw, a new 25-horse power engine, and 36-horse power steel boiler, also a heading machine. Mr. Shaw says he is bound to have his mill second to none in Western Ontario.

—The Dominion Government has passed an Order-in-Council placing $40,000 in the estimates for the construction of an iron bridge to replace the present Suspension bridge across the Ottawa river below the Chaudiere falls. This is something the lumbermen have been wanting for some time.

—Messrs. W. P. Christie & Co. are taking out 6,000,000 feet of logs to be cut in Severn mill; and 12,000,000 feet for Christie, Kerr, & Co. from Oakley township, which will be partly cut at the Severn, but the greater part will go by the Black River via Longford to the company's mill at Bradford.

—Through inadvertence the cut of the Sturtevant Patent Progressive Lumber Dry Kiln was omitted in the description of the same in the March issue. The cut which should have appeared and which clearly shows the arrangement of the Sturtevant Steam Hot Blast Apparatus, may be found on page 13 of this issue.

—Exemption from taxation for ten years has been granted to the Longford Lumber Company, of Longford, by the town of Orillia. The company will erect a large establishment for the manufacture of woodenware, such as tubs, pails, etc. The outlay will be about $40,000, and the industry will furnish employment for thirty or forty hands.

—John Shaw, of Forest and S. Fraser, of Amherstburg, still keep up their reputation of being among the largest lumber dealers in Western Ontario, having recently closed a purchase of 12,000,000 feet of lumber and 5,000,000 pieces of lath, for this season's delivery at Goderich, Point Edward, Courtright, Windsor, Amherstburg and Kingsville.

—Mr. Burns, M.P., for Gloucester, who has returned from Europe, states that while in England he organized a syndicate with a capital of $255,000 to operate 7,000 square miles of timber limits on the lower St. Lawrence. He also brought to the notice of several capitalists a railway scheme which will give an air line from Montreal to Shippegan harbor.

—Mr. Elias Thompson, of Peterborough, is taking out a quantity of large timber from "Maher's place," near Keene, and shipping it over the Grand Junction to Halifax, where it will be used for spar and boom timber. Some of the sticks sent have been commended as the best ever seen in Halifax. Each stick extends over three flat cars in shipping, and requires two teams to draw it to the station. Already a number of sticks have been sent, and more are being shipped almost every day.

—Logging operations in the neighborhood of Sackville, N. B. are being vigorously prosecuted. J. L. Black, of that town, will get out logs enough to make 6,000,000 superficial feet of lumber; Black & Robertson will get out about 14,000 logs; J. M. Hicks, 12,000; Harvey Copp, 6,000; Eastabrook & Cook, 6,000; G. W. Towse, 2,000; and A. W. Ogden about 20,000.

—The lumber market in the North-west is said to be very active. According to the *Northwestern Lumberman*, Eastern lumber buyers are thick as bees in Wisconsin. They have begun to slide into the State by the Canada-Soo route, and drop down into the stomach of supply by the way of Rhinelander in a way that astonishes the natives and their Western customers. They propose to take out lumber by the Soo route, and thus sharply compete with Western buyers. Eastern men are also purchasing more lumber then heretofore on Green Bay and the north shore, and a Manistee report states that the same class of buyers are at that point, and are picking up so much bulk stock that the supply of dry lumber on the dock is likely to be exhausted before the opening of navigation.

—Mr. A. F. Wood, M.P.P., in a recent speech in the Legislature upon our timber and mineral resources, gave some interesting statistics regarding the timber output of this province. He said:—"First, the Belleville District, which includes the Counties of Victoria, Peterborough, Hastings, Addington, Renfrew, and Frontenac. From this District, since Confederation, the government have received dues on 15,948,000 sawlogs, and about 6,000,000 square feet of timber—equalling nearly 4,000,000,000—four thousand millions of feet—of sawed lumber. In the whole Province, the output since Confederation of pine sawlogs and pine timber has been about 55 millions of sawlogs, and 146 million of square timber, equalling 132,000,000,000—one hundred and thirty-two billions—feet of sawed lumber."

—The Miramichi *Advance* says:—The announcement that Mr. Burns, M.P., has organized a Lumber Company, or syndicate, with a capital of a quarter of a million to operate in the Province of Quebec, is an additional indication that lumber operators are at a disadvantage in this province. Mr. Burns is a new Brunswicker and, doubtless, would prefer to encourage operations within his own province, other considerations being equal. He would do so, moreover, because he has large interests at stake in New Brunswick, which must be benefitted, by the promotion of any great business enterprise, but he is forced by disadvantages attending lumber operations here to direct his attention, his own capital and that of those associated with him in this big undertaking, to a province where the lumber industry is not so heavily handicapped as it is in his own. There can be little doubt that if the New Brunswick government were as liberal in its policy towards lumbermen as is that of Quebec, we would have fewer idle mills, retain many of our people who are now forced to leave us from want of employment and, at the same time, realize the benefits of capital seeking investment in enterprises such as that promoted by Mr. Burns.

—A reporter of a Nova Scotia paper interviewd Capt. Aaron Grant, who is superintending the construction of the big raft referred to in our last issue. The loss of the big raft last fall, which attracted world-wide attention, has not discouraged the owner, J. T. Leary, of New York. He is having another mammoth raft built larger than the first, which he expects to launch next June. This is to be followed by a third timber raft. The raft now under construction will be about 540 feet long—60 feet longer and about four feet wider and deeper than the first. It will contain about 40,000 logs, from 30 to 70 feet long. To give an idea of the quantity of the logs we may say that it would take 90 or 100 vessels of 150 tons each to carry the logs that go into the raft. About 150 men and 50 double teams are at work and they put on from 350 to 400 logs a day. The shape of the raft will be similar to the first one, with the exception of improved ends which will be timbered out like the bow and stern of a vessel, and the outside will be much smoother. The raft is about quarter-built. The frame of the raft is made of spruce and hardwood, mostly spruce, and is placed on the ways. When the raft is half-built the main chain or backbone will be put on the centre; and when completed, the chains will be put around the raft, about ten feet apart, hauled taut and shackled into the large chain or backbone. Before launching, the frame will be removed. The logs are placed on the raft by means of an elevated railway, which runs over the bow to the stern of the raft. The present height of the railway is about 50 feet. The cars are moved by means of an endless chain worked by a stationary engine. Captain Grant says that Mr. Leary was at the raft week before last, and expressed himself as being well satisfied with the progress made. The sight is described as one well worth seeing, and it will probably have many visitors before the day of launching.

—Judgment was given in the Court of Appeal on March 27th, in the case of Oliver Latour, against Allen Grant. Both are well-known lumber dealers. They owned timber limits adjoining each other in the Temiscamingue district, and Latour, claiming that Grant had felled timber on his property, seized a large raft valued at several thousand dollars which Grant was having towed to Ottawa. The seizure was set aside by the Superior Court for want of proof, and this decision was confirmed in appeal.

—The market for lumber in Montreal has been fairly active, and firm prices had at the yards and from the mills. At the latter values are firmer, and with the roads in good condition there will be augmented sales and advanced values. It is expected that considering the quantity of logs which was left over last year, the output this year will be greater, and though this may be the case, there can be no question that higher prices will be in order. Some car loads have recently changed hands and owners are as firm as they can be.

—Small dealers in lumber just now say they are unable to purchase supplies at reasonable rates. Prices, they claim, have advanced fifteen per cent. all round during the past eight months. All last year's cut, as well as the prospective season's cut has been disposed of by Ottawa firms to outsiders. The big purchasers who are thus cornering the local dealers are said to be New York firms, Dobell, of Quebec, and the Export Lumber Company. Lumbermen are consequently enjoying prosperity. In one line (3 inch deals) prices have risen from $7.00 to $9.50 per thousand.

AMERICAN NOTES.

—It is probable that the Muskegon saw mills will run only during the day time this season.

—The March inventory of stock at Chicago shows a round total of 500,000,000 feet, including the southern section, which is an increase over last year of about 40,000,000 feet. It is what may be called an average stock.

—According to late reports from the English market, the supply of American black walnut, both manufactured and in the log, is rather in excess of the present demand, and it is said that shippers would simply be consulting their own interest if they would moderate the shipments of stock thence, and give consumption time to overtake the late rather liberal receipts.

—The Saginaw *Courier* says that the lumbering industry of Michigan is not only the largest in point of productive value of any in the State, but it exceeds in magnitude the lumbering industry of any other State in the Union. It is not an unreasonable estimate to place the number of persons employed in the lumbering industry of the State last year at 50,000, whose wages aggregated over $15,000,000, with an invested capital of over $60,000,000. The total product of the State last year was 4,162,317,778 feet of lumber, and 2,677,855,750 shingles, the estimated value of which was $65,043,825.50.

AMONG THE MANUFACTURERS.

Messrs. Robin & Sadler, manufacturers of leather belting, Toronto and Montreal, are making some pertinent suggestions to users of such belting, in which they set forth that they tan their own leather especially for the purpose of manufacturing it into belting; that because of the excellence of their belting they have increased their trade in it three-fold within the last few years, and that they sell their belting according to a list that is 25 to 30 per cent. lower than the list that some sell by. Regarding the popularity of this belting, which is based upon its intrinsic merits, they say they have customers to whom they have sold from $3,000 to $40,000 worth, one Canadian manufacturing firm alone having bought for their mill last year belting to the value of $10,000. We refer to their card for further information.

—The Canadian Rubber Company, corner of Front and Yonge Streets, Toronto, of which Mr. J. H. Walker is manager, are calling the attention of the trade to the special lines of rubber goods manufactured by them. Among these are included patent pressed double strip belting; engine, hydrant, suction, steam, brewers' and fire hose; valves, car springs, steam packing, wringer rolls, carriage cloths, blankets, stopples, rubber shoes and boots, tweed and gossamer clothing, garden hose etc.

—Denny, Mott & Dickson, of London, in their circular under date March 2nd, speaking of Canadian timber, say: "Most of the coming season's importation has now been arranged for. The enchanced prices of Yellow Pine and Oak have been firmly maintained by the shippers, with the result that most of the shipments will be for the East Coast and Clyde; this market having seen its way to take very little at the high figures conceded by buyers at outports."

THE NEWS.

—R. Ralston, Kallarney, Manitoba, has failed.

—Lumber camps are breaking up in all directions.

—Parry Sound will have three new mills next summer.

—S. Edwards, saw miller, Fordwich, Ont., has assigned.

—Timber lands are being rapidly bought up in the Southern States.

—Lumbering operations are brisk in the Parry Sound district.

—Young's shingle mill, at Lakefield, Ont., has commenced operations.

—A large amount of cedar for paving is being shipped from Owen Sound.

—Large quantities of lumber is being shipped by vessel from Moodyville, B. C.

—D. B. McRae, of Meldrum Bay, Ont., has 30,000 saw logs on his dump already.

—Messrs. Brunette & Bros., Hereford, Que., will build a steam sawmill this spring.

—Holmes, Moore & Courtright, of Inwood, Ont., will build a saw mill near Glencoe.

—United States lumbermen say that lake freight rates which were so high last year must be reduced.

—The Rathbun Co's boats at Deseronto are being overhauled and prepared for the opening of navigation.

—The Rathbun Company have been making heavy shipments of lumber from their mill at Rossmore, Ont.

—The products of lumber in Eastern Michigan in 1887 shows an increase as compared with 1886 of 178,200,603 feet.

—Shingle machines in the Gibson shingle mill at Marysville, Mo., saw at the rate of 19,250 shingles each in nine and a half hours.

—A vessel has recently sailed from Moodyville, B. C., for Tientsin China, with a cargo consisting of 423,532 feet of lumber.

—Mr. George Butchart, of Port Moody, B. C. is making arrangements for the erection of a large steam lumber mill at or near that place.

—The Canada Lumber Cutting Machine Co., limited, has been incorporated with headquarters at Toronto, The capital stock is $35,000.

—Messrs David Henderson and J. L. Ainslee, Tilbury East, near Port Alma, Ont., are about erecting a new stave and heading mill.

—According to the *N.-W. Lumberman*, Chicago wholesale lumber dealers and commission men favor the free import of lumber from Canada.

—Messrs. W. H. Veysey & Son, of Waterboro', N. B., will build a mill this spring at the thoroughfare between Grand and North Lakes, in that province.

—Lumbering operations in some parts of Ontario are considerably obstructed by the deep snow in the woods which has reached the enormous depth of four feet.

—Leading Wisconsin lumbermen now estimate the shortage in the log crop for the season at only ten per cent. less than anticipated at the beginning of the season.

—The Owen Lumber Company, Sherbrooke, Que., have acquired a tract of 84,000 acres of land near that place, and will erect mills for the conversion of timber upon it into lumber.

—Messrs. Rhodes, Curry & Co., Amherst, N. S., are manufacturing a large lot of cherry and ash doors to fill an order for Newfoundland, and a lot of mahogany doors for London, Eng.

—Mr. Underwood's logging crew on Cain's river, (N. B.) recently cut a mammoth pine, which when cut made eight logs. The diameter of the stump was five feet. The contents are given as 3,238 sup. feet.

—Wells, of the saw mills at Palliser, B. C., in the moun tains, has opened a branch yard at Calgary, Alberta, with J. Deacon in charge. Calgary is coming to the front as quite a distributing point for lumber.

—A French Canadian named La Roche, of The Brook village, while driving a heavy load of railroad ties from a shanty to Casselman station, C. A. R. was violently thrown from the load, run over and instantly killed.

—The approaching season promises to be a bright one for builders in Ottawa. Buildings are going up on every hand, and it is estimated that no less than $500,000 in the aggregate will be expended. The demand for material is now very great, especially in building stone. A large number of expensive [illegible] are going up, and no less that five churches are to be [illegible], as well as several public halls belonging to different [illegible].

—Robert Conners and other large operators have projected a canal around Grand Falls, (N.B.,) for the passage of logs down the river. That it is needed is shown by the fact that 1,500,000 feet of last winter's cut is "hung up" there now.

—We are informed upon good authority says the Pembroke *Standard*, that Mr. E. B. Eddy, of Ottawa, has purchased the limits on the Dumoine river from Messrs. T. & W. Murray. The price paid for the limits is said to be $50,000 and about $16,000 extra for the plant and present output.

—The McDiarmid Manufacturing Co., Aylmer, Ont., late McDiarmid & Price, manufacturers of hubs, spokes, and bent goods for carriages, wagons and agricultural implements, are running their work to their fullest capacity, employing about thirty hands.

—On March 16th Hahn's planing and saw mill at New Hamberg, Ont., were totally destroyed by fire, having originated in the drying-room. The original value with machinery is estimated at $15,000. Insurance $5,000 as follows: Perth Mutual, $2,500; Economical, $2,000; Gore Mutual, $500.

—Negotiations are nearly completed for the sale to the Northwestern Lumber Company, of Eau Claire, Wis. The lumber, mills, and pine land of the Sterling Lumber Company, of Sterling, Clark county, Wis., consideration, $100,000. The Sterling Company is a branch of the Eau Claire Lumber Company.

—The new mills being erected by Messrs. J. R. Booth & Co. at the Chaudiere are rapidly nearing completion. The framework of the addition to the large saw mill is all up and the building will be completed and the machinery in by the first of April. The work of constructing the band saw mill has also been commenced.

—Mr. J. Black, M. P. P., Sackville, N. B., will get out logs enough this season to make six million superficial feet of lumber. Black & Cobertson will get out about 14,000 logs this year. S. M. Hicks will cut about 12,000; Harvey Copp, 6,000; Estabrooks & Cook, 6,000; G. W. Towse, about 2,000; A. & W. Ogden, about 20,000. David Wheaton and other Sackville lumbermen will get out about their usual cut this season.

—The Longford Lumber Company, Longford Mills, Ont., who have extensive mills at that place under the management of Mr. Wm. Thompson, will immediately erect a large establishment to be devoted to the manufacture of woodenware, such as tubs, pails, etc. The building and plant are estimated to cost $40,000, and from the beginning about thirty-five or forty hands will be employed. At a special meeting of the town council the company was granted exemption from taxation on the land and buildings for a term of ten years.

—About the first of March last the Manistee Salt and Lumber Company made an assignment to E. G. Filer with liabilities of $864,068.89 and assets footing up $2,099,786.96. The cause of the suspension of business was the death of the Hon. M. Engelmann, the president of the company, and though the remaining members were gentlemen possessing abilities, still the sudden taking away of the president, left the business in rather a precarious condition. Bills payable were accruing in alarming numbers, and to honestly meet the demands of the creditors the assignment was made.

Michigan leads all other states in the lumber industry, giving employment to fully fifty thousand persons, who received $15,000,000 in wages last year. The capital invested aggregates $60,000,000 and the product last year was: Lumber 4,162,317,778 feet, valued at $58,370,438; shingles, number, 2,677,855,750, valued at $6,673,387, making a total value of $65,043,825. Dec. 1 the stock of lumber on hand was 1,428,221,132 feet, and of shingles 195,218,000. A comparison with preceding years is as follows; 1887, 4,162,317,778 feet; 1885, 578,138,443 feet. These figures show an increase for 1887 over 1886 of 178,200,603 feet.

—It is learned, says the Victoria (B.C.) *Times*, that a powerful syndicate is being organized to purchase the property known as the Hastings Saw Mill concern at Vancouver. The property is a valuable one, as it embraces, in addition to the mill plant and buildings, a large extent of leased timber ground. The proposal is to replace the present machinery and buildings with new ones, erected specially for the purpose of carrying on an extensive shipping trade. Everything will be modern. There will be a double set of buildings and machinery, one of which will be devoted to the export trade and the other to the local and home market. It will be one of the largest concerns on the coast, giving employment to a considerable number of employees directly and indirectly, and be of great advantage to Vancouver.

—The amalgamation of the Grand Trunk and Northern and North-Western railways will result in Belleville becoming the point at which square timber will be rafted, which was formerly shipped by water from Hamilton, Toronto, Port Hope and other lake ports. The large pier built out into the bay by the Grand Junction Railway Company is being refitted, filled with stone, floored with plank, 300,000 feet of lumber being required, and tracked. It is alleged that rafting can be [illegible] more cheaply here than at lake port[illegible] igation tight binding is not neccessary

—Nearly as much lumber will be cut this season by St Croix operatives as during last winter. Messrs. T. H. Todd & Sons will cut about two-thirds as much as last year, they having a large stock of logs remaining over. The operations of Messrs. J. Murchie & Sons will include about 14,000,000 feet; those of Gates & Wentworth, about 10,000,000 feet. Messrs. C. F. Todd & Sons' cut will be about the same as last year; Messrs. H. F. Eaton & Sons will cut about 18,000,000 feet. The total cut will be about 55,000,000 feet as a[illegible] 60,000,000 last year. The winter. thus far. has been a [illegible] good one for logging operations.

—The Bronson & Weston Lumber Co's petition for incorporation has been presented to Parliament by Mr. W. G. Perley, M.P. The company desire to carry on in Canada, the United States and elsewhere, the business of lumberers, timber merchants and manufacturers of timber and lumber in all its branches, also of pulp, wood pulp, and other products from wood; and also the business of wharfingers, vessel owners, general merchants and dealers; and with power to acquire the business and property of the firm of Bronson & Weston. The persons asking the incorporation are E. H. Bronson, M. P. P., Ottawa, lumber merchant, Abijah Weston, Pointed Post, Steuben County, New York, lumber merchant, F. P. Bronson and W. G. Bronson, of Ottawa, lumber merchants.

—Mr. William Hurdman, jr., is reported as saying that the new mills at the Chaudiere are getting on well. By the 20th of April they will have the new mill, which is taking the place of the one burnt down and which is to be larger but of the same cutting capacity, ready to open. They will then put the full force on to complete the second mill, the foundation of which will be commenced in a few days. All the timber for this mill is ready and the machinery well forward. They expect to be ready to cut in this mill by the first week in May, and when their season's work come in they will be humming as merrily as any of their neighbors. Mr. Hurdman says that the season's cut has been good but that there will be trouble getting out the logs. A short time ago they had one fall of snow, at Kippewa, of thirteen inches, and at Mattawa there was no fall at all. After each fall this winter there has also been a heavy wind, which has caused heavy drifts, giving a good deal of trouble. In the new mill the firm have excavated an extra ten feet into the solid rock.

—An idea of the exports of lumber from the Pacific coast of British Columbia will be learned from the report for the month of January. Six ships arrived at Burrard inlet during the month, to load lumber for foreign ports. Five of these ships were at the Moodyville mill, and one at Hastings mill. Two ships were for Australia, one for Valparaiso, South America, and the three remaining for China. The clearances with lumber during the month numbered five ships. Three were from the Hastings mill, two bound for Australia, and one for South America; one from the Moodyville mill for Cornel, and one from the Chemainus mill. Hereafter the exports of lumber promises to be much larger. Through improvements to navigation at the mouth of the Frazer river, the Royal City and Brunette mills, situated some distance up the river, will now be reached, though heretofore inaccessible to large ocean crafts. Six vessels have just been chartered at San Francisco to load lumber at the Royal City mill, two for Australia and four for South America.

—The new Madawaska Improvement Company recently formed by the lumbermen of the Ottawa district has been incorporated. The officers are: President, J. R. Booth; secretary-treasurer, G. B. Green; directors, E. B. Eddy, W. G. Perley, M. P., E. H. Bronson, M. P. P., C. McLaughlin, W. B. Dickson, G. B. Pattee and R. H. Klock. The object of the new company is to get possession of all the works and improvements made by private parties and the Government on the Madawaska river, improve them and then continue the works by erecting a series of dams, slides, booms, etc., all along the course of the river as far up as timber is taken out, thus enabling the lumbering firms by paying a fee or toll to the company for allowing the logs to pass through their works, to get out their entire drive with very few men and without danger of having the logs hung up as they are some years in thousands. Negotiations are now going on between the company, the Government and private parties owning works on the river, to enable the Improvement Company to secure all improvements already made. As soon as spring opens the company will begin the work of extending their works by building a series of dams, slides, booms and piers. The work will probably last all this summer and a portion of next.

SAW MILL ENGINEERING.

There was a time when it was the popular impression among millwrights and engineers that anything was good enough for saw mill work; that a common "nigger" engine, with any kind of a whirligig upon it for a governor, was good enough; that any sort of a kettle, leaky or otherwise, was suitable; that the shafts had only to be strong enough not to bend too much under the heavy belt strains that were put upon them; that belts which would not be used for conveyors in a grist mill, would answer for transmission in a saw mill; that any kind of dope was good enough for lubrication; and that finally, any kind of a plug, who could feed the slabs, was good enough for an "engineer" (save the mark).

Now, public opinion on this subject is commencing to change, and to change for the better. The mere fact that fuel is not only plenty, but absolutely "a drug in the market," is no longer among the best saw mill proprietors, considered an excuse for such wastefulness in every department. I shall endeavor to give below some of the reasons which are influencing the most advanced proprietors in this change of opinion.

In the first place, as regards the engine properly speaking, the boiler should come first, but there is a reason why I should speak of the engine first: It is a well recognized fact that an automatic cut-off engine, particularly when the variations in load and in speed are frequent and considerable, is much more economical of steam than the ordinary trottler; that is when the power consumed exceeds 25-horse, at any rate.

"But suppose that fuel not only costs nothing, but the excess has to be cremated?" It makes no difference. It is cheaper to build or buy a crematory, than to pay for a boiler just for the purpose of getting rid of the waste. If you can get a small high-speed engine to consume high pressure steam with economy, you will need a smaller boiler than if you have some sort of a "steam chewer" back of your engine. It makes a difference whether you have to evaporate from 125 to 1,000 pounds of water per hour, or only from 60 to 480, which takes a smaller boiler. A smaller boiler costs less to commence with, and less freight to follow with, and to finish with, after it is set, will cost less than a larger one. No, I will not say to finish with; because it makes a difference whether you have to feed in enough fuel to evaporate 125 to 1,000 pounds of water, or only enough to evaporate 60 to 480. You will save upon a fireman's wages. Then come into the items of insurance, wear and tear, taxes, depreciation, repairs, etc. All these are greater for a boiler which has to make 125 to 1,000 pounds of steam per hour, than for one which has to supply only 60 to 480.

In the same way you may cipher up the steam pipes between the boiler and the automatic cut-off engine, using only 60 to 480 pounds of steam per hour, over those needed for the throttling engine needing 125 to 1,000.

When you get to the engine itself you have two advantages in buying the automatic; rotation speed being the same in both cases. You will save on boiler account, on piping from boiler, and in firemen's wages; but you will also have better regulations, and better governing means, better quality of lumber. It also means the saving of much annoyance in the mill.

We will suppose that you have six or eight gang saws, all of which are likely to be in the log at once; now with an engine which has a good range of governing, you can work right along and not stall anything; whereas with a throttling engine you will be apt to have trouble once in a while from belts slipping, and the engine refusing to do anything at all, until one or more of the gangs can be thrown off. The automatic engine will of course cost you a little more for the same power and same rotation speed, than the throttling engine; and this will of course run up your costs for interest, wear and tear, depreciation and taxes; but it will generally be more than made up in the saving on the boiler side of the mill.

As a general thing, you can get an automatic engine better built and capable of being driven at higher speed than one of the throttling type; and this means a big saving "all along the line," not only in the matter of fly-wheel weight required, but in shifting and belting. We will suppose that you have an automatic engine delivering 50-horse power at 250 turns; it will take a pulley of two-fifths the diameter (for a given belt width;) to put the power in the jack shaft, of that required for the engine running only 100 turns for the same horse-power. Or with a given belt speed it will take a belt only about two-fifths the width. There can be saving in pulleys, belts and shafting, all through the saw mill, by the adoption of high speed; because most of the machines require to be speeded much higher than the engine itself. Of course with narrower or lighter belt width, giving out their power by reason of higher speed rather than greater belt tension, there will be less pull upon the shafts, and less lubrication required. This means also less likelihood of hot bearings stopping the mill.

There will also be a less belting bill to pay, because there will be lighter belts to buy. Couplings, hangers, clutches, and all other appurtenances of the transmission will of course be lighter and cheaper, and will require less force of men to put them up and less strength of frame work to hold them.

There is this further advantage in having an automatic engine; you can at any time reduce or increase the amount of work done in the mill without seriously affecting the speed and general working of the engine. If you think that the boiler will stand a little more pressure, the engine will take it and be thankful. If the boiler gets a little weak and you want to ease up on the steam, the engine will simply reach out a little further with the cut-off. If you are burning slabs or any other kind of fuel giving greater variations in pressure, the automatic, being a better grade of machine, is apt to get better care, and for this reason alone will keep in better condition than the "nigger." Further, the "niggers" are generally delivered painted or unfinished, and consequently there will be poorer stock than must be put into a finely finished engine, where the grain of the metal shows.—*Wood and Iron, San Francisco.*

NEW WATERWAYS FOR MANITOBA.

The biggest scheme on hand for some time of interest to the lumbering industry, says a correspondent in the Mississippi Valley *Lumberman*, is the one now agitating the public here in connection with the improvement of our waterways. At intervals during the past five or six years efforts have been made to induce the Dominion government to undertake the work of improving navigation on our rivers and streams, but beyond taking out a few scow-loads of sand from the mouth of Red river, nothing has been done. The present phase of the question is a result of the agitation against railway monopoly. The Dominion government has intimated to certain of its leading local supporters that if Manitoba will submit for three years to railway monopoly and give up the attempt to build a road to the boundary, an appropriation will be made sufficient to carry out the river improvements demanded. With a little expenditure a vast stretch of navigation can be made tributary to Winnipeg. The Red river is now navigable to the boundary, a distance of 60 miles, but in the opposite direction down stream there are rapids, a few miles below the city, which effectually block navigation, except during a short time in the spring when the river is very high. It is estimated that a lock and dam, to cost only about $400,000, would overcome this difficulty and render the river navigable to Lake Winnipeg. This would open a vast stretch of inland navigation, with a coast line of about 5,000 miles, including the Red river to Lake Winnipeg, 350 miles long, a portion of the Nelson river and tributaries, the great Saskatchewan river and tributaries, and other minor rivers flowing into the lake. About 300 miles of lake navigation on Lakes Manitoba and Winnipegoosis could be added to its vast system of inland navigation by a little additional expenditure. When it is known that all this north country is more or less covered with timber, the interest to the lumber trade will be surmised. There are now half a dozen or more lumber firms opening on Lake Winnipeg. The lumber is now brought to Selkirk, the present head of Lake Winnipeg navigation, by boat, and there transferred to the Canadian Pacific railway branch line and brought on to the city. To bring lumber from Selkirk to the city, a distance of about 20 miles by rail, it costs as much as to freight it by boat the entire length of the lake. By making the proposed improvements in the Red river, it is estimated that the cost of rough lumber at Winnipeg would be reduced about $3 per 1,000. The country tributary to Lake Winnipeg is a valuable timber district, and the opening of direct water communication with the city would undoubtedly stimulate the lumbering industry on this lake. But the most valuable timber area in the Canadian Northwest is in the countries surrounding Lakes Manitoba and Winnipegoosis. This region has never yet been tapped, owing to its isolated position. Lakes Manitoba and Winnipegoosis are really a chain of many lakes of varying size, connected by narrows. These lakes stretch along in a line parallel with Lake Winnipeg for a distance of about 300 miles, and are separated from the latter lake by a ridge of land, varying from 15 to 60 miles in width. The country between is mostly wooded, but the most valuable timber district lie to the west of this chain of lakes, on the opposite side from Lake Winnipeg. This long chain of lakes is navigable the entire distance, with the exception of a couple of miles between Lakes Manitoba and Winnipegoosis proper, which could easily be overcome, the country between being of a low, swampy nature and usually flooded. The northern end of Lake Winnipegoosis reaches within about half a mile of Cedar lake, the latter being merely a widening out of the Saskatchewan river, the river being already navigable from Lake Winnipeg. This would complete the circuit, and render available the vast timber country west of the Lake Manitoba chain of water stretches. The resources of this timber region were referred to in a previous letter, but the country has not yet been sufficiently explored to give a very accurate approximation of its wealth. An engineer who spent two months in that country last summer, however, estimated the quantity of timber tributary to Lake Winnipegoosis at 500,000,000 feet. The timber is of larger size and said to be much superior to the districts now being worked on Lake Winnipeg. If these improvements to the waterways are carried out, a very valuable timber region will be open for development, and the lumbering industry will be given a fresh impetus.

The Duty on Lumber.

Mr. Arthur Hill, of Saginaw, in a recent interview with a reporter, expressed himself as follows regarding the tariff on lumber between the United States and Canada:

"As I understand it, Mr. Hotchkiss, and others who side with him, believe that if the Canadian export duty is abrogated that Canadian logs will naturally come to supply Saginaw mills with stock; but I think that it is a plain mathematical proposition that if the Canadian export duty on logs of $2 a thousand and the American import duty on lumber of $2 a thousand are removed at the same time, that the Saginaw mills will stand in the same relative condition as to securing logs to saw from Canada as they do to-day. The cost of towing and delivering logs to the Saginaw mills from the Georgian bay is $2 a thousand, and while Canadian labor costs less than ours, we will call the cost of sawing in Canada the same as here. The freight rate from the Georgian bay to Buffalo and the eastern market by water is substantially the same as from the Saginaw river. By rail it is less. If you call the rate from both points to Buffalo $2.50 a thousand, you will have these results: Canadian logs sawed on the Saginaw river:

Cost of delivering logs, per thousand, to mills	$2
Sawing	2
Freight to Buffalo	2 50
Export duty on logs	2
Lumber costs in Buffalo above cost of logs	$8 50

"Canadian logs sawed in Canada:

Sawing	$2
Freight to Buffalo	2 50
Import duty on lumber	2
Lumber costs in Buffalo above cost of logs	$6 50

"These figures conclusively show that under present conditions as to duties the Saginaw mills are at a disadvantage of $2 a thousand feet in handling Canadian logs, and since the imposition of the $2 export duty on logs, it is well known that they have ceased to be brought in. Now let us suppose that both the duties are removed as is supposed, and we have: Canadian logs in the Saginaw river:

Cost of delivering logs to mills	$2
Sawing	2
Freight to Buffalo	2 50
Lumber costs in Buffalo above cost of logs	$6 50

"Canadian logs sawed in Canada:

Cost of sawing	$2
Freight to Buffalo	2 50
Lumber costs in Buffalo above cost of logs	$4 50

"Under the new conditions, then, the advantage of the Canadian mill owners over Saginaw mill owners of $2 a thousand still remains, and the logs would therefore, then as now, be manufactured in Canada."

The irresistible conclusion is that there is still two sides to the tariff question.

In further conversation Mr. Hill said that in Canada at present the norway and coarse logs were not cut, the lumbermen not owning the land taking only the best timber. He believed that if the tariff duty were removed it would enable the Canadians to cut closer and go over limits for a second crop. That is one reason why he opposed free lumber.

The Proper Way to Dry Oak.

A large amount of oak is spoiled in drying. It is the nature of oak to crack, not only on the ends but on the surface. This can be guarded against and reduced by care and the expenditure of a trifling sum of money. First of all, the ends of the logs should be thoroughly painted. Ordinary roofing paint is best, and the addition of a handful of salt to the gallon will improve it. In piling, the stickers should not be over two inches wide and not over three feet apart, and placed directly over one another. This method will keep the lumber perfectly straight. The piles should be thoroughly covered and thus protected from rain, heavy dews and the sun's rays. Oak that is allowed to gather moisture and dry out repeatedly, will soon become checked and surface cracked, and as such can only be graded as culls. If stained or badly twisted, it goes into the lower grades, all of which is frequently due to slack and unbusinesslike way of preparing what might be good and desirable lumber for market. An expenditure of $5 for paint, would probably save $5,000 worth of valuable lumber.—*Northwestern Lumberman.*

TRADE REVIEW.

Toronto, Ont.

TORONTO, Mar. 2nd, 1888.

CAR OR CARGO LOTS.

Columbia's Lumber Trade.

Mr. John Hendry, of the Royal City Planing Mills, New Westminster, is in the city, on his way home from San Francisco, whither he went to arrange for timber charters by vessels to Australia, South America and other countries from his mills. Mr. Hendry states that the only obstacle to a very large trade is the unsatisfactory state of the Fraser river channel from the sandheads inwards for a couple of miles. Once a channel is established of say 24 feet, vessels will ascend as far as New Westminster and load lumber at his mills for the countries we have named. He found his principal difficulty to lay in the fact that no chart of the Fraser was extant for the use of the underwriters in San Francisco, New York and London. Steps will be taken to have a proper survey of the lower Fraser made and a chart prepared. Once the river is properly buoyed and vessels can go up Mr. Hendry is of the opinion that the traffic is practicably an unlimited one. Unless the Fraser is dredged the Royal City Mills will be compelled to look elsewhere for a site whereon to erect their mills for their export trade. This will be a serious matter for New Westminster. It is to be hoped the Government will be impressed with the necessity for dredging a channel as suggested by him.

He believes that a reciprocity in the natural products of the soil will be of an immense advantage to this province. In his line of business it would be equivalent to $2 per thousand feet, besides affording a home market, which would consume all the products of his mill even if they were doubled or trebled. He leaves for home to-morrow morning. — *Victoria (B. C.) Colonist.*

EXCHANGE ECHOES.

Chicago Timberman.

Whether there shall be more or less than an average output of lumber during the season of 1888, of course, is impossible to prognosticate with any degree of certainty at present ; but from the tabulated and published statements one inference is plainly deducible at least, viz : that there is an increasing consumption, which augurs well for the maintenance of prices in the future. The only logical conclusion deducible from the statements alluded to is that there is less lumber at the distributing centers than there was a year ago, as well as a smaller supply at the manufacturing centers ; hence, there must inevitably have been an increased consumption. The shortage at the large wholesale markets must be met as early as possible, and this must inevitable result in an active demand as soon as the selling season is fairly inaugurated, which will be in the near future. The indications point fairly and forcibly to the conclusion that there will be no weakening in lumber prices in the absence of unforeseen and unanticipated financial or other disasters generally. Anticipated extensive building operations throughout the country are fairly deducible from market and other reports, and this fact is another guarantee that the spinal columns of the holders of lumber will have no reason to exhibit any sign of weakness during the season of active operations which is approaching.

Northwestern Lumberman.

An anticipatory effect has been exerted upon certain Canadian holders of lumber by the present serious consideration of the free lumber question, since confidence is felt on the other side of the line that duties will be removed. The larger and more independent of the Dominion lumbermen are reported as showing no anxiety to dispose of stocks except at a good profit, believing in an increased demand from the United States by means of the removal of $2 duty, and under this feeling prices have acquired firmness and in some cases have been advanced, though the severe winter season has seriously restricted demand. This condition of affairs, however, appears to be a straw in the wind by which to judge the inclination of Canadian lumbermen. It is apparently more profit that they want rather than increased business. The United States is looked to as a source of demand to keep up a normal activity across the line, in the face of decreased export trade and this could result to a considerable extent without important injury to American prices or shipments, though the course of trade is likely to be changed somewhat by such competitive influences. It does not appear that the Canadians will make extra efforts to place their lumber output by underselling American producers, but rather do they seem to rejoice in the possibility that they will be able to sell their output at an increased price. If demand is small now and margins narrow, it would be quite another affair to sell more lumber in the United States at a good living profit. Yet it does not follow that the increased trade between Canada and the United States would soon reach a point of competition that would cheapen lumber to an extent, as the ordinary individual seems to think it would. There would likely be local friction near the line, but the Canadian flow of lumber would merge into the great stream of trade, and gradually lose its identity as a disturbing influence.

Miramichi (N. B.) Advance.

Now that the claim of the Province on account of Eastern Extension Railway is to be paid, it is to be hoped that the local government will recognise the claims of the lumber industry by relieving it of a portion of the heavy stumpage burdens imposed on the plea of revenue necessity. The fact that the lumber business is much depressed, that prices are low in the world's great market, with no prospect of material or permanent increase ; that the cost of lumbering operations is growing greater every year, and that the accumulated burdens of business have driven many operators to the wall and left many mills in idleness, ought to warn the government and legislature that the continued imposition of the existing high stumpage charges is suicidal. An opportunity is now presented for reducing these rates, and instead of new and, perhaps, needless avenues of expenditure being opened, let there be a just measure of relief afforded to our most important staple industry.

London Timber.

Whatever may be the opinion held as to the improvement or not of general trade, there can be no doubt as to the favorable development of business in the hardwood line. From its rise a month or two before the close of last year until now, the progress has been constant and regular, and at the present time matters look equally promising with the condition of the market at any time during that period. The outlook for the future is good, and there is a reasonable prospect of a continuation of the present revival of business. There are not only in this district, but all over the country, a large number of commercial enterprises either projected or already started, which largely increase the consumption of hardwood, and so considerably benefit the trade during the season. It is anticipated that there will be a large distribution of hardwood this year, and up to the present there has been nothing to induce a modification of those anticipations ; but on the other hand the general report is that the demand is more lively, whilst stocks are within very moderate limits, the rate of supply not equalling the distribution. As the issue of these features the condition of the market is firm, and from the present outlook a good and improving trade appears to be assured.

The Chicago Timberman.

The Michigan lumbermen who are strenuously opposed to the removal of the tariff on Canadian lumber, are watching congressional action with a vast amount of anxiety, believing as they do that free-trade in lumber and logs as proposed, will be fatal to the interests of Michigan's great industry ; some of them are a good deal vexed at the bill recommended by the ways and means committee, and in substantiation of their position on this question refer to the fact that there has recently been an enormous rise in the value of Canadian timber limits from about $400 per square mile to $3,000 per mile. They say that this fact does not indicate that American consumers are to receive the benefit of cheap lumber, or Michigan mills to receive the benefit of cheap logs, as has been argued by the advocates of the removal of the duty on lumber but, rather as one says, " that the Canadian government will secure an enormous increase in its revenue, and Canadian manufacturers will secure about $2 per thousand feet advantage over American manufacturers, and the benefit of the whole range of the American markets." Michigan lumbermen, at all events, are not, as a rule, in love with the advocates of the proposed measure.

CORRESPONDENCE.

TORONTO, March 12th., 1888.

Editor Canada Lumberman,

DEAR SIR.—You ask for a few words regarding my business the past year, and in reply would say that my operations for a retail yard the last twelve months were very extensive, having handled upwards of four million feet of all grades of lumber, my margin on same being very close indeed. Bills cut so close and heavy losses in some cases have left small profit, and we retail lumbermen have now got to make up our minds to one of two alternatives, either to do a small business and look after it properly, or take our capital and put it into some other business. For instance, to take a bill from a builder we have to figure it down as low as a wholesale man, who has no yard to keep up, or to lose it altogether. Again, the wholesale men in nearly all cases, have a portion of their lumber piled off on the Northern, Grand Trunk and Midland R. R. yards, and if a carpenter, butcher, baker, taylor, or any other tradesman wants half a thousand of lath or shingles, two or three scantling, or one hundred feet of boards, down they go to any of those places, and would you believe it, buy it from those who call themselves wholesale men at as low a rate as they would charge me if I took two or three thousand feet. How can the retailer expect to make a profit in the face of such unrighteous work as that? (I may here say there are a few exceptions but very few). All I can say is no wonder the trade is in such a demoralized state.

The retailers have been trying to form an association to put a stop to such work, and have been ably assisted by five of the largest wholesale dealers in the city, but whether from the present depression, or that some of the concessions they will have to sign to bind themselves might injure their trade for a time, half of them have withdrawn, and unless they form soon I have no hope of them organizing this season. A most unwise policy, particulary when all have expressed themselves as having made no money last year. I for one could see great good resulting from such an association, and the few meetings that were held in discussing a few matters, furnished information in an informal manner, that I consider is worth a few hundred dollars to me. How in the world a body of men commanding so much capital as the retail lumbermen of this city do can be so blind to their own interests I cannot account for. However good may flow from the agitation already commenced, as the wholesale men will have to be very chary of what builders they supply, and find out if they are customers of those yards they supply most to, and if so, it is but quite right that they should give them shorter time and charge them at least 50 cents per thousand more, as I fear the retailer will not be imposed upon any longer.

Another thing now that the Northern has come into the hands of the Grand Trunk we may look for a change and will realize that they will find other uses than making a piling ground of such a valuable piece of property.

Now, Mr. Editor, that I have opened up this much vexed question between the wholesaler and retailer, and taken up so much valuable space in your paper, I trust you will call upon every interested subscriber to give us their views on the matter.

Yours respectfully,

J. CARNOCHAN.

EUROPEAN NOTES.

—Baltic goods in London are said to be greatly diminished.

—Steamers are offering Montreal to London, at last year's opening rates, viz : 47s. 6d. for deals.

—Public timber sales in London seem to be more numerous than ever. The bidding, as a rule, has been active and well sustained.

—Free-on-board business is reported as very quiet in England, stocks are mostly cleared for first open water, and imports are coming in for later deliveries.

—Messrs. Browning & Co. have issued a very neat stock list made up principally of Canadian goods, containing a good assortment of all sizes of dry pitch pine and spruce, of which they make a specialty.

—The returns issued by the London Board of Trade shows that the imports during the month of February increased as compared with the same month last year £1,020,000, and that the exports increased as compared with February of last year £1,740,000.

—The sales of Quebec timber in Glasgow, so far this year from all accounts have been very limited. Up to the present a considerable business has been done by the Quebec merchants for spring shipment. Most of the importers are acting with caution, however, and the advanced f.o.b. prices being asked are deterring not a few from going in for very large cargoes. Of course the timber merchants round the coast have all been going in for their usual supply, and most of this business is now closed.

—Denny, Mott & Dickson, of London, in a recent circular speaking of Canadian timber say : "The market being practically bare of square white pine and oak, negotiations are confined to contracts for next season's goods. Shippers have come over with very enhanced ideas of value, and there seems little doubt that a substantial advance on last year's prices must be conceded by those who adopt the policy of covering themselves at once against their prospective requirements."

—The *Canadian Gazette* states under the heading of Quebec news :— It is understood that some heavy transactions in spruce and pine deals have lately been made in the market. It is said that McArthur Bros., W. & I. Sharples, and Dobell, Beckett & Co., have bought up most of the next season's cut of nearly all the more important mills in the Province, to the value of about £7,000,000, sterling." If this statement was true, adds *Timber*, the three above mentioned firms would be doing about 40 per cent. of the export trade of the vast Dominion of Canada. The total exports of all articles from the Dominion of Canada to all countries—timber, grain, cattle, hides, &c., &c.—for the fiscal year ending 30th June, 1886, was $85,251,314, or equal to about £17,000,000 sterling.

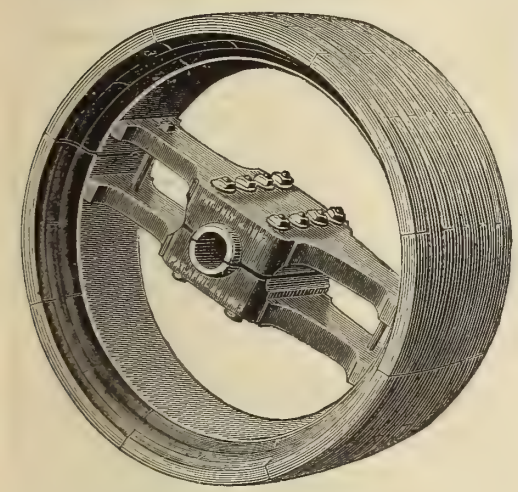
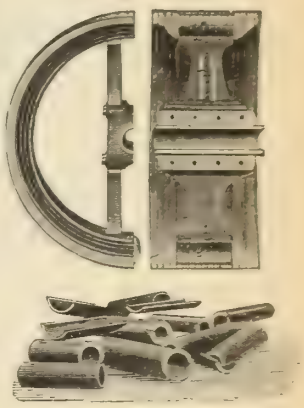
DODGE * PATENT * WOOD * SEPARABLE * OR * SPLIT * PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities :—

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.80	1.42
.30	2.43	1.69
.40	3.26	2.02
.50	4.38	2.41
.60	5.88	2.87
.70	7.90	3.43

Morin.—Appleton's Encylopedia of Mechanical Arts.

Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.
.20	1.90	1.40
.30	2.40	1.70

.50	4.40	2.40
.60	5.90	2.90
.70	7.90	3.40

Haswell.—Engineers' and Mechanics' Pocket Book.

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are : It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft ; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus : The ratio is friction of pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to

SEALED TENDERS marked "For Mounted Police Clothing Supplies," and addressed to the Honourable the President of the Privy Council, Ottawa, will be received up to noon on Monday, 16th April, 1888.

Printed forms of tender, containing full information as to the articles and quantities required, may be had on application to the undersigned.

No tender will be received unless made on such printed forms. Patterns or articles may be seen at the office of the undersigned.

Each tender must be accompanied by an accepted Canadian bank cheque for an amonnt equal to ten per cent. of the total value of the articles tendered for, which will be forfeited if the party decline to enter into a contract when called upon to do so, or if he fail to complete the work contracted for. If the tender be not accepted, the cheque will be returned.

No payment will be made to newspapers inserting this advertisement without authority having been first obtained.

FRED. WHITE,
Comptroller, N. W. M. Police.

Ottawa, March 12th, 1888.

Notice to Contractors.

Sealed Tenders, addressed to the undersigned, and endorsed, "Tender for Carpentry, Joiner, and other Works, &c., of Parliament Buildings," will be received at this Department until twelve of the clock, noon, on Tuesday, the SEVENTEENTH DAY OF APRIL next, for the carpentry and joiner, roofing, slating, iron work in roof construction, etc., painting and glazing, labor and materials, and other works, etc., in connection therewith, required for new Parliament and Departmental Buildings.

Printed forms of tender can be obtained at this Department, and persons tendering are specially notified that they will not be entitled to have their tenders considered unless the same are made on and in compliance with these printed forms, signed with the actual signature of every person tendering (including each member of the firm), followed by his postoffice address, and with all blanks in the forms properly filled up.

Each tender must be accompanied by an accepted bank cheque, payable to the order of the Commissioner of Public Works for Ontario, for the sum of three thousand dollars, which will be forfeited if the party tendering declines or fails to enter into a contract based upon such tender, when called upon to do so. Where the party's tender is not accepted, the cheque will be returned.

For the due fulfillment of the contract, satisfactory security will be required on real estate, or by the deposit of money, public or municipal securities, or bank stocks, to the amount of five per cent. on the bulk sum, to become payable under the contract, of which five per cent., the amount of the accepted cheque accompanying the tender will be considered a part.

To each tender must be attached the actual signature of at least two responsible and solvent persons, residents of Ontario, willing to become sureties for the carrying out of these conditions, and the due fulfilment and performance of the contract in all particulars.

Printed copies of the specifications can be obtained on application at the Department.

The Department will not be bound to accept the lowest or any tender.

C. F. FRASER,
Commissioner, &c.

Department of Public Works for Ontario.

Cleveland, Ohio., U. S. A.

NEWS NOTES.

—A prominent lumberman at Atlanta, Ga., expresses the opinion that free Canadian lumber would ruin the Georgia pine industry.

—Shippers think that the opening rates on lumber will be $1.75 to Buffalo and Tonawanda, and $1.50 to Ohio ports, from Saginaw river.

—Robert Nixon, while logging on the Aroostock, in Maine, near New Brunswick, was instantly killed, a few days ago, by a fall from a load of logs.

—Mr. W. C. Cardwell, Lanark, Ont., who owns and operates a lumber mill and flour mill, will add the necessary machinery for manufacturing rolled oatmeal.

—Mr. F. W. Galbraith, Bethany, Ont., had his saw, shingle and planing mill destroyed by fire March 11. Loss about $3,000. The works will be rebuilt.

Through an oversight of the proof-reader the dates at head of the various market quotations were not changed. They should be dated at the end of March.

—The Chemainus mill, the only exporting mill on Vancouver's Island, B.C., has loaded twelve vessels since August 1st last, carrying over 10,000,000 feet of lumber.

—Messrs. Erb & Abrams, Apohaqui, N. B., include in their manufacturing works a sawmill, a gristmill, a machine-shop and a factory for the manufacture of sashes, doors, etc.

—It is reported that two large lumber firms will locate at Sault Ste. Marie in the spring, for handling manufactured lumber, and two new planing mills there are also projected.

—The Gutta Percha and Rubber Manufacturing Company, Toronto, have been awarded the contract for supplying the fire department of Hamilton, Ont., with 2,000 feet of cotton hose.

—Messrs. Bleakney & Jonah, Elgin, N. B., are a new firm who have recently bought out the plant and business of the Elgin Manufacturing Company, that town, manufacturers of lumber, wooden-ware, etc.

—The new mill of the John Spry Lumber Company, at Sault Ste. Marie, Mich., will be commenced shortly, and will have a capacity of from 80,000 to 100,000 feet daily. It will probably be completed by September.

—John Welde, of Bay City, is to try the experiment of sawing pine with a thin circular, and this season will run one of about one-half the gauge of the ordinary circular. He is confident that it will give satisfactory results.

—Carleton Place, Ont., cuts at its two sawmills between sixty and seventy million feet of lumber a year, and its woollen factories make seven or eight thousand yards of goods a week. About twenty-five car loads of freight per day is sent out.

—In the free-on-board trade in London business may be said to be at a standstill. Occasional sales are being made at wholesale prices, but as far as we can learn these were for special sizes, and no new features have developed themselves.

—W. J. Macauley, of St. Paul, has just arrived here. He reports having sold the Norman saw mills near Rat Portage, Lake of the Woods, in which he holds a leading interest. It is understood, however, that the sale has not yet been legally completed.

—The prospect of lumber being placed on the free list is said to be causing a perceptible appreciation in the value of timber lands in the Lake Superior district and other accessible regions of Canada to the frontier. The result of the placing of lumber on the free list would no doubt cause quite a boom to the Canadian lumbering industry, one of the first features of which would be an advance in timber lands, following an increased demand for limits from American investors.

—The Alberta Lumber company will shortly ask a vote of its directors on the proposition to raise $159,000, on the security of the company's property. This company has extensive timber limits in the Red Deer river country north of Calgary, which it purposes developing, for which the money is wanted. Some machinery was taken to the limits last summer to establish a mill, but little else has yet been done, and it is not likely that any great amount of manufacturing will be done for some time. The country wants two things first before extensive lumbering operations would pay. These are: Settlers and a railway. The former are going in to the district to some extent, and there is a charter out for a railway. A charter, however, does not always mean a railway, and it may be several years before the railway is built.

—A correspondent writing from Madawaska, N.B., says the soft weather has materially retarded hauling operations, and that it is very doubtful if the bulk of the lumber will be got off. Snow is scarce and it is not thought that there will be sufficient water in the small streams to float the logs.

—Alexander Gibson, a heavy lumberman of New Brunswick, is going largely into the deal business this year. It is reported that he has bought up about all the deals in market at St. John, and in that neighborhood, and has altogether between 15,000,000 and 17,000,000 feet. He will begin shipping very soon.

—Another strike is threatened in Toronto among the builders' laborers, who are asking for an increase in wages. Up to the time of going to press no positive action has been taken, but meetings are being held by both the Builders' and Contractors' Association and the Builders' Laborers' Union. What the outcome of the difficulty will be it is premature to deter mine.

—The mill men on the Saginaw river are making repairs and putting matters into shape for starting operations. A few mills will have railroad logs to commence on, but nearly all will wait until the boom company begins rafting. There is still a large body of ice and snow in the woods, and indications warrant the belief that there will be a good stage of water for log running.

—Advices from St. John are to the effect that 10 cargoes of spruce cleared last week, and that several of the main ports are open and will begin to contribute to the supply very soon. Under such circumstances it cannot be many days before we shall be called upon to chronicle activity in the spruce market. Lath have advanced to $2.50 a thousand, simply because a few dealers have been caught short; there was only a single cargo to offer, which was taken at that price. Two cargoes are afloat, and on arrival may not command over $2.25—it all depends upon the weather, and how bad off dealers are for supplies.

—Lumber from the Pacific cost of British Columbia, which was first introduced into the prairie country east of the Rocky mountains last summer, promises to come quite extensively into use the coming season. Shipments are already coming in, and Pacific lumber is found in yards all over Manitoba and the territories. The Douglas or Oregon pine and cedars are the qualities mostly in demand, these being used for finishing material in place of white pine. Carpenters do not receive the Pacific coast lumber with favor, on account of its tough nature, which makes it considerably harder to work. Cedar shingles from the coast are also coming into use here.

—The Upper Ottawa Improvement Company are asking for an Act of Parliament empowering them to place works on the Upper Ottawa as far up as the Quinze Rapids at the head of Lake Temiscamingue. At the present time the Company's works go no further up stream than the head Des Joachim rapids, from which point the Company take charge of all logs, and convey them down to the mills. By the contemplated works from that point to the Quinze, the company will have complete control of the Ottawa River from Ottawa city almost to the sources of the Ottawa River, and with the building of piers and booms will be enabled to greatly facilitate the log drive, as well as doing away with the present individual drive of lumbermen who drive their own logs to the Des Joachim. Should the Act pass, the company will be in possession of at least 175 miles of river more than what they at present control.

SEALED TENDERS addressed to the undersigned, and endorsed "Tender for Post Office, &c., Joliette, Que.,", will be received at this office until Tuesday, 10th April, 1888, for the several works required in the erection of Post Office at Joliette, Que.

Specifications and drawings can be seen at the Department of Public Works, Ottawa, and at the office of Messrs. Vezina & Desarmier, Notaries, Joliette, on and after Thursday, 22nd March, and tenders will not be considered unless made on the form supplied and signed with actual signatures of tenderers.

An accepted bank cheque, payable to the order of the Minister of Public Works, equal to five per cent. of the amount of tender, must accompany each tender. The cheque will be forfeited if the party decline the contract, or fail to complete the work contracted for, and will be returned in case of non-acceptance of tender.

The Department does not bind itself to accept the lowest or any tender.

By order,
A. GOBEIL, Secretary.

NEW WATER JACKETED

CUPOLA FURNACE.

B. W. KEIM'S New Water Jacketed Cupola produces superior castings with a saving of a labourer and ten per cent. of a saving in metal and fuel. It is especially adapted for the use of stove, brass and iron founders, also for the treatment of phosphor-bronze, copper and bell metal. It is so constructed that by the addition of 1½ per cent. of aluminum a steel casting can be produced. It requires little, if any, repairs, and the bottom need not be dropped for months. Estimates furnished for portable reduction works for the smelting of gold, silver, lead or copper ore. Assaying and analyzing promptly attended to by the best of chemists. Your correspondence is solicited. Send for illustrated catalogue.

WANTED.—Reliable parties to introduce the Hartsfeld Automatic continuous and improved economical Coke and Charcoal Ovens of any capacity.

Also, lately improved portable reduction works and prospecting hand-power diamond bit rock drill that will bring up a solid core 500 feet. Extraordinary inducements.

GRATEFUL—COMFORTING.

EPPS'S COCOA.

BREAKFAST.

"By a thorough knowledge of the natural laws which govern the operations of digestion and nutrition, and by a careful application of the fine properties of the well-selected Cocoa, Mr. Epps has provided our breakfast tables with a delicately flavoured beverage which may save us many heavy doctors' bills. It is by the judicious use of such articles of diet that a constitution may be gradually built up until strong enough to resist every tendency to disease. Hundreds of subtle maladies are floating around us ready to attack wherever there is a weak point. We may escape many a fatal shaft by keeping ourselves well fortified with pure blood and a properly nourished frame."—"*Civil Service Gazette.*"

TO USERS OF
LEATHER BELTING

Some Pertinent Suggestions.

FIRST *We tan our Leather especially for Belting.*
We have increased our trade threefold during the last few years.
We sell our Belting according to a list that is 25 to 30 per cent. lower than the American list which some sell by in Canada.

BUT *We have heard some consumers who are N.P. manufacturers say that they cannot get good Belting made in Canada.*

NOW WE HAVE CUSTOMERS AMONG THE BEST MILLS IN CANADA — *To whom we have sold from $3,000 to $40,000 worth of Belting.* *One firm alone buying from us last year to the amount of $10,000 for their Mill.*

CAN YOU *Harmonize these Facts with any other theory than*
1ST. THAT OUR PRICES ARE RIGHT?
2ND. THAT OUR LEATHER IS GOOD?
3RD. THAT OUR BELTS ARE WELL MADE?

IF NOT Send us a Sample Order and see if we cannot please you.

Advertising Rates Furnished on Application.

THE CANADA LUMBERMAN is published in the interest of the lumber trade and of allied industries throughout the Dominion being the only representative in Canada of this foremost branch of the commerce of this country. It aims at giving full and timely information on all subjects touching these interests, discussing these topics editorially and inviting free discussion of them by others.

Especial pains are taken to secure the latest and most trustworthy market quotations from various points throughout the world, so as to afford to the trade in Canada information upon which it can rely in its operations.

Special correspondents in localities of importance present accurate report not only of prices and the condition of the market, but also of other matters specially interesting to our readers. But correspondence is not only welcome but is invited from all who have any information to communicate or subjects to discuss relating to the trade or in any way effecting it. Even when we may not be able to agree with the writers we will give them a fair opportunity for free discussion as the best means of eliciting the truth. Any items of interest are particularly requested, for even if not of great importance individually, they contribute to a fund of information from which general results are obtained.

Advertisers will receive careful attention and liberal treatment. We need not point out that for many the CANADA LUMBERMAN with its special class of readers is not only an exceptionally good medium for securing publicity, but is indispensable for those who would bring themselves before the notice of that class. Special attention is directed to "WANTED" and "FOR SALE" advertisements which will be inserted in a conspicious position at the uniform price of ten cents per line for each insertion. Announcements of this character will be subject to a discount of 25 per cent. if ordered for three successive issues or longer.

Subscribers will find the small amount they pay for the CANADA LUMBERMAN quite insignificant as compared with its value to them. There is not an individual in the trade, or specially interested in it, who should not be on our list, thus obtaining the present benefit and aiding and encouraging us to render it even more complete.

THE total number of boiler explosions occurring during the year 1887 is given by the *Locomotive* as 185, killing 254 persons and wounding 314. It is interesting to observe that, as stated to have been "invariably the case," the greatest number of explosions has been supplied by saw-mill boilers, 24.3 per cent. of the whole number being in this class.

MILL OWNERS in Nova Scotia are hoping for improved prices this season, principally owing to the fact of the more favorable outlook for the timber trade in England. It is said that there is little hope of a market for Nova Scotia lumber in the eastern states even with a reduction of duty, as west India and South America shipments pay more than present prices even without any duty. The best American market available is in Maine and New Hampshire, Boston and New York. A new river has lately been opened, known as Gold river, in Lunenburg county, and will this year contribute several million feet for the first time to the markets of the Atlantic.

THE Chaudiere lumbermen and the Dominion Government are mutually concerned at the present time over the question of water rents at the Chaudiere. It appears that the lumbermen are a long way in arrears in the payment of these rents, but have a considerable offset in the shape of expenditure for improvements made by them on these water powers to enable them to be utilized properly. At a meeting of the Banking and Commercial Committee of the House of Commons recently held, Hon. John Costigan, Minister of Inland Revenue, by whose department these rents were collected, explained that he did not want to enter into the claim of the lumbermen to the offset of expenditure for improvements and intimated that it was the intention of the Government to raise the rents as soon as the lease to the lumber firms expired, as the present rents were not nearly adequate considering the value of the water power.

A CHICAGO lumber journal has made the discovery that during a period of ten years the lumber trade of that city has paid out in premiums for fire insurance, a sum estimated but little, if any, short of $3,000,000. The losses during the same time, including yards, planing mills and box factories, have been inside of $500,000, or 16⅔ per cent. of the premiums. It is claimed that the rate paid by lumbermen heretofore has been exorbitant, so much so that steps are now being taken to organize a Mutual Insurance Company, having for its object lumber yard insurance throughout the United States.

NEW railroad projects are becoming as numerous just now as new patents for "the best car coupler extant," the number of which can only be guessed at by those who are familiar with the patent office returns. There seems to be more time taken up by committees in the consideration of railroad projects than anything else, and although they usually pass through successfully, seldom become more than paper charters. It is high time that the Government should exact some substantial guarantee of ability and good intention with each application for a charter before being taken up in committee. The public has to pay too dearly for the consideration of such wild-cat schemes.

FROM all accounts there is an ever-increasing flow of capital from the pockets of northern lumbermen to the southern timber regions, and likewise a migration to the latter point which will have its effect in the different north-western states. As an indication of the decline of the lumber industry in the Wolverine State, it is said that large lumber companies are being formed with timber possessions entirely in the South and with their projected operations there as well. The old fued which so long existed between the North and South is rapidly dying out, and a relationship is rapidly springing up which will result in making the hitherto divisional line, socially and politically, a thing of the past.

IF what is being published can be credited, there appears to be a considerable falling off of late in the receipts of the Grand Trunk Railway Co., so much so, it is said, that every possible expense is being curtailed, and the staff of employees considerably reduced. The Hamilton correspondent of the Toronto *Mail* in a recent letter to that paper said: "There is rumor among the railway employees here that 25 per cent. of the 580 men employed in the Grand Trunk shops are to be discharged on next pay day. The reason alleged is the heavy decreases in the recepts of the road during the past few weeks, said to amount to over $100,000 since the middle of March, which necessitates the reduction of expenses. The officers of the company here are very reticent regarding the truth of the rumor and refused to say whether it is correct or not."

ON various occasions THE LUMBERMAN has advocated the opening up of more extensive trade relations between the Dominion and the British West India Islands, but the Conservative members from the Provinces by the sea are going one better by pressing the question of annexation on the attention of the Dominion Government. The question of more intimate trade relations with those Islands has ever been an alternative one in the Maritime Provinces, and just at this juncture, when these provinces are withering for want of nourishment, it is thought that the strivings of the Nova Scotians and New Brunswickers for increased trade with their neighbors, may be turned into a new channel by working out the plan, not only for closer trade relations, but also for some form of intimate political connection. What we, as Canadians, want is intercourse of commodities with the people that are most convenient to us, who want to trade with us, and whom nature points out as out natural customers, instead of looking across seas to find a market for our products, and form unnatural political alliances in order that we may do so. It does not appear that the Government has yet shown a disposition to take the matter up, but a heavy influence, it is said, will be brought to bear to induce them to do so. The Government's dreams of peaceful conquest may wax wider than the mere proposal to annex Newfoundland would indicate.

PROMPTED by the withdrawal from business in Chicago of a large number of dealers in lumber, the daily papers of that city have recently devoted considerable space to the subject of the future of Chicago as a lumber market. They seem to perceive a decline in the importance of the Northwest metropolis as the great white pine distributing market of the country. The primary reason why Chicago is losing her grip on the lumber trade seems to be the fact that manufacturers find it more profitable to ship by rail direct to the consumer than to Chicago, to go into the hands of the midde men, and be subjected to the necessary charges for dockage and handling. Even the low lake freights do not compensate for these unnecessary expenses. The change in the conditions surrounding the handling of lumber in the West can be traced to the rapid increase in the railroad facilities in all the white pine producing region. Mr. Van Schaick, a well-known authority, is reported as saying that in Chicago's palmiest days as a lumber market, Michigan was the great lumber producing State. The consumptive demand was, as it is still, in a large measure westward. The lumber found its way to Chicago because it was in the track of the movement from the stump to the market. The streams brought the logs to the lakes, and the lakes afforded the means of transportation. But as the timber nearest to the streams was cut off, the logging railroads were built and brought into service, and these have in many cases been incorporated into the railroad system of the State. It has become possible, in consequence, to move lumber from the mill to the market cheaper than by the old method.

AT last the question of railway disallowance in M[illegible] which has been the all-absorbing topic for so many months, seems to have finally been settled in favor of the people of the Canadian North-west. It is understood that, acc[illegible] arrangement for the abandonment by the Canadian [illegible] railway company of its monopoly rights in the North-west, the Government will guarantee $15,000,000 of land grant bonds to be issued by the company, the bonds to run for fifty years and bear 3½ per cent. interest. As security the company pledges the unsold portion of its lands, some 14,000,000 acres, and its earnings from postal subsidies and transportation of militia stores, etc. The interest on the bonds is to be made a charge on the surplus earnings of the company after paying its fixed charges, thus ranking ahead of the ordinary shareholders. The company is pledged to devote the whole of the proceeds of the bonds to the purposes of the railway. It is understood that about $5,000,000 will be employed in extinguishing the floating liabilities and debts, and $5,500,000 will be spent in equipment, the construction of elevators, and otherwise increasing the facilities and earning power of the property, and the balance will go to such other improvements as are necessary and to raising the standard of the road bed, so as to enable it to bear a maximum of traffic at a minimum of cost. Through this arrangement Manitoba is now open to the reception of as many railways as wish to cross the boundary and come into the province. The result of this will be that within the next few months both the Northern Pacific and the M. & M. will have independent lines running into Winnipeg. Both the Canadian Pacific Railway Co., the Government, and the people of Manitoba are to be congratulated on such a reasonable adjustment of a much vexed question.

MR. ROBERTSON of Joggins, N. B., certainly cannot be accused of want of pluck or enterprise. The first failure of his big raft, when it refused to leave the ways and had to be taken to pieces, did not deter him. Stronger ways having been constructed, a still larger raft was successfully launched. Then came the catastrophe of the two ropes parting in a storm, the destruction of the huge raft, and the scattering of the logs far and wide over the ocean beyond the possibility of recovery. All this expense, heavy loss, trouble and disappointment would have deterred many men, but it seems only to have spurred Mr. Robertson on to further efforts. He has now nearly completed a still stronger raft or craft. This time it is piling for the New York market, not saw logs with which he is experimenting. Neither is this new marine monster to depend upon tugs, but to have motion power of its own in the

shape of six masts and their sails, and will carry a crew of twenty men. It will in fact be a solid ship with no hold, or all hold and all cargo if that view is preferred. Twenty-five thousand spruce trees and innumerable smaller pieces of piling are to form a mass 600 feet long, 54 feet wide, and 38 feet deep. Whether she will make her voyage in safety remains to be seen, but the trial is to be made in the early summer. She will not have many prayers for her success from the schooners which are in the business of carrying piling to market. A question has been raised, whether the spruce trees are not saw logs and thus liable to export duties, but Mr Robertson claims that they are really piling and thus exempt from duty and he says that the custom authorities at Joggins agree in his view.

THE committee of the Senate of Canada, which is now conducting an enquiry into the capabilities of the Mackenzie River basin, is obtaining much interesting and valuable information as to that enormous water system and the extensive district which it drains. Some of the witnesses have spoken particularly of the timber to be found in the region. As might be expected from its northerly situation there are a few timber trees for a long distance from the mouth of the river. Further south on the main river and its affluents on this side of the Rocky Mountains there seem to be rather extensive forests but chiefly of a nature that makes them of comparatively little commercial importance though they would be amply sufficient to supply local requirements. On the large rivers that run into the Mackenzie from the westward breaking through the Rocky Mountains the case is different. There are on their banks fine forest of the character of those on the Pacific coast and the excellent timber they can supply could be conveyed great distances by this gigantic water system to the settlers of the district. But that concerns a distant future.

THE statutory power that is asked by the Dominion Administration of rescinding by order in council the export duty on saw logs and shingle bolts, is in addition to the power they previously had of removing or reducing our import duty on lumber, if the United States would consent to reciprocate in this manner. The new power is to facilitate such a bargain for the benefit of both countries. It is indeed of considerable practical importance as congress has been asked if it removes the lumber duty to make it apply only to countries which do not impose an export duty on saw logs. If legislation in the United States takes this shape we will be prepared for it.

IN the United States Congress Mr. Mills' tariff bill has been exposed to the influence of the procrastinating methods in vogue on the eve of a Presidential election, and a discussion of it has been avoided in the House, though not in the press. It is indeed very doubtful what its fate may be even if any action is taken in regard to it. The whole tariff question is indeed full of pitfalls for the politicians. They treat the subject very cautiously and are very likely to postpone any decision. But though there may be a pause till after a President is elected, there is evidently a growing desire for a reduction or repeal of some of the duties which are yielding a revenue that is positively embarrassing from its magnitude. As in Mr. Mills' bill lumber is in most of these propositions one of the articles to be placed on the free list, and there is far less opposition now to the suggestion than there was a few years ago. There is every probability that before very long the United States import duty on Canadian lumber will be totally removed.

IN the last number of this journal reference was made to the trouble then existing between the Builders' Exchange and the Bricklayers' Union, of Hamilton, which for a time almost entirely put a stop to building operations throughout the city. The history of the affair has been furnished THE LUMBERMAN by a thoroughly reliable correspondent, which is as follows: "Mr. W. Hancock owns a quarry in which union laborers were employed, but they refused to work ten hours a day and he discharged them and employed non-union men. The other union laborers in the city then refused to handle his stone, although all the other quarries in the city were non-union, and then Mr. Hancock set about organizing the Builders' Exchange, which when in running order fell in line with his wishes, and without hearing from the other side at all, proclaimed a lockout of all trades until the laborers agreed to handle the stone. This a good many consider was very unjust, as the laborers, as was afterwards assertained, were not supported by the other unions until after this action, and even then only by the Bricklayers' Union. The whole matter was eventually settled a week ago by the contractors again following Hancock's lead and giving an advance of wages to almost every trade in the city. The workmen may be said to have gained substantially everything that they asked, and most of their demands were merely vague and would not have come to anything, or could have been settled by arbitration had the exchange not taken the stand they did. The settlement arrived at has undoubtedly lowered its prestige and will make it much harder to settle matters next year unless some of the more level-headed of the contractors take matters into their own hands and go about it in a business like way and leave out the bulldozing. The general impression among the more sensible builders is that they will in future steer clear of the private quarrels of any of their members, as it turned out on looking deeper into the matter, that the aggrieved quarryman had actually made money by the whole business, and in fact, with the assistance of the hot-headed ones of the party, carried matters pretty much as he pleased for a while. There are no changes to speak of in lumber here. There are still prospects of a fair year's building, but nothing like what would have been but for the trouble above referred to."

LUMBER TAXATION.

REFERRING to our remarks in a late issue of THE LUMBERMAN, anent lumber taxation in the province of New Brunswick, and in reply to our enquiry for further information, the Miramichi *Advance*, usually well informed on such matters, replies as follows:

"The Crown Land policy of the New Brunswick Government is complained of because it has directly affected those actually engaged in the lumber business, mill owners being the chief sufferers. As we understand the matter in the upper provinces the crown timber lands are held in perpetuity. That is, the lessee holds his limits indefinitely, so long as he complies with the regulations of the Department. That being so, a large interest in these lands is acquired by third parties—capitalists—who make advances to the limit-holders, their security being the latter's tunure of the lands, and, therefore dependent on the stability of the Government regulations. The Government of Quebec and—we believe—that of Ontario, also, have increased the mileage and stumpage charges, which, of course, lessons the value of these lands to those who have treated them as a security for moneys advanced to the operators.

"Capitalists who make investments in connection with the trade in this section of New Brunswick do not secure themselves in the lands held by lessees, for the tenure of the latter is for a fixed period—ten years—at the end of which the 'limits' are open to general competition. The capital invested is, therefore, in mills, booms, facilities for moving lumber, such as steamers, barges, scows and other plant connected with the business. The cause of complaint with us is that the time when our largest permanent investments were made in these facilities for carrying on the business, there was no reason to believe that the Government tax on Crown Land lumber would be even one half what it is at the present time. Not only so, but the utterances of members of the Government at that time, in the legislature, were calculated to create the belief that the then existing rates would be decreased rather than increased. We refer to a period about fifteen years ago when an annual allowance of $150,000 a year was arranged for between the Dominion and local governments, to be paid by the latter to the former, in consideration of New Brunswick relinquishing her right to levy export duty. That arrangement relieved the trade of the provincial export tax of twenty cents per thousand sup. feet on all merchantable lumber, and the Government of the day claimed great credit for the 'boon' it had secured for the lumbermen. They showed that they had gained for the public treasury some $75,000 a year more than the province had realized from the export duty and could afford to make things easier than formerly for the lumber industry.

"New Brunswick was, under these circumstances, a promising field for lumber operations on Crown Lands. There was no stumpage tax, the only charge being $6 per square mile for the land, which was held from year to year, only, subject to annual public sale.

"Unfortunately, however, for those whose operations were on Crown Lands, as those of the Northern Counties of New Brunswick were, and are still, immense blocks of the best lumber lands of the province had been granted, absolutely, to land and railway companies, as well as to private individuals, either for about fifty cents per acre, or as subsides for the construction of certain railways To show the relative positions of the Northern and Southern sections of the province in respect of their lands, we group the four Northern Counties together and also the four largest Southern Counties for the sake of comparison—not from the statistics of fifteen years ago, as we would like to do, but those of 1877, which are the only ones we have at hand—and we find the following:

	Total Acres	*Granted*	*Crown Land*
Restigouche, Gloucester, Northum'd, Kent	7,372,885	2,174,774	5,198,111
York, Carleton, Victoria, Charlotte	4,922,460	3,196,298	1,726,172

"The greater part of the acres granted in the second or southern group were in the hands of land and railway companies or pledged to them in 1873, and as these lands had been selected by the owners because they were the best lumber lands of the province, it was natural that the government should be encouraged by the representatives of those counties to increase the taxation on Crown lands lumber, in order that the value of that on the private lands might be enhanced. And we may say that the rest of the province is practically against the four northern counties in this matter, for the seven counties not included in the above groups, although their aggregate acreage is only 5,052,010, had but 1,705,118 of it remaining in possession of the Crown in 1877. Increased provincial expenditure was soon made a plea for increasing the taxation on lumber, and it will not, therefore, be wondered at that the ten representatives of the four northern counties could do little to prevent what was urged in the interest of the counties which sent thirty-one representatives to the legislature.

"The record of the advancing steps by which the New Brunswick lumber dues have reached their present industry-crushing figures is briefly told—

"From the charge of $6 per sq. mile in 1873 they were advanced, in 1874, to $8 per sq. mile and a stumpage tax of 60c per M. on spruce and pine logs cut anywhere on the North Shore and 80c. elsewhere in the province. Mileage dues, however, were refunded to operators who paid sufficient stumpage to cover the amount they had contributed on that account. This arrangement lasted until 1877, with some slight alterations in items of small lumber.

"In 1877 the mileage was continued at $8 but the stumpage tax on merchantable saw logs was made 80c. all over the province, the drawback of mileage being still allowed on payment of stumpage. This arrangement lasted for six years, the leases being renewable for five years and an extension of a year being practically allowed. In 1883 the mileage rate was continued at $8, but the stumpage tax was raised to $1 per thousand sup. feet for spruce and pine saw logs with no drawbacks on account of mileage. Leases were made renewable for ten years at an annual charge of $4 per sq. mile and stumpage dues at $1.25 per thousand sup. feet for spruce and pine saw logs. These are the rates now taxed upon the lumbermen. In addition to this great increase in stumpage on logs, and the retention of mileage fees, the rates on timber have been increased and many items of small lumber, such as boom-poles, etc., which were not taxed before, are made to contribute to the revenue of the province.

"The Government, having set the example, the private land holders have not been slow to imitate and even better it. It will, therefore, be readily understood that the effect of the government's policy has been to place the New Brunswick trade at a great disadvantage. It is well known that mill-owners with large capital invested can neither suspend operations nor realise anything near cost on their properties. They are, therefore, obliged to go on. Many have done so for the past two or three years at a loss. Some of our best known concerns have been squeezed out of the business, as so many idle mills testify. Should prices improve across the Atlantic the best prepared—those who have any capital left—may make both ends meet. If they can do so and pay $1.25 per M., Government stumpage on spruce, it follows that the Quebec lumbermen who pay only 60 cents will make what is a handsome profit in these times. And that is why we expressed the view that the Government of Quebec, which charges $3 for mileage and 60c. per M. stumpage for spruce is merciful, compared with that at New Brunswick which exacts $8 mileage the first year, $4 for subsequent years, and $1.25 stumpage."

New York City.

New York April 27.—The market drags. Dealers evince little disposition to buy, unless they can secure a snap trade and such opportunities are scarce, because sellers look forward to a general thawing out of business. when sales will be more numerous and prices better Many factories are running with small crews, and have but little work on hand. Certain dealers go so far as to say that business in certain directions has been overdone, and if care and sound judgment are not used, a crash of more or less severity will follow. Weakness, if any exists, is among consumers, and yard dealers are hesitating about piling their yards with stock which may not be saleable. A month ago trade was fully as strong as it is now, and at that time the dealers looked forward to a decided improvement in the time which has intervened.

LONDON BOARD OF TRADE RETURNS.

With this issue, says the *Timber Trades Journal*, we publish the timber portion of the Board of Trade returns for March and the past three months, which are rather later in appearance than usual, the Government report not being issued to the public till the afternoon of the 9th inst. Extending our remarks beyond that portion confined to wood, we observe that, although the business of the country continues favorable, it works upward very slowly from a national point of view. The general character of the returns is very much in keeping with the accounts we receive from the provinces; there is certainly an increase of business, and in some places trade may be even rather brisk; but there is no "boom" yet to inspire that confidence in commercial circles which is the customary forerunner of advancing prosperity. People rather think there is a good time coming, but they do not depend on it, and those who try to persuade themselves that the good time has actually arrived, as they see more business doing, wonder that so small a share of it reaches themselves. Last year the Board of Trade returns for March, in the export department, surpassed those of the March previous (1886) by £492,011, and in our imports for the same month there was an increase of £1,303,993, but we did not improve on those figures to a like extent in the March just passed.

All we have to the good in the comparison is £45,224 in the export trade, while our imports show a small deficiency amounting to £204,109. In other words, our oversea trade as a whole has fallen back in the month of March as compared with March last year by £158,885. This may not be altogether unfavorable, but it shows that we are not doing any great things in the way of regaining our former foreign trade. All the same there is something for from discouraging in the figures the Government have just put before us if we look carefully into them. There is an item of £187,196 less of manufactured articles. We are surely able to do without these, and will hardly regret the deficiency; and as food and drink are cheap and plentiful with us, we can very well dispense with the £1,974,965 worth of eatables and drinkables duty free, which we did not receive this March, but did the corresponding month last year. On the three months including March we have gained on the trade of last year for the same period, say—

On the import side	£4,589,039
On the export side	2,557,450
Total increase during the 3 months,	£7,146,489

If our export trade holds its own we shall be sure to have plenty of imports.

So much for the general trade, which it is always desirable to take a glance at before going into that branch, which more nearly interests ourselves, as every section must assimilate to the whole mass. Timber importations at this early period is seldom a trustworthy index to that which is to follow, the foreign trade being very desultory, but we all like to see the season open quietly. It disheartens the most sanguine to see cargoes coming forward early one on top of the other as it were, to be thrown into the public sales as fast as they are unloaded, which has been the case for the past four or five years.

If it be admitted (which some will not allow) that the import season for timber has begun, it must also be allowed that it has commenced with great moderation. Last year at this time we had to record an excess of import over 1886 up to 31st March amounting to within a fraction of 100,000 loads (see No. 554, Vol. 22, page 413), but this year tells a very different tale. The import of timber goods in March just passed is 60,982 loads in arrears of March, 1887, and, instead of the first quarter of the year showing an increase on the previous year's import up to that date, it is, according to the Board of Trade returns, 41,703 loads behind it. We are admonished of large east coast contracts gone out, and of steamers with heavy cargoes on board on their way home, and that the great thaw will be followed by a very considerable fleet of timber-laden vessels for this country. But, if so, that is nothing unusual when the spring trade begins, and in the meanwhile we have the important fact before us that, instead of being supplied with 100,000 loads more than last year as was the case in 1887, we are 41,000 loads deficient, in the comparison, up to the present date, with stocks generally very much below what they stood at then. Our readers can substantiate these figures for themselves from the subjoined timber returns of the Board of Trade, which may be considered very satisfactory as far as they go.

The following are the official returns for the month of March, 1887 and 1888, compared, and also for the three months ending March 31st. 1887 and 1888, compared:—

	Quantity.		Value.	
	1887	1888	1887	1888

PERSONAL.

The Ottawa papers report Mr. R. Nagle, the well-known lumberman, as improving though still very ill.

The return of Mr. D. B. Meigs, a well-known lumberman, for Missisquoi, as member of the House of Commons, has been announced in the *Canada Gazette*.

Mr. Tucker David, has vacated the editorial chair of the New York *Lumber Trade Journal* and transferred his interest in the same to his late partner, Mr. J. D. Crary. We wish the new management every success.

One of Nova Scotia's pioneer lumbermen, N. L. Jodd, of St. Margaret's Bay, will be missed this season by his company, having died suddenly last winter. The mill will run as usual, the past winter proving very favorable for the taking out of logs.

M. M. Boyd & Co., the enterprising lumbermen of Bobcaygeon are working on the system of tramways throughout their property, intended to greatly facilitate handling the immense cut of lumber to be cut during the season, which will amount to from ten to twelve million feet.

BUSINESS NOTICES.

The Gutta Percha and Rubber Manufacturing Company, of Toronto, have recently supplied about 3,000 feet of the larger sizes of Monarch rubber belting to Messrs. Hurdman & Co., Ottawa, for their saw mills at that place.

Attention is directed to the announcement in this issue of the Ball Electric Light Co., manufacturers of Electric Light Apparatus, Toronto. Mill owners contemplating introducing electric light into their mills will do well to correspond with the above firm.

As per announcement in our advertising columns, tenders are being asked up to the 30th June next, for the purchase of the estate of George Baptist, Son & Co., Insolvents, of the city of Three Rivers, lumber merchants. As this is a very valuable property there well in all probability be a brisk competition among prospective purchasers.

The Napanee Cement Co., Napanee, Ont., are Manufacturers of hydraulic cement of a superior quality, which they say is specially adapted to the construction of bridges, sewers, cellars, culverts, cisterns, foundations, etc. They also manufacture quicklime of special grade suitable for paper manufacturers, gas purifying, strong masonary and fine finishing work.

The Rathbun Co., of Deseronto, Ont., are calling attention in our advertising columns to the terra cotta manufactured by them, specially intended for rendering fireproof both new and old buildings. It is endorsed by leading architects as the most suitable material in the market for the construction of mills, factories, etc. Terra Cotta is a fireproof, material capably of withstanding the severest test. It is being used in the construction of some of the finest buildings on the continent, and is giving the most universal satisfaction.

We take pleasure in drawing the attention of our readers to the announcement in this issue of the well-known firm of Goldie & McCulloch, Galt, Ont., manufacturers of flour mill machinery, wood-working machinery, safes, vault doors, etc. This old-established firm are too well known to need any introduction from us, and their manufacture can be classed as second to none on the continent. Parties visiting the Queen City would do well to call at the company's warerooms, next to the *Mail* office, where their courteous manager, Mr. Bostwick, will be pleased to show them as fine a sample of safes as can be found in the Dominion.

NEWS NOTES.

—The North Hastings Lumber Co., capital $[illegible] been incorporated.

—Another man gone wrong! Aldermen Patterson, of Cadillac, Mich., employed at Haynes Bros.' planing mill, thinks he has discovered perpetual motion, and has a machine going which he proposes to let alone for 30 days, to demonstrate his belief.

—Pacific coast capitalists are said to have made arrangements with the Maine Compress Company, of Bangor, to introduce its sawdust baling machine on the coast, which presses a ton of wet sawdust into three bales, each 24x24x36 inches, a reduction in bulk of 75 per cent. One coast concern aggrees to bale 20 tons of sawdust daily.

—The Toronto *Empire* says: The wholesale men want the freight agents to see the necessity of constructing a general lumber depot in this city in connection with the Northern railway at the sole expense of the railways. Naturally enough the retail men are kicking against this, as it would deprive them of the earnings of their yards, or at all events it would do so to a great extent. The lumbermen of the Board of Trade went about their object very quietly and pretty successfully represented their story to the public. When, however, they met the railway freight agents the majority of them had not made up their minds as to what they did want, and railway representatives express no opinion whatever on the scheme. A committee was then appointed of the wholesale lumbermen to draw up some definite plan which they will submit to the railways in a few days. There is pretty sure to be some hard kicking on the side of the retailers, and the railway companies, if the matter should be submitted to them by their agents, are certain to consider it in a serious spirit. Though no expression of opinion has so far been given the fact of great piles of timber being placed in even comparatively close proximity to the engine-house and other railway sheds will have to be well considered. At any rate it is well that the public should know what the proposition is and give every side a show.

—The Miramichi *Advance*, in speaking on the stumpage question, "sits down" on the members of the Provincial parliament in the following unique but forcible manner: "The lumber trade, from Kent to Restigouche, has begged, by petition, for some relief from the oppressive stumpage, which is helping to close down mills and drive those formerly employed in them from the country. The Government pleads its revenue necessities for several years and says that but for these it would give the relief asked. When the exchequer is full and it has thousands to spare it spends the money for a third railway between Fredericton and Woodstock, for an additional public building at Fredericton, etc, and it hopes to make us forget its Punic faith by throwing this paltry $5,000 grant at us in the form of an item in the Supplementary estimates, ostensibly in the lumber interest but, really, to build a road to the Salmon waters owned chiefly in official circles at Fredericton, and which it is said to be now determined not to spend after all. At least, it does not seem to have been voted and we cannot see, therefore how it can be 'appropriated.' Who asked for this $5,000 to be spent for a substitute for the promised stumpage reduction? Were there any petitions, or requests for it from the lumbermen of the Miramichi as a body? Moreover, this idea of improving the lumber lands, is only a step in the direction already taken by the railway land corporation, which gives a drawback on stumpage at times to lumbermen who make such improvements. Even if the government spent $5,000 in a *bona fide* way it would not be doing more than its duty and the appropriation would be in its own interest, rather than that of the lumbermen."

NAVIGATING THE OTTAWA.

On the Upper Ottawa, from Lake Temiscamingue to the Chaudiere, things are beginning to look lively, says a local paper. The ice has all passed out of the river, and the different boat companies are preparing their fleets to receive and transport the logs, which formed the lumbermen's cut in the forest ranges of that country during the past winter months.

Mr. Alex. Lumsden, of New Edinburgh, has the contract from year to year to drive all the logs on the Ottawa River from the Long Sault Rapids, which is above the points where the logs are driven into the main Ottawa, except those cut on Lake Temiscamingue which are driven separately, to Des Joachims. This is the first part of the drive and the logs are driven loosely by a large gang of men, the volume of logs increasing as the mouth of each stream is passed and the logs are collected in the drive.

Arriving at Des Joachims the logs are taken over by the Upper Ottawa Improvement Co. and the Upper Ottawa Towing Co. They are boomed out and towed by the steamers H. F. Bronson and H. Robinson to Fort William where they are again let loose and driven loose through Fort William boom, after which they are boomed out and towed to the head of Allumette Rapids by the steamer Dolphus. Here they are again turned loose and driven to Mellon's Chenail boom where they are boomed out and towed to the head of Calumet Chenail by the steamer G. B. Pattee. The same process is repeated and the logs driven into Chenaiux boom, where they are boomed out and towed to the head of Chats Rapids by the steamer Pembroke, again they go loose over the Chats Rapids and into the Quio boom where the logs for mill owners on the North or Quebec side are sorted from the logs on the south or Ontario side. This done, the logs are boomed out once more and towed by the steamer Baldwin and a new steamer put on this year to replace one burned last year, to the head of the Deschenes Lake.

Here the Upper Ottawa Improvement Co., and the Upper Ottawa Towing Co. hand the logs over to Capt. Goulet with his steamers the Castor and Chaudiere, and the Upper Ottawa Steamboat Company with their steamer the Monitor and they are towed by them to the head of the Deschenes Rapids, where the logs belonging to Messrs. Perley and Pattee, J. R. Booth, Bronson & Weston, Pierce & Co. and Mason are turned into the south shore snie and run into Thompson's Bay where they are held in reserve, sorted and supplied to the various mill ponds as required.

The logs belonging to Messrs. E. B. Eddy, Hurdman Bros., Hamilton Bros., McClymont, McLaren, Conroy, W. C. Edwards and Rathbun & Co., are turned into the north shore snie and sorted at Eddy's gap, Messrs. Hamilton Bros. and W. C. Edwards' logs running through Eddy's canal into the lower Ottawa and towed to their mills at Hawkesbury and Rockland. The other logs are distributed into the ponds of their owners as on the south shore. All the boats used in this work on the Upper Ottawa are of the most powerful character, large paddle wheel steamers capable of standing a heavy sea.

This brings the logs to the mills from the limits. At the mills they are converted into lumber with wonderful rapidity, piled in the yards and piling grounds, and when dried shipped by boat and rail to Montreal and Quebec and re-shipped in American bottoms for Bur'ington and the Eastern States, and deals to England, or shipped direct from Ottawa in Canadian and American bottoms direct to Burlington via the Chambly Canal and Lake Richelieu.

The firms who will be engaged in this sawn lumber carrying from the Chaudiere this summer are :

J. B. Blanchard & Co., with the steamers Dolphin, E. B. Eddy and Owens, and fifty-five barges.

D. Murphy & Co., with the steamers Ivy, J. R. Booth, Angus Mahan, Dandy, Elfin, John Young, Silver Spray, Hope, Vermon and about sixty barges.

Messrs. Bangs & Kirby, with the steamer Allan Gilmour and six barges.

Mr. Geo. Harris, with the steamer Geo. A. Harris and ten barges.

Mr. J. Parks, with the steamer Rigaud and four barges.

Mr. Ogilvy, with steamer Ada and two barges.

The work of shipping the remains of last year's cut to the New England market actually began on Saturday. The canals at Calumet and the lower Ottawa will be open in a week's time, when the work will be started in earnest, and continued until the ice forms next fall.

The freight and passenger business on the Ottawa River, from Ottawa River to Montreal will be done by the Ottawa River Navigation Company's steamers. The passenger steamer Empress, which has been newly fitted up in luxurious style, will run from Ottawa to Grenville, and a new boat just completed in Montreal by the company between Grenville and Montreal. The freight business will be conducted by the steamers Maud, Olive, Welshman, Gatineau and a few other steam barges.

NEWS NOTES.

—The mills in the Northwest are commencing their season's operations.

—All the saw mills in Winnipeg will be running this summer, all three having been closed down last year.

—Machinery has arrived at Maclead, Alberta, for a new mill which will be established there by Jas. McLaren.

—M. B. McAulay, and A. Mercier took out from two to three million feet of lumber on the Victoria River the past winter.

—Mr. Mathison's saw mill, at Havelock, Ont, which was burned some time ago, has been rebuilt and is now in good running order.

—The stop-logs in the timber slide at the Chaudiere have been removed, and all Government works opened for navigation and the running of logs.

—Mr. Robt. Dollar, of Marquette, Mich., who is considerably interested in Canadian and Michigan lumber operations, has invested in California lumber during the past winter.

—C. Beck & Co,, of Penetanguishene, Ont., has taken a contract to saw ten million feet of lumber this season for an American firm. This will be the largest cut ever turned out in this mill.

—R. Balfour, inspector of bridges on the Canadian Pacific Railway, has lately written a letter in which he speaks very highly of the value of British Columbia lumber for bridging and similar purposes.

—The report is confirmed that James McLaren, the Ottawa Lumberman, will build a mill at some point on the Pacific coast this season. He declares it will be a model mill and will cut for both export and local trade.

—The cut this season by the Chaudiere firms, Messrs. Booth, Perley & Pattee, Bronson & Weston, Hurdman & Co., Pierce & Co. and the E. B. Eddy Manufacturing Company, is estimated by the lumbermen at about 375,000,000 feet, if no delay occurs in the fall from low water.

—The returns of the government timber inspector shows that 1,400,000 feet of lumber and 875,000 shingles were cut in the far northwestern district of Edmonton last year, 1,000 miles northwest of Winnipeg. The cut was made by five mills, these being mostly moveable affairs.

—Saw log driving has become brisk on the Madawaska and other streams. No timber driving has, however, yet begun on the streams of the Upper Ottawa on the north side. The ice on the lakes is, in many places it is said, of a winter solidness. The season in respect to driving is two weeks behind the ordinary one.

—The lumbermen are a little anxious about the lowness of the water in the Ottawa River this spring, and it is feared that trouble may be experienced in the fall from that cause. It is very important that no delay occurs to the log drive, as the reserve of logs from last season is very small and may not be sufficient to keep the mills busy till the drive logs arrive at the Chaudiere.

—Harbor improvements at Penetanguishene will be carried on this year on an extensive scale. The Dominion Government has placed $20,000 in the estimates for that purpose, which is being supplimented by the town to the extent of $10,000, and a like sum by the Grand Trunk railway. Forty thousand dollars should make Penetang. harbor one of the best on our northern lakes.

—It is stated that Messrs. J. Burstall & Co., of Quebec and London, have sold a large quantity—between 1,800 and 2,300 standards--of the lower grades of a well known and favored Ottawa pine stock wintering in Canada, to be shipped to the London market. Prices have not transpired, but the current quotations for 4th pine deals range from £7 12s. 6d. to £7 15s. according to specification, including cost, insurance and freight.

—The partnership heretofore existing between Mr. J. D. LeBel and Mr. McCausland lumbermen of London, Ont., has lately been dissolved. Mr. LeBel will continue the business alone in the future. He has secured for this year's shipments some 3,000,000 feet of the different kinds of hardwoods, such as black ash, hard maple, basswood, cherry, birch, etc. He reports trade as gradually improving with every prospect for a still further increase when the season fairly opens, his business being largely with firms in Boston and New York.

—A correspondent writing from Madawaska, N. B., says: "We are having cold, dry weather for this season of the year, which is not any too favorable for logging operations so far as floating is concerned. It looks very much at the time of writing as if the rivers and small streams would be very short of water at the time when the same is most required. From reports received there is nearly double the output of logs there was last year. On the American side some of the mills have been running some time manufacturing Provincial cedar."

—William Smith, while working in a saw mill, in the county of Bruce, met with a fearful accident one day recently. He was attending the engine, and was alone ; how the accident happened is therefore only surmissed. The mill was running, and a fellow workman was at work upstairs, when he noticed something wrong with Smith and immediately ran to his assistance. He found the poor man had been carried round the shaft, and is thought he was adjusting the belt. All his ribs on one side were broken, and other severe injuries sustained, causing the poor man's death.

—A correspondent writing to the Winnipeg *Free Press* from Carbery, Man., says: Matters are getting interesting in the timber permit business here. There are three inspectors around and they are making things lively for delinquents. Not only are they attending to the business of the present winter, but it is said they are raking up the business for a year or two back. It is somewhat peculiar they did not settle some of this before the last general election. Most people consider the permit system obnoxious and better adapted to fill the pockets of a few Government officials than any good it does to the Dominion Treasury.

The following official list of saw mills in Manitoba and the district ot Keewatin has been published :

Name of Owner or Owner and Assignee.	Where Situated.	Cut of Logs in Winter of 1887-88. Feet.
Boyd & Crowe	Fisher River	30,000
G. I. Brouse & Co	Bad Throat River	7,000
Brown, Rutherford & Nelson	Fisher Bay	15,000
F. T. Bulmer & Co.	Keewatin	50,000
A. Cameron	Minnedosa	4,000
Dick & Banning	Keewatin	40,000
Federal Bank of Canada	Ebb and Flow Lake	20,000
Hudson's Bay Company	Riding Mountain House	
Jermyn & Bolton	Minnedosa	15,000
Stgr. Johnson	Bad Throat River	12,000
Keewatin Lumbering and Manf. Co., Limited	Keewatin	120,000
J. Likely	Fort Alexander	5,000
Manitoba and Northwest Railway Co	Ebb and Flow Lake	4,000
Miller and Patton	Bird Tail Creek	30,000
D. McFayden	Sec. 19, Tp. 17, R. 16, W. 1st	3,000
H. B. Mitchell	Millwood	30,000
G. Morton	Turtle Mountain	12,000
Northwest Timber Co.	Bull Head Bay	15,000
Rainy Lake Lumber Co.	Rat Portage	40,000
" "	Fort Francis	
D. Ross	Whitemouth	12,000
S. Smith	Turtle Mountain	3,500
D. Sprague	Winnipeg	20,000
J. Stewart	Fort Ellice	3,000
A. Watts	Norquay	3,000
Wells Bros.	Balmoral	2,500
Williams & Harrison	Wakopa	3,000
Weimster & Kyall	Strathclair	4,000

CORRESPONDENCE.

150 MILE HOUSE, B.C., April 2nd, 1888.

Editor Canada Lumberman.

DEAR SIR,—In one of the first numbers of the CANADA LUMBERMAN you sent me I observed a mistake which I wished long ago to rectify, but delayed till now, In dealing with the timber of B.C. you mention the timber called the Douglas Pine and state that it was named after Governor Douglas, this is entirely wrong—it was named after its discoverer, viz: Douglas the great Botanist, who was killed on one of his floral expeditions in the Sandwich Islands by falling into a pit, along side of a wild bull who was in at the time.

Yours truly,

GAVIN HAMILTON.

GALT ITEMS.

From an Occasional Correspondent.

Building operations which have been very brisk in Galt for the past few years, still continue, the most important present project in this line being a general hospital, for which a by-law is being submitted to the ratepayers.

Mr. Peter Hay, of the Galt Machine Knife Works, an establishment well known to readers of THE LUMBERMAN, is building a new grinding shop, 48x24 feet, to meet increased business, and will add a 40-h. p. Wheelock engine to the present plant, from the well-known firm of Goldie & McCulloch of this town.

The new Opera House is fast nearing completion, only a few of the interior details being unfinished.

Of the seventeen new stores erected last year all are now occupied except one or two in the new opera block.

Trade among the several lumbermen operating here appears to be brisk, and a full average cut is anticipated the present season.

T. V.

THE NEWS.

—The season for stripping tan bark is near at hand.

—M. Wilson has opened a lumber yard at Newdale, Man.

—Mr. Spencer, Ursa, Ont., is about to erect a saw mill on Bear Lake.

—Lumbering operations at Victoria Harbor have been brisk during the past winter.

—Mr. Geo. B. Gordon has bought the saw mill property of Mr. Angus Millan, Sunderland.

—The first carload of square timber from Lake St. John has arrived at the Palace depot.

—Mr. C. G. Fox has got out 3,000,000 feet of logs for G. Jesperson's mill at Rodney, Ont.

—Mr. S. D. Bryan has lately purchased saw mills at Keewatin and has taken up his residence there.

—It is now believed that the lumber business will be good on the Saginaw river during the season of 1888.

—The Midland *Free Press* says that the saw mills of that berg will have all they can do the coming summer.

—Isaiah Feir's shingle mill, Feirville, Ont., was burned on March 31st, with 50,000 shingles. Insurance, $500.

—An Ogemaw lumberman by the name of Anderson has skipped to Canada, leaving about $5,000 unpaid debts.

—Not less than ten thousand to twelve thousand feet of lumber per day has been cut during the past season at Jordan, Ont.

—Mr. H. H. Cook, of Kinmount, Ont., while operating a circular saw, on Good Friday, lost two fingers from his left hand.

—The capacity of G. Y. Slate's shingle mill at False Creek, Vancouver, B. C. has been increased from 30,000 to 100,000 per day.

—The Kootenay Valley Co. are cutting material in their saw mill for the construction of a navigable canal between Kootenay and Columbia rivers.

—Mr. Tait, of the Bird Tail Creek limits, (Man.) reports over 3,000,000 feet of timber cut and on the bank ready for rolling into the water.

—About 3,000,000 feet of logs have been taken out in the Riding Mountains to be cut at Yait's mill at Birtle, Man. The timber is a fine sample of spruce.

—Mr. Wm. Thompson, Orillia, Ont., intends having a large burner erected on the Esplanade for the disposal of sawdust and other refuse from his shingle mill.

—J. McLaren & Co., Ottawa, Ont., will saw from 25,000,000 to 30,000,000 feet of logs this season, and employ 250 men at their mill. They have been in the trade for 30 years.

—It is said that the lumbering firms of McLarens, of Perth, Ont., and Ross, of Quebec, will erect a model saw and lumbering manufacturing mill at New Westminster, B. C. this summer.

—Wm. Dunn, of Atwood, Ont., has got in over one million feet of logs this season for the manufacture of cheese boxes, about 23,000 of which are turned out in this establishment every season.

—The proposed sale of the Hastings saw mill at Vancouver, B.C., for $175,000, has not yet been completed and it is stated that negotiations for the transfer are not likely to be carried through.

—Adam G. Clark, a native of Truro, N. S., and lately in the employ of the Elk River Mill & Lumber Co., of Humboldt Co., Cal., has been missing since March 6, when he was last seen at a Eureka restaurant.

—Building operations will be very brisk in Ottawa this summer. It is said that contracts footing up to half a million dollars have already been made. Ottawa people haven't got to import their lumber anyhow.

—An official report shows that the lake receipts of lumber at the port of Oswego, N.Y., were 145,799,067 feet for 1887, as compared with 148,710,367 feet for 1886, 169,814,279 feet for 1885, and 189,515,335 feet for 1884.

—Along the line of the Grand Trunk railroad, in Ontario, the chief source of employment for the farmers during the winter is the tie demand, which has been large enough to keep many of them busy the season through.

—Henry Gilchrist, tail-sawyer in Maxwell's mill, near Owen Sound, while swinging a slab around from the edger, was thrown across the circular saw and instantly killed. The poor fellow was completely sawed through below the breast.

—The total output for 1887 of one sawmill at Moodyville, Burrard Inlet, B.C., was 30,513,808 feet of lumber, 23,337 bundles of lath, and 23,926 lineal feet of piles. The product was shipped to Australia, China, South America and California.

—February was a fiery month. In the United States and Canada the total loss by fire was about $11,250,000, over $4,000,000 above the average February loss for thirteen years. Wood-working industries contributed about $525,000 to the total for the month.

—The Restigouche Boom Company have deposited with the Minister of Public Works a plan and description of the site of certain booms constructed by the company across the Restigouche river, and have made application to the Governor and Council for approval of the same.

—Mr. James Brown, of Acton, Ont., writes us that he has about 600 M. feet of logs at his mill, principally hemlock, basswood and cedar, and has already commenced to cut. Acton, he says, is growing rapidly, manufacturing industries forming the neuclus of a thrifty town.

—The men employed in Messrs. Gillies Bros'. shanty on White Lake recently presented Rev. Mr. Sirrell, Baptist minister at White Lake, with a handsome set of Buffalo robes, valued at $34 as a mark of their appreciation of his kindness in ministering to their spiritual needs.

—It is estimated that Michigan railways alone consumed three and three quarter million ties last year. Thereupon the Manitoulin *Expositor* remarks: People on the Manitoulin should not be too free in parting with their cedar. It will yet be worth a good deal more than it is to-day.

—Mr. James McLaren, millionaire lumberman of Buckingham, Que., is at present in Victoria, B.C., where, it is understood, he is having explored a limit recently purchased by him. It is said Mr. McLaren intends erecting saw mills with a capacity of fifty million feet annually at Victoria.

—About 200,000 logs, part of last season's drive, which were abandoned on account of low water and boomed above O'Brien's Bridge, Belleville, have broken loose and are now jammed against Fairfield Bridge, four miles further down the stream, and it is said will probably carry the bridge away.

—William Train, lumber merchant and real estate agent, Toronto, has assigned, not only his personal estate but also the partnership business in which his son is interested with him at Burk's Falls. The Dominion Bank is largely interested but fully secured. A meeting of the creditors has been called.

—A Leslie correspondent of the Pontiac *Advance* says: "Great excitement prevails among the jobbers, because one man has been detected sawing off the marked ends of the logs and getting them remeasured as fresh logs. He is supposed to have treated 100 logs in this way. It is a very serious offence."

—S. D. Ryan, who succeeded W. J. McCaulay in the management of the Minnesota and Ontario Lumber Co., is now at Rat Portage getting things in shape to commence the season's operations. He is just now actively opposing the proposal to grant a license for the sale of liquors in the vicinity of the mill.

—Mr. John Irwin, of Irwin, Ont., delivered recently a monster Balm of Gilead log at the mill yard of Mr. D. H. Vanallen. It was fourteen feet in length, five feet six inches in diameter, at the larger and five feet at the smaller end, and when measured at the mill was found to contain over 2,200 feet of lumber.

—Several parties are operating on the Port Medway river, in Queen's county, N. S., and this old lumber river will this season have over 10,000,000 feet to ship, should all the drives get to the mills. Davison & Sons have bought largely of the stock, and will supply their customers from Bridgewater, Port Medway and Liverpool.

—Mr. J. B. Charleston, timber limit inspector for the County of Ottawa, has recently returned from the Gatineau shanties. He reports the work done during the season as good, the cut being considerably more than last year. The road from the Desert to Ottawa is in a terrible condition and travelling in some places is dangerous.

—A movement is on foot among the employes of the Lake of the Woods mills to have the hours of labor reduced. Eleven hours each day is now the established usage, and the men are agitating to have the time reduced to ten hours. They are forming themselves into a Knights of Labor organization in order to facilitate the movement.

—We learn from the Ottawa *Journal* that Mr. Geo. H. Millan, mechanical manager of the E. B. Eddy Manufacturing Co., has gone to New York for the purpose of making inquiries and obtaining information respecting a number of small yard locomotives which will be used in the extensive lumber yards of the firm at Hull for hauling lumber. The firm have come to the conclusion that much more and better work can be done with locomotives than with the horses used at present. The introduction of locomotives will, however, necessitate the laying of new rails in all parts of the yard, which work will take a considerable part of the summer to complete.

—The proposed bridge across the [illegible] point is expected to be [illegible] Quebec Government will contribute [illegible] Government $5,000, the city of H[illegible] $8,000 will be made up by [illegible] Gatineau point, Templeton, Buckin[illegible] The bridge will be of iron [illegible]

—A Petitcodiac, N. B., correspondent writes, "There is considerable activity in the lumber business this season. D. J McLaughlin's mills will cut about six million superficial feet. Humphrey & Trites will cut between three and four million feet of various kinds of lumber. Wilson & McLaughlin will cut about two million feet. The mill belonging to the Sir Albert J. Smith estate will cut about one and one half million feet, and John Found will cut about one million.

—Messrs. Hurdman & Co. intend, as soon as the ice leaves the Ottawa river and the water has [illegible] ordinary level, to begin the construction of docks and crib wharfing about the shores of the small island in the centre of the river, opposite Blythe's Point. The wharfing will be built sufficiently high to prevent the water from reaching the piles of lumber which the firm intend piling upon the island. This will be one of the best piling grounds at the Chaudiere.

—The Ottawa *Journal* says that the smaller dealers in lumber are troubled to get supplied at reasonable prices, the claim being that in Ontario the prices have advanced 15 per cent. all round during the past eight months. Stocks left over and the prospective cut are said to have been contracted for, chiefly by Dobell, of Quebec, the Export Lumber Company and New York firms. Three-inch deals have risen from $7 to $9.50. The lumber producers are therefore said to be enjoying prosperity.

—The St. John N. B., *Sun* would like to know whether the Government proposes to let the Goggins raft go to New York without paying duty, and if so why? "It is not a raft of piling or other small stuff, but contains some of the heaviest timber that is grown in the Cumberland forests. There is an export duty on such timber when sent abroad in the rough. The duty is a proper one, and the *Sun* thinks it is a bad thing for the country to send logs away to be manufactured into lumber abroad instead of at home."

—During the last season the firms operating on the Labare river in the vicinity of Bridgewater, N. S., have sold out their lands and mills to E. D. Davidson & Sons, who are thus enabled to continue their regular output of from 8,000,000 to 12,000,000 feet yearly. The last season being very dry there are about 6,000,000 feet of logs left over, and there will be about 7,000,000 feet of new stock, consequently the mills will have their usual supply. Additional branches of the river have been improved, and now logs will come to the mill drouth or no drouth.

—The Longford Lumber Co. of Longford Mills, Ont., in renewing their subscription to THE LUMBERMAN write: The winter just closed has been admirably adapted to our saw-log operations, every day being suitable for work in the woods. We have taken out our usual stock and have now our men at work driving the Black River. From the present outlook our usually active community will this season be more alive than ever, as the quality of logs coming into Lake St. John and over the portage will be much larger than the usual. Mills will commence running about May 1st.

—Preparations are already being made for the rafting of timber on a large scale at Belleville. The probability is—so favorable has been the experience of those who have rafted their timber here—that more timber will be brought to Belleville by rail for rafting than was ever heretofore brought to the bay. The industry is a highly important one, as it involves the expenditure in the city and in the surrounding county of a large sum for labor and material; and it is only in its infancy, as when the Grand Trunk complete their line to the Sault, Belleville will become the greatest timber rafting port in Ontario.

—Orilliaites are highly elated over their success in securing what is likely to prove one of the largest wooden-ware factories in Ontario. The extensive buildings, which are estimated to cost in the neighborhood of $40,000, are under construction, and will be pushed to completion at the earliest possible date. The manufacture will consist of tubs, pails, butter firkins, oyster pails, lard tubs, jam jars, preserve jars, washboards, clothes pins, and the hundred and one other things that only a wooden-ware factory on an extensive scale can turn out. The wood to be used in the manufacture of these articles will partly consist of the refuse from the company's shingle mill at Orillia, and their lumber mills at Longford, thereby entailing a very slight expense for the raw material. They will also use a considerable quantity of different kinds of wood, principally white birch and spruce, of which there is any amount in the vicinity. The new company is under the management of Mr. Geo. Thompson, and the mechanical responsibility rests on Mr. D. A. Lundy, late of the Cane Manufacturing Co. of Newmarket.

NEWS NOTES.

—C. Caron, sash and door maker, Arnprior, Ont. has assigned.

—The large Cedar Mill at Deseronto is expected to commence operations shortly.

—Mr. C. H. Doxsee has erected a new planing mill at Campbellford, which will be put in operation shortly.

—The Georgian Bay Lumber Company have the largest number of logs ever cut in Matchedash.

—The Canada Lumber Cutting Machine Co. has made satisfactory trials of their machinery at Belleville.

—The Deseronto *Tribune* says there is going to be a great building boom in that town this summer.

—The lumber cut in the upper St. John this winter is estimated at 130,000,000 feet; about the same as last year.

—The cut of logs on Moosehead Lake and tributaries, in Maine is figured at 35,000,000 to 45,000,000 feet. There have been 900 men employed in the work.

—Lumbermen in the Peterboro' district apprehend considerable difficulty this year in floating their logs to the mills, owing to low water in the rivers and streams.

—It is said that a good deal of lumber will be exported from Quebec to Melbourne, Australia, during the coming season.

—At Petitcodiac, N. B., April 12th, D. J. McLaughlin's large lumber mill was totally destroyed by fire. Loss 10,000 insurance 6,000.

—Messrs. J. & B. Bear's carriage factory, at Doon, Ont., with their sawmill adjoining, were totally destroyed by fire April the 9th. Loss about $20,000.

—Mr. Alfred Attridge, Schomberg, Ont, is building a large lumber and planing factory for manufacturing sash, blinds, doors, moldings, etc. It will be equipped with a full outfit of the best machinery, embodying all the latest improvements.

—A lumber stacking machine which takes the place of fifteen men has been invented and successful use. The lumber is carried on chains from the trimmer and dropped on the cars in better shape than by the men who formerly did the work. Bnt one man is necessary to manipulate the machine.

—Mr. Marshall's lumber and shingle mill, at Washago, Ont., was destroyed by fire the latter end of March. About 300,000 shingles was piled close to the mill, part of which were removed and the balance saved by the constant application of water. The mill was insured. Mr. John Waldron's mill and Messrs. Brady & Hartley's, both situated in this village, are running, the latter likely to run double tour in a short time.

—Lumbermen sometimes seem to vie with each other as to who can "get on" the largest load of logs. We have published reports of several of the "largest loads on record," and now from the Longford Lumber Co's camp comes the following; "At No 1 camp Longford township one team of horses actually drew for one mile on bush road, on sleighs at one time, seventy-five pcs., of sawlogs, with 22 men on the top of the same, and another load contained 5500 feet board measure." What a "whalloper" that must have been. Next!

—Fesserton, a smart little village in northern Ontario, is rapidly coming to the front as a lumber producing point. We learn that Mr. E. W. Wiffen has the past winter got out about 3,500,000 feet of pine stock, all of which he intends cutting at his mill this season. Brissley & Wood are building a dock on their water front, 100 feet square to facilitate the shipment of their lumber by water. The same firm are removing and fixing up their old shingle mill for future use as a planing mill. Through such additions as these Fesserton will likely be a busy town the coming season.

—A shipment from a sawmill at Barrard Inlet, B. C., was recently made to Japan, which will give some idea of British Columbia timber. The cargo consisted of 1½ million feet of timber 36x36 inches square, ninety feet long. A very common order for mills on the Gulf of Georgia, for the Japan and China trade in cargo lots comprises 3x24 and 3x36--60 and 90 feet long; intermediate lengths are practically uknown. A saw-log in this region is understood to be twenty-four feet long, unless otherwise specified; anything less than twenty-four feet would be cut only on special contract.

—There appears to be quite a "boom" working up in the lumbering interests of the Pacific coast of British Columbia. A short time ago it was announced that a large mill would be established at Port Moody, Burrard Inlet. A New Brunswick lumber corporation has since sent an agent to the Pacific coast with a view to selecting a site for an extensive export mill, and it is said that a location will probably be selected at Westminster. James MacTarly, a famous Ottawa lumberman, is now on the coast looking for a location for a mill, having in connection with other eastern parties secured valuable timber limits in British Columbia.

—Messrs. W. J. Trenouth & Bros., Fawkham, Ont., write the LUMBERMAN: The first of the drive on Black River has reached the canal here and men have commenced to sort. Each company will employ about thirty hands from now until the middle of June. We have something over a million feet this year, and expect to start our shingle mill about the first of May, in which we will cut about 4,000,000 shingles.

—The Alberta Lumber company recently held its annual meeting at Winnipeg, the head office of the company. W. W. Huntington and Henry B. Beard, of Minneapolis, and J. B. McArthur, J. S. McEwan and Hugh J. MacDonald were elected directors. The property of this company is in the Red Deer country, Alberta Territory, about 1,000 miles west of Winnipeg and north of Calgary. The company secured valuable timber limits there some time ago, and some machinery was taken in last fall with the intention of erecting a mill. The work, however, appears to have been delayed. At the meeting an issue of $150,000 in bonds was authorized, for the purpose of building the mill and developing the territory. The district is said to be one of the finest for settlement in the northwest, but owing to its isolated position it has not yet received much attention. The company will make an effort to induce settlement. Now that railway monopoly has been done away with, it is probable that the the district will shortly be opened up by railway communication. A charter for a railway through the territory is now being asked for.

TRADE REVIEW.

Toronto, Ont.

TORONTO, April 27th, 1888.

With the opening of spring orders and enquiries for lumber are coming in more freely. On a whole business so far this season is ahead of that of last year. Prospects for local as well as outside trade are very fair, although not in excess of past years. Money seems a little easier and more confidence in general business noticeable. Prices remain about the same, as follows:

CAR OR CARGO LOTS.

1¼ and thicker clear picks, American inspection	$34 00@35 00
1¼ and thicker, three uppers, American inspection	40 00
1¼ and thicker, pickings, American inspection	30 00
1x10 & 12 dressing and better	20 00 22 00
1x10 & 12 mill run	15 00 16 00
1x10 & 12 dressing	14 00 16 00
1x10 & 12 common	12 00 13 00

Goderich, Ont.

GODERICH, April 27th, 1888.

There is nothing interesting to report from this point. Business is very quiet. There is the customary spring demand for lumber. Vesselmen are fitting out their craft, and we hear of several lumber charters already being made to this and other ports. Navigation will be late in opening this season, very little water to be seen here yet. A few changes in prices have taken place principally in clear and picks and lath.

Ottawa, Ont.

OTTAWA, April 30th, 1888.

The busy season among the lumbermen has arrived and the prospects for this year are good. The mills are all getting in readiness to commence cutting, and at an early date the hum of the saw will be heard in all the old as well as in new quarters. Prices are firm with few changes.

Saginaw, Mich.

SAGINAW, April 28th, 1888.

Senator Palmer is credited with the statement "That Michigan alone has standing pine sufficient to build a fence around the globe eight feet high of twelve feet boards." If this statement is correct the Saginaw district will soon make a healthy hole in it at the present rate of operations. The estimated cut during the past winter is placed at 790,000,000 feet. At the close of operations in 1887 there were in the mill booms on the Saginaw River 22,829,000 feet of logs, against 33,190,000 feet in 1886. About 85,000,000 feet of logs will be brought to the Saginaw River this season by raft for manufacture. The tributary streams will yield 550,000,000 probably, and the railroads will bring in 150,000,000 feet more, making altogether 800,000,000 as the stock for this season. Throughout this district there are upwards of 100 mills to be run this season, most of which have already started cutting.

The cargo market has not developed astonishing activity as yet, neither is the yard trade booming, but a good healthy seasonable trade is reported.

Following are the ruling prices:

Buffalo and Tonawanda, N. Y.

BUFFALO, April 27th, 1888.

Spring has arrived, the river is open, and vessels are being moved from winter quarters to loading docks. Building operations will be brisk this summer which naturally makes a good home market for lumber. Car trade with the Eastern markets is reported quiet. Stocks are badly broken, and there is a scarcity of course lumber. Uppers and selects are in good supply with small demand. Hardwoods are in better demand than Pine. It is anticipated that lake navigation will open about May 1st from this port to Chicago, and that canal navigation will commence a few days later. The receipts of sawed and cut barrel staves promises to be fully up to last year. Considerable of this stock is bronght over from Canada.

A LUMBERMAN'S VIEWS ON RECIPROCITY.

Speaking upon business principles, says the *Journal*, "Not as a politician, but as a lumberman of long standing," Ottawa's senior member, W. G. Perley, made a valuable contribution to the debate on the unrestricted reciprocity resolution in the small hours on Saturday morning. The speech was not too lengthy, occupying only about forty-five minutes in delivering, but it was brimful of information bearing upon the point at issue as it affects the lumbermen, for whom, perhaps no one is better qualified to speak than is Mr. Perley. Notwithstanding the unseasonable hour at which by force of circumstances he had to speak, the practical common sense of his remarks and his strict adherance to the subject, won for the speech fair attention. This is more than could be said for any other speech delivered during the riotous closing hours of the debate.

To show how uncalled for had been the sympathy expressed for the duty-burdened lumberman or—exporter of lumber—during this debate, Mr. Perley pointed out that all the products of the forest that have been subject to duty on entering the States since the abrogration of the treaty of 1854, are for the future to be admitted free without any such sacrifice as Canada is asking to make, as a bill with that object is now before congress, with every likelihood of becoming law. And he conclusively showed in addition that even now the duty on lumber is paid not by the Canadian producer, but by the United States purchaser. These were his words:

WHO PAID THE DUTY?

I do not know that there is any settled principle; but the dealers in lumber and manufacturers in the United States, without any exception, contend that they pay the duty. They come here and buy lumber free on board and pay the duty on it. I do not intend to argue the question, but I will state my experience in the application of the treaty of 1854, and leave the hon. members to draw their own conclusion as to which contention is right. Notice for the abrogation of the treaty of 1854 was given in 1864, and the abrogation took place on the 1st of July, 1866, when a duty of 20 per cent. was imposed on pine lumber. At that time my firm was engaged in the sawing of lumber, and at the time this resolution was introduced my impression was that we did not experience any difference in the price of our lumber from the imposition of that duty. But to verify my impression I had an examination made of the books of my firm, and I found that from 1864 to 1867 there was no perceptible change in the price of our products. If anything, the prices increased in the latter year to some extent. But this instance goes to show conclusively that at that time we certainly did not pay the duty that was imposed on lumber by the United States."

ONE POSSIBLE RECIPROCITY BOON.

While showing the fallacy of the opposition contentions as to the benefits to be derived by the lumbermen, Mr. Perley on the other hand pointed out a benefit not touched upon in this debate which they would receive by the removal of the duties, however brought about. He said "the only advantage, I contend, which we can obtain by the removal of those duties, is to enable us to cut and saw an inferior quality of logs, and perhaps, in many cases, trees that have been burnt and killed a long time ago might be cut and used for boxes, and so on, which might be worked here and exported to the United States, if there were no duties to pay." He pointed out that the mere earnings of the laboring classes and the payment of Crown dues, with even only a small profit to the millmen, would be a great boon for the country to get from such timber. The advantages thus in store for the lumbermen Mr. Perley claimed had been offset by the action of the Government of Ontario and Quebec in materially increasing lately the Crown dues upon timber. He contended that they were unwarranted in making such a large increase, and that so far as trade was concerned in the Ottawa valley, there was no reason for increasing the Crown charges as they have done, except in anticipation of the removal of the duties upon the products of the forests going into the United States. According to the conditions of the lumber trade in the Ottawa valley, those charges could not be paid by the lumbermen at the present time, otherwise it being a well-known fact to all practical lumbermen and sawmill men, that a low grade of lumber as produced now cannot be exported to the United States under that system of duties, without a loss to the men who saw the logs.

EFFECT OF THE N. P.

Not only did Mr. Perley contend that no such scheme as unrestricted reciprocity was called for in the interest of the lumber trade, but he illustrated how that trade had been built up by the National Policy which it was now sought to supplant. "At the inauguration of our present fiscal policy," he said, "it was contended on what we considered reasonable grounds, that that trade would have to suffer, under the National Policy, for the benefit of other industries. It was contended by some members of my own firm and by my neighbors that we would have to pay increased prices for the different articles from our own manufacturers at rates fully as low as those we would have to pay the foreign manufacturer. What was the fact? The articles of clothing and the vast amount of goods that enter into shanty supplies were never advanced in price, and to-day we can get them cheaper than ever we could get them before.

"An enormous increase in the home consumption had taken place, he said, since 1880. As a sample he cited statistics gathered in Montreal, where in 1887 the lumber consumed amounted to 20% of the cut of all the mills in Ottawa and its immediate neighborhood. In that city," he said, "the estimated local consumption for 1880 was from 45,000,000 to 50,000,000 feet, while in 1887 it ran up to 120,500,000 feet. I look upon this as one of the important elements of the prosperity and success which this National Policy so-called, has given to this country. And if we were able to obtain the statistics of other cities, I am sure we would be able to show the people and hon. gentlemen opposite, who are contending that we should throw overboard everything we have achieved, that upon that basis we have developed our trade and given our own people employment in the manufacturing interest."

A PARTING MORAL.

Before concluding, he administered a rebuke to the "murky-fingered painters of blackness and despair," as Mr. Foster calls the pessimists on the Opposition side. "I think," said Mr. Perley, "that if we can get over this attempt to disturb the progress and development of this country, and if the hon. gentlemen in this House would take some other means of criticising the action of the governing party, we would do far better and get along more successfully in developing the resources of the country. It seems to me that this feeling of enmity against the successful party and this complaining that has been going on since I have known anything about Parliament, and this raising of the cry that we are going to ruin, are calculated to retard the progress of the country, and to embarrass the Government from carrying on measures for its welfare. I may be criticised for expressing my views on this point, being a young member of the House, but I may say that I consider this resolution uncalled for in any sense of the word, so far as the lumber trade is concerned, and I can see no ground upon which they can justify themselves in introducing a resolution of that kind."

The whole speech was terse and practical, and made a marked impression on the members of the House who heard it.

Purchasing Belts.

We find the following in a treatise on belting recently issued by the Page Belting Co.: Having properly arranged the machinery for the reception of the belts, the next thing to be determined is the length and width of the belts.

When it is not convenient to measure with the tape line the following rule will be found of service: Add the diameters of the pulleys together, divide the result by two, and multiply the quotient by 3¼. Add the product to twice the distance between the centres of the shafts, and you have the length required, substantially.

The width of the belt needed depends on three conditions: 1st, the tension of the belt; 2nd the size of the smaller pulley and the proportion of the surface touched by the belt; 3rd, the speed of the belt.

The average strain under which leather will break has been found by many experiments with various good tannages to be 3,200 pounds per square inch of cross section. A very nice quality of leather will sustain a somewhat greater strain. In use on the pulleys, belts should not be subjected to a greater strain than one-eleventh their tensile strength, or about 290 pounds to the square inch of cross section. This will be 55 pounds average strain for every inch in width of single belt three-sixteenths inch thick. The strain allowed for all widths of belting—single, light, double and heavy double—is in direct proportion to the thickness of the belt. This is the safe limit; for, if a greater strain is attempted, the belt is liable to be overworked, in which case the result will be an undue amount of stretching, tearing out at the lace or hook holes and damage to the joints.

When the belt is in motion the strain on the working side will be greater than on the slack side; and the average strain will be one-half the aggregate of both sides.

The working adhesion of a belt to the pulley will be in proportion both to the number of square inches of belt contact with the surface of the smaller pulley, also to the arc of the circumference of the pulley touched by the belt. This adhesion forms the basis of all right calculation in ascertaining the width of the belt necessary to transmit a given horse-power. A single belt, three-sixteenths inch thick, subjected to the strain we have given as a safe rule—55 pound per square inch in width—when touching one-half of the circumference of a turned iron pulley, will adhere one-half pound per square inch of the surface contact; while if it be a leather covered pulley, the belt will adhere two-thirds of a pound per square inch of contact. If the belt touches but one quarter of the circumference of the pulley, the adhesion is only one quarter pound to the square inch of contact with the iron pulley, and one-third pound per square inch on the leather covered pulley.

The adhesion one inch in width if the belt has on the pulley is the number of pounds which each inch in width of belt is capable of raising or transmitting. Multiplying this by the velocity of the belt in feet per minute will give the total number of pounds each inch in width will raise to transmit one foot per minute. Now multiply 33,000, the number of pounds raised by one-horse power one foot per minute, by the horse power to be transmitted, and divide this product by the number of pounds which one inch in width will raise or transmit one foot per minute, and the quotient will be the width of the belt required.

A Log Runner's Appeal.

As illustrative of the kind hearts that beat beneath a rough exterior, says a Michigan paper, let us relate a little incident that occurred on the Grand Rapids and Indiana railroad last Monday. At Grand Rapids there got on the train going north a typical lumberman or log runner. He was clad in a checkered costume so familiar to us all, and was filled to overflowing with Valley City bug juice. On the train his offensive familiarity and ribald songs and jokes made him a nuisance to all in the same car. The train men, however, succeeded in curbing his frolicsome spirits until Big Rapids was reached. Arriving at the latter place, a young fellow boarded the car whose appearence at once excited the sympathy of all. His face, at one time handsome, was thin and haggard, his form, once robust was sadly emaciated, and where his strong right arm should have been was an empty sleeve.

Immediately upon entering the car door, our friend, the lumberman, saw him and jumping to his feet, he rushed at him with, "Zhay, Jimmie, zhat you? Where you been?" and looking at Jimmie's empty sleeve, big tears gathered in his eyes and began to trickle down his cheek as he mournfully ejaculated, "too bad; too bad." Then, hastily drawing the back of his hand over his eyes, as if ashamed of a little honost emotion, he grasped the back of a car seat to steady himself, and turning to a car full of passengers said:

"Say, boys, I am nothing but a poor devil of a lumberman, and I am pretty drunk, but here is a poor fellow who is worse off. He lost his arm while breaking a jam on the Muskegon river, he has been in the hospital for six weeks. He has an aged mother, God bless her, who is entirely depending on him for support. When I went to Grand Rapids last week I had $140 in my pocket, now I have only $6, but here goes a 'V'," and he dropped a shining gold piece into his hat. His example was infectious, and after taking a tour through the car his hat must have contained nearly $100. This he turned over to his friend, who returned a few broken words of thanks, and together they left the train at Upper Big Rapids.

A passenger of a suspicious turn of mind thought the business looked a little fishy, and followed the pair from the train and around a lumber pile, where, unseen himself, he saw the one-armed man take off his coat and vest and from a sack made on purpose withdrew his lost arm, and then two of the slickest confidence men in Michigan meandered down town chuckling over the gullibility of the human race.

The Toothpick Business.

"Are you aware of the extent of the toothpick business in Maine?" Mr. J. C. Bridgman, who represents the National Toothpick Association, asked a representative of the Portland *Press* the other day. "That seems to be a pretty big name for small business, I suppose you think," he continued. "But you will be surprised when I tell you that our association have contracted for enough toothpicks to be made in Maine the coming year to load a train of fifty cars with nothing but toothpicks. We shall take out of Maine before next June five thousand million toothpicks. A pretty fair sized wood lot, you see will be slit up to go into the mouths and vest pockets of millions of Americans. Maine furnishes the larger portion of all the toothpicks used in the country. Our association controls the trade. It is something like the Standard Oil Trust, the Cotton Seed Oil Trust, and the lately formed Rubber Trust. It regulates the price and output of toothpicks as the big trusts regulate the price and output of oil or rubber goods. We have not adopted the name of Toothpick Trust yet, however. We have a mill at Belmont, N. Y., Harbor Springs, Mich., and Fond du Lac, Wis. Besides these, all our mills are in Maine; one at Strong, one at Farmington, one at Canton and two at Dixfield. There is a small mill at Mechanic Falls, also, but it has not joined our association. In Massachusetts, also, there is one small mill not in the association. So you see Maine is the great centre of the industry of toothpick making."

700,000,000 FEET THE PAST WINTER'S CUT OF LUMBER.

The season for making logs and timber on the Upper Ottawa and the great forest limits of the Ottawa valley has concluded, and the lumbering firms are busy drawing their logs and timber to the nearest waters.

This year's cutting season opened very unfavorably. To begin with, the lumbering firms had no reserve logs on hand from last season's cut. Then, in the first few weeks of the winter season, no logs could be cut at all owing to the want of snow. This feature, though a drawback in one sense, was a great assistance to the lumbermen in the end, as the hard frost previous to the fall of snow made an excellent bottom on all the roads, and froze the lakes and rivers solid when the snow came and work was commenced about Christmas ; it was continued without interruption until a few weeks ago.

Speaking of the Chaudiere lumbermen a *Journal* reporter learned that the season, although short, had been one of the most favorable and busiest the lumbermen have had for a number of years. The cut of logs with few exceptions are quite up to what was estimated in the fall of the year, and are on the whole about one-quarter larger than the cut of the previous season.

A GROUNDLESS APPREHENSION.

A fear has been expressed by some of the lumbermen that a great many of the logs cut on limits back from the Ottawa river front would be hung up, as many of the small creeks through which this timber is taken to the main Ottawa are frozen to the bottom, and there is a danger of the spring freshet, upon which the lumbermen rely to carry out their logs, passing out over the ice, leaving the logs in the shallow creeks, where they would then remain until the following spring. Mr. G. B. Green, manager of the Upper Ottawa Improvement Company, who has had an extensive experience in superintending the work of getting out timber and driving it down the Ottawa, speaking of this difficulty said that more or less every year the lumbermen have cause of fear from this source, but the appearance of affairs this spring is not a particle worse than it has been during years past, and there is little trouble anticipated by the lumbermen.

THE PRINCIPAL CUTS.

The following is a carefully prepared estimate obtained from most reliable sources, of the cuts this season of the principal firms on the Upper Ottawa and its tributaries. The French River, Parry Sound, South River and the Whanapitae and the Sturgeon River.

Firm.	*Feet.*
Canada Lumber Co	80,000,000
Bronson & Weston Co	60,000,000
Gilmour & Co	60,000,000
J. R. Booth	70,000,000
McLaughlin Bros (Arnprior)	75,000,000
Pierce & Co. (formerly J. & B. Grier)	30,000,000
Richard White	7,000,000
Booth & Gordon	10,000,000
Hurdman Bros.	50,000,000
Hamilton Bros	20,000,000
Perley & Patteé	60,000,000
E. B. Eddy Co	60,000,000
Alex. Fraser	15,000,000
A. Barnet (square timber)	200,000
Carswell, Mackey & Thistle (square timber)	150,000
French River.

J. R. Booth (Duchenes Creek)	1,000,000
J. & Chas. Moore	6,000,000
Thos. Mackie	1,000,000

This calculation shows that the cut of the principal firms taking out lumber on the Ottawa River and its tributaries is about 635,000,000 feet of lumber and about 350,000 feet of square timber.

On the French river the cut is about 18,000,000 feet of lumber.

On the Parry Sound, South River and Whanapitæ districts, about 29,000,000 feet of lumber and 130,000 feet of square timber, and on the Sturgeon River about 150,000,000 feet of lumber.

All this immense quantity of lumber—over 700,000,000 feet is taken out by the Ottawa River, with the exception of the cut on the Whanapitæ, which is taken out by the waterway to the Georgian Bay and shipped by the C.P.R.

About two thirds of this immense cut from the forests of the Ottawa valley is cut at the Chaudiere saw mills and the remainder on the Upper Ottawa between Lake Temiscamingue and the Chaudiere. Messrs. Hamilton Bros. will of course, cut their timber at Hawkesbury. In addition to the 20,000,000 cut by Messrs. Hamilton Bros. on the Dumoine that firm having taken out about 20,000,000 feet more on their Gatineau limits. Messrs. Gilmour and Co. and James McLaren have also taken out large cuts on the Gatineau river.

THE FALLING FORESTS.

"About how much forest land cleared would the cutting of seven hundred millions of feet of lumber mean?" asked the reporter of a lumberman.

"Well," he replied, "that's a difficult question. But let us figure on it and see. Seven hundred millions feet of lumber represents say 3,500,000, an average standard of 200 feet of sawn lumber from each tree. Now in a good forest a tree that you can get 200 feet of lumber out of will take up from 250 to 400 square feet of ground—that is ground 15 or 20 feet square. Take the average to be 300 square feet, and add another couple of hundred feet for the waste and cutting necessary to get the logs to the rollways—this would give 500 square feet of land cleared for every standard log that comes to the Chaudiere. If there are 3,500,000 standard logs cut, the territory cleared of pine will be about 1,750,000,000 square feet in area, or about sixty five square miles.

"Of course this means sixty-five square miles of uniform thick pine forest, but as you never find a stretch like that—there are barrens, and hills, and swamps and creeks—the annual cut probably clears twice or three times that area of all its available lumber. But this is rough guess-work anyway. —*Ottawa Journal.*

EXCHANGE ECHOES.

Mississippi Valley Lumberman.

It is gradually beginning to dawn upon lumbermen all over the country that a pretty generous supply of logs has been got in—all that it was intended should be put in, and more than it was hoped would be secured. If the break up had come early in March instead of actually about the first of April, all the logs would have been secured that the mills will be able to turn into lumber this season. It is now certain that quite as many logs will be carried over on nearly all the streams and at the different manufacturing centres, as were carried over last winter and possibly more. Under all these circumstances it will require an exceedingly active spring trade to prevent the market for lumber sagging along about July or August. All the dry lumber now in pile will undoubtedly find a ready market at fair values, but the disposition will be to cut prices in anticipation of an overstock by and by. All the logs put in this winter have been secured at a greater cost than usual, and this is about the only influence now present calculated to sustain values during all the summer. Should there be a full and bounteous harvest, as there may be, with a lively fall trade in its wake, it is possible the weakness which manufacturers are already beginning to prophecy may be averted. It is clear now that the mill men at almost every point are preparing for a season of exceptional activity, and are determined —because it is possible—to run their mills to their full capacity, and to restore the stocks of lumber at least to the normal condition. The present supply of white pine lumber in the northwest is undoubtedly below what is justified by an ordinary active demand.

Lumber, Chicago.

The report that eastern buyers of lumber are delaying their purchases, and otherwise greatly disturbing themselves, because of the possibility that the market will be flooded with cheap Canadian lumber, admitted duty free, is one that is to be taken with a grain of allowance. They no doubt fully recognize the fact that even if the bill placing lumber among the untaxed articles is passed, the immediate effect of it is not likely to be startling. It takes time to bring lumber into market, and it is now an imminent danger that the distributing points on the lakes will be flooded with Dominion lumber within a few hours after the removal of the duty. Manufacturers on the other side, in order to enter into effective competition with Michigan and Wisconsin producers, will need a chance to prepare for the business they propose to do. It is not likely they will accumulate a stock of lumber and keep it piled up for shipment waiting for the change to come. They are entirely too shrewd to bank so heavily on what is only a possibility at best, and many think a rather remote one. At the earliest there will be an addition to the offerings of Canadian lumber great enough to materially affect prices before next season, and it is questionable whether then the output of mills on the other side will be sufficiently increased to produce a decline in values. If eastern buyers are keeping away from Saginaw, which is not a fact beyond dispute, it must be for some other reason than because they are afraid of Canadian lumber.

Canadian Mining Re[illegible]

It is becoming obvious, even to the modified intelligence of the statemen at Quebec, that the mighty forests of the Laurentian country are rapidly disappearing before the axe of the settler and lumberman and frequent destructive forest fires. Recently a disposition has been manifested to check this criminal waste of a rapid diminishing source of revenue but so far with little practical effect. In the sale of mining lands, for instance the Government reserve the timber for three years. During that time the lumberman who owns the limit in which the lands are situated has the privilege of removing such timber as he may want. Very frequently this timber would be of considerable value to the miner in the construction of his works and buildings, but having no direct interest in the timber, and having every interest in learning the character of the rocks beneath it, his first step after taking possession is usually to start a forest fire to burn the moss, forest growth and debris from the rocks. But with them goes valuable timber. It is lost to the owner of the land, to the limit holder, and to the Province. What is wanted is an amendment to the Mineral Act which will give the proprietor of the land the ownership of the timber upon it from the day of purchase, thus making it his interest to exercise himself to save such portions of the forest as do not interfere directly with his operations.

PUBLICATIONS.

Something entirely new in class publications, the first number of which is before us, is known as "Science of Photography, at Home and Abroad," published by James W. Queen & Co., 924 Chestnut street, Philadelphia, Pa. It is gotten up in a neat pamphlet form, handsomely printed and illustrated, and treats on all subjects pertaining to the photographic art. It is promised that every issue will contain a number of original articles from the pens of writers well known in photographic circles, together with a few pages of carefully selected matter of value to the trade in any country. The price of subscription is $1 per year.

Novel in name, form, purpose and method is The Novelist, Alden's new weekly magazine of American fiction. It undertakes to give the worthiest fiction that *American* authors can be tempted to produce. Foreign authors not admitted. It is handy in form, and low in price ; well suited in all respects to meet the wants of the intelligent millions who are capable of appreciating "the best." Terms, $1 a year, at which rate it will give over 2,500 pages, equal to from eight or twelve ordinary American dollar novels. The stories will follow successively, one at a time, a novel of ordinary length thus being completed in from four to eight weeks. For a ten-cent subscription (if you don't wish to enter for all at $1.00), you will receive the first chapters of every story published during the year, which you can then order separately, if you wish. A specimen copy of The Novelist will be sent free on request. Address, John B. Alden, Publisher, 393 Pearl St., New York ; P.O. Box 1227.

We have received Vol. 1, No. 1 of *America*, a weekly paper devoted to the advancement of distinctively American ideas, and the strengthening and preserving of American institutions. It is a handsomely printed 20-page paper about the same size as the LUMBERMAN and is well fitted with original and interesting matter. It has among its list of contributors some of the best writers in the United States, and if it retains the excellence of its initial number it is deserving of a large measure of success. *America* is issued by the American Publishing Co., 180 Monroe Street, Chicago, and the subscription price is $3.50 per year.

Our esteemed contemporary, the *Canadian Trade Review*, of Montreal, has appeared in a new dress of type, and presents a healthy appearance.

We are in receipt of a neat little pamphlet, from the office of the *Northwestern Lumberman*, containing figures of the production of white pine lumber and shingles in the Northwestern States in 1887, by mills and districts, with comparisons for each year since 1873. The lumber trade generally will find in this handy little reference book much interesting information.

—An Ottawa paper says that some two hundred and fifty shantymen have left that city already this spring for the western Ontario lumber district.

NEW WATER JACKETED

CUPOLA FURNACE.

B. W. KEIM'S New Water Jacketed Cupola produces superior castings with a saving of a labourer and ten per cent. of a saving in metal and fuel. It is especially adapted for the use of stove, brass and iron founders, also for the treatment of phosphor-bronze, copper and bell metal. It is so constructed that by the addition of 1½ per cent. of aluminum a steel casting can be produced. It requires little, if any, repairs, and the bottom need not be dropped for months. Estimates furnished for portable reduction works for the smelting of gold, silver, lead or copper ore. Assaying and analyzing promptly attended to by the best of chemists. Your correspondence is solicited. Send for illustrated catalogue.

WANTED.—Reliable parties to introduce the Hartsfeld Automatic continuous and improved economical Coke and Charcoal Ovens of any capacity.

Also, lately improved portable reduction works and prospecting hand-power diamond bit rock drill that will bring up a solid core 500 feet. Extraordinary inducements.

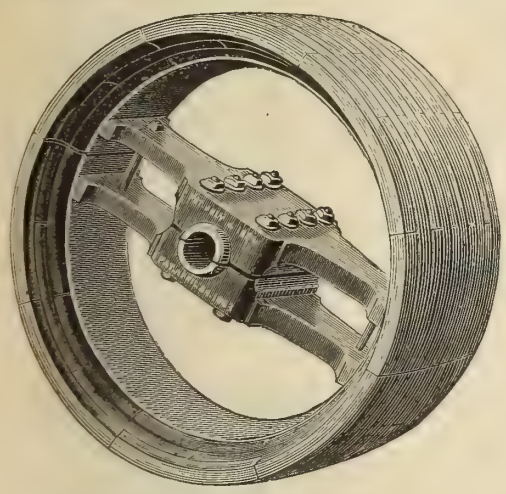
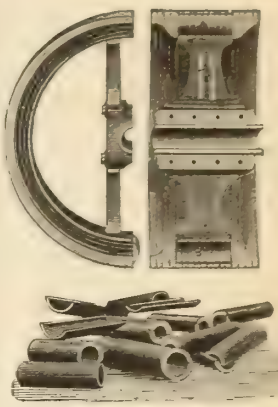
DODGE ⁜ PATENT ⁜ WOOD ⁜ SEPARABLE ⁜ OR ⁜ SPLIT ⁜ PULLEYS.



BEST BELT SURFACE, LIGHTEST, STRONGEST, BEST BALANCED AND MOST CONVENIENT PULLEY IN THE WORLD.



With our Patent Bushing System

Every pulley will fit 22 different sizes of shafting, and guaranteed to give from 30 to 60 per cent. more power from same belt and like tension than any iron or steel pulley. Every pulley a split pulley, 70 per cent. lighter than cast iron and 50 per cent. lighter than wrought iron or steel. Strong enough for any power required. Made in any size from nine inches to sixteen feet diameter.

As a material for pulleys wood is better than iron from the fact that it holds a belt much better. Most good mechanics are aware of this fact, but it may not be generally known how great is the difference, and for the benefit of our readers we give the result of two tests made and published by two of the most eminent mechanical authorities :—

Portion of Circumference embraced by Belt.	Rel. value of leather belt		Portion of Circumference embraced by Belt.	Rel. value of leather belt	
	On Wooden Pulleys.	On Iron Pulleys.		On Wooden Pulleys.	On Iron Pulleys.
.20	1.80	1.42	.20	1.90	1.40
.30	2.43	1.69	.30	2.40	1.70
.40	3.26	2.02	.40	3.30	2.00
.50	4.38	2.41	.50	4.40	2.40
.60	5.88	2.87	.60	5.90	2.90
.70	7.90	3.43	.70	7.90	3.40
Morin.—Appleton's Encylopedia of Mechanical Arts.			Haswell.—Engineers' and Mechanics' Pocket Book.		

A Dodge Patent Wood Pulley is better than iron from the fact that it can be made very much lighter and thus save weight on the line shaft and bearings, thereby saving in expense from a saving in friction.

The advantages of the separable pulley are very apparent. By its use the necessity of taking down shafting already up for the purpose of putting on additional pulleys when needed, or to be changed, is avoided, thus saving time, trouble and expense, while their first cost is much less than any other pulley made not having these advantages.

The Compression Fastening whether used with keys in iron center or compression alone, keeps the pulley always in balance as the compression on the shaft and key is always towards the center.

The most perfect balanced iron pulley fastened with set screws or key, is invariably out of balance by being thrown from the centre, this fact is obvious to all mechanics.

The advantages of our mode of fastening over any other are : It is the only absolutely true fastening for a pulley. A pulley once properly balanced cannot be thrown out of balance in securing with this fastening. A pulley fastened with key or set screw in the ordinary way, cannot be screwed without lifting the pulley from the shaft at that point where the key or set screw is placed, thus throwing the pulley out of balance.

Manufacturers should carefully avoid any pulley with a set screw fastening for shaft ; also a key unless the pulley is compressed on it. The Dodge Patent Bushing system is a great convenience to manufacturers and also to agents who carry pulleys in stock, as with the aid of the patent bushings every pulley will fit 22 different sizes of shafts.

Haswell the acknowledged authority and most quoted by American mechanics, summarizes thus : The ratio is friction to pressure of leather belts, when worn over wooden pulleys is 47, over turned cast iron pulleys, 24, thus showing the average advantage of a wood pulley over iron to be 50 per cent.

We also manufacture GROOVED HARD WOOD PULLEYS FOR TRANSMITTING POWER BY MANILLA ROPES (tallow laid) by the Dodge Patent System of applying the ropes and taking care of the slack.

Illustrated catalogues of belt pulleys and the rope transmission system will be furnished on application to
